Further excavations were conducted between 1951 and 1965 by M. Stekelis, who noticed that the stratified remains dip markedly toward the center of the cave. His excavations concentrated on the Upper Paleolithic (Aurignacian) layers and especially the Mousterian levels, to a depth of 8.5 m below the surface. The bedrock was not reached.

Since 1982, Kebara Cave is being excavated by a Joint Israeli-French team, headed by O. Bar-Yosef, B. Vandermeersch, and B. Arensburg.

The following geologically based units have been established: I–III Upper Paleolithic; IV–VI Transitional Period (or industry of a mixed nature); and VII–XIII Mousterian.

Kebara gave its name to an Epipaleolithic flint industry—the Kebaran—typified by predominantly microlithic tools.

Layer A, the most recent stratum, contained sherds from the Bronze Age to recent times.

Layer B is attributed to the Lower Natufian. A collective burial pit was uncovered which contained adult and infant skeletons. Noteworthy among the flint tools were the numerous sickle blades and lunates, many of which were retouched with Helewan retouch. The rich assemblage of bone tools included points, bipoints, hooks, harpoons, needles, combs, and four sickle hafts decorated with carved animal heads. The jewelry consisted of pear-shaped bone pendants, pierced bones, teeth, and shells. Among the basalt objects, some were decorated.

Layer C consists of the Kebapan industry with microliths greatly outnumbering normal-sized tools. Among the microliths, a characteristic backed bladelet, obliquely truncated, known by the name "Kebaran bladelet" is well represented.

Layers D and E are assigned to the local Aurignacian. Layer D, with its two sublayers, parallels the Upper Paleolithic IV of the Neuville division. It is characterized by many-nosed and steep scrapers.

Layer E parallels the Upper Paleolithic III and is characterized by a large number of El-Wad points, and a decrease in the number of the Aurignacian scrapers. One of the main characteristics of the Aurignacian levels is a preponderance of large circular hearths, with remains of charred animal bones.

Layer F is assigned to an upper phase of the Mousterian. Several living floors were distinguished, marked by hearths with charcoal and ashes, broken animal bones and teeth, as well as numerous flint

tools. A concentration of refuse along the walls marked the kitchen midden areas. Gazelle, *Dama, Capra sp.,* and *Cervus elaphus* were the most common animals hunted.

The flint industry is characterized by a high proportion of well-made delicate flakes, blades, and points in Levalloisian technique as well as many side scrapers of various types.

A C_{14} date of 41,000 ± 1,000 B.P. was obtained for the upper part of the Mousterian layer.

In 1965 at a lower level, the buried skeleton of a 7-month-old infant with Neanderthal characteristics was unearthed. Another Neanderthal skeleton, that of a young man, was found in a recent excavation in unit XI.

The overall picture which emerges from the finds is that the Kebara Cave served as a multi-activity center—as a home base, a workshop for tool making, and as a burial site.

TAMAR SCHICK

KEDAR (PERSON) [Heb *qēdār* (קֵדָר)]. The second son of Ishmael (Gen 25:13; 1 Chr 1:29). The "sons of Ishmael" constituted a group of N Arabian tribes who flourished from the 8th through the 4th centuries B.C. Kedar, attested from 738 B.C. well into the Hellenistic period, was the most powerful among them (Eph'al 1982: 223–27; Knauf 1989: 66, 96–108). See ISHMAELITES.

In Assyrian and Neo-Babylonian texts, the name of the tribe is given as *Qidr, Qidar/Qidâr, Qadr, Qadar/Qadâr,* and *Qudar/Qudâr* (Eph'al 1982: 223–24). As a personal name, *qdr* occurs in Safaitic, Thamudic, Nabatean *(qdrw),* and Standard Arabic (*Qidr* and *Qudâr*). Among more recent bedouin tribes, there were *Qudêriyyah* and *Qudêrât.* The names are derived from Ar *qadara* "to decree" or "to possess power"; this etymology matches the role played by the tribe of Kedar within the Ishmaelite confederacy (Knauf 1989: 66).

In Jer 2:10 (late 7th century B.C.), Kedar and the *Kittîm* ("Cypriots," Greeks) mark the E and the W end of the world as it was known to the prophet. Jer 49:28–33, an "oracle against a proud desert power" (Dumbrell 1972), may reflect Nebuchadnezzar's Arabian campaign of 599/598 B.C. Kedar is mentioned in the heading and in the introduction of the oracle only (v 28), and may belong to its final editing rather than to its first utterance. Verses 29–33 call the inhabitants of the desert, who own camels, sheep, and tents, "kingdom of Hazor" (v 28), "inhabitants of Hazor" (v 30), and "Hazor" (v 33). "Hazor" does not refer to the well-known city in N Palestine, but to "the country of *ḥăṣērîm,"* hamlets and/or fortified enclosures (cf. Gen 25:16; Isa 42:11). The description of the Arab hair style in Jer 49:32 refers back to Jer 25:23–24, where the expression "the people with the edge of their hair cropped" denotes the bedouin.

Iconographically, this "Arabian hairdress" is well attested from the 6th century B.C. to the 1st century A.D. (Knauf 1989: 103 n. 564).

Ezek 27:21, a part of the list dealing with the "trade partners of Tyre," credits the "princes of Kedar" with delivering sheep to the Phoenicians. Because this list still considers Edom to be a flourishing area (27:16), it should antedate Edom's conquest by Nabonidus in 553/552 B.C. For "Trito-Isaiah," the Kedarites are still paradigmatic sheep-breeders, Isa 60:7 (late 6th century B.C.). Knauf (1989: 109) assumes that "Kedar and Nebaioth" in Isa 60:7 already refer to the Nabateans, who, as a clan or a subtribe of Kedar, had immigrated into Edom in the course of the 6th century. A cuneiform tablet from Ṭawîlân near Petra, dated to the 1st year of Darius (probably Darius I, i.e., 521/520 B.C.), contains a contract for the delivery of small cattle to Harran in N Syria (Dalley 1984).

"Deutero-Isaiah," who believes Kedar to live in the desert as well as between rocks and mountains (Isa 42:11), may equally have located Kedar in the country that previously was Edom (the LXX renders *yšby sl*ʿ "rock-people" as "inhabitants of Petra"). No firm date can be proposed for Isa 21:16–17. The two verses announce Kedar's doom within three years, and characterize the Kedarites as bowmen (v 17; cf. Gen 21:20). These verses form an appendix (in prose and of unknown date) to the poetical oracle "on the wilderness" (Isa 21:13–15), which may comment on Nabonidus' march of conquest in 552 B.C. (Galling 1963; Lindsay 1976). The author of this appendix may have added his note on Kedar, because he missed the bedouin in 21:13–15, where only two N Arabian cities, Dedan and Tema, are mentioned. Relations between Tema and Kedar are documented in Babylonian cuneiform correspondence (*UET* IV 167, 5–11; Ebeling 1949: 163–64, #303; Knauf 1989: 75, n. 393), and in an Aramaic inscription on a jar (5th/4th centuries B.C.) found at Tema (Livingstone et al. 1983: 108), which reads: "1 wine. Kedar."

Psalm 120 is either a lament by an exile in bedouin country (cf. the arrows and the charcoal from juniper wood, a typical plant of the N Arabian desert [v 4]), or a complaint by a peaceful mind who compares his compatriots (in postexilic Jerusalem?) to bloodthirsty bedouin (vv 2–7). Meshech, evoked in parallel to the "tents of Kedar" in v 5, may not refer to a region in Asia Minor (as in Gen 10:2; Ezek 27:13; 32:26; 38:2; 39:1), but rather to a clan or subtribe of Kedar, Ar **Mâsik* (Knauf 1989: 72, n. 363).

Geshem, Nehemiah's adversary (see GESHEM) who controlled S Palestine and Sinai, S Transjordan and NW Arabia around the middle of the 5th century B.C., originated from the tribe of Kedar, according to an inscription left behind at Tell el-Maskhûta by his son (Dumbrell 1971). The realm of these two Kedarites comprised all of the later *Arabia Petraea.* This observation lends support to the assumption that the Nabateans emerged out of the Kedarites. Two texts from the 3d century B.C. refer to the Nabateans under the name of Kedar: Cant 1:5 and the Minaean "lists of hierodules".

Cant 1:5 mentions the black tents of the tribes of Kedar and *Shalmah* (see SHALMA, which MT vocalizes as "Solomon"). In the 3d century B.C., Shalmah was a tribe to the S of the Nabateans. This does not leave many choices among the contemporary Arab tribes for the identification of Kedar.

The so-called Minaean "lists of hierodules" (for the texts, cf. Garbini 1974: 115–24, M 392–97) are actually epigraphic marriage certificates, set up in the main temple of the Minaean capital by merchants from one of their trading colonies in Arabia or on the shores of the Mediterranean who had married women from their guest country and now publicly announced their marriages back at home. These lists, mainly from the 3d century B.C., contain all the "addresses" of their trading partners known from other sources—with the exception of the Nabateans. All major native cities or tribes of the wives can be identified—with the exception of Kedar, who occur three times in these lists. Thus, from Cant 1:5 and the Minaean lists it can be concluded that the Nabateans were known as Kedarites to at least some of their neighbors as late as the 3d century B.C. (Knauf 1989: 106–8).

Pliny the Elder is the last author who referred to Kedar. According to *HN* 5. 11 (12), 65, the *Cedrei* live S of the Sinai peninsula, the *Cauchbei* (sic!) E of them, and both have the Nabateans for neighbors. This geography does not make sense. Pliny may quote a source from the 4th/3d centuries B.C. which he did not fully understand. His source may have tried to depict the emancipation of the new Nabatean tribe from its previous subordinate role within the tribe of Kedar.

ERNST AXEL KNAUF

KEDEMAH (PERSON) [Heb *qēdmâ* (קֵדְמָה)]. A son of Ishmael (Gen 25:15; 1 Chr 1:31). All the sons of Ishmael are prominent N Arabian tribes or cities of the 1st millennium B.C. (see ISHMAELITES), more or less amply attested as such in both biblical and extrabiblical sources—with the exception of Kedemah. For Kedemah as a personal name, one may compare Ar (and Safaitic) *Qudâmah.* Because Kedemah figures last in the list of Ishmael's twelve sons, the name can be interpreted as a personification of the "people of the East" (Heb *qedem;* see EAST, PEOPLE OF THE) which was added to the sons of Ishmael in order to make them number twelve (Knauf 1989: 81).

ERNST AXEL KNAUF

KEDEMOTH (PLACE) [Heb *qĕdēmôt* (קְדֵמוֹת)]. Third levitical city allotted to the tribe of Reuben. In Josh 21:37, Kedemoth is missing from the MT and the verse must be reconstructed. In 1 Chr 6:64—Eng6:79, the verse is intact. Besides the two references to Kedemoth as a levitical city, it appears in two other verses in the OT. In Deut 2:26, Moses sends messengers "from the wilderness of Kedemoth" to Sihon in an attempt to receive permission for the Hebrews to pass through Sihon's land. This request is denied. It is important to note the phrase "wilderness of Kedemoth," for this is one of the few geographical descriptions given relating to this city. The other reference to Kedemoth is in the distribution/inheritance list of Reuben in Josh 13:18, which supplies no additional information.

Outside of the OT, only Eusebius (*Onomast.* 114: 5–6) in the 4th century makes reference to this levitical city. Briefly he restates Deut 2:26, asserting that Moses sent messengers from the wilderness of Kedemoth to Sihon, king of the Amorites. As early as Eusebius, the exact location of this site was probably lost and no further mention is made of the site until modern geographers started to associate different archaeological sites with the biblical city.

There is not universal agreement regarding the location of biblical Kedemoth and the geographers give their suggestions tentatively. Kedemoth is a town situated N of the Arnon. It is probably an outpost toward the desert. It is impossible to define its location more precisely. Three possible sites are usually considered to be Kedemoth: Qasr ez-Zaʿferan, es-Saliyeh, and er-Remeil.

There are two Qasr ez-Zaʿferans, located about 1 km apart. The mounds are approximately 10 to 12 km to the E of Khirbet Libb and 4 to 5 km to the NNW of Tell el-Medeiyineh. Both are located in a group of low hills and although the other hills do not seem to be fortified, these two mounds were.

The most N mound was the main settlement; this Glueck has called Qasr ez-Zaʿferan I. It is the larger of the two sites, and a Nabatean fortress had been built on the foundation of an earlier and larger structure. The pottery found at Qasr ez-Zaʿferan I was Early Iron I, Early Iron II and Nabatean.

Qasr ez-Zaʿferan II is located about 1 km S of ez-Zaʿferan I. There is also a large Nabatean fortress built with the same type of blocks as the fortress at ez-Zaʿferan. Most of the sherds found belonged to the Nabatean period, together with plain and painted Byzantine. A few sherds could be dated to Early Iron I. Glueck (1934: 30) argued that the Iron I sherds were carried to ez-Zaʿferan II, as he believed the site was not actually occupied during Early Iron I. There were also decorated Moabite sherds. The most serious

argument against this identification has been raised by van Zyl (1960: 75, 85). He has maintained that Qasr ez-Za῾feran is located too far to the N and would like to see it placed more to the SE. Van Zyl argues this on the grounds of Num 21:13 and Deut 2:26, that Kedemoth should be located N of the Arnon River on the E edge of the desert. The site he proposes for biblical Kedemoth is es-Saliyeh.

Es-Saliyeh is located N of Qasr Abu el-Kharaq on the N side of Wadi Salieyh. It is a large site, situated on a rise at the S edge of a fertile plateau. Presumably, es-Saliyeh depended upon the cultivation of its arable land. At the site there remain many ruined buildings, cisterns, and low mounds, dating to the early Iron Age and rebuilt by the Nabateans. The pottery found at es-Saliyeh has included LB, Early Iron I–II and Nabatean sherds. Van Zyl maintains that es-Saliyeh is biblical Kedemoth because it borders the desert. Although the description in the MT does not explicitly state that Kedemoth borders the desert (the reference need not be to more than pasture lands), the argument is interesting particularly because es-Saliyeh lies right on the W edge of the Desert of Kedemoth.

The third suggestion for the location of biblical Kedemoth is er-Remeil, situated about 3.5 km SW of Khirbet el-Medeiyineh. From the S it overlooks the Wadi re-Remeil, which is an extension of the Wadi eth-Themed. Positioned on a high point, er-Remeil can be seen for kilometers in all directions. At this site we have another example of the extensive fortress system in Moab during the Iron Age. The pottery that has been identified at er-Rumeil dates to the 9th and 8th centuries B.C.

The levitical city Kedemoth was probably located at es-Saliyeh. The biblical texts regarding this city are scanty and there are no references to it outside of the Bible; however, Van Zyl's reconstruction is convincing. See Peterson 1977: 671–86.

JOHN L. PETERSON

KEDESH (PLACE) [Heb *qedeš* (קֶדֶשׁ)]. **1.** A variant form of KADESH-BARNEA.

2. A levitical city in Issachar (1 Chr 6:57), assigned to the sons of Gershon. The parallel version (Josh 21:28) is KISHION; therefore, some scholars maintained that the version in 1 Chr 6:57 is a corruption inspired by Kedesh in Galilee in 1 Chr 6:61.

Scholars supporting the version of 1 Chr 6:57 identify Kedesh with Tell Abu Kudeis, a small mound in the Jezreel valley between Taanach and Megiddo. Some scholars advanced the theory that this mound should also be identified with Kedesh near where Sisera was killed (Judg 4:11). Others maintain that this event occurred near Kedesh in Naphtali (see #3 below), where also Barak would have gathered his people in the battle against Sisera (Judg 4:6). However, this latter view has been rejected by scholars who maintain that the two are different localities and that Kedesh in Naphtali should be located near the plain of Zaanaim (literally "Alon Besananim," Judg 4:11) which is between Mount Tabor and the Jordan river. They claim that it is implausible that Sisera fled "on his feet" (Judg 4:17) all the way to Kedesh in Naphtali, which was among Israelite possessions. In addition, Judg 5:19 places the battle "in Taanach by the waters of Megiddo," which supports the identification of Tel Abu Kudeis with the place where Sisera died.

The excavations in Tel Abu Kudeis revealed finds dating from the 12th century B.C.E. (which is, according to many, the date of the Deborah War) to the 9th century B.C.E. Among the finds in level IV (9th century), are a sanctuary and a four-horn altar which testify to a tradition of a sacred place. See also Kallai *HGB*, 228, 232–35, 472; *Historical Ency. of Palestine* 4: 816 (in Hebrew); *EAEHL* 3: 702–3.

RAMI ARAV

3. The first levitical city mentioned in the Naphtali distribution in Galilee. Besides occurring in the levitical city lists of Josh 21:32 and 1 Chr 6:61—Eng6:76, Kedesh is one of the Cities of Refuge (Josh 20:7). It appears as one of the cities given in the allotment to Naphtali (Josh 19:37). In other OT accounts the king of Kedesh was defeated by Joshua (Josh 12:22), although Noth (*Josua* HAT, 73) argues that this Kedesh must be identified with the Kedesh in the Jezreel valley. Kedesh was the home of Barak (Judg 4:6) and it is where Deborah and Barak gathered their followers for the battle with Sisera (Judg 4:1–10). Aharoni (*LBHG*, 223–24) associates the Kedesh in Naphtali of the Deborah narrative with Kh. Qedish (M.R. 202237). 2 Kgs 15:29 tells how Tiglath-pileser, during the reign of Pekah, captured Kedesh and took the people captive. It was here that Jonathan Maccabeus defeated the army of Demetrius (1 Macc 11:63, 73) and it is mentioned in Josephus (*JW* 2.459) as being a Tyrian village.

There is basic agreement that Kedesh in Galilee is to be identified with Tell Qades (M.R. 200279), located in the hill country NW of Lake Huleh in upper Galilee. It lies in the E zone overlooking the N part of the Jordan valley. Tell Qades' location is strategic for the whole Galilee region. It stands at one end of a small but fertile plain. This area has spacious tablelands with an abundance of springs. The highest parts of upper Galilee are mountainous, making habitation difficult and transportation nearly impossible. One of the major roads from the Jordan valley to the Phoenician coast passed by Tell Qades leading W to Abdon and Achzib in the Acco Plain. This was a rugged road—the climb out of the Jordan valley is steep and treacherous, while the continuation of the road in the mountains as it passes Tell Qades on its way to the W coast is difficult. This was nevertheless one of the major lines of communication, making Kedesh one of the most important cities in upper Galilee.

E. Robinson (1841: 355) first identified Tell Qades with biblical Kedesh in Naphtali. He made his identification by associating the name of Tell Qades with biblical Kedesh. The early geographers, including C. W. Wilson, C. R. Conder, and H. H. Kitchener (*SWP* 1: 228) and Guérin (1880: 355–62), all concentrated their efforts on the tombs and mausoleums. It was not until Albright's visit in 1925 (1925: 12) that the different historical periods were identified. Since Albright there have been numerous surveys and soundings conducted at Tell Qades, including a probe conducted by Y. Aharoni (1953: 263). The occupations that have been identified through probes and surveys include the EB, MB, LB, Iron I, Iron II, Hellenistic, Roman, and Arab periods. See also Peterson 1977: 67–76.

Tell Qades is one of the most northern sites associated with the levitical cities W of the Jordan. This means that this refuge city was not only strategically located geographically, but it was also an important communication center between the Canaanites/Phoenicians/Tyrians and Israel. See also QADES, TELL.

JOHN L. PETERSON

KEDRON (PLACE) [Gk *Kedrōn* (Κεδρων)]. A town fortified by Cendebeus, one of the commanders of Antiochus VII, who wanted to use the town as a staging area for raids against Judea ca. 139–138 B.C. (1 Macc 15:38–41). This action provoked a military response from Simon the Maccabee and his sons, who routed Cendebeus' forces and forced them to retreat to Kedron (1 Macc 16:1–9); it is not clear whether Kedron was then destroyed by the Maccabean force (v 10 seems to imply that only Azotus was burned; but see Goldstein, *1 Maccabees* AB, 522). The passages clearly indicate that Kedron was in the coastal plain (15:38) located in the vicinity of Jamnia and Azotus (Ashdod), not too far from Gazara (=Gezer). Abel (*GP*) was the first to identify Kedron with the village of Qaṭrā (M.R. 129136), which may be derived

from an original Qiṭron (*GTTOT,* 147). Such a location would have accommodated military forays up the Sorek valley into the Shephelah and W hill country of Judah.

GARY A. HERION

KEFAR BIR‹AM (M.R. 189272). The Arabic name for a Roman ruin NW of Gush Halav (see GISCALA) and just NE of Sasa, located alongside an abandoned Maronite village. Bir‹am is the site where two ancient synagogues have been reported. One of these has not survived but was said by medieval Jewish travelers to be in the village. When H. Kohl and C. Watzinger surveyed the site in 1905, the remains of the synagogue in the town had already been lost. The discussion, therefore, focuses only on the restored remains of the synagogue just S of the modern village.

The site is not mentioned in any ancient sources, but was doubtless a very important Jewish town by the 3d century C.E. (Middle Roman times). Gush Halav is one of very few other settlements in this general area to have had two synagogues, which underscores the importance of the settlement. Depending on the identification of ancient MEIRON with Mero of Josephus, it is possible that Bir‹am was outside the borders of Israel and was in the municipality of Tyre (Avi-Yonah 1977: 134), which might explain its absence in ancient sources.

The synagogue was restored by the Israel Department of Antiquities and is maintained by the National Parks Authority, but no excavation report on the site exists. It is a monumental basilical structure 15.2 m wide and 20 m long, with a triple doorway on its S facade that is oriented S toward Jerusalem. A well-preserved porch, 5.35 m wide and supported by eight columns, runs the length of the facade. In conception and design the synagogue is similar to Meiron, which also has a porch at the S end. The facade wall of the synagogue is particularly well-preserved and is constructed of ashlar stones. The central portal, 2.65 m high and 1.42 m wide, is elegant with its lintel depicting two Winged victories bearing a wreath. The figures, however, have been purposefully destroyed. Windows have been placed above each of the three portals; on the sill of the E window is the Hebrew inscription: "Built by Eliezer Son of Yudan."

The interior of the building is paved with large flagstones. Only one column and several pedestals were found *in situ.* Judging from the pedestals and capitals found in the porch, the columns had attic bases and the capitals were molded with ovolo, cavetto, and abacus. The central nave is surrounded by aisles on all three sides. Two rows of six columns run N–S, and two additional columns close the N end where two heart-shaped columns stand in the corners. Although Avigad (1977: 707) follows Kohl and Watzinger in drawing an entrance on the E wall, it is not clear that there is justification for it (Kohl and Watzinger 1916: Pl. XII). Indeed, the Israelis have restored the W wall with a side entrance. No remains of any upper story were found.

The synagogue is among the best-preserved ruins in all of Israel today and presents a dramatic picture of the remnants of the Galilean highland culture from Roman times.

ERIC M. MEYERS

KEFAR GIL‹ADI (M.R. 203294). A modern kibbutz in the extreme N of Israel ca. 20 km E of Tyre. Two sites have long been known in the area—the large mound N of the kibbutz where the former Arab village of Abil el-Qamḥ once stood (M.R. 204296; identified with biblical Abel-beth-maacah, *GP* 2: 354), and Khirbet Niḥa, which lies NW of the kibbutz and was occupied from the 1st century B.C. on. In 1957 a survey was conducted in the area surrounding this kibbutz, revealing the existence of three new sites: (1) a site NE of the Rawaḥina spring which yielded Neolithic and Chalcolithic remains (see A below); (2) an area of tombs and mausoleums S of the kibbutz, called Givat ha-Shoket (see B below); and (3) a small, flat mound near a spring S of Givat ha-Shoket (see C below).

A. The Rawaḥina Spring Site

During excavations in 1957 and 1962, an area of 200 square dunams was exposed containing four distinguishable strata (3 Chalcolithic and 1 Neolithic). The top stratum (I) contained the lower portions of round stone silos, the pottery of which resembles Ghassulian ware. In strata II–III were uncovered foundations of a building containing pottery similar to the Chalcolithic ware of Jericho VIII and Wadi Rabah (level II).

Stratum IV contained two older occupation phases: IVa (the upper phase) contained both a wall over 1 m thick built of large rubble stone, and a clay fertility figurine; IVb (the lower and oldest phase) rested on virgin soil. The flint tools (axes, adzes, hoes, blades, sickle blades, arrowheads, and spearheads) were similar in both phases, and most of the pottery from both phases resembles the "dark-faced burnished ware" known from Cilicia and the Amuq plain (see Hole 1959). In phase IVb were found sherds of cord-marked ware known from excavations at Tabat el-Ḥamam in N Syria (Braidwood 1940). Radiocarbon tests of charcoal from that phase fixed a date of ca. 6900 B.C. (± 320 years), thus the pottery from this phase represents some of the earliest found in the ancient Near East, roughly comparable in date to the earliest pottery excavated at Chatal Hüyük in Anatolia. These Neolithic remains found near the Rawaḥina spring are much closer in character to those found in Neolithic sites in Lebanon and Syria than are those excavated further S in Palestine (Kaplan 1959).

B. The Givat Ha-Shoket Mausoleum

The excavations here in 1961 exposed the lower part of a Roman period mausoleum (9 × 9 m) with walls 1.8 m thick (Kaplan 1967). Three superimposed layers of burials were found on the floor. The topmost level (stratum I) yielded an empty sarcophagus, with the name "Hezekiah" inscribed on one of its short sides.

The intermediate level (stratum II) included a complex of 7 rectangular graves filling a cavity below the floor of the mausoleum. Although most of the graves contained coffins made of thin lead sheets, one had a heavy lead coffin ornamented with reliefs depicting Hercules in a gabled frame, a roaring lion also in a gabled frame, Corinthian columns, and panels depicting grape clusters, vine tendrils, and birds. Inside it was found a rare gold diadem inlaid with semiprecious stones and also a gold chain bracelet with greenish stones. Several glass vessels of the 3d century A.D. were found in some of the graves.

The lower level (stratum III), stratigraphically underlying the 7 graves, yielded a marble sarcophagus partly concealed in the rock. One of its long sides bore a Gk inscription (painted in red) with the name "Heraklides." Inside was a sheet-lead coffin (actually the inner lining of a wooden coffin) containing a human skeleton.

This stratigraphy suggests that the mausoleum was actually used for burials in two separate periods. Hezekiah's sarcophagus actually constitutes the oldest artifact in the mausoleum; indeed, the mausoleum seems to have been built originally to preserve it, probably by Heraklides, his son, who hoped to be buried there himself. Apparently when the pit was dug for Heraklides' own sarcophagus, Hezekiah's was shifted aside and then later restored to its original place. This first period dates not later than the Severan dynasty (A.D. 193–235), and accounts for the remains in strata I and III. The second period begins in the time of Diocletian, when the first graves in stratum II were dug beneath the floor of the mausoleum ca. A.D. 290–295; the final grave was probably dug ca. A.D. 310. Once again, the sarcophagus of Hezekiah was moved aside during the digging of these tombs, and later was returned to its original location (thus its final stratigraphic position *above* stratum II).

C. The Mound S of Givat Ha-Shoket

This small mound was occupied mainly in the Israelite period, and may well be biblical Janoah, one of the towns in Naphtali conquered by Tiglath-pileser III (2 Kgs 15:29). This identification is based both on the fact that Janoah appears in the biblical list after Ijon and Abel-beth-maachah, and before Kedesh and Hazor, and on the similarity between its name and that of Khirbet Niḥa nearby (which was only occupied from the 1st century B.C. on, when the area of Givat ha-Shoket served as its cemetery).

KEHELATHAH (PLACE) [Heb *qĕhelātâ* (קְהֵלָתָה)]. The seventh encampment of the Israelites after leaving the wilderness of Sinai, as listed in Num 33:22–23, where it is placed between Rissah and Mount Shepher. Many scholars suggest that this is a duplicate for Makheloth in Num 33:25–26, since LXX preserves very similar names for both: Makellath in 33:22–23 and Makeloth in 33:25–26 (*GTTOT*, 256). Both names also have similar meanings, "assembly," or the like. A suggested location is Kuntilet Ajjrud, also called Kuntilet Qraye (*GP*, 214; M.R. 094956). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

KEILAH (PLACE) [Heb *qĕʿîlâ* (קְעִילָה)]. A fortified town of Judah (Josh 15:44; Kallai HGB, 335). Keilah was located in the E part of the Shephelah about 13.5 km NW of Hebron. The important role Keilah played in OT history is reflected in references to the site both in the Bible (Josh 15:44; 1 Samuel 23; 1 Chr 4:29; Neh 3:17–18) and the Amarna Tablets. Today scholars identify the ancient town with the present-day site of Kh. Qila (M.R. 150113; Aharoni *LBHG*, 123; Kallai *HGB*, 381, 385).

During the Amarna period, Keilah was caught in a struggle between two Canaanite city-state kings, Shuwardata of Hebron, and Abdu-Ḫeba of Jerusalem. Located near the border between the two regions, the troops of Keilah became part of Shuwardata's military force as he made encroachments on Abdu-Ḫeba's territory. Abdu-Ḫeba, who saw Shuwardata's tactics as a violation of the agreement between the city-states and Egypt, protested the violation and the use of the troops of Keilah, and appealed for assistance to the king of Egypt (*ANET*, 489, nos. 289 and 290; Aharoni *LBHG*, 174).

Several features combined to make Keilah an important site at different times in biblical history. It was located in the E or upper part of the Shephelah, the band of the Shephelah nearest the central hill country. It was situated on a N-S route which connected a number of sites in the E Shephelah (*RAB*, 85, 87). It was a fortified town which had "gates and bars" (1 Sam 23:7), perhaps part of a line of fortresses running N and S in the E Shephelah. Also, the E Shephelah, including the area in which Keilah was located, most likely was forested. Perhaps for this reason the area around Keilah was not heavily populated, especially during the 2d millennium B.C.E. (*RAB*, 86). However, the thickets of the forest offered protection for those seeking refuge.

David attempted to use Keilah as his headquarters and a place of refuge from Saul. He gained control of the site in a battle with the Philistines who had attacked the town and robbed the threshing floors of the inhabitants (1 Sam 23:1–6). However, his attempted plan was foiled by the citizens of Keilah, who apparently were loyal to the authority of Saul (1 Sam 23:7–13).

During the period of the divided kingdom, Keilah, along with eight other towns, was a part of the district of Mareshah (*LBHG*, 353). During the period of restoration, the Persian period, Keilah was a district capital near the SW border of the province of Judah, a province which had been drastically reduced in size (*LBHG*, 416–18). Apparently Keilah and other towns in that district were repaired and resettled by the returnees from Babylonian territory (Neh 3:17–18). According to Eusebius, the prophet Habakkuk was buried at Keilah.
LAMOINE F. DEVRIES

KEISAN, TELL (M.R. 164253). A site in the middle of the plain of Acre.

A. Name and Identification

The modern Arabic name of the site, Tell Keisan, may signify "of treachery" and is attested from the 12th century onward in Arab chronicles. It presumably refers to a military event now forgotten. None of the proposed identifications of Keisan with a biblical city is convincing. Kishion in Josh 19:20 (R.

Dussaud and A. Alt) relies on the similarity of sound with Tel Qison (or Kison) read on certain maps, but the name is mistaken; besides, the Kishon runs much farther to the S. The same comment applies to Allammelech (Josh 19:26): the wadi of that name passes too far to the S. Achshaph (Josh 19:25) is a more serious candidate, since it is often mentioned in association with Acco. See ACHSHAPH. The papyrus Anastasi I speaks of Achshaph and seems to place it to the S of Acco, which is not the case with Tell Keisan, and implies that a city separates the two, which is not possible. But this Egyptian text is not easy to interpret. Another possibility is Mishal (Josh 19:26; Y. Aharoni), but no argument supports this view; three or four other cities mentioned in the list of Joshua are also possible candidates, but there is no means of deciding among them. Therefore any reference to the Bible is problematic, and it is best to be somewhat cautious. It is probable that this region was never under Israelite control. The lists in Joshua owe a great deal to later redactors, and may derive from a register of postexilic Jewish communities. One theory suggests that Keisan was one of the twenty cities granted by Solomon to the king of Tyre (1 Kgs 9:11–13), and hence belonged to the region of Kabul. There is a village with this name about 8 km from Keisan, but it is unclear if it should be identified with the Kabul of 1 Kings 9:10–14. The text of Kings mentions Kabul in Galilee without any further details. According to the list in Joshua 19, Kabul is situated rather to the N, in what is now S Lebanon. The village of Kabul is the Cabor of the Crusaders, which may reflect an older place name close to the Arabic *kebir,* for example, and would suggest that the Kabul of today is a recent name. In any case, the Bible tells us that Solomon's gift did not please the king of Tyre, which would not fit the agricultural and commercial wealth of the plain of Acco. What is true is that Keisan belongs to the frontier region between the hills of lower Galilee and the coast (S Phoenicia).

B. Description

The tell is an imposing mass in the heart of the plain of Acco. The flat, oval summit (250 m × 300 m) dominates the plain at a height of 28 m. It is 8 km from the sea as the crow flies, and only 4 km from the hills of lower Galilee. Prehistoric inhabitants occupied the site when it was only a rocky knoll near the swamps and the riverbank which provided abundant game. Later its position in the center of the fertile plain would make it an excellent agricultural site. Hunting (both birds and animals) and fishing in the marshes, rich agricultural land, close proximity to both sea and mountain, meant that Keisan was an important link between the herdsmen of the hill country and the traders of the coast. This contributed to its prosperity throughout three millennia, a prosperity founded on a balanced economy integrating all systems of exchange. Keisan was a rich market town at the crossroads of highways leading from Tell Abu Hawam (Haifa) to Hazor and Damascus, and from Acco to Megiddo, Beth-shan and Transjordan.

C. History of Excavations

An English expedition in 1935 and 1936 directed by J. Garstang and A. Rowe was interrupted by the disturbances in Palestine at that time: much damage was done, and the expedition house was burned down. Even worse, most of the documents and finds which had been taken to Liverpool, the headquarters of the expedition, were destroyed by bombing in 1941. In 1970, the Ecole Biblique conducted 8 campaigns between 1971 and 1980 under the successive direction of J. Prignaud, J. Briend, and J.-B. Humbert.

D. The Results of the Excavations

The English excavation had shown that the town was founded at the beginning of the EB, when it enjoyed its greatest extension, within mudbrick ramparts.

In the MB, the city was less extensive, but had a cyclopean rampart about halfway down the slope. The well, more than 20 m deep, was dug at the foot of the tell in the MB and has continued to provide water in such quantity that it served for irrigating nearby gardens until the beginning of this century. From this time come the structural blocks which bear Egyptian hieroglyphs which may date from the campaign of Seti I, who marched from Megiddo toward Tyre and Sidon in 1303 B.C.

The excavations in 1936 revealed a prosperous settlement in the 13th century and throughout Iron Age I, but suggested a complete gap for Iron Age II, after 900 B.C. The Ecole Biblique was particularly interested in the period from 1200 B.C. Its findings confirmed the importance of Iron Age I, but were able to show continuity of occupation from that time until the 2d century B.C.

The deepest level (13) lay under a thick destruction layer. The pottery fits perfectly into the LB tradition, but also has specific features of Iron Age I. It is a transitional style. The presence of Mycenaean IIIC shows that Sea Peoples had settled in the area before the destruction of Keisan. The destruction may have been the result of a new wave of Sea Peoples looking for somewhere to settle, but it may equally have been due to some local struggle, which apparently characterized the entire LB period. This level is the one which sees the beginning of the Iron Age, and it would appear that in archaeology there is no *event* which marks the transition from Bronze to Iron.

The following level (12) certainly belonged to another group whose hold on the site was precarious: the structures are modest, and the first sherds called "Philistine" make their appearance. Before the end of the 12th century, the town was solidly reconstructed (level 11), but was occupied for only a short time. It was soon destroyed or abandoned, and was only redeveloped with poor structures of mudbrick, at three or four stages during the first half of the 11th century. Under some influence difficult to define, reconstruction was undertaken vigorously (level 9) and in accordance with an elaborate scheme of town planning: series of module-type houses forming a solid line at the top of the slope, arranged to prevent the incursion of raiders into the city which was without a rampart. The module was divided into two or four compartments which had some affinity with the "four-room house" which was to be characteristic of the Iron Age. A type of pottery appeared which integrated Cypriot and Levantine features with the earlier basis inherited from the Mycenaeans. In fact, throughout the entire Iron Age I, the Palestinian coast constantly received new population groups and influences coming by way of the sea. The prosperity attested in the 11th century witnesses to a period of peace and an undeniably successful economy. The exceptional thickness of sediments from Iron I contrasts with the thinness of those from other sites of the region for the same period. This is probably because Keisan, positioned inland from the coast while dominating a rich territory, became the refuge-site in a period of prolonged disturbance. Regardless, level 9 was eventually destroyed by fire ca. 1000 B.C. marking the end of a period of prosperity which had lasted for a millennium. The final examples of the "Philistine" pottery disappeared. It would be arbitrary to see in the destruction of Keisan the effects of the campaign of King David in the N of Palestine, which is of questionable historicity. Instead, the destruction should be seen as the work of a tide of Aramean nomads who, at a moment when the Levant was destabilized, came up against Galilee and the rich kingdom of Tyre to which Keisan belonged.

The renewal of occupation (level 8) occurred immediately, but once again was undistinguished, bearing a clear Phoenician imprint. Still, the modest scale of the settlement is striking: Keisan was a little village on the edge of the kingdom of Tyre during the period of the Israelite monarchy (levels 7, 6, 5). This interpretation reflects the results of archaeological investigation into the whole of this region. Despite several cities which are better constructed—the so-called "Solomonic" cities—the sites of ancient Israel never recovered the prosperity they had enjoyed in the Bronze Age.

For this reason, the upswing which followed the Neo-Assyrian occupation (level 4) looks like a real renaissance. It is known that the new power practiced systematic displacement of populations. Keisan, although there is no trace of destruction, was reconstructed according to a totally new plan, and with smaller houses. Possibly a group deported by the imperial power was the new blood which Keisan needed. In any case, the quantity, quality, and novelty of the pottery undeniably marks a radical change. However, the influence comes not from the E but from the N. The influence of Phoenicia was never greater, and the same is true of its openness to Cyprus. The administration of the conquerors was tolerant but nonetheless effective, as inferred from a cuneiform tablet giving a list of rations for workers; overseas trade was certainly encouraged. Each house excavated contained at least one of the large loop-handled amphoras which have been found in great number in the chariot tombs of Cyprus in the 7th century B.C. It is not known what they held, in spite of the brief inscriptions which are sometimes on them; oil was exported from Palestine. Keisan belonged to a region which was like a Cypriot commercial "factory." There are abundant remains of new types of jars: smaller, lighter, better baked, with the strength required for overseas trade; these have been found in 7th century B.C. contexts as far as the coasts of Spain and the Atlantic coast of Morocco, and show the vitality of the commercial ports of the Levant.

However, two consecutive destructions affected the site—perhaps punitive expeditions of Assurbanipal in the middle of the 7th century. It is possible that a gap in occupation preceded the Persian period (level 3).

Keisan was rebuilt, but it ceased to be an administrative center. However, its function was an interchange between the hill country and the sea continued for several centuries of peace, which favored commerce. The link with the Mediterranean remained essential, and trade with the Greek islands and the coasts of Asia expanded continuously until the 3d century. With the creation of Acco/Ptolemais as regional capital, Keisan became nothing more that a suburb of this great Hellenistic port (level 2).

Keisan was finally abandoned before the end of the 2d century B.C. The campaign of Simon Maccabeus against Ptolemais in 163 B.C. may have rendered the final death-blow. Keisan did, however, have two revivals, the first during the time of Justinian, when a church was built on the summit (level 1); the second, when Saladin chose the strategic point which dominates Acre from which to direct the siege of 1189.

JEAN-BAPTISTE HUMBERT

KELAIAH (PERSON) [Heb *qēlāyâ* (קְלָיָה)]. Var. KELITA. One of the Levites who married a foreign woman during the era of Ezra's mission (Ezra 10:23 = 1 Esdr 9:23). The text indicates that Kelaiah is also known as Kelita *(qĕlîṭā)*. Even Noth, in his exhaustive study of Hebrew names, concedes that the meaning of the name is uncertain (*IPN* 256). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

KELITA (PERSON) [Heb *qĕlîṭā* (קְלִיטָא)]. Var. KELAIAH. One of the Levites who, along with various priests and laymen, listened to Ezra and agreed to renounce their foreign wives and children (Ezra 10:23; 1 Esdr 9:23). Kelita's legacy, however, is not limited simply to the renunciation of mixed marriages. He was among those who provided interpretive assistance during the great reading of the Law in the time of Ezra (Neh 8:7; 1 Esdr 9:48). In addition, following the public confession of sin concerning Israel's past failings, he joined in with other officials and laity in supporting and "sealing" a new covenant (Neh 10:11—Eng10:10). According to Ezra 10:23 and 1 Esdr 9:23, Kelita is a name associated with a certain Kelaiah (Heb *qēlāyāh*). Rather than being a gloss mistakenly identifying two otherwise distinct individuals, Kelita appears to be a descriptive nickname indicating a crippled or stunted condition (see root *qālaṭ, BDB,* 886). Once the nickname is provided, the real name goes unmentioned.

TERRY L. BRENSINGER

KEMUEL (PERSON) [Heb *qĕmû'ēl* (קְמוּאֵל)]. Three individuals mentioned in the Hebrew Bible have this name, the origin and meaning of which are not known. The transcription of the name is also unclear, as evidenced by the rendition of *Samouel* in the LXX (Vatican). There do not seem to be any occurrences of the name in extrabiblical literature (*IPN,* 256).

1. The son of Nahor, father of Aram (Gen 22:21).

2. The son of Shiphtan, a leader of the tribe of Ephraim appointed to help distribute the land to the children of Israel (Num 34:24).

3. The father of Hashabiah, a leader of the Levites who served King David (1 Chr 27:17).

RAPHAEL I. PANITZ

KENAN (PERSON) [Heb *qênān* (קֵינָן)]. Var. CAINAN. Son of Enosh, when Enosh was 90 years old (Gen 5:9–14). When Kenan was 70 years old, his son Mahalalel was born. Kenan lived a total of 910

years. The similarity of names in the genealogies of Genesis 4 and 5 has led to comparison of Kenan with Cain of Genesis 4. Just as Cain was the son of Adam (whose name means "man, humanity"), so Kenan was the son of Enosh (whose name also means "man, humanity"; Wilson 1977: 161 n. 63).

The first three consonants of both Cain and Kenan are the same, *qyn* (see CAIN). Kenan differs from Cain in the addition of a *nun* at the end of the name, vocalized *-ān* in the MT (and in all versions). Such an ending, along with *-ōn,* is common in West Semitic personal names of all periods (Noth *IPN*, 38; Huffmon *APNM*, 135–38; Sivan 1984: 97; Silverman 1985: 125). Suggestions have been made to identify this ending with a diminutive sense (Noth *IPN*, 38) and to render Kenan as "little Cain," i.e., a second Cain (Diakonoff 1982: 17). However, Noth's other examples need not be interpreted as diminutives. Instead, the general identification of *-ān* as a hypocoristic suffix better accords with the evidence.

Perhaps this shortened "Cain" name should be compared with Tubal-Cain. See TUBAL-CAIN. If Tubal-Cain is to be understood as a two-element name (rather than as two separate names), it demonstrates the existence of longer constructions in names using the *qyn* element. Therefore, Kenan could be a hypocoristic form of a longer name. For another use of the *-ān* ending in a Genesis 1–11 personal name, see HARAN (PERSON). A deity bearing the same name as Kenan *(qynn)* is attested in Sabean inscriptions in Old South Arabic (Ryckmans 1934: 30).

RICHARD S. HESS

KENATH (PLACE) [Heb *qĕnat* (קְנַת)]. A town in Bashan which was taken by the Manassite Nobah, whose name was given to the site (Num 32:42). In a later campaign against Gilead, after the division of the Israelite monarchy, Geshur and Aram captured Kenath (1 Chr 2:23). Because the Gadite settlement of Jogbehah is mentioned both in Num 32:35, in the same context as Kenath (v 42), and in Judg 8:11, on the same caravan route as Nobah, it is possible that Kenath and Nobah were alternative regional designations or local place names. Kallai (1983) concludes that Nobah is a region which encompasses other localities, including Kenath. See HAVVOTH-JAIR; JOGBEHAH; NOBAH (PLACE).

The name Kenath appears in the Egyptian Execration Texts, an itinerary of Thutmose III, and the Amarna Tablets. In later times Kenath was known as Kanatha, one of the Decapolis. Though it is sometimes linked with Kerak-Kanata, Kenath is possibly identified with El Qanawât, located about 3 miles NE of Es Suweīdiya, Syria.

PAUL NIMRAH FRANKLYN

KENAZ (PERSON) [Heb *qĕnaz* (קְנַז)]. KENIZZITE. **1.** The son of Eliphaz, the firstborn son of Esau and Adah (Gen 36:11; 1 Chr 1:36), who functioned as an Edomite clan chief (Gen 36:15, 42; 1 Chr 1:53). Though Kenaz of Gen 36:11 is ordinarily understood to be the eponymous ancestor of the Kenizzites (Gen 15:19), this connection is not buttressed by hard evidence.

2. The younger brother of Caleb and father of Othniel (Josh 15:17; Judg 1:13; 3:9, 11). In 1 Chr 4:13 Kenaz is credited with a second son, Seraiah.

3. The grandson of Caleb through Elah (1 Chr 4:15). The plural gentilic adjective "Kenizzites" surfaces but once in the OT (Gen 15:19), within a promise that Yahweh makes to Abraham in a theophany. Listed

in second position, just after the Kenites, this is one of ten peoples whose land Yahweh intends to deliver to Abraham's descendants. In the singular form, this gentilic adjective is thrice attested (Num 32:12; Josh 14:6, 14) in the phrase "Caleb the son of Jephunneh the Kenizzite." This predication probably should be associated with the Kenizzites of Gen 15:19.

The Kenizzites were a non-Israelite ethnic group that presumably penetrated the Negeb from the SE. What little is known about them emerges mainly from a consideration of their wider geopolitical context. Toward the close of the LB Age and the onset of the Iron Age (ca. 1300–1100 B.C.E.), the S portion of Palestine's central hill country was occupied by diverse tribal groups. These included the Judahites, the Calebites, the Othnielites, the Simeonites, the Korahites, the Jerahmeelites, the Kenites, as well as the Kenizzites. Though scholars lack the necessary data for reconstructing the early history of these tribes in any detail, it is nonetheless clear that, owing to the prominence of David and the increasingly sturdy position of the tribe of Judah from whence he came, these S tribes were eventually subsumed under the category of "Greater Judah" (*HAIJ*, 103). From the narrative in Numbers 13–14, we may infer that the Calebites settled into the city of Hebron and subjected its quite promising agricultural environs to their advantage. In Josh 15:13–19 (and Judg 1:11–15, its parallel), the spotlight falls on the Othnielites. We are told that Othniel, the son of Kenaz, the younger brother of Caleb, took possession of the city of Debir (Tell Beit Mirsim?) SW of Hebron. Though the text is too laconic to be of much help to biblical historians, it does attest that the Othnielites, residing in the hill country directly SW of Hebron, clustered around Debir. To the SE of Hebron, the Kenites held sway in the vicinity of Arad (Judg 1:16). The precise extent of the territories claimed by the Calebites, the Othnielites, and the Kenites is unknowable, and, as de Vaux (*EHI*, 538) observes, there was some territorial overlap.

Several biblical genealogies denote that the Kenizzites, Calebites, and Othnielites were closely related tribal groups, and that from their tent encampments along the foothills of S Palestine, all three maintained intimate associations with their eastern Edomite neighbors. Caleb and Othniel are both recognized for their genealogical linkage with Kenaz. In Num 32:12 and Josh 14:6, 14, Caleb is identified as "the son of Jephunneh the Kenizzite," and in Judg 1:13 and 3:9, Othniel is said to be "the son of Kenaz, Caleb's younger brother." Kenaz, in turn, takes his place in the Edomite genealogy of Genesis 36. Finally, in the Wadi Arabah, a region rich in mineral deposits to the S of the Dead Sea, the Kenizzites cultivated close ties with the Kenites, from whom they undoubtedly learned the art of mining and metallurgy (Glueck 1940: 83). In due course, the Kenizzites and other neighboring S tribal groups became thoroughly absorbed by Judah.

J. KENNETH KUNTZ

KENITES [Heb *qênî* (קֵינִי)]. The Kenites—or more correctly the Qenites—were a community or clan whose ancestry was traced to an eponym, biblical Cain (Heb *qayin*). The Kenites constituted a non-Israelite group, frequenting the wilderness near Sinai, that may have been responsible for mediating the religion of Israel's god, Yhwh, to Moses. This view is conjectural, based on hints in legendary texts about Israel's history before or just after its entry into the land. It locates the era of Kenite influence in an era largely inaccessible to archaeologists, epigraphers, and historians—a time Abraham Malamat rightly calls the era of Israel's "proto-history" (1983; cf. Soggin 1979).

A. Kenites as Cain's Descendants

Our knowledge of the Kenites in the Iron Age, when Israel occupied its land, is limited to a few texts only (Josh 15:57; Judges 4–5; Judg 1:16; 1 Sam 15:6; 27:10; 30:29; 1 Chr 2:55). There has been widespread agreement that the etymology of the term "Kenite" implies that the Kenites were itinerant smiths (*AncIsr*, 478–79; *ARI*, 96): the root, *qyn*, can form the basis for words meaning "to forge," or "a metal-worker," in Arabic, Syriac, and Palmyrene. A derived term designates part of a spear (2 Sam 21:16; Wyatt 1986: 89); the context suggests a spearhead (of ca. 6.5 lbs), but it may be the shaft, in which case the root is unrelated (cf. CAD *qanû*). Proponents of this hypothesis observe that Gen 4:22 identifies Tubal-cain, a descendant of Cain *(qyn),* as the founder and "patron saint" of metallurgy. The element "Tubal" is to be explained on the basis of the fact that Tabal was a renowned center of metallurgy in SE Cappadocia (see Elat 1977: 53).

It seems most probable that it was the wordplay with Cain's name *(qyn)*—a root having to do with artisanship—that led the biblical narrator (J) in Genesis 4 (or his oral sources) to identify a scion of Cain as the first metallurgist, and to give him a name reminiscent of that of Tabal. Thus, another form of the root, *qynh,* denotes a song of lament (this, too, has a parallel in Arabic); thus another of Lamech's offspring in Gen 4:21 becomes the archetypal musician. The name Cain is attested both as a Nabatean personal name (J. T. Milik and J. Starcky *apud ARNA* 146:23; 157:107:3; 108:2) and, with preformative *ʾalep,* as a Sabean clan name (*DOSA*, 454). It is uncertain, then, if the biblical Kenites are named after an occupation (tinkerer or songster?) or if they drew their appellation from a particular figure. Even if it began as an occupational term, by the time of our texts it had an ethnic denotation—and may bear no relation to the economic activity of Kenites in Canaan.

This alternative does not refute the assumption that the Kenites were itinerant tinkerers and musical specialists. One of Cain's offspring, after all, is the "father of those who dwell with tents and cattle" (Gen 4:20), a condition characterizing the later Kenites (see below). On the other hand, Cain himself (or, originally, possibly Enoch) is said to have built the first walled town (Gen 4:17: *bnh* + town); yet Kenites were not sedentary.

In essence, the Kenite traditions in Gen 4:17–24 depict Cain as a prime culture-hero, an almost Promethean figure in the development of the civilized arts (cf. Wyatt 1986). Cain is the first human horticulturalist (Gen 4:2), and therefore the author of the first technological advance (cf. Marx and Engels 1938: 7). Yhwh, like Aeschylus' Zeus quite possibly intent on retarding human development (cf. Gen 3:22; 6:3; 11:6, all J), rejects the fruits of Cain's labor, and prefers the products of husbandry (Gen 4:3–4). He condemns Cain, ironically, to a nomadic existence as punishment for murder (4:8–12).

Although outcasts, Kenites pioneer the arts of city building, tent dwelling, herding, music, and metal work, as well as agriculture. One might infer from P's account, in which Cain's line is folded into Seth's (Genesis 5—with the order and the gutturals garbled), that the Kenites of Genesis 4 should have been eradicated in the Flood. This is, however, far from being J's implication, despite the fact that he deliberately provides for two branches of descent from Adam (Gen 4:25–26): the accursed, yet protected Kenites (and Gen 4:15, 24) mediate the blessings of civilization to all humankind. This apparent inconsistency is one of the reasons critics have sometimes attempted to discover a pre-history in the J materials, including a core of "nomadic" tribal traditions (as Beltz 1974).

B. Kenites in the Iron Age

The oldest information about the Kenites is preserved in the Song of Deborah (Judg 5:24–27). There, Jael is "the woman of the Kenite *ḥbr."* The late prose interpretation of the song, in Judges 4 (Halpern 1988), takes *ḥbr* to be the name of an individual, Heber (Jael's husband). But it may equally denote the "community" of the Kenites, identical to the nomadic unit of the Mari *ḫibrum* (Malamat 1962: 144–46).

In the Song of Deborah, it is certain at any rate that the Kenites dwell in tents and pasture dairy herds: Jael is praised above "[other] women of the tent" as distinct from women in houses (Judg 5:24); and, when Sisera, the general of the Canaanite army, asks for a drink, she serves him milk in a ceramic krater, possibly with human or animal figures (5:25), like wares found at Iron I Tell en-Nasbeh, Tell Beit Mirsim, and, most recently, Shiloh (Finkelstein, Bunimovitz, and Lederman 1985: 135) and Tell el-Hammah (Cahill, Lipton, and Tarler 1988). Clearly conceived of as non-Israelite even in this early

context, Jael is an archetypal Kenite. It merits remark that her camp can be no farther S than the Jezreel valley; the Song of Deborah does not even hint that such a N location is in any sense inappropriate for a Kenite.

The Judges 4 prose interpretation of Judg 5:24–27 stems either from the hand of the Deuteronomistic Historian, in the late 7th century B.C.E., or from a slightly older source (ca. 700). It retains the elements of Kenite dairy production, their residence in tents, and their status as "allies" of the Israelites (hence the need to explain why Sisera would take refuge among them—4:17; Halpern 1988). It does adduce a nomad's wineskin rather than mention a ceramic krater (Judg 4:19). It adds, too, the implication that Jael was the proprietress of her own tent (4:17)—it was normal, among polygamous pastoralists, for each wife to preside over her own establishment, in a discrete tent, a convention also visible in the Jacob cycle (Gen 30:16). For discretion's sake, this remains the practice today. But most of all, the late prose source feels compelled to explain that Jael's camp had wandered N (to the vicinity of Kedesh in Naphtali in the far N, in the prose interpretation), away from the standard pastures of the Kenite community (4:11). By the time of the prose writer, the Kenites were identified chiefly with the S.

A few other sources confirm these conclusions from the Song of Deborah. An oracle of Balaam in Num 24:21–22 speaks of the age-old residence of Cain in "the rock," or perhaps Sela in Edom—an interesting comment given that the only Kenite personal name surely known to us in the historical period, Jael, means "mountain goat." Balaam's oracle is linked to another on Amalek, another S community. 1 Sam 15:5–6, in a pre-Deuteronomistic source of 1 Samuel, relates that Saul met Kenites in the company of Amalekites at the "city of Amalek" S of Carmel in SE Judah (cf. 1 Sam 15:5, 12). Saul spared the Kenites, Amalek's fellow-travelers, because of earlier relations between the Kenites and Israel. Like Gen 15:19, a late piece, and the other passages cited to this point, 1 Samuel 15 identifies the Kenites as alien to Israel. The linkage to Amalek is of special interest, since Amalek was Judah's great competitor, in the 11th century B.C.E. for the desert hinterland of the S hill country.

The location of the Kenites in the SE (on the border of Judah with Edom) is attested in texts from various eras. In the 7th century, Josh 15:22, 57 (on the date, see Alt 1925) locate settlements named Kinah (Heb *qînâ*) and Kain (Heb *qayin*) in the southernmost and southeastern reaches of Judah. Judg 1:16 also locates the descendants of the Kenite in the SE: this Deuteronomistic passage, which may stem from an earlier source, has a group of Kenites descended from Moses' in-laws joining the Judahites in conquests S of Arad (cf. Num 10:29–32). The Kenites start from "the city of palms"—probably Jericho (Deut 34:3; 2 Chr 28:15), but identified in the Talmud with Zoar (*m. Yebam.* 16:7). Here again the Kenites appear as collaborators, on the border with Edom (cf. also Boling *Judges* AB, 57; *YGC*, 40–42). Two earlier texts, 1 Sam 27:10 and 30:29, probably refer not to Kenites in the S, but to Kenizzites (so LXX and 4QSam[a]).

In sum, the Kenites are identifiable as an Iron Age pastoral community occupying the wilderness S and E of Arad. The reference in Judg 5:24–27 might tempt us to suppose that, in search of summer pastures, they sometimes migrated as far N as the Jezreel, or even to the S end of the Bekaa Valley (Judges 4). But the language of Judg 4:11 has another implication: Heber "had separated" from the Kenites, from the children of Hobab, Moses' in-law. The issue here is lineage fission—the Kenites in the N were a branch community of those near Arad.

1 Chr 2:55 confirms this inference. It speaks of a Kenite migration to Judah (to Jabez; cf. 1 Chr 4:9–10) from "Hammath, the father of the house of Rechab." This must be in the N. The only known Hammath in Israelite territory was located on Naphtalite soil (Josh 19:35; probably Tell el-Hamma [M.R. 197197], 12 km S of Beth-shan; cf. Hammon in 1 Chr 6:61). It may have been "Hammath of the house of Rechab" (cf. Jer 35:18, "house of the Rechabites"; note Levenson 1976 on the communal nature of Rechab): the Rechabites originated in the N (2 Kgs 10:15, 23); and, in the mid-9th century B.C.E., they developed a regimen of ascetic nonagricultural nomadism (Jer 35:6–10). It is almost as though the Rechabites had assumed the status of the accursed Cain (Gen 4:11–12), doomed to live without tillage because of his earlier carnage. The Rechabites may therefore have been a lineage of a N Kenite community. Even if they were not, connubium between them and the Kenites is not difficult to imagine. Eventually, some of the Rechabites also found their way into Judah, where the depredations of Nebuchadnezzar induced them

ultimately to take refuge in Jerusalem (Jer 35:11). The Kenite encampment at Jabez was probably related to the Rechabite withdrawal to Judah.

Because the Kenites near Arad were linked to Moses (Judg 1:16; 4:11) and Moses' in-laws were linked to a Midianite priesthood (Exod 2:17–21; 3:1; 18:1–5), B. Mazar (1965) has argued that the Kenites presided at the well-known Israelite sanctuary at Arad (see Aharoni 1968: 27–28), as well as at a high place in the vicinity of Kedesh in Naphtali (Judg 4:11). Mazar's view has attracted widespread support. However, there is no sure sign of a *temenos* at Arad before the shrine built by David or Solomon; this would have been served by the priestly agents of the United Monarchy. Judg 1:16 speaks of a Kenite presence *south* of Arad, not in it (*VGC*, 40–41 n. 82), and later ostraca at Arad attest to the presence of Korahites, among other (Aaronid?) priestly elements, but give no indication of a Kenite role there (see *AI* 49, 50, 54). There may be further indications that the Midianite-Kenite cultic tradition called for a tent (not a stone) shrine (below, C), much as Solomon had to incorporate the earlier Israelite tent into his cultic establishment. The links between any Kenites related to Moses and the Arad temple are in fact unsubstantiated (Ussishkin 1988).

There are, however, indications that the Kenites enjoyed a certain status as ritual specialists or as the beneficiaries of a special relationship with Yhwh. The marking of their eponym, Cain, and Yhwh's promise of divine protection to him (Gen 4:15) were apparently elements projected back into prehistory by the later Kenites—the elements were appropriated by Yahwistic tradition. It would be erroneous to revert to the notion of a "desert ideal" embodied by the Kenites and Rechabites, among others—S. Talmon (1966: 31–37) has shown the bankruptcy of that theory. But it is interesting to note that the "mark of Cain" has a parallel in what seems to be a prophetic hairstyle or tonsure (2 Kgs 2:23; 1 Kgs 20:37–41; Ezek 9:4–8; cf. Zech 13:4, 6, with allusions to Elijah and to Amos). This was probably a mark (like the Akkadian *abbuttu;* see Mendelsohn 1932: 31–37) of Yhwh's proprietorship (cf. Deut 6:8; Ezek 9:4–6), though another sort of mutilation (as Exod 21:6; Deut 15:17) is also possible. That the prophet was thought to enjoy personal protection comparable to Cain's is a convention of Israelite social usage evinced in various passages (including 1 Kgs 20:35–36; 22:26–28; Jer 26:16).

Like the Kenites, prophets sometimes claimed to have been torn from the land. Properly, the Levites were also landless (Deut 18:1), and like pastoral nomads may have had common pastures (as Lev 25:34). The association of landlessness with murder is of course explicit in the case of Cain. It leads to the accusation leveled against the eponym of Levi as well (and Simeon) in Gen 34:25–31; 49:5–7. It is probably no coincidence, then, that in the national folklore the archetypal Levite, Moses, begins his career as a murderer (Exod 2:11–12)—of a foreigner, not a brother. Moses' face, too, was reputed in one tradition to have been disfigured (Exod 34:29–35, P), again through an encounter with Yhwh.

Both some prophets (Hos 12:14; Jer 15:1) and some Levites (*CMHE*, 195–215) traced their guilds to Moses—Elijah's flight to Horeb recapitulates Moses' epiphany there on the same understanding (1 Kgs 19:8–19). The paradigmatic revelation is, of course, that at Sinai, in the pasturelands of Moses' Midianite-Kenite father-in-law (Exod 3:1). Sinai is also the locus of Levi's first commission, according to an anti-Aaronic Levitic tradition (Exodus 32). All these links between certain strands of Israelite prophecy, the Levitic orders, and the Kenites center on the person of Moses. This suggests that there was a strong strain of primitivism connected with Moses in the Israelite cult. It reached a height, perhaps, in the mid-9th century during the careers of Elijah, Elisha, and Jonadab ben-Rechab. The Kenites either served as a model for primitivist movements or themselves embodied one. In either case, they will have enjoyed a sacral cachet that distinguished them from other pastoral nomads on the fringes of Judah and Israel.

In sum, the Kenites of Iron II Israel appear to have been a pastoral community, with a mixed dairy and meat production strategy (see Hesse 1986: 22 for an example), focused on lands in the vicinity of Arad. The rise of Kenite settlements in the 7th century suggests the regularization of their commerce with the state. This was presumably part of Manasseh's and Josiah's systematic resettlement of the hinterland in that era; and Kenite caravans may have played a substantial role in channeling the S trade through Jerusalem and the Assyrian province of Samerina (further, Halpern fc.). Nevertheless, the Balaam oracle also suggests that some Kenites were deported by Assyria (Num 24:22), presumably during a Sargonid

campaign in Arabia, but possibly as early as Tiglath-pileser III's war with the Arabs in 734–733. The priestly or cultic dimensions of the Kenite clan were probably restricted to shrines along the pilgrimage route to Mt. Sinai—Kadesh-barnea, perhaps, and Sinai itself. Other than the name, Yhwh of Teman, represented at Kuntillet ʿAjrud, their ministry has left no plain residue in the archaeological or biblical record.

C. Kenites and Israelite Proto-History

The relationship specifically between the Kenites and Moses is explicit in two texts only, both Deuteronomistic (or just earlier): Judg 1:16 and 4:11. These speak of "Hobab, the father-in-law of Moses." In the Pentateuch, Moses' father-in-law is named variously as Jethro (Exod 3:1; 18:1—E) or Reuel (Exod 2:18; Num 10:29—J). There have been various attempts to reconcile these differences (see Albright 1963). The most successful has been that which identifies Reuel in J (Exod 2:18; Num 10:29) as a scribal insertion meant to sustain a harmonization that makes both Jethro and Hobab not the father-in-law (*ḥtn*, vocalized *ḥōtēn*) but the brothers-in-law (*ḥtn*, vocalized *ḥātān*) of Moses (Bacon 1891: 111–12). In fact, the dissonance arises from variants in the oral tradition, probably based on familiarity with different groups of S nomads; it is probable, however, that the Judges texts reflect a misreading of J in Num 10:29 ("Hobab the son of Reuel the father-in-law of Moses") to imply that Hobab, not Reuel (as Exod 2:18), was the father's name. In any event, an easier harmonization would be to attribute to Moses more than a single wife.

Despite their difference on the name of Moses' father-in-law, the pentateuchal sources concur that Moses' in-laws were "Midianites." This element is absent from the texts in Judges, which describe Hobab as a Kenite. Scholars circumvent the problem by placing the Kenites in an early Midianite league (Dumbrell 1975; see Rowley 1950: 152–53), just as later (1 Sam 15:6) they came to be affiliated with Amalek. There is no evidence for or against this view (see further below).

The fact that J and E locate Moses' first encounter with Yhwh during his residence among his Midianite in-laws, and the fact that J speaks of Yahwism long before Moses, while E and P claim the name Yhwh was first revealed at Sinai (Horeb), spawned a thesis in the 19th century that Yhwh was a Kenite or Midianite deity. This thesis, which has consistently found staunch advocates, is commonly called the Kenite or Midianite hypothesis (for its history, starting with F. W. Ghillany writing under the pseudonym R. von der Alm in 1862, see Rowley 1950: 151ff.; 1963; cf. de Vaux 1969). Recent supporters cite possible Egyptian references, in the 14th–13th centuries B.C.E., to a "Yhwh Bedouin Land" (see *CTAED*, 121–22), perhaps near a place named Reuel and thus associated with Kenites (Weinfeld 1987: 305). This suggests worship of the god, somewhere in the region of Edom, before the development of a nation, Israel (Freedman 1987: 329; Weinfeld 1987: 309–10). Yhwh, after all, in the earliest Israelite poetry, was "the one of Sinai" (Judg 5:5), who marched to Israel's rescue from the Edomite southland (Judg 5:4; Deut 33:2). However, there is some question (Astour 1979: 30) as to whether the Egyptian epigraphs refer to the god Yhwh or to an abbreviated personal name (of the known form, Yahwi-DN).

Two archaeological arguments for the Kenite hypothesis merit brief attention. The excavations at biblical Timna, just N of Eilat, uncovered a 12th-century B.C.E. temple. This temple was characterized by what archaeologists call "Midianite" pottery. And, it was apparently a tent-shrine, much like the tabernacle in the biblical tradition. Inside it, the excavators uncovered a copper snake (Rothenberg 1972: 151–62). Curiously, the only zoomorphic icon associated with Moses in any source earlier than P is a copper snake called Nehushtan (2 Kgs 18:4; Num 21:9). The tent-shrine, if that indeed is what it was, is not altogether unexpected on the desert fringe, but it may be that Israel's notions of its early cult were in part shaped by Midianite-Kenite models. Snakes, too, were common icons in the Mediterranean basin: bronze serpent figurines have also been found at Megiddo (LB IIB), Hazor (LB IIA and IIB), Gezer (MB and LB IIA) and Tel Mevorakh (LB IIA), and it will not do to make too much of the coincidence (Stern 1984: 21–22 and Dever 1987: 230 supply further references).

The other archaeological indication of an early Israelite-Kenite nexus is even more circumstantial: the floruit of Midianite culture in the era of Israel's emergence into history. It is increasingly evident that, in the absence of a national state in LB II-Iron IA Edom, a mercantile culture, based in the region of

Qurayyah, dominated NW Arabia (Rothenberg and Glass 1983: 101–14). This culture, identified on the basis of biblical evidence as Midianite, sent out tendrils through S Canaan to the coast and Egypt, and along the King's Highway at least as far as Amman.

Synthesizing this data, Cross has suggested (in an unpublished paper) that an Israelite Exodus through or sojourn in Edom would have meant important contacts with Midian. Further, any migration northward in Transjordan toward the traditional Reubenite springboard for the invasion of Canaan must have followed the routes controlled by Midianite traders. Cross has also added an entirely fresh dimension to the literary case for a Kenite influence. He argues that Levites who looked to Moses as the founder of their order preserved memories both of the association between Moses and Midian (in J and E) and of Moses' activity in the area of Reuben in Transjordan. In the Mesha stele, and in the tradition that Moses declaimed Deuteronomy from the valley opposite Beth-peor, Cross finds evidence of an Iron II Israelite shrine in Reuben, in territory verging on that of the old Midianite confederacy.

More significantly, Cross has identified amid a welter of polemic against other Levites in the Aaronid source in the Pentateuch (Lev 10:1–7; Numbers 16–17) a strong strain denouncing precisely the Midianite traditions of the Mosaic (Mushite) Levites. J and E speak of Moses' marriage without any hint of censure—this, despite the fact that J's portrait of the serpent in the Garden of Eden (Genesis 3) does not, on the whole, commend itself as sympathetic to E's Mosaic snake icon (further below; contrast Soggin 1975: 99–102 on J as anti-Canaanite). But in Num 25:6–15, the Aaronid source (P) assails the Midianites as those who debauched Israel in the plain of Moab at Baal-peor: it was by taking action against the Midianites that Phinehas, the son of Aaron, secured an eternal priestly franchise to his line. Similarly, P portrays the Midianites as Israel's archenemies in Num 31:1–12; in this text, P even reverses the generally positive view that J and E take of Balaam because of Balaam's association with the villains of Numbers 25 (Num 22:7). P has a strong dislike for Midian, and holds it in the same sort of contempt that J (Exod 17:8–14) and Deuteronomy (25:17) reserved for the Amalekites: the Midianites are the first object of Israelite Holy War.

Cross has found more than P's polemic. He has found a riposte to it in the E source: E is the probable purveyor of the most open attack on Aaron in the Bible, the story of the golden calf in Exodus 32; it is the source of the story of Moses' snake, Nehushtan (Num 21:4–9). E also has links to Deuteronomy and is probably to be identified wth the Mushites (Friedman 1987). In Numbers 12, E recounts a story in which Aaron and Miriam denounce Moses' marriage to a Cushite wife—Cross identifies her as stemming from Cushan, a clan of the Midianite confederacy. Yhwh intervenes decisively on Moses' behalf. A more direct response to the Aaronid assaults on Midian could hardly be written (*CMHE*, 198–206).

To Cross's argument, we may add the consideration that P's polemic against Midian can have had no relevance whatsoever in P's own time: the Midianite league disappeared at the end of the 12th century, and Israelites attributed its demise to Gideon (Judges 7–8), whose victory Isaiah holds up as a model act of Yhwh (9:3; 10:26). In fact, Midian had flourished in a commercial condominium with Egypt. With the withdrawal of the Egyptian empire into Africa in the mid-12th century B.C.E. and the rise of new kingdoms in Canaan and Transjordan—the successor-states to Asian Egypt—trade languished, and Midian lost her middleman monopoly to inland hills centers to the N (for the archaeological data, note Sauer 1986: 10). This is the political background to the regularization of the Negeb settlements in the 11th century B.C.E., when increasing settlement by elements like the Kenizzites gradually led to the imposition of state authority from the N (cf. Finkelstein 1984). In any event, the only Midianites of which P could have known in Iron II were those in the background of the Mushite priesthoods. Thus, P treats Midian on the model of Amalek solely to attack his cultic competitors.

Cross's analysis of the literature suggests that the Mushite-Midianite network was a fixture of early Israelite tradition. Aaronic priests attacked it, as a target in their ongoing exchange with Mushites—P, alone among the pentateuchal sources, gives no hint of a link between Moses and Midian. And Mushite orders defended the connection, openly in Numbers 12. The ground for this tradition has been exposed in excavations in Israel, Egypt, S Transjordan, and the Hejaz. Some theological interaction between the

Transjordanian and Israelite settlers who homesteaded the Canaanite hills in Iron I and the traders of S Edom and N Arabia must therefore be conceded.

There are two points, however, on which the Kenite hypothesis requires qualification. The first is minor. Mushite traditions of kinship with the Midianites cannot be traced back tangibly to the period in which Midian still cohered as a local power. There is always the possibility, therefore, that recollections of Midianite domination in the region inspired the tradition. Too much weight should not be accorded this alternative; but it is worth remembering that the folklore is not history, and stops short of being authoritative testimony.

The second point is more significant. Numbers 12 speaks of a Cushite wife of Moses, not a Kenite. And J and E tie Moses to Midian. Similarly, Hab 3:7 employs Midian and Cushan as poetic complements. Conversely, 1 Samuel 15, which speaks rather cryptically of a Kenite bond with all Israel in the course of the Exodus, associates the Kenites with Amalek, not Midian. Amalek was another tribe or clan in the southlands of 11th-century Edom and Judah. What fuses Midian to the Kenites, and the Kenites to Moses (note *EHI*, 331)?

The two (Deuteronomistic) texts that explicitly describe an unmediated relationship between Moses and the Kenites (Judg 1:16; 4:11) tie Moses to a Hobab. J, in Num 10:29, identifies Hobab as a "son of Reuel, the Midianite." Reuel, incidentally, was the name of another (non-Amalekite) Edomite tribe (Gen 36:13, 17; further, Weinfeld 1987: 305 on the place name in a topographic list of Rameses III). It is possible that the invocation specifically of the Kenites, rather than the Midianites (or others) generally, represents a skillful parry to the Aaronid thrust against Midian. The Kenites in the Iron Age were celebrated aliens of the Israelites (see A above), who had produced the folk-heroine Jael. Appealing to the Kenites as the S nomadic party from whom Moses took his wife will have stilled the polemical rapier. Thus, the early traditions (J, E) are vague about the distinctive identity of Moses' in-laws. The version set out in Judg 1:16 and 4:11 may have appropriated actual Kenite claims; it may reflect cultic cooperation between Kenites and Levites in the S; it may even reflect Kenite exploitation of the pilgrimage routes to Kedesh and Sinai. Whether it preserves an authentic recollection remains an open question.

If one can speak with any assurance about any aspect of the Exodus, then the group that experienced Egyptian bondage or the succor at the sea (Exod 15:1–18) furnished a national myth, a national identity, for the Iron I Israelites. In disseminating this myth, the landless Levites became Israel's primary ritual specialists. Since these priests brought with them a gospel of a god located at Sinai, in Midian, it is reasonable to look for their concrete origins there: in the national folklore, naturally, their forebear had to be an Israelite; the memory of involvement with Midianite elements (or S nomadic elements) was preserved with that of the home of their god. Later, their traditions of connubium with Midianites came under the guns of the Aaronid temple priesthood. By that time, however, their history, and their old cultic practice, were fixed in doctrine.

BARUCH HALPERN

KENIZZITE [Heb *qĕnīzzî* (קְנִזִּי)]. See KENAZ (PERSON).

KERAK (M.R. 217066). A site in ancient Moab situated above Wadi el-Kerak which drains the Moabite plateau into the Jordan valley (this site should not be confused with Kh. Kerak on the SW shore of the Galilee, which has proved important in ceramic typology and chronology of the EB period; see KHIRBET KERAK WARE and BETH-YERAH).

A. Name and Identification

The Arabic name *al-Karak* derives from Aramaic *karḵā* "the walled town, city"; the root *krk*, meaning "to circumvent; to enclose," is peculiar to Aramaic. The name of the site in the Hellenistic-Roman-Byzantine periods was *Karakmōbā* "the fortress-city of Moab," attested, in various spellings (*Charach-*, *Charak-*) since Claudius Ptolemaeus (middle of 2d century A.D.; cf. Canova 1954: LXI). Presumably, the name *Karakmōbā* derives from the Persian period, when Aramaic was the official language of the administration.

The Moabite name of Kerak is unknown. Generally, the Moabite city (or cities) of Kir (Isa 15:1), Kir-heres (Jer 48:31, 36; Isa 16:11), and Kir-hareseth (Isa 16:7; 2 Kgs 3:25) are identified with Kerak (Musil 1907: 58; Glueck 1935: 4; Abel, *GP* 2: 418–19). This, however, is difficult to prove. Kir occurs only once (Isa 15:1), where it stands in parallelism with Ar. If Ar refers to a landscape, not to a city, Kir was probably the capital of this district. In Moabite, **qīr* denotes "city" (*KAI* 181.11, 12, 24, 29). Ar was probably the region between Wadi Mūjib and Wadi el-Ḥasā (Weippert 1979: 18); its natural center is er-Rabbah, ancient Rabbathmoba. Kir-heres/Hareseth is used parallel to "Moab" in Isa 16:7, 11; Jer 48:31, 36. In Jer 46:38, "Moab" is a designation of a city, too, i.e., the capital city of Moab, which is in accordance with Late Assyrian and Neo-Babylonian usage. These texts attest that Kir-heres/Hareseth was, at a time, the capital of Moab. They do not say much about its location. The same holds true for 2 Kgs 3:25. In 2 Kgs 3:4–27, only vv 4–6 contain reliable information (Bartlett 1983: 145). What really happened in this war is documented in the inscription of Mesha (*KAI* 181). According to this inscription,

Dibon was the capital of Moab in Mesha's days. If one should look for Kir-heres/Hareseth S of Wadi Mūjib, both er-Rabbah and el-Kerak are reasonable candidates for the location (cf. Iron Age evidence from er-Rabbah; Miller 1982). Only excavations at both sites could help to settle the question. *Qîr Ḥăreśet/Ḥereś* probably means "city of the woodland" (cf. Arabic *ḥirš* "wood"). If the absence of large-scale Iron Age settlement activity in the Wadi el-Kerak means that the wadi slopes were wooded in the Iron Age, the name could be an argument in favor of Kerak. There is, however, not enough information available from the Moabite plateau for the Iron Age. On the other hand, Kerak lay off the major roads of the Iron Age and the Roman-Byzantine periods; er-Rabba did not (Worschech and Knauf 1985).

B. Description

Kerak occupies the upper ridge of a spur protruding into Wadi el-Kerak from the S. Steep slopes on the N, E, and W sides protect the settlement. A moat excavated by the Crusaders on the S side separates the town from the ridge, and adds to its natural strength. Apart from this, and according to the Madaba mosaic map, Byzantine Kerak had the same extent as had the Crusader through Ottoman city, the wall of which is still preserved. In order to reach their fields on the Moabite plateau or in Wadi el-Kerak, the inhabitants of Kerak had to cover wide distances. In the last century, some spent their summers in tents on their fields. For water, they depended on cisterns, or brought water from springs in Wadi el-Kerak.

C. History of Exploration

The archaeological data for the history of Kerak and the upper part of Wadi el-Kerak consists of only surface surveys. From 1896 to 1902, A. Musil spent several months in Kerak and left an unsurpassed account of the ethnography of the late Ottoman city, and the topography and ecology of its surroundings (Musil 1907: 45–62 and passim). W. F. Albright visited Kerak in 1924 (Albright 1924: 10–11), and N. Glueck passed there in 1934 (Glueck 1935: 4). Both picked up "Moabite" (that is 9th/8th through 6th/5th centuries B.C.) and later pottery from the site. From 1936 to 1939, R. Canova, an Italian classicist lived in Kerak and collected inscriptions, mostly Greek Byzantine tombstones, from the city and its vicinity (Bagatti 1978). Canova's book (Canova 1954) is the only historical and archaeological monograph published on Kerak until now. The upper part of Wadi el-Kerak, the immediate environment of the site, was surveyed by J. M. Miller's survey of the Moabite plateau in 1982, by H. Donner and E. A. Knauf in 1983 (Donner and Knauf 1985), by S. Mittmann and E. A. Knauf in spring 1984, and by U. Worschech and E. A. Knauf in summer 1984 (Worschech 1985: 61).

D. History of Occupation

In the late Ottoman period, the whole area between Wadi Mūjib and Wadi el-Ḥasā was known as *arḍ el-Kerak* "the land of Kerak" (Musil 1907: 1). This reflects the fact that Kerak was the center of that region in times of insecurity and instability, when permanent settlement retreated into the wadis W of the plateau. In times of high security and high density of settlements on the plateau, the natural center of this region was er-Rabbah, Rabbathmoba "the capital of Moab."

The EB Age predecessor of Kerak, a walled town, is situated W of Kerak in Wadi el-Kerak, overlooking ʿAin es-Sārah, and was called Khirbet ez-Zuṭṭ until recently (today eṣ-Ṣāliḥīyeh). Evidence for MB, LB, and early Iron Age occupation is sparse in Wadi el-Kerak, which was, however, intensely settled by agricultural communities from the Nabatean through the Ottoman period (1st–20th centuries A.D.). Kerak must have been a major city since, at least, the 9th century B.C. This is attested by a fragment of a Moabite royal inscription, probably left by Mesha (Reed and Winnett 1963; Freedman 1964), and by fragments of Iron Age monumental architectural decoration from Kerak (a lion's relief in basalt; Canova 1954: 8) and from ʿAin es-Sārah below Kerak (a proto-aeolic capital; Donner and Knauf 1985). Note, houever, that the wadi system to the N of Wadi el-Kerak, Wadi Ibn Ḥammād, was not under Moabite control until the time of Mesha (*KAI* 181.31–33; Worschech and Knauf 1986: 84–85). If Kerak had not been already the administrative center of its region at the end of the Moabite kingdom, it became the center in the Persian period (539/520–332 B.C.). This seems to be attested by the name of the site in classical antiquity (see above), and may indirectly be attested by an inscription in official Aramaic, dated to the fifteenth year of some ruler (probably Ptolemaeus II), which contains a remarkable number of Arabic names and words (Milik 1959: 330–41; Lipiński 1975: 261–62). Both with their seat of

administration, and their language of administration (on a local level), the Ptolemies may have taken over Persian usage.

Nabatean presence at Kerak is attested by the fragment of a half-bust with parallels at Petra, Kh. et-Tannūr, and Kh. el-Mesheirfeh (Musil 1907: 53 fig. 18). Charachmoba had the status of a *polis* at the time of Hadrian, and minted coins under Elagabal (Piccirillo and Spijkerman 1978: 108–15). In the Byzantine period, Kerak became a bishopric. The regional center of the Arḍ el-Kerak in the Roman, Byzantine, and Umayyad periods, however, was er-Rabbah. The center shifted back to Kerak with the Crusaders in 1142 (Mayer 1987). Regained by the Muslims in 1188, Kerak remained the administrative center for S Jordan throughout the Ayyubid, Mamluk, and Ottoman periods (Bakhit 1982).

ERNST AXEL KNAUF

KEREN-HAPPUCH (PERSON) [Heb *qeren happûk* (קֶרֶן הַפּוּךְ)]. The third of Job's daughters born to him after the restoration of his fortunes (42:14). The name means literally "horn of antimony" (cf. Driver and Gray, *Job* ICC). The typical Hebrew word for "horn" here certainly means "container" or "flask" (cf. 1 Sam 16:1 and 1 Kgs 1:39 for analogous usages). "Antimony" is a black powder still used as mascara to darken the edges of the eyes in order to contrast with the natural color of the eye. Note Jezebel's failed attempt to woo the maniacal Jehu by "painting her eyes" (2 Kgs 9:30) and Jeremiah's scornful description of the evil Jerusalem as a harlot, seeking to "enlarge your eyes with paint" (Jer 4:30). As in the names of her two sisters, "Turtle-dove" and "Cassia," the name Keren-Happuch appears to have been chosen to refer to the beauty and charm of the girl: "In all the land no women were found more beautiful than Job's daughters" (42:15). See also JEMIMAH; KEZIAH.

JOHN C. HOLBERT

KERIOTH (PLACE) [Heb *qĕrîyôt* (קְרִיּוֹת)]. Hebrew word for "cities" and a proper noun, a well fortified town in Moab's tableland mentioned in oracles of Jeremiah (48:24, 41) and Amos (2:2). Although the use of definite articles in Jer 48:41 and Amos 2:2 seem to support the LXX's translation "the cities," in Amos 2:2, it is probable that all three appearances of Kerioth in the OT refer to the name

of a town. Most decisive is the reference to Mesha's dragging of the *ariel* of Ataroth before Kemosh at Kerioth (Mesha Inscription, line 13). A number of archaeological sites have been identified with ancient Kerioth, including el-Qereiyat (M.R. 215105), SE of Kh. ʿAṭṭarus, and Kh. Aleiyan (M.R. 233104), NE of Dhiban.

GERALD L. MATTINGLY

KERIOTH-HEZRON (PLACE) [Heb *qĕrîyôt* (קְרִיּוֹת) *ḥeṣrôn*]. A settlement of the tribe of Judah (Josh 15:25). Kerioth-hezron is only mentioned this one time, where it is listed among the settlements occupied by Judah in the aftermath of the conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Kerioth-hezron is in the southernmost district of Judah, the Negeb.

The location of Kerioth-hezron is problematic. In the list it is placed between Hazor-hadattah and Amam. Some scholars read these as separate names, Kerioth (and) Hezron, assuming that a *waw* has been lost. Hazor-hadattah means "New Hazor," and Kerioth-hezron is qualified by "that is, Hazor." It seems that the author intended to make clear that he was referring to two towns in the same region with similar names. The name means "towns of Hezron." Hezron was a descendent of Judah (1 Chr 2:3, 5); his sons, Jerahmeel, Ram, and Caleb all settled to the south of Jerusalem (1 Chr 2:9). If Aharoni is correct, the Jerahmeelites settled in the vicinity of Arad (1979: 216), while Caleb centered around Hebron (Josh 14:6–15). Kerioth-hezron may lie between Hebron and Arad. A possible location is Khirbet el-Qaryatein, 8.5 km north of Arad (M.R. 161083). See also *GP* and *LBHG*.

JEFFREY R. ZORN

KERMES INSECT. See ZOOLOGY.

KEROS (PERSON) [Heb *qîrōs* (קִירֹס)]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubabbel (Ezra 2:44 = Neh 7:47 = 1 Esdr 5:29 [Gk *kēras*]).

MICHAEL DAVID MCGEHEE

KERYGMA PETROU. See PETER, PREACHING OF.

KETAB (PERSON) [Gk *Kētab* (Κηταβ)]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:30). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear in their lists of returning exiles (see Ezra 2:46; Neh 7:48). Differences such as this raise questions about the literary relationships among the texts.

MICHAEL DAVID MCGEHEE

KETHIB AND QERE. A variance in the Masoretic Text between "what is written" (Heb *kĕtîb*) in the consonantal text and "what is read" (Heb *qĕrê*) according to the tradition of vocalization. These variances arose for a variety of reasons over the centuries of textual transmission, and are noted in several sources. The causes and classifications Kethib and Qere notations figure significantly in the biblical scholar's understanding of the transmission and interpretation of the Hebrew Bible. See MASORETIC TEXT.

———

A. Terminology
B. Sources
    1. Marginal notes
    2. Masoretic lists
C. Origins of *kĕtîb* (K) and *qĕrê* (Q) Notes
D. Classes and Causes of K/Q Variations

1. Nonstandard Orthography in the K
2. Variations Due to Language Change
3. Scribal Errors in the K
4. Scribal Errors in the Parent Text of the Q
5. Variant Textual Traditions
6. Epexegetical Alterations of the K

A. Terminology

The words *kĕtîb* and *qĕrê* are Masoretic terms used with reference to texts in the Hebrew Bible in which the received reading tradition, the *qĕrê,* suggests an orthography which is at variance with what is written in the consonantal text, the *kĕtîb.* The difference in orthography is usually more substantial than the placement of vowel letters, but *kĕtîb* and *qĕrê* notes will comment on unusual cases of *mālēʾ* (full) or *ḥāsēr* (defective) spellings.

The words *kĕtîb* and *qĕrê* are Aram *Peʿil* participles meaning "what is written" and "what is read," respectively. The traditional pronunciation of the word *qry* as *qĕrî* arose by analogy with the vocalization of the word *ktyb.* The term *qry* has been interpreted both as an imperative form and as a participle. Its identity as a passive participle can be determined, however, by analogy with the use of the term *ktyb* in Masoretic notes of the type *ktybn wlʾ qryyn* (plural for: "written but not read").

The following abbreviations will be used in this article:

A The Aleppo Codex
C The codex of the Prophets found in the Cairo Geniza
K *kĕtîb*
K/Q *kĕtîb* and *qĕrê*
L Leningrad Codex B 19A
Mp Masora parva
Q *qĕrê*

B. Sources

There are two major sources for identifying instances of K/Q variations: (1) notes in the Mp of the Hebrew Bible; (2) independent Masoretic lists of K/Q situations. In addition, the various mss and editions provide instances of the class known as *qĕrê perpetuum* "perpetual *qĕrê,"* as well as unnoted cases resembling those identified in sources (1) and (2).

The class of *qĕrê perpetuum* comprises words never subject to K/Q notes, although their pronunciation implies an orthography different from the written text. It includes three proper names: the Tetragrammaton *yhwh* (pronounced *ʾădōnay*), Jerusalem, and Issachar. The pronunciation of *hwʾ* as *hîʾ* in the Pentateuch is often considered to be another *qĕrê perpetuum,* but this depends on the ms. In L, *hwʾ* is subject to a Q note in the Mp of the Pentateuch four times: Lev 6:18, 22; 13:20; Deut 13:16.

1. Marginal notes. Marginal annotations of K/Q situations do not appear in synagogue scrolls because these scrolls can contain only the unvocalized consonantal text if they are to be used liturgically. Some early pointed mss also do not mark K/Q situations. Examples of K/Q notes in the Mp of various mss may be found in Fig. KET.01.

a. Tiberian. It is the K/Q notes of the Mp from the Tiberian tradition which are most often referred to in discussions about *kĕtîb* and *qĕrê.* The manner in which they appear has been described in detail by Yeivin (1980 §§93–97). K/Q notes do not stand out from other Masoretic notes in the Mp of fully developed Tiberian mss. In less developed or complete mss, K/Q notes stand out as a class. They are the only kind of note from the Mp to be recorded in most printed editions. Some editions note the Q by printing it in the margin with its vocalization and leave the corresponding K unvocalized. Mss associate the vowels of the Q with the corresponding K and leave the consonants of the Q in the margin unvocalized. In either case, it is understood that the vowels in question belong to the Q and not the K (Yeivin 1980 §§94, 97).

K/Q readings are usually recorded by placing a small circle (the typical indicator of a note in the Mp) over the K with a marginal note indicating the Q reading over the word *qry* which appears in the margin

of mss either written in full (infrequently) or in abbreviated form (commonly). It is typical for the entire wording of the Q to be recorded in mss like L and A, but some of their K/Q notes record only the letter of syllable actually affected by the Q (see Fig. KET.01 (a)). Earlier mss are more likely to have abbreviated citations. So, e.g., C has more partial Q citations than L or A.

Another K/Q indicator is the marginal sign that resembles a somewhat thick and elongated *zayin* or final *nun* (see Fig. KET.01 (b)). It is usually dotted. This sign is also found in mss with Palestinian and Babylonian pointing. Neither the origin nor the distribution of this sign have been adequately explained. Despite various efforts to identify it as an abbreviation, the sign may simply be a mark which happens to look like a final *nun* or a *zayin.* Its distribution is puzzling. For example, in L of the former prophets, it is only found at Judg 20:13. It occurs twice in the book of Psalms (Pss 105:28; 129:3), but thirteen times in Job. Printed editions often neglect to record it (but cf. *BHK* on Judg 20:13). They either register only the term *qry* which usually accompanies this sign or substitute a note using *qry* for the original as, e.g., Job 39:30 in *BHK* and *BHS.*

Some notes use the word Heb *yattîr* "additional, superfluous," and its abbreviations to mark a Q form (see Fig. KET.01 (c)). This term is not as common as *qĕrê* and is limited to cases in which the *kĕtîb* has a letter which is not heard in the pronunciation of the text. Manuscripts will not only vary internally with regard to the use of *qry* or *ytyr,* but will also differ between themselves in the use of this term (see Fig. KET.01 (e)).

The terms *qry* and *ytyr,* and the *nun*-like sign may all be considered formal markers of cases of K/Q variance. K/Q cases are also subject to other forms of Masoretic notation. Fig. KET.01 (d) records the use of the Masoretic term *sĕbîr* (pl. = *sĕbîrîn*) to mark a situation which may also be subject to a K/Q note. The significance of *sbyr* has been debated. It was likely used to mark an unusual phrase or word in the *kĕtîb* and to warn against a correction to another form (Barr 1981: 23–24). The terms *qry* and *sbyr* can be distinguished by the source of error they refer to in L. K/Q notes mark passages where the reading tradition might lead a scribe to alter the K, but the *sbyr* also marks places where a correction might be motivated by unusual syntax in the text such as a lack of agreement in gender or number (e.g., Gen 19:23; Num 13:22; 1 Kgs 22:43). The number of *sbyr* notes in different mss varies and it is not uncommon to find one ms list as a *sbyr* what another ms records as a *qry* (Yeivin 1980 §109).

Even within a single ms, a situation may be recorded in one place with a K/Q note and in another with different Masoretic terminology. This is particularly true of cases involving vowel letters. The Mp of L on Gen 13:3 marks the unusual spelling of Heb *ʾhlh* meaning "his tent" with the note "*waw* is read." But elsewhere, the Mp notes that the word *ʾhlh* appears four times with the vowel letter *he* standing for *ḥolem* (Gen 9:21; 12:8; 35:21). Different mss will also vary in the designation of cases of unusual or defective spellings as K/Q situations (see Fig. KET.01 (f)).

Manuscripts can also vary in their placement of the vowels of the Q in conjunction with the consonants of the K. This is most obvious when K/Q notes point to a case of inverted consonants. The preference in a ms like L is to place the vowels in the order that they are found in the Q. Manuscript A, however, prefers to invert the vowels in order to place them under their proper consonants. This difference between A and L stems from the disagreement between Karaite and Rabbinate Masoretes as to whether only the consonantal text was given to Moses at Sinai, or whether the divine revelation also disclosed the vowel signs and accents. The latter position was held by the Karaites (and so also by A), whereas L generally follows the Rabbinate line (Yeivin 1962: 146–49).

It is well known that mss and editions of the Hebrew Bible differ in the number of K/Q notes which they contain in their Mp. A major reason for this inconsistency arises from the fact that K/Q examples are not noted systematically in the Mp. In L, for example, the K/Q on *nʿr* / *nʿrh* is faithfully noted in Deuteronomy 22 but never in Genesis 24. Through the centuries there has been a trend toward greater systematization of the various texts of the Masorah found in the mss. The body of K/Q notes published by Jacob ben Hayyim in the second Rabbinic Bible is a compilation of those found in various mss. Ginsburg's collation of editions found anywhere from 901 to 1353 recorded K/Q notes (Ginsburg 1869: 723). In the case of L, a fairly accurate facsimile of the Mp may be found in *BHK.* The edition of the Mp

prepared for *BHS* adds many more K/Q notes in an effort to harmonize the notes of the Mp with those of the *masora finalis* and *masora magna* of L. But students using *BHS* are apt to arrive at a false impression about the number of K/Q notes the Mp of L contains and also about the manner in which some of them are registered.

b. Palestinian. Evidence for the manner in which K/Q notes appear in the margin of Palestinian mss has been collected by Revell (1977: 238–47). Examples of this tradition are found in Fig. KET.01 (g). It is common to find the marginal mark which resembles a (dotted) *zayin* or final *nun* used with no further note. K/Q notes may also consist only of a dot or double dot over the affected part of the K with no further note or only two dots written beside the line containing the K. There are also a number of cases where the double dot or *nun*-like mark occur in conjunction with the dot(s) over the K. Where the consonants of the Q were originally recorded in the margin, abbreviated citations of the Q slightly exceed full citations of the Q. Palestinian biblical mss represent a popular text type which shows little independence from the Tiberian tradition in their Masoretic notes (Revell 1974: 87).

c. Babylonian. Babylonian mss show various degrees of independence from the Tiberian tradition. To date, no comprehensive study of their K/Q notes has been published. The texts on which these remarks are based were published by Kahle (1913). The Babylonian tradition has a variety of ways in which it records K/Q cases; only the more frequent will be described here. Instead of the Tiberian circle, the supralinear marker is usually an abbreviation of the term *ktyb.* The marginal note records the corresponding Q with the abbreviation for *ktyb* above it and the abbreviation for *qry* below it. Babylonian mss may point the Q as well as the K. It is not uncommon for a ms simply to register the *qry* in the margin and leave the *ktyb* unmarked.

Babylonian mss are important to compare with Tiberian texts because many of them stem from the schools of Masoretes identified as the *madinḥā›ê* (Easterners), whereas the Tiberian schools tend to represent the *ma‹arbā›ê* (Westerners). Most of the recorded differences between the Easterners and the Westerners are matters of K/Q (see, e.g., the list of Gordis 1937: 214–15). Variations attributed to the Easterners and Westerners in the standard Masoretic list affect about 10 percent of K/Q situations in the Prophets and Writings. But the proportion of disagreement on K/Q readings between Babylonian and Tiberian mss is even greater (Yeivin 1980 §96).

2. Masoretic lists. Testimony to the oldest independent list of K/Q variants is found in *b. Ned.* 37b:

> Rabbi Isaac said, "The pronunciation of the scribes (*mqr› swprym*), the omissions of the scribes (*‹yṭwr swprym*), words read which are not written in the text (*qryyn wl› ktybn*), and words written in the text but not read (*ktybn wl› qryyn*) are a law of Moses from Sinai."

The text continues with examples of each of these classes. R. Isaac belonged to the third generation of ›Amoraim and taught in Babylon toward the close of the 3d century C.E.

The K/Q classes of "read but not written," and "written but not read" are also mentioned in tractate *Sop.* (6: 8–9). *Sop.* was compiled sometime after the final redaction of the Babylonian Talmud. It is usually dated to the Gaonic period about the middle of the 8th century C.E. *Sop.* also lists the following K/Q situations: words written *l›* but read as *lw* and vice versa (6: 5–6), the K/Q *y‹wl / y‹yl* (6: 7), words written in the singular but pronounced as plural (7: 1), words written with a *he* which is not pronounced and vice versa (7: 2), words written as one word but read as two and vice versa (7: 3), and words spelled with a *waw* but read as with a *yod* vowel letter (7: 4). Similar lists also occur in the collative lists of the *masora magna.* Lists of this kind are rare in the *masora magna* of L, but see, e.g., no. 782 in Weil's edition (1971): "Fourteen words written with the vowel letter *he* but read with the vowel letter *waw*." The systematic compilation of lists of this kind eventually resulted in independent Masoretic treatises of the type known as *›oklah we›oklah* (Lyons 1974: 62). Lists of K/Q situations are prominent in these treatises. See, e.g., lists nos. 80, 81, 97–100, and 105–59 in the edition of Frensdorff (1972), originally published in 1864.

C. Origins of *kĕtîb* (K) and *qĕrê* (Q) Notes

Discussion of the origins of K/Q notes must distinguish the question about how the notations of K/Q situations came to be composed, from questions concerning the origins of the variations they record. The

position taken here is that the K/Q variations represent alternate traditions, each accepted in a certain circle. The K represents the written tradition accepted by the scribes who copied the consonantal text, while the Q represents the oral reading tradition accepted by the readers and synagogue schools (Breuer 1981: 261). K/Q notes, whether recorded in lists or in the Mp of mss, are the work of the Masoretes, the scholars who produced the first pointed biblical mss. The Masoretic scribes knew by heart what was to be read, the Q. Precisely where the Q did not agree with the K, there was a danger that the Q might affect the orthography of the K. Hence, passages were noted where the Q suggested an orthography at variance with the K. This is in accord with the dominant character of Masoretic operations which throughout are meant to safeguard the copying of the consonantal text (Barr 1981: 36–37).

Two arguments can be advanced in favor of the view that the Masoretes are the creators of K/Q notes. First, there is no evidence for marginal notations of K/Q cases before the time of the Masoretes. Second, the K/Q notes in the Mp cannot be divorced in either terminology or function from the bulk of Masoretic activity.

The argument from manuscript evidence is weakened because of the gap in evidence between the finds of the Dead Sea Scrolls and the earliest Masoretic mss. It is noteworthy, however, that biblical mss found among the Dead Sea Scrolls contain no system of marginal notation corresponding to K/Q situations. The evidence of the early versions does not shed any light on this problem, either. There is no decisive preference shown in the LXX for either the K or the Q (Yeivin 1980 §106). The Targums prefer the Q (Sperber 1973: 132–33). But this is to be expected given their origins as translations of the synagogue readings. Several passages in rabbinic literature show knowledge of discrepancies between the consonantal text and the received reading tradition. Some even use the formula "it is written, but we read," e.g., *b. Menaḥ.* 89b on Lev 23:13; *ʿErub.* 26a on 2 Kgs 20:4; cf. also *Gen. Rab.* 34:8 on Gen 8:17 (for further examples see Bamberger 1923: 232–39; Yeivin 1980 §105). But the evidence falls short of indicating that the rabbis knew about the presence of marginal notes to the K.

Positive evidence for the Masoretic origins of K/Q notes comes from a consideration of their form and function. They are written in the same script and form as other notes in the Mp. The functional vocabulary applied to K/Q cases is also applied to other situations in the Mp. For instance, the note on *šmnt* in L at Num 3:29 reads, "defective in the whole Bible and always read (*qry*) in this way with one exception." The note on *wph* in Josh 18:8 reads "occurs twice, once written (*ktyb*) *pe he* and once written *pe ʾalep.*" This is a common kind of note in the Mp.

As with other types of notes in the Mp, a number of K/Q notes are at odds with the details of the text. In L, Exod 16:7, Ezek 6:3, and Ezra 10:44 have a Q which equals the K. Other texts have notes which are erroneous, such as those on Ps 99:6 and Dan 2:35 in L. These kinds of inconsistencies indicate that K/Q notes were not simply derived from the ms to which they were attached. The majority were probably taken from older sources transmitted in Masoretic circles (Rubinstein 1961: 129–30).

One must also consider the fact that K/Q readings figure prominently in Masoretic lists of the collative type. The composition of *Sop.* points to the beginning of Masoretic work as the enumeration of various known features of the orthography of the consonantal text and their arrangement into lists (Yeivin 1980 §150). It is significant that this same tractate has a number of lists of K/Q situations. It is likely that the various details of the Mp including those of K/Q were first transmitted in Masoretic lists (Rubinstein 1965: 16–17). Many of these lists probably first circulated orally before they were written down, either in the form of the Mp or *masora magna* (Lyons 1974: 63–64).

The view articulated here is in opposition to two other opinions about the origin of K/Q notes: (1) that the marginal Q notes are the result of a process of manuscript collation and represent a record of variant readings; (2) that the Q notes were meant to correct the K where it was supposed to be in error. These theories are not mutually exclusive and some have proposed that the collection of K/Q notes is a result of both ms collation and correction.

The collation theory was first put forward by David Kimḥi (ca. 1160–1235). Kimḥi suggested in his introduction to the Former Prophets that Ezra found the state of biblical mss in disarray because of the Babylonian exile. Variant readings were resolved by the device of the K/Q notes inserted in the ms

margin. Theories related to this view have been prominent in later critical scholarship (Bamberger 1930: 39–41; Gordis 1937: 9–12). In this century, both Gordis (1937) and Orlinsky (1960) have proposed theories of ms collation to explain the origins of the K/Q notes in the Mp. A suggestive text they (and others) have pointed to in this regard has been the report of *j. Taʿan.* 4: 2:68a and its parallels (Talmon 1962: 16–17):

> Three scrolls of the Torah were found in the Temple Court: the *mʿwnh* scroll, the *zʿṭwṭy* scroll, and the *hyʾ* scroll. In one of them they found written *mʿwnʾ lhy qdm* (Deut 33:27) and in the other two they found written *mʿwnh;* they adopted the reading of the two and discarded the reading of the one. In one they found written *wyšlḥ ʾt zʿṭwṭy bny yśrʾl* (Exod 24:5) and in the other two they found written *wyšlḥ ʾt nʿry bny yśrʾl*; they adopted the two and discarded the one. In one they found *hyʾ* written nine times, and in the other two they found it written eleven times; they adopted the two and discarded the one.

Gordis's theory of a pre-Masoretic collation is vulnerable to the observations about the Masoretic origins of K/Q notes made above. Orlinsky was more sensitive to the relationship between the placement of notes in the Mp and the beginning of Masoretic activity than Gordis. But it is highly uncertain that ms collation was a characteristic type of Masoretic activity as he suggests (Barr 1981: 21). Recent study of the report of the three scrolls has denied that it speaks of ms collation, but instead reports on the process whereby three nonconforming scrolls were discarded from use (Talmon 1962: 15–18). A related problem is the presence of just one Q for each K in the Mp. It would be quite natural for the transmission process to generate multiple variants for a single text (Rubinstein 1959: 128). In fact, the existence of just one Q for any K is a difficulty for all collation theories. It is explained, however, by the assumption that the Masoretes combined the reading tradition they knew with the ms they chose to point. There need only be one Q for each K because the reading tradition was considered in relation to only one ms.

Sperber contended that most of the Hebrew Bible was transmitted in two recensions, one of which is represented by the K and the other which is represented by the Q (1943: 299–311). The scribes sought to preserve the details of these two recensions when they standardized the MT. They used the technique of K/Q to preserve one recension in the K and the other in the Q. It is possible that some K/Q readings are derived from different recensions (see D.5 below). But this idea is no explanation for the composition of K/Q notes, nor can it be extrapolated into a general principle which will explain the origins of all the variants the K/Q system records.

The first to propose the correction theory was Abrabanel (ca. 1437–1508) in the introduction to his commentary on Jeremiah. He suggested that Ezra and his followers found that the sacred books contained irregular expressions, and loose and ungrammatical phrases arising from carelessness and ignorance of the inspired writers. These were corrected by the Q notes found in the Mp. Modern support for the view that K/Q notes are the result of critical work on erroneous readings usually uses the correction theory as a supplement to the textual collation theory (e.g., Ginsburg 1869: 723–24; Würthwein 1979: 17–18).

A decisive blow to the correction theory arises from the probability that the K/Q notes are the work of the Masoretes. The Masoretes labored to preserve the text as accurately as possible in the form in which they received it. Correction of the text is incompatible with the goals of Masoretic activity (Gordis 1937: 19–20). It is likely, however, that some variants recorded in the K/Q system are corrections or alterations which originated in the reading tradition (see D.6 below).

D. Classes and Causes of K/Q Variations

The classification of K/Q cases can proceed on two separate levels. First, K/Q readings may be described formally, i.e., in terms of the orthographic differences that they entail. Second, K/Q situations may be classified in terms of the various reasons for their creation. It will often happen that variants which show similarity on the level of form will have arisen due to different pressures on the K and Q traditions.

Masoretic lists of the collative type contain formal descriptions of K/Q variations. Elias Levita (1538: 182–95) suggested a sevenfold division of K/Q variants which is still useful: (a) letters of words read in the Q but not written in the K and vice versa; (b) letters interchanged between the K and Q; (c) transpositions of letters (metathesis); (d) two words in sequence with the first having a letter belonging to

the second and vice versa; (e) words read but not written and vice versa; (f) expressions written as one word but pronounced as two and vice versa; (g) substitutions or euphemisms. A catalogue of K/Q readings classified according to this system appears in Bamberger (1923: 221–29). More modern attempts at classifications have generally combined analyses of the formal distinctions between K/Q readings and their causes. Among the most notable are those of Ginsburg (1869), Gordis (1937), and Barr (1981).

A traditional view of the origin of the K/Q notes holds that the Q represents the ordinary meaning of the text while the K represents some hidden or mystical meaning. Both were regarded by this view as equally inspired and to have originated with Moses. It is apparent, however, that the divergences between the K and the Q are the result of a long and complex history of transmission. The variations recorded by the K/Q system are due to a number of different causes. These include textual variations, dialectical differences, and correctional and epexegetical tendencies of the Q. Others are recorded because the K was written before the spelling conventions marked by the Q were standardized.

A detailed account of the etiology for each K/Q situation in a ms like L demands a book-length study, but no such work has appeared since it was undertaken by Gordis. The kinds of pressures which have created K/Q readings are generally indicated below. The examples have been taken from the Mp of L. In every case, they are only illustrative and are not to be taken as exhaustive.

1. Nonstandard Orthography in the K. A large number of K/Q notes record divergences in the orthography of the K and are meant to prevent correction of the K to the standard orthography of the word pronounced in the Q. These notes affect cases like the following:

a. 3 masc. sing. suffix on plural nouns. For example, *mṭb‹tw / mṭb‹tyw* Exod 28:28. Lachish letter 3:18 contains the spelling *w›nšw* meaning "and his men." It is likely that the K is a traditional consonantal spelling of the later full orthography which the Q indicates is standard (Orlinsky 1943: 271–72).

b. Unusual mālē› spellings. Examples include notes on words spelled with a double *yod* and a defective *ḥolem,* e.g., *ṣbyym / ṣbwym* Gen 14:8; *ḥolem* marked by *›alep,* e.g., *l› / lw* Exod 21:8; and *šureq* marked by *he,* e.g., Lev 21:5.

c. Unusual ḥaser spellings. Note *lk / lkh* in Num 23:13. Another candidate which might be included here is the variation *n‹r / n‹rh* in Deuteronomy 22. It is possible, however, that this example could be better analyzed as a lexical variant (see sec. D.2. below) in which the epicene *n‹r* found in the K has been resolved into its feminine counterpart in the Q.

2. Variations Due to Language Change. This class contains important evidence for dating the relative age of the language represented by the Q. For instance, in the case of the reading tradition for biblical Aramaic, it can be shown that it represents a language similar to the Aramaic of the Dead Sea Scrolls. But some features of the Q point to a later form of that dialect (Morrow and Clarke 1986: 421–22).

a. Phonological shifts. This class refers to shifts in sound which have not resulted in morphological change in the inflection of the word. Examples include:

(1) Quiescence. Note that *hqly›* (1 Sam 17:17) and *wšyṣy›* (Ezra 6:15) are both examples of words which have the annotation *ytyr›* "superfluous *›alep"* in the Mp. The danger that such a word might be written without the silent consonant can be illustrated by the K/Q on *mby / mby›* in Jer 39:16.

(2) Reduction of *ḥolem.* A number of phrases with one major stress are marked by joining the words in question together with *maqqep.* It is typical in this situation for the /o/ vowel to reduce from tone-long *ḥolem* to *qameṣ qaṭan,* e.g., *lš›wl* (1 Sam 22:15) and *y‹bwr* (Isa 26:20). It is possible that the vocalization of *bmwty* in Deut 32:13 has also arisen because of a stress shift (BDB, 119). Another explanation could be suggested, however, on the basis of orthography found in 1QIsa[a] where the vowel letter *waw* is used to mark short vowels (see Kutscher 1974: 147–48).

(3) Dissimilation of the consonant *yod* to *›alep* when preceded by *qameṣ* and followed by another vowel in biblical Aramaic. This shift occurs in nouns which are in the feminine absolute state, e.g., *rby‹yh / rby><h* (Dan 2:40); in the masculine determined state, e.g., *kśdy› / kšd›h* (Dan 5:30); and in many plural gentilics, e.g., *lkśdy› / lkśd›y* (Dan 2:5).

b. Morphological Shifts. Examples include:

(1) Replacement of the archaic 3 fem. pl. ending. For example, *špkh* / *špkw* (Deut 21:7); *nṣth / ns\tw* (Jer 2:15).

(2) Loss of the archaic 2 fem. sing. ending. It is not clear whether the K in all cases represents a form that was pronounced when it was written or whether the ending had already fallen out of use. Typical forms include *w›ty / w›t* (Judg 17:2); *lmdty / lmdt* (Jer 2:33).

(3) Replacement of the 3 fem. sing., 2 masc. sing., and 1 person pl. suffix forms on plural nouns with their singular counterparts in biblical Aramaic. For example, *brglyh / brglh* (Dan 7:7); *l‹bdyk / l‹bdk* (Dan 2:4); *›ytyn› / ›ytn›* (Dan 3:18).

c. Dialectical Variants. A number of differences between the K and Q amount to variations in word formation with no change in semantic meaning. It often is difficult to determine whether the choice made in the Q is textually based or dialectical, i.e., the Q arose from a dialect of Hebrew that preferred a different form of the word than found in the K. Nominal variants of this sort include the alternation of *qrw› / qry›* in Num 1:16; 26:9; *›swr / ›syr* in Gen 39:20 and *šbyt / sbwt* in Ezek 16:53. Dialectical differences may also be implied by the K/Q notes on variants between *Qal* and *Hip‹il* forms of the root *lwn* in Exod 16:2; Num 14:36; and 16:11. Cf. also *wyyrš / wywrš* in Num 21:32.

3. Scribal Errors in the K. A number of K/Q situations seem to have arisen because of scribal errors in the K. Barr cites 1 Sam 4:13, 1 Kgs 22:49, and Ezek 25:7 as examples of scribal error in the K (1981: 34–35). Typical errors include haplography, e.g., *wyštḥw / wyštḥww* (Gen 27:29); *bnymn / bny bnymn* (Judg 20:13); errors in word division, e.g., *›šdt / ›š dt* (Deut 33:2); *mnhs‹rh / mn hs‹rh* (Job 38:1); and metathesis, e.g., *wtr›nh / wt›rnh* (1 Sam 14:27).

K/Q variants have also arisen because of confusion in the writing of consonants. It is possible that some K/Q arose as two different interpretations of an ambiguous grapheme (Barr 1981: 27–28). For example, *waw* and *yod* are often indistinguishable in the Dead Sea Scrolls. Common consonantal confusions include:

a. *waw* / *yod* interchange, e.g., *tnw›wn / tny›wn* (Num 32:7). The Q is correct, the root *nw›* is only used in the *Hip‹il* in biblical Hebrew; cf. Num 32:9.

b. *reš* / *dalet* interchange, e.g., *›‹bd / ›‹bwr* (Jer 2:20). The consonants *reš* and *dalet* are easily confused in most Hebrew scripts.

c. *bet* / *kap* interchange, e.g., *wybw* / *wykw* (2 Kgs 3:24).

4. Scribal Errors in the Parent Text of the Q. This is less frequent than the incidence of scribal errors in the K. A number of difficult cases in the vocalization of the Q suggest that its tradents took as authoritative a ms or ms tradition which had an error. A case in point is the alternation *rbyt* / *rbt* in Dan 4:19. There is no justification for the 3 fem. sing. suggested by the Q and it appears to be based on an error (Morrow and Clarke 1986: 416). See also McCarthy's discussion of the Q *b‹yny* in 2 Sam 16:12 (1981: 81–83).

5. Variant Textual Traditions. This possibility is suggested by the Masoretic lists of words read but not written and words written but not read. The early form of the list of words read but not written in *Ned.* 37b mentions seven cases: 2 Sam 8:3; 16:23; Jer 31:38; 50:29; Ruth 2:11 (*›t*); 3:5, 17. The standard list contains ten examples. There is no reference to Ruth 2:11 and the list is augmented with Judg 20:13; 2 Sam 18:20; 2 Kgs 19:31, 37. The early form of the list of words written but not read has five examples: Deut 6:25 (*z›t*); 2 Kgs 5:18; Jer 51:3; Ezek 48:16; Ruth 3:12. The standard list has eight examples. It leaves out Deut 6:25 and adds 2 Sam 13:33; 15:21; Jer 38:16; 39:12 (*IDBSup*, 719). These texts have to be examined on a case by case basis to determine if an authentic textual variant underlies each one. Nevertheless, the tradition in general indicates the probability that the Q and K diverge at times because of different textual traditions.

Evidence of textual traditions in the K/Q also seems indicated where the Q of Samuel and Kings is in many cases the K of Chronicles and no Q is recorded there. Compare, e.g., 2 Sam 23:8–9, 13, 15–16, 18, 20–21 and 1 Chr 11:11–12, 15, 17–18, 20, 22–23. Sperber took this kind of correspondence as evidence that the Q was based on a recension of the Deuteronomistic History separate from the K (1943: 303–9).

6. Epexegetical Alterations of the K. Some K/Q variations are probably the result of alterations by the tradents of the Q in order to clarify the meaning of the text. Classes of epexegetical alterations include:

a. Grammatical Corrections. A probable case of grammatical correction is attested in the alternation of *whyh* / *whyw* when the subject is *twṣ›wt* as in Num 34:3; Josh 15:4; 18:12, 14, 19. The K agrees with the Q in Num 34:9 and Josh 17:18; cf. also Josh 19:29. Gordis considered this variant to be due to the loss of the archaic 3 fem. pl. ending (1937: 104–5). But a verb does not have to agree with its subject in number or gender in biblical Hebrew if it precedes it (*GKC* §145o). These Q readings are likely a correction to a simpler grammatical form which anticipates the kind of change the Masoretic *sbyr* notes aim to prevent.

This class may also include certain cases of variation between short and long imperfect forms, e.g., Josh 7:21; Jer 3:7; 17:8; and gender variations such as *›ḥd / ›ḥt* in 2 Sam 23:8 and *hw› / hy›* in Isa 30:33. The latter alternation is similar to the preference shown for pronouncing 3 fem. pl. verbs and suffixes in the Q of biblical Aramaic. See, e.g., *npqw* / *npqh* (Dan 5:5); *bynyhwn* / *bynyhyn* (Dan 7:8).

b. Euphemisms. One form of this kind of alteration is the euphemistic replacement of words based on roots such as *šgl* and *‹pl* with milder forms, cf. Deut 28:27, 30; 1 Sam 5:6, 12. The K/Q *šn›w / śn›y* in 2 Sam 5:8 has probably resulted from a desire to protect David's character (McCarthy 1981: 230–31). A euphemistic substitution can also be found in the alternation of *bgd / b›gd* in Gen 30:11. Both of these Q readings were likely generated in a manner similar to the midrashic *›al tiqrê* ("do not read") technique. According to McCarthy (1981: 166), similar techniques generated most of the readings now preserved in the rabbinic lists of the "emendations of the scribes" (*tiqqûnê sôpĕrîm*).

c. Expansions. An expansion in the Q may be indicated by the prepositional phrase *›ly* in Ruth 3:5, 17 found in the lists of words read but not written. The addition of *waw* in the Q is attested in Lam 5:3, 5. This kind of expansionary tendency is often found in the versions. The rabbinic tradition of the "corrections of the scribes" (*‹iṭṭûrê sûpĕrîm*) is related to this phenomenon.

WILLIAM S. MORROW

KETHUBIM. The third section of the Jewish division of the Hebrew Bible meaning "writings" (Heb *kĕtûbîm*), known also as the Hagiographa from the Greek term meaning "holy writings." This division includes the books of Psalms, Job, Proverbs, Ruth, Canticles (Song of Solomon), Qoheleth (Ecclesiastes), Lamentations, Esther, Daniel, Ezra, Nehemiah, and 1–2 Chronicles.

KETURAH (PERSON) [Heb *qĕṭûrâ* (קְטוּרָה)]. The third wife of Abraham, after Sarah and Hagar (Gen 25:1–4; 1 Chr 1:32–33). As far as they can be identified, her children and grandchildren were prominent Arabian or Aramean tribes or cities. See MEDAN; MIDIAN; ISHBAK; SHUAH; SHEBA; DEDAN. Medan, Midian, Dedan, and Sheba/Saba were situated along the "incense route" through W Arabia, and Shuah was involved in Sabean commerce as early as the second half of the 8th century B.C. "Keturah" is not attested as a personal name. It is reasonable to suggest that Keturah is a personification of the incense trade (cf. Heb *qĕṭōret* "incense"; *qĕṭôrâ* "incense offering"; Eph'al 1982: 231–33). Within a concept of geography in terms of genealogy as it is encountered in the OT, Keturah links to Abraham those Arabian tribes and cities which were not included among the descendants of Hagar.

The date of the geographical list constituted by the "sons of Keturah" is difficult to ascertain. Whereas some of its elements, like the "sons of Midian" (Gen 25:4), may antedate the 8th century B.C. (Knauf 1988: 85–86), the list as a whole presupposes the establishment of the "incense route" in the course of the 8th century B.C. Because it does not mention the Minaeans, who gained supremacy over the Arabian trade in the 4th century B.C., the list can be assumed to have been finalized before 400 B.C. (Knauf 1988: 168).

KEYS OF THE KINGDOM. In Matt 16:19 the giving over of the "keys of the kingdom of heaven" (*tas kleidas tés basileias tōn ouranōn*) is part of the three-part promise of Jesus to Peter, who had confessed Jesus to be "the Christ, the Son of the living God." As the Petrine confession represents a post-Easter formulation of the Church's Easter faith, so the promise made to Peter reflects Matthew's understanding of the Church and relates to the ecclesiastic situation after the Resurrection.

The logion of v 19 is but loosely linked to the image of the Church built on Peter (Cephas)—the "rock." The imagery of the building is maintained but the metaphor is mixed. In v 19 Peter is depicted as one having the power of a householder, the image of the keys having been evoked by the image of the gates of Hades. Nonetheless, the mixed metaphors incline many scholars to think that the two sayings (vv 18, 19) enjoyed an independent existence at some point in the existence of the Palestinian Jewish-Christian church.

Some hold that v 19 alludes to Isa 22:15–25, in which an oracle is expressed apropos of Eliakim, the successor to the deposed Shebna: "I will place on his shoulder the key of the house of David; he shall open, and none shall shut; and he shall shut, and none shall open" (Isa 22:22). In this case, Peter would appear to fulfill something of a prime ministerial role in the kingdom of heaven. Allusion is certainly made to the Isaian text in Rev 3:7 ("the holy one, the true one, who has the key to David, who opens and no one shall shut, who shuts and no one opens"), apparently in reference to Jesus. In an earlier passage (Rev 1:18), Revelation had described Jesus as having the keys of Death and Hades. There is, however, no clear reference to Isaiah 22 in Matt 16:19 and the attempted Aramaic retroversions would seem to argue against its plausibility.

In Jewish tradition, the key of David refers to the authority of the teachers of the Law. Luke cites a Q tradition in which reference is made to a key (the key of knowledge in Luke's formulation) held by lawyers (Luke 11:52). The Matthean version of the saying, a woe addressed to the scribes and Pharisees "because you shut the kingdom of heaven against men; for you neither enter yourselves, nor allow those

who would enter to go in" (Matt 23:13), without explicit reference to a key, serves as a negative parallel to Matt 16:19. Thus "the keys of the kingdom of heaven" would seem to indicate that Peter enjoyed an authority like that of the teachers of the Law, but in contradistinction to them. He represents something of a chief rabbi for the Matthean community.

The present wording of Matt 16:19a, specified and reinforced by the binding and loosing logion of v 19b–c, is clearly a Matthean formulation ("kingdom of heaven"). The emphasis of the image is primarily positive; its primary reference is to a power allowing entrance into the kingdom. The Matthean language may be compared with the earlier eschatological understanding whereby entrance into the kingdom is effected by means of belief in the gospel which had been preached. Matthew's phraseology affirms the eschatological significance of Peter's commission to preach. In its post-resurrectional setting, the image symbolizes Peter's plenipotentiary authority over the Church and may well also have reference to Peter's power to gather the community together, to interpret the Scriptures, and to exercise various disciplinary functions within the community. The household imagery affirms Peter's full power over the Church and confirms that the exercise of that power is sanctioned by the risen One. See also *TDNT* 3:744–53.

RAYMOND F. COLLINS

KEZIAH (PERSON) [Heb *qĕsîʿâ* (קְסִיעָה)]. The second of Job's daughters born to him after the restoration of his fortunes (42:14). The name means "cassia plant," and refers to the aromatic cassia which is mentioned in Ps 45:9 [—Eng 45:8] along with myrrh and aloes. The principle ancient versions are agreed in this identification, the LXX reading *kesia* and the Vulgate *cassia.* Dhorme (1967) assumes that the reference is to the aromatic cassia which is today called cinnamon or canella. Not only do the names of Job's daughters refer in some way to their beauty and charm, but the three together present assonantal relationships. Jemimah and Keziah clearly offer final syllabic rhyme, while Keziah and Keren-happuch offer first syllable assonance. See also JEMIMAH; KEREN-HAPPUCH.

KHAFAJE. A site in Iraq on the left bank of the Diyala river, SE of tell Asmar. Particularly vigorous clandestine excavations shortly after the first World War brought this region of the lower branch of the Diyala to the attention of the scientific community, and the Oriental Institute of the University of Chicago decided in 1929 to explore four of its principal tells: Asmar, Ischaeli, Agrab, and Khafaje.

The latter site, formed of a group of three principal hills (A, B-C and D) of unequal importance and belonging to different periods, has proved to be quite rich. P. Delougaz directed the research for the first seven expeditions under the sponsorship of the Oriental Institute (1930 to 1937) and under a joint expedition of the University Museum of the University of Pennsylvania and the American Schools of Oriental Research for the two final campaigns in 1937 and 1938.

Tell D, about 400 m by 250 m, has been only minimally explored; it contains, apparently, the ruins of a small fortress and two temples, one dedicated to Sin. The name of this installation is unknown.

Tell B-C, of larger dimensions (more than 500 m by 400 m) is a fortress built by the son of Hammurabi and known by the name of *Dur-Samsuiluna* ("fortress of Samsuiluna"). Behind an enclosure wall of 5 m thickness, a large residence of 1200 square m has been found, but the excavations have not been continued long enough to give a precise image of the installation.

It is tell A that has been the object of the most thorough research. Oblong in shape (about 900 m by 400 m), the city that it contains was known at the end of the 3d millennium by the name "Tuttub." However, its history results more from knowledge gathered from archaeological finds than from textual sources, which have not been found in great number. Its origins are found in the Predynastic period, without doubt

during the phase generally known by the name of Jemdet-Nasr, about 3000 B.C.E.; it is during this period that the five first phases of the temple of Sin are dated. It is possible that the city was most often under the control of Eshnunna (tell Asmar), but it is impossible to know the course of events for this early period. However, its real importance, at least if one trusts the monuments that have been unearthed, dates from the Early Dynastic Period, when the improvements to the Oval Temple show that the city possessed the means to undertake works of enormous size. It is to this period that the largest number of discovered monuments belong. But following this period, the city again enjoyed real importance, at least during certain periods. The foundations of a large edifice dated from the Agade period found in the N part of the city show that it still felt the need to construct buildings that clearly fell into the category of palaces. In addition, around 1900 Tuttub freed itself from the natural dominance of Eshnunna, its neighbor, and for about thirty years knew independence. The incorporation of the region into the empire of Hammurabi, in the 18th century, was accompanied by a weakening and a growing poverty that proved the end to urban life in Tuttub as in all the other neighboring cities.

The major ruin is clearly the Oval Temple. The first of the sanctuaries of this type to have been found in Mesopotamia, it presents an organization that expresses spatially the progression from the profane toward the sacred by a progressive elevation of the levels of occupation. The general form, irregular, is created by an approximately ellipsoidal enclosure of 74 m by 54 m oriented NW-SE about 40 cm higher than the surrounding surface; one reaches this slightly elevated level by a single entrance to the NW that gives onto an open space tightly associated with D House located to the N between the two enclosures. Almost facing the entrance, a monumental doorway allows one to enter into an almost concentric second enclosure in which a stairway of four steps marks a new level of elevation. One then arrives in a large trapezoidal courtyard with rooms located all around its perimeter. Two functions were without doubt intended: to allow the completion of rites that took place outdoors and to allow access to the terrace six meters above that takes up all of the SE part; although no trace has been found, a temple which formed the apex of the progression was probably located on the summit.

Among the material remains that have been collected are several stone statuettes, a votive plaque, and a group of three standing copper statuettes on a circular pedestal with four feet. We do not know the name of the deity worshiped in the Oval Temple, but the sanctuary seems to be characteristic of the Early Dynastic Period. It was built during the course of the second phase of the period (ED II) and seems to have been in use up until the empire of Agade, having undergone several reconstructions and alterations.

The Temple of Sin is located about 50 m to the E; it is in reality a small sanctuary whose notoriety comes more from the minute study undertaken by the excavators than from the importance of the location. The oldest phase recovered goes back to the Jemdet-Nasr period and the most recent has been fixed at the end of the Early Dynastic; ten major architectural phases allow us to follow the evolution of the small urban temple and its alterations; the most important part consists of a rectangular room NW-SE equipped with a platform built against the NW wall (the location of the throne of the god) and sometimes parallelepiped or cylindrical pedestals (probably offering tables). The adjoining structures were located along the two sides; toward the E extended a courtyard that was important for the course of the history of the building. Also of note is a third temple dedicated to Nintu, and above all, the very curious small walled quarter of which the significance is not very well understood.

TRANS. STEPHEN ROSOFF

KHALIL, RAMAT EL-. See RAMAT EL-KHALIL (M.R. 160107).

KHELEIFEH, TELL EL- (M.R. 147884). The site of Tell el-Kheleifeh is located approximately 500 m from the N shore of the Gulf of Aqaba, roughly equidistant between modern Eilat and Aqaba. This low mudbrick mound was first surveyed in 1933 by the German explorer Fritz Frank, who identified the site with biblical Ezion-geber (Frank 1934). Having conducted a surface survey of Tell el-Kheleifeh in 1937, Nelson Glueck directed three seasons of excavation (1938–1940) and discerned six major periods of occupation with three subphases (Glueck 1938a; 1938b; 1939; 1940a; 1965). The occupational horizons were dated between the Iron I and Persian periods. Glueck accepted Frank's identification of Tell el-Kheleifeh with biblical Ezion-geber and, though some uncertainty is reflected in his field records and later publications, the equation remained the underlying premise for the interpretation of the site's occupational history.

A reappraisal of Glueck's excavations in light of advances in the science of archaeology, particularly refinements in pottery typology, has suggested the need for significant refinement and revision of his conclusions (Pratico 1982; 1985). The most important datum involves revision of the site's chronological horizons as indicated by the study of the pottery. The site's pottery cannot be dated earlier than the 9th century B.C., and this early limit is suggested only by isolated forms. The horizon as a whole appears to date between the 8th and early 6th centuries B.C. with a presence attested as late as the 4th century B.C. The horizons of the site's architectural traditions are too broad to provide definitive chronological refinement. Tell el-Kheleifeh, therefore, provides no clear archaeological indications, ceramic or architectural, for an identification with Ezion-geber of Israel's wilderness traditions (Num 33:35–36), the 10th century (1 Kgs 9:26–28), or the 9th century (1 Kgs 22:47–48).

Tell el-Kheleifeh was occupied in two major architectural phases: casemate fortress and fortified settlement. The earliest phase consisted of a casemate square (approximately 45 m on each side) which surrounded a courtyard that was apparently devoid of architecture with the exception of one monumental building (13.20 × 12.30 m), constructed on the "four-room" plan. Glueck originally identified this structure as a smelting furnace but later abandoned this interpretation, designating the building as a citadel. The best architectural parallels to the earliest phase are provided by the casemate fortresses of the central Negeb (Cohen 1979; cf. also 1970; 1976; Meshel 1975; 1977). The latter are generally dated to the 10th century B.C., a date which is not consistent with the suggested chronology of the extant Tell el-Kheleifeh pottery. Unfortunately, Glueck's methodology and recording system preclude precise determination of the date of the casemate fortresses phase.

After the destruction of the casemate fortress, the plan of Tell el-Kheleifeh was radically changed. The fortress was replaced by a significantly larger settlement with an offsets/insets wall and a four-chambered gateway. A large section of the earlier casemate fortress was retained, creating an inner enclosure or courtyard in the NW quadrant of the new offsets/insets plan. The N and W perimeters of the earlier casemate wall were now outside the offsets/insets fortification which also destroyed a portion of the N wall of the four-room building.

The plan of the fortified settlement phase is best paralleled by the citadels of Tell Arad X–VIII (Herzog et al. 1984). Similar features include an element of monumental architecture in the NW corner (though dissimilar in function), a main N-S street on the settlement's E side, inner-wall structures of similar plan and function, a gateway of the four-chambered plan and the offsets/insets fortification which created similar dimensions for each of the settlements.

The pottery which can be associated with the levels of the offsets/insets settlement dates between the 8th and early 6th centuries B.C. These dates are also indicated by certain of the epigraphic materials and studies in comparative architecture. Though the data are lean, both architectural and ceramic, the occupational history of Tell el-Kheleifeh continued beyond the Iron Age, perhaps as late as the 4th century B.C.

The identification of Tell el-Kheleifeh is both an archaeological and a historical problem. One may argue the identification from the perspectives of possibility or probability, but the problem of verification precludes examination of the site in the context of biblical Ezion-geber and/or Elath. The biblical notices

pertaining to these two sites are of special importance, however, for providing a rough chronological framework relative to Judean or Edomite control or influence over the region. The methodological prerequisite for the reappraisal of Glueck's excavations must be the demand for uncensored archaeological data. Tell el-Kheleifeh must be allowed to tell its own story in its own language. Allowing Glueck's data to speak apart from the historical contours of Ezion-geber and Elath has produced a significantly different version for this chapter in the study of Syro-Palestinian archaeology.

GARY D. PRATICO

KHIRBET. Geographic names containing the element "khirbet," meaning "ruin," may be found alphabetized under the second element of the name; for example: ISKANDER, KHIRBET; ADER, KHIRBET.

KHIRBET KERAK WARE. This term designates a distinctive assemblage of ceramic forms found at a number of sites in Palestine, Syria, and E Anatolia dating to the EB III. The name "Khirbet Kerak Ware" was given to this pottery group by W. F. Albright in the 1930s when the ware was first found in large quantities on the SW shore of the Sea of Galilee at the site of Khirbet Kerak, now known as BETH-YERAH (M.R. 204235), one of the major international trade centers of the EB III. (Kh. Kerak should not be confused with the Jordanian site of KERAK.)

A. Forms and Decoration

Smaller forms include upright-sided and sinuous-sided bowls. Sinuous-sided pots and kraters have been found among the larger vessels. A third category includes conical lids, biconical stands, and U-shaped pot stands.

Khirbet Kerak Ware is distinguished by its bidirectional burnished-surface and "metallic" ware, yet especially larger vessels are frequently made of poorly levigated clay often with some medium to large inclusions. It seems that only small upright-sided bowls had a slip applied before burnishing. Lids and U-shaped stands were usually left unburnished.

The sinuous-sided bowls, sinuous-sided pots and kraters have brownish-orange to brown rims and interior surfaces, while the exterior, excluding the rim, is black. The upright-sided bowls are brownish-orange over the entire surface. The surface colors of the lids and U-shaped stands ranges from tan to gray.

Decorations range from simple knobs and lines (esp. on the smaller bowls) to chevrons, spirals, and polygons (esp. on larger pots and kraters) to anthropoid faces on the U-shaped stands. The decorations are

made before the burnish is applied and may be either fluted or raised, although there are a few examples where the decoration was etched through the burnished surface after the vessel was fired.

B. Provenience of Khirbet Kerak Ware

The earliest extant Khirbet Kerak Ware, dated ca. 2800 B.C.E., was found in E Anatolia and S Russia and bears many similarities to E Anatolian polished ware of the era immediately preceding (Amiran 1952; Lamb 1954; Burney 1958). The pottery appeared suddenly in N Canaan ca. 2700 B.C.E. during EB IIIa (Hennessy 1967; Callaway 1972). Scholars postulate that KKW appeared in Canaan either as an import from the Trans-Caucasus region or as a result of a major migration of an ethnic group (possibly the Hurrians; Burney 1958) from this region through Syria to N Canaan with settlement along some of the region's major trade routes. Significant quantities have been found as well at sites in the Ḥabur and 'Amuq regions of N Syria, at the Syrian coastal site of Ugarit and at several sites in the N Jordan valley and the Esdraelon Plain in N Canaan. Smaller quantities have been found at peripheral sites.

Assemblages of KKW found at various Canaanite sites show some unique variations in technique which set them apart from the wares found in Syria and Anatolia. Furthermore, some standard Canaanite forms (e.g., holemouth jars and simple bowls) were incorporated into the KKW repertoire at certain Canaanite sites through the application of the specialized burnishing and color typical of this ware. Both these features would indicate that the KKW found in Canaan was not imported from Syria and Anatolia.

Testing by neutron activation analysis and petrographic analysis of KKW found at Palestinian and Syrian sites has indicated that wherever this pottery is found in significant quantities, nearly all of it was manufactured locally at or near the site. It seems in the light of the few nonlocal sherds found at sites such as Beth-Yerah that perhaps initially some vessels were imported to Canaanite sites before local manufacture of the ware was established. Meager quantities have been found at S Canaanite sites. Initial testing of pieces from sites such as Jericho indicates that the pottery was not locally made but rather imported from major production centers in N Canaan. (viz., Beth-Yerah).

KKW remains one of the main diagnostic pottery forms in determining EB III levels at archaeological tells in the Levant today.

STEPHEN J. PFANN

KHORSABAD. The name of a village in N Iraq which designates the site of ancient Dur-Sharrukin (fortress of Sargon), a city founded by Sargon II of Assyria. The work began around 713 B.C. and the city was inaugurated in 707 B.C. as the capital of the empire; but it was never finished because Sargon II died in 705 B.C. and his successor Sennacherib, abandoned the city to return to Nineveh.

The site is famous for the profusion of discoveries that have been found there, and also because it was there that the very first digs were conducted in Mesopotamia. In fact, P. E. Botta, the French consul in Mosul in 1842, who was actively interested in orientalism, decided to dig at the site of Nineveh, neighbor of Mosul and soon after at Khorsabad, 15 kms N-NE of the Assyrian capital; it was a matter therefore of finding real proof of this Assyrian civilization, known only up to that time in biblical sources (the campaigns of Sennacherib, Ezekiel's prophecies and the adventures of Jonah) and through a few superficial discoveries that aroused curiosity without bringing any solutions to the questions that were

being asked on the origins of Christianity and Judaism. Nevertheless the initial research conducted at Nineveh was deceiving, while the works being conducted at Khorsabad were crowned with success: on the third day monumental *bas-reliefs* filled with inscriptions were found.

The reverberations of these initial discoveries were sufficient for Paris to begin proceedings with *la Porte* in order to insure the continuation of exploration and sent Flandin to secure the design and the unearthing of the monuments uncovered. The first excavation, finished in October 1844, was accompanied by the shipment of the recovered reliefs to France and the opening of the Assyrian museum in the Louvre palace. V. Place in 1852 again took up the exploration in the tells of the Assyrian triangle and most particularly at Khorsabad; he brought to light an important part of the Sargon Palace, but most of the reliefs and statues he found were lost in a shipwreck in 1855 at Korna, near the confluence of the Tigris and the Euphrates. The Khorsabad tell was not explored for more than 60 years after that. It was the University of Chicago that decided to take up again the excavations in 1928; the most active digs took place from 1930–35 under the direction of G. Loud. These excavations revolved around the region of the Sargon Palace, a gate to the city and the old city itself. Finally a few research and conservation works were conducted on the site these last few years by the Iraqis.

The old city measures 1800 m × 1700 m and is enclosed behind an enclosure of 24 meters thick (in coarse bricks on top of a stone bedrock). We do not really know the interior organization of the city since the dig only explored small areas; however, we were able to enumerate the existence of seven doors in two facing walls, the north face possessing only one. On the western flank closely linked to the enclosure and in the proximity of the fifth door, the palace of the heir-apparent, Sennacherib, was found on a terrace. On the north face, straddling the enclosure, a terrace was installed that supported the great palace of Sargon. A ziggurat was found more than 40 m high and with layered paints (white, black, purple, and blue) which was dedicated to six divinities: Sin, Adad, Ea, Shamash, Ninurta, and Ningal. At the foot of this terrace was an area of private houses, enclosed by a wall opened toward the city by two monumental gates, where there had been constructed the great residences attributed to members of the royal family and the great dignitaries of the empire. The temple of Nabu, set on a terrace that was connected to the one that supported the great royal palace by a stone bridge, rose up between these residences.

The Sargon palace was planned according to the fundamental principles of Assyrian residences. A great public courtyard, approximately square in shape, containing the majority of administrative annexes consisted of the first unit; it had access to a rectangular courtyard decorated with orthostats in relief.

The renown of Dur-Sharrukin derives, without doubt, less from architecture than the bas-reliefs and monumental full-relief sculpture that were discovered, like the androcephalous bulls. Starting with the first dig and during the course of the excavations that followed on this site, an extraordinary dossier of Assyrian art was brought to light. The court scenes, the religious themes, and the representations of war, all meaning to glorify or protect the sovereign, are at the same time creations of rare quality by sculptors from the Assyrian period.

The epigraphic harvest from the excavations was just as important. The inscriptions on the bas-reliefs or on the doorway flagstones, the list of the Assyrian kings (more than 100 sovereigns between the beginning of the 2d millennium and the 8th century) provide an incomparable source for the history of the Assyrian empire.

KIBROTH-HATTAAVAH (PLACE) [Heb *qibrot* (קִבְרֹת) *hatta῾awâ* (הַתַּאֲוָה)]. The first encampment of the Israelites, after leaving the wilderness of Sinai, as listed in Num 33:16–17, where it is placed between the wilderness of Sinai and Hazeroth. After leaving Sinai, the Israelites complained to

Moses about a lack of meat (Num 11:4–6). When Moses brought this before his God, the Lord caused a flock of quails to fall to the ground near the Israelite camp. Though they were able to feast now, a great plague from God came upon them even as they were eating, killing many people. It is this incident which gave the site its name: "The Graves of Craving" (Num 11:31–35, Deut 9:22). Unfortunately the name does not help in the identification of the site. A suggested location is Rueis el-Ebeirig, NE of Jebel Musa, and between the latter site and ʿAin el-Hazerah, often identified with Hazeroth, the next station in the list (*GP*, 214, 417; Palmer 1872: 212–14, 252, 418–19, 423; *GTTOT*, 255 and note 224; M.R. 076797). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

JEFFREY R. ZORN

KIBZAIM (PLACE) [Heb *qibṣayim* (קִבְצַיִם)]. Third Levitical city in the Ephraim list (Josh 21:22).

The parallel city in the Levitical City list in 1 Chronicles is Jokmeam (1 Chr 6:52—Eng 6:68). Albright (1945: 67–68) has argued through a text-critical study that Kibzaim and Jokmeam are individual cities, but B. Mazar (1957: 198) has argued that the place name Jokmeam was taken from the name of the Levitic family who settled there. In his list, Mazar reads Jokmeam for Kibzaim. Both Kibzaim and Jokmeam appear only once in the OT; in each instance it is in a Levitical City list. There is no reference to either city in any extrabiblical sources. Because these two cities are so obscure, any identification becomes speculative. See JOKMEAM.

Tell el-Qusin (M.R. 167182) has been identified as biblical Kibzaim by Abel (*GP*, 417), but Y. Aharoni (*LBHG*, 325) has identified the site with the Samaria Ostraca's Kozah. The site is located 2 km N and 9 km W of Nablus. About 5 km due N of Qusin is Sebaste (biblical Samaria). Situated on a mountain, Qusin is surrounded by a broad, major valley. On its E and N sides is the important Nablus-Jenin road. In the valley to the W and S is a Wadi that joins other wadies which flow to the Mediterranean. There have been a few surveys conducted at Tell el-Qusin revealing pottery from the EB, Iron I, Iron II, Persian, Byzantine, and Ottoman periods. One serious problem with the identification of Qusin with biblical Kibzaim is that Qusin clearly lies in the tribe of Manasseh, not in Ephraim. Consequently this identification is not acceptable, and Aharoni's suggestion that Tell el-Qusin is Kozah is more likely correct.

Z. Kallai has identified Tell esh-Sheikh Dhiâb (M.R. 190161) with biblical Jokmeam. It is located in the Judean Desert, 22 km N of Jericho and 2.5 km NW of Khirbet Faṣâyil. The tell is situated at the foot of the Judean hills on the edge of the Jordan River valley about 9 km due W of the river. Tell esh-Sheikh Dhiâb is surrounded on three sides (N, S, W) by hills, while the flat valley lies to the E. Between Sheikh Dhiâb and the W mountains is the Wadi Faṣâyil. There have been some archaeological surveys conducted at Tell esh-Sheikh Dhiâb and a wide distribution of pottery has been found including Chalcolithic, EB, MB, Iron I, Iron II, Hellenistic, Roman, Byzantine, and Arabic.

The third city to have been identified with biblical Kibzaim and/or Jokmeam is Tell el-Mazar (M.R. 196171). Mazar (1957: 198) has been a leading exponent favoring the identification of biblical Kibzaim/Jokmeam with Tell el-Mazar. Mazar thinks that Kibzaim and Jokmeam are one and the same city, claiming that the settlement of Kibzaim was called Jokmeam after the family of Levites living there. This family, the Jekameamites, were descendants of the priestly family of Hebron. Mazar points out that "the same town" is mentioned in 1 Kgs 4:12. It is located on "the extreme S border of the fifth administrative district of Solomon." A problem with this text is that this city is located in Zebulun and its name has been understood to be a scribal error for Jokmeam. Therefore Mazar harmonizes the 2 lists by simply stating that Kibzaim changed to Jokmeam by the time of the Chronicler because the city took on the name of the levitical family that had originally settled Kibzaim.

Tell el-Mazar is located near the lower end of the widening plain of the Wadi el-Far‹ah, which merges with the plain of the W side of the Jordan Valley. Because the Wadi el-Far‹ah flows continuously it irrigates the land along its sides as well as the rich fields of the merged plains of the Wadi el-Far‹ah and the Jordan Valley. Tell Mazar controlled the highway leading to the hill country by way of Wadi el-Far‹ah and the highway to Transjordan via Wadi Zerqa. It was also on a N–S route which ran on the W side of the Jordan Ghôr. The archaeological surveys that have been conducted at Tell el-Mazar indicate occupation during the Iron I, Iron II, Hellenistic, Roman, Byzantine, and Arab periods.

With regard to the problem of Kibzaim/Jokmeam, Kallai's suggestion that Jokmeam is to be identified with Tell esh-Sheikh Dhiâb is the most probable identification. This would then associate with Tell el-Mazar, a site that has a longer occupational history, with the border town of Ataroth in Josh 16:7, although Ataroth like Jokmeam is mentioned only once in the Bible. Simon's recommendation that Tell Qusin is biblical Kibzaim is unacceptable on geographical grounds, which strengthens, if not proves, the opinion that Kibzaim and Jokmeam are separate cities. As a result Kibzaim goes unidentified while Jokmeam and Tell esh-Sheikh Dhiâb are associated together as one of the eastern cities in Ephraim. See Peterson 1977: 249–74.

KID. See ZOOLOGY.

KIDRON, BROOK OF (PLACE) [Heb *naḥal qidrôn* (נַחַל קִדְרוֹן)]. A valley just E of the old walled city of Jerusalem, separating it from the Mount of Olives. The valley descends from the N, just W of Mt. Scopus, past St. Stephen's Gate of the Old City where it is known in modern Arabic as Wadi Sitti Maryam (Valley of St. Mary, since the traditional tomb of Mary is in the wadi). It continues southward as Wadi en-Nar ("Valley of Fire," because of its dry, parched wadi bed during most of the year, excepting in times of heavy rain). The name *qidrôn* apparently means "dark," "not clear," or "turbid" because of stirred up sediment. It is first mentioned in the OT in 2 Sam 15:23. After joining with the Hinnom Valley, S of Jerusalem, Kidron then courses SE into the wilderness of Judea and empties into the Dead Sea about 10 miles S of the mouth of the Jordan. Because of debris accumulation, the Kidron Valley is 10–50 feet higher than in ancient times.

In the times of the OT kings, the Kidron Valley was probably identified with, at least in part, the King's Garden (2 Kgs 25:4; Neh 3:15); the kings apparently owned land in the area. Water which flowed down the W side of the Kidron Valley through the water channel, and water which may have been diverted from the Siloam tunnel of Hezekiah (2 Kgs 20:20) watered the S end of the Kidron Valley near its confluence with the Hinnom Valley to produce a lush garden (cf. the "palace garden," 2 Kgs 21:18).

That the Kidron was also known as the King's Valley (seemingly located close to Jerusalem, possibly E of it, cf. Gen 14:17–18, and in which Absalom set up his monumental pillar, 2 Sam 18:18) is problematic. The Bible does not make this identification explicit, and the association can only be inferred as associated with En-rogel which is at the lower end of the Kidron (see Mazar 1975: 156). It might be argued that the name "King's Valley" derived from its proximity just E of the palace of David in the City of David (2 Sam 5:9; cf. 1 Kgs 3:1) on the W slopes of the Kidron Valley and S of where the temple platform was later constructed. Of the location of the Valley of the Kings, Josephus only indicates (*Ant* 7.243) that in it Absalom set up a marble column two stadia (ca. 1,200 feet) from Jerusalem, but from which direction from the city and from which part of the city he does not say.

Since David "was buried in the City of David" (1 Kgs 2:10; i.e., in the neighborhood of the city where the royal family owned property) and the kings of Judah during the Divided Monarchy were often buried there as well, it is possible that these royal tombs can be identified with some in the Kidron Valley. The City of David in which a number of kings are said to have been buried (cf. 1 Kgs 2:10; 11:43; 14:31; 15:8; 15:24; 22:50; 2 Kgs 8:24; 9:28; 12:21; 15:7; etc.) was on the SE ridge between the Kidron and Tyropoeon Valleys, just N of the modern Pool of Siloam. In this locale, in the S part of the City of David, near the E wall and along the W slope of the Kidron, R. Weill in 1913–14 found a group of four tombs horizontally cut into the bedrock, two with vertical shafts, and one with a stone bench to hold a coffin. These may be the tombs of David mentioned in Neh 3:15 near "the stairs that go down from the City of David," and it may be the place where Hezekiah was buried "in the ascent of the tombs of the sons of David" (2 Chr 32:33), "that is, the crest of the ridge" (Mazar 1975: 183). Many scholars believe that these were the royal burial tombs (although this is uncertain), and that they are to be distinguished from the other tombs recently found on the E slope of the W hill, opposite the temple platform (see Mazar 1975: 183). See below for discussion of tombs on the E slope of the Kidron Valley.

The Kidron Valley was also famous for the Gihon (meaning, "a bursting forth," "gusher") Spring, also called in Arabic today, Ain Sitti Maryam, "Spring of Mary," located at the foot of the City of David on the W slope of the valley. In ancient times the Gihon was the primary water supply for Jerusalem. Hezekiah eventually directed the spring's flow by digging a tunnel (Hezekiah's Tunnel) to a pool at the S end of the City of David (2 Kgs 20:20), and blocked "the upper outlet of the Gihon Spring" (2 Chr 32:30), which suggests that part of the water could have been diverted to help irrigate the Kidron Valley gardens. See SILOAM, POOL OF.

On the E side of the Kidron Valley, opposite the City of David, is the modern village of Silwan, in the middle of which are the remains of ancient tombs, some of monumental character, which were the burial places for certain royal officials and perhaps for some of the kings of Judah. One such tomb, showing evidence of Egyptian influence, is called in Arabic, "The Tomb of the Daughter of Pharaoh" (Mare 1987: 116; but it is unknown who was actually buried in it). Other ancient tombs, from the MB and LB, have been found opposite the walled city of Jerusalem in the Dominus Flevit area (Mare 1987: 44–46), and still other ancient tombs (EB and Iron Age II) have been found on the W side of the valley below the temple platform (Mare 1987: 45). At the lower end of the Kidron Valley, at its confluence with the Hinnom Valley, is the spring En-rogel, perhaps also part of a royal irrigation source.

The Kidron Valley was considered the E boundary of Jerusalem, and when David crossed the Kidron to escape the rebellion of his son, Absalom (2 Sam 15:23), he passed beyond the jurisdiction of the city; beyond the valley, on the Mount of Olives, David was among friends (2 Sam 15:32). This E boundary jurisdiction is also emphasized in the warning Solomon gave to Shimei that he not leave Jerusalem and cross the Kidron, lest he die (1 Kgs 2:37).

In the Kidron Valley and on its E slopes, opposite Jerusalem and the City of David, foreign cult worship was practiced in defiance of the worship of the Lord. At a place called the Mount of Corruption (cf. 2 Kgs 23:13; see CORRUPTION, MOUNT OF), probably on the S slope of the Mount of Olives near modern Silwan, Solomon desecrated the name of the Lord by erecting cult high places for Ashtoreth, Chemosh, and Molech (1 Kgs 11:7) which Josiah later destroyed (2 Kgs 23:13). In the same valley, King Asa buried the Asherah that his grandmother, the queen mother Maacah, had set up (1 Kgs 15:13). Here, too, Hezekiah took all the cult objects that represented unclean worship out of the temple of the Lord (2 Chr 29:16), and further "removed the altars that were in Jerusalem, and all the altars for burning incense they took away and threw into the Kidron Valley" (2 Chr 30:14). The high priest, Hilkiah, under orders from Josiah, took the Asherah from the temple and burned it in the Kidron Valley (2 Kgs 23:6) and destroyed the altars that the kings of Judah had built on the roof near the upper chamber of Ahaz, and also the altars Manassah had erected in the two courts of the temple (2 Kgs 23:12).

Hezekiah's purge of false worship from the temple was either incomplete, or heathen practices were reintroduced after Hezekiah's time, because Josiah later removed from the temple "all the articles made for Baal and Asherah and all the starry hosts" (i.e., heathen astral cults) and he "burned them outside

Jerusalem in the fields of the Kidron" (2 Kgs 23:4). The desecration of these "fields," along with their use as a place of burial may have been viewed as a place of desolation similar to how the Hinnom Valley was viewed (Jer 7:32).

In the NT the Kidron Valley is only mentioned in John 18:1, which tells how Jesus crossed it and went into an olive grove at Gethsemane (Matt 26:36), at the foot of the Mount of Olives. In this same valley not far S of Gethsemane, Jesus must have passed the funerary monuments now popularly known as the tombs of Jehoshaphat, Absalom, James the Less, and Zachariah—tombs, however, which are misnamed and were actually built in the period from the second half of the 2d century B.C. to the first half of the 1st century A.D. (Mare 1987: 194–97).

The Kidron Valley has also been identified by Jews, Christians, and Muslims with the Valley of Jehoshaphat and associated with the final judgment. See JEHOSHAPHAT, VALLEY OF. Some have associated the Kidron Valley with Ezekiel's future river (Ezekiel 47) flowing E and S from Jerusalem to the Dead Sea.

KILAN (PERSON) [Gk *Kilan* (Κιλαν)]. Progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:15). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear in their lists of returning exiles (see Ezra 2:16; Neh 7:21). Differences such as this raise questions about the literary relationships among the texts.

MICHAEL DAVID MCGEHEE

KILN [Heb *kibšān* (כִּבְשָׁן)]. The Hebrew word for kiln comes from the root *kābaš,* "to subdue," "bring into bondage," and is used three times in the OT: Gen 19:28, Exod 9:8, 10, and Exod 19:18. In Gen 19:28, the smoke from the burning cities of Sodom and Gomorrah rose like the smoke from a *kibšān.* Similarly, in Exod 19:18, the smoke from Mt. Sinai rose like the smoke from a *kibšān.* When a kiln is being fired, smoke rises rapidly from the exit flue due to the high velocity of the hot exhaust gases. These descriptions, therefore, most likely refer to smoke that was being forced into the air by means of hot gases. There is always abundant ash in the vicinity of a kiln as a result of the combustion of the various materials used as fuel. It was the ash from a *kibšān* which Moses sprinkled before Pharaoh in Exod 9:10 and which caused boils to break out on man and beast.

Two types of pottery kilns were used in ancient Palestine: the vertical or up-draft kiln and the horizontal or down-draft kiln. The vertical kiln was by far the most frequently used type. Both the vertical and horizontal kiln had all the elements of a modern kiln: a fire box where fuel is burned and heat generated, a chamber where the pottery is placed and which retains heat, and a flue or exit from which the spent gases escape. This arrangement creates a draft that pulls air into the fire box and moves hot gases through the stacked vessels and out the exit flue. Heat is transferred directly to the vessels by convection and indirectly by radiation after the surfaces of the walls of the kiln become red hot (Rhodes 1968: 13, 15).

The vertical kiln reached its definitive design form in the EB Age and has remained more or less unchanged to the present day. In this design, the vessels to be fired are placed in a chamber above a fire box, the two being separated by a partition floor supported by a wall or central pillar. See Fig. KIL.01. A fire is built in the entrance to the fire box. Hot gases then rise through flue holes in the partition floor, pass through the stack of vessels in the upper chamber and out the vent at the top, thus the designation "up-draft" kiln. Temperatures in the kiln are controlled by the intensity of the fire and the amount of draft. The draft can be regulated by adjusting the size of the air inlet opening, the size of the flue holes in the partition floor (before firing) and the size of the exit flue. For examples of well-preserved vertical kilns

from the biblical period, see Pritchard 1978: 117–23 and Van Beek 1977: 172–73 (pictured in Rye 1981: fig. 1). For a description of a contemporary vertical kiln in the Middle East today, see Franken 1969: 94–95.

A major shortcoming of the vertical kiln is that it is difficult to maintain a constant temperature throughout the pottery chamber. As a result, there is often uneven firing of the wares. In the horizontal kiln, which represents a more sophisticated design than the simple up-draft kiln, this difficulty is overcome. Its design differs from the vertical kiln in that the elements are arranged along a horizontal rather than a vertical axis. See Fig. KIL.01. A fire box is located at the front and an exit flue at the back. In between, the vessels are stacked in a chamber for firing. A baffle or a row of pots is placed at the back of the fire box so as to direct the hot gases to the top of the pottery chamber. The gases are then drawn down through the stack of pots and out the exit flue, leading to the designation "down draft" kiln (Scott 1965: 382, 393; Rye 1981: 100).

Constant temperature is maintained in the pottery chamber of a horizontal kiln by diminishing the cross section in going from the front of the kiln to the back. This is accomplished by reducing the height or width of the pottery chamber, or both. Thus, as the gases cool as heat is transferred to the vessels, the velocity of the gases increases. This results in a more even amount of heat being transferred to all vessels in the chamber, regardless of location (Rhodes 1968: 20). As with the vertical kiln, the draft of the horizontal kiln can be controlled by adjusting the size of the air inlet opening and the exit flue. For examples of horizontal kilns from the biblical period, see Dothan 1971: 92. For contemporary examples of horizontal kilns, see Foster 1956: 396–97 and Hankey 1968: 30, 31.

KINAH (PLACE) [Heb *qînâ* (קִינָה)]. A town (Josh 15:22) mentioned in a list of cities (Josh 15:21–62) which presumably derives from the time of Josiah. The LXX, which reads *kina* in the Codex Alexandrinus and, by metathesis, *Ikam* in the Codex Vaticanus, perhaps also refers to this site in addition to the MT in the list of Simeonite cities (Josh 19:2–8), where *keimath* is mentioned (Kallai *HGB,* 352). Among other sites mentioned, Kinah was situated in the Negeb, on the Edomite border (Josh 15:21–32). Because of the possibility that a site may receive a new name while the old name persists in its immediate vicinity (Aharoni *LBHG* [1967 ed], 112) it is likely that the Wādi el-Qēni points to biblical Kinah. An earlier suggestion located Kinah at Kh. Ṭaiyīb (M.R. 163081), about 5 km N–NE of the present city of Arad (Aharoni 1970: 21). In recent times Kinah has frequently been connected with Kh. Ghazze (Heb Ḥorvat ʿUza, M.R. 165068), 6.5 km SW of Arad. See UZA, HORVAT.

In the time of Josiah, the *khirbe* was a strategically important site along Judah's SE border on the road to Edom (Keel and Küchler 1982: 233–34). This site, which consisted of a sizable fortress and an open settlement in the 7th to 6th centuries B.C. (Aharoni 1958: 33–35), dominates the Wādi el-Qēni. The excavations conducted there since 1982 have yielded ostraca comparable with those found in Arad (Beit-Arieh and Cresson 1985: 96). Reconstruction of one of the Arad sherds mentions Kinah along with Arad as logistic centers of the area (Aharoni 1981: 46–49). The name "Kinah" may reflect colonization by Kenites of the E part of the Beer-sheba depression.

When the Seleucid army under Antiochus XII lost a battle with the Nabateans S of the Judean mountains (Josephus, *Ant* 13.387–91; *JW* 1.99–102), the remnant of the army retired to ‘a village called Kana’ (*Ant* 13.391; *JW* 1.102). The site of this retreat, which probably took place in 86/85 B.C., could have been the biblical Kinah (*GP* 2: 149).

KING AND KINGSHIP. The term “king” is used as a title to refer to a male sovereign ruler who exercises authority over a defined territorial area, the state. The position of the king may be purely or partly hereditary or, as in some cases, elective. The king acts as a central symbol for the territory and population he rules over, as well as symbolizing its prosperity, fertility, and security. Kingship refers variously to the rank, authority, or office and dignity of the king, including the exercise of power over the subjects of the state. These two terms are applied to states which vary considerably in degree of social development, size of population or territorial extent. They are used of small agrarian polities of the past which have centered on a sovereign ruler as well as of much larger monarchies, including modern industrialized societies.

The inauguration and development of kingship in Israel was one of the most significant episodes in its history, affecting the formation and transformation of traditions now preserved within the Hebrew Bible. King and kingship have had a profound influence on the history of the community, its religious and literary traditions. The monarchies of Israel and Judah lasted little more than four centuries, were small in comparison with the surrounding riverine cultures of Egypt and Mesopotamia, but left an indelible mark upon the religious traditions of mankind. The ideology which grew up around Israelite and Judean kingship proved to be of immense significance for the development of messianic beliefs which have shaped major world religious traditions. An understanding of king and kingship in Israel forms part of the broader investigation of social anthropologists and historians into the formation and development of early state societies. It is also an essential element in trying to understand and appreciate the religious movements and ideas which culminated in the formation of the canon of the Hebrew Bible.

A. The Definition and Nature of Kingship

Monarchy is the most common form of government in agrarian societies throughout history. The development of the state with the king as the central symbolic figure represents a major stage in the evolution of political systems. The king was responsible for the maintenance of law and order within a defined territory through the use of a professional and permanent military force and a dedicated central bureaucracy. There is considerable evidence for Israel to suggest that the bureaucracy was modeled upon

Egyptian patterns (Mettinger 1971; Heaton 1974). Such states were politically centralized societies based on social stratification and specialization and dependent upon the extraction of an agricultural surplus from the peasantry in order to provide for the subsistence needs of the royal elite and its religious and political specialists. The king had the power to command the payment of various forms of taxation, the rendering of services, and the obeying of law. The central bureaucracy provided a means whereby the king was able to control the various levels of government responsible for the military, economic, legal, and ritual activities of a network of urban centers and villages within the territorial boundaries of the state.

The king as the *owner* of the institutions of the state was able to control the agrarian economy. Probably the most important aspect of kingship therefore in an agrarian society was the ownership of agricultural land. The development of a monarchy meant in reality the transfer of sovereignty over agricultural land from the villages to the king. In practice, arable land was granted to various royal functionaries (cf. 1 Samuel 22) as hereditary estates, securing patrimonial land tenure in return for taxes and military service. Alternatively, prebendal land grants were made to various officials as payment for their duties in the central administration of the state. Although in theory such prebendal estates were in return for official duties, it was not uncommon for such lands to become hereditary. Elite landlords extracted from their peasant cultivators as much as 50 percent or more of all produce in the form of taxation and rent. They in turn paid taxes, rent and labor to the king. Such systems of land tenure and taxation maintained and reinforced the distribution of power and privilege of a stratified agrarian society such as the kingdoms of Israel and Judah.

The Hebrew Bible uses derivatives of the root *mlk* to denote this form of government. *Melek* is the designation for a "king," whereas other derivatives of the root *mlk* denote "kingship," "kingdom," "to be king/reign," etc. The notion of "dominion" or "rule" is also expressed by the root *mšl.* It is interesting, in light of the above discussion, to note that the basic meaning of the Arabic root *mlk* is "to own completely" and may indicate a similar basic meaning of the Hebrew *melek.* It is an intriguing feature of Semitic languages that Hebrew has *melek* for "king" and *śar* for "official," "prince," while Akkadian has *šarru* "king" and *māliku* "counsellor" (Mettinger 1976: 296). The noun *melek* is used frequently in the Hebrew Bible to refer to neighboring or foreign monarchies, including Canaanite city states, Philistia, Ammon, Edom, Moab, Hamath, Aram, Tyre, etc. The most frequent usage, however, is reserved for the ruler of the kingdoms of Judah and Israel.

In the biblical traditions which relate to the introduction of kingship into Israel, Saul is anointed by Samuel as *nāgîd* over Israel (1 Sam 9:16; 10:1). The meaning of the noun *nāgîd* has proven to be particularly elusive and engendered a long yet inconclusive debate. Alt (1966) concluded that it referred to one who was designated to be leader by Yahweh, wheras *melek* designated an office conferred by the people's acclaim. Richter's extensive treatment (1965) concluded that the term underwent a complex development: it was originally a pre-monarchic title for a military leader and denoted a position quite distinct from *melek.* Cross (*CMHE,* 220–21), following an earlier suggestion of Albright, appeals to the Aramaic Sefire inscriptions for his view that *nāgîd* means commander. He emphasizes continuity with the charismatic leadership of the judges, as opposed to the dynastic kingship of David and Solomon designated by the term *melek.* Ishida (1977: 50) rejects the view that it was originally a title for the charismatic war leader in the pre-monarchic period. Instead he concludes that it denotes the "king designate" of Yahweh. Similarly Mettinger (1976: 151–84), who offers a thorough review of previous literature, suggests that it was originally a secular term for the "crown prince" designated by the reigning king; its theological use as a divine designation came later. Recently, Flanagan (1981: 67) has advocated the view that *nāgîd* indicates the chiefly power of Saul and David prior to the emergence of the early state and a fully developed kingship.

B. The Introduction of Kingship into Israel

The complex processes which led to the introduction of kingship, that is, the formation of an Israelite state, have continued to generate scholarly debate and research. Discussions of how kingship was introduced into Israel can be divided into two broad categories. The most common approach has been and continues to be a literary investigation and analysis of the traditions within the Hebrew Bible which relate

to the rise of the monarchy. In recent years reconstructions of the formation of an Israelite state have drawn more extensively and consciously on social scientific studies and methods, particularly anthropological studies of state formation. This has given rise to alternative approaches which do not necessarily rely upon detailed literary analysis of biblical texts. This type of work has focused upon the links between environment, economy, trade, demography, settlement patterns, and so on, as part of the processes which culminated in the rise of an Israelite state and the introduction of kingship into Israel (Gottwald 1986; Frick 1986; Chaney 1986; Coote and Whitelam 1986).

The classical work of Alt (1966) has been influential in shaping the debate on the nature of the formation of an Israelite state in Palestine. His investigations were based upon a detailed treatment of biblical and extrabiblical material combined with an analysis of topography. According to Alt, Israel had gradually infiltrated into the scarcely populated hinterland of the hill country over a protracted period of time, possibly centuries. The areas where Israel settled were dictated by the military superiority of the city-states of the lowlands which were much too strong for the Israelites to confront. The rise of an Israelite state was the direct result of the threat posed by Philistine domination (1966: 183, 188, 195–96). This is a view that has proven to be extremely influential in the history of scholarship since it is reiterated in the majority of standard textbooks on the history of Israel.

For Alt, Saul's charismatic leadership was the starting point of the inauguration of kingship into Israel, but this was a title conferred by public acclaim. Initially it was designed as a defensive response to the Philistine threat and did not involve any notion of hereditary kingship. Alt sees this as a major change brought about during the reigns of David and Solomon in an attempt to hold together through a personal union the kingdoms of Israel and Judah along with the city-state monarchies of Ziklag and Jerusalem. A further suggestion of Alt, which still remains to be properly investigated, was that the initial structure of the Israelite state found its closest parallels in the near contemporary east Jordanian states of Ammon, Moab, and Edom.

Detailed studies of biblical texts pertaining to the introduction of kingship into Israel have formed a major part of the research effort into this area. It has long been a basic assumption that 1 Samuel 7–15 contains a valuable though complex account of the introduction of the monarchy in Israel. It is also widely acknowledged that the utilization of this material is made difficult by its composite nature and theological interpretation of the introduction of kingship. The history of the analysis of these chapters has been dominated by attempts to identify various literary strata. The traditional identification of two sources, one early and pro-monarchical (1 Sam 9:1–19:16; 11:1–11, 15; 13–14) and the other late and anti-monarchical (1 Sam 7:3–17; 8; 10:17–27; 11:12–14), has dominated the discussion of this narrative complex. Despite various refinements of this source-critical analysis or subsequent attempts to find three sources, it has remained influential in the discussion. It has also been assumed that 1 Sam 11:1–15 preserves the most authentic account of how Saul became king, although recent literary studies have raised serious questions about the use of such material for historical reconstruction.

The combination of Alt's view that kingship was the result of external pressure and interpretations of biblical material as anti-monarchic has led to widespread acceptance of the notion that the monarchy was an institution alien to early Israel. These arguments take various forms but all depend to a large extent upon the interpretation of texts within the books of Judges and Samuel. From this point of view Israel is described as a theocracy ruled by the heavenly king who endowed various earthly "judges" with charismatic power to deliver the community from foreign oppressors. The refusal of Gideon to accept the offer of a dynastic form of kingship (Judg 8:22–23) is seen as central evidence for a rejection of a dynastic monarchy by early Israel. The abortive attempt at monarchy by Abimelech (Judges 9) and Jotham's parable (Judg 9:7–15) against the nature of earthly kingship are used as corroborative evidence of this opposition to kingship. The acceptance of the existence of anti-monarchic passages in 1 Samuel 8–12 is central to this idea that early Israel was opposed to the introduction of a monarchy. From this point of view the monarchy is seen as an institution "alien" to Israel's origins and its essential nature. However, as with the discussion of the "anti-monarchic" material in 1 Samuel 8–12, scholars disagree on the dating of the Judges material. Views differ as to whether it is late Deuteronomistic material or reflects

contemporary concerns about the nature of kingship as opposed to some theocratic nature of early Israel. Furthermore, Buccellati (1967) demonstrated that the conception of Israelite kingship as alien denies the dynamics of internal social development.

Ishida (1977: 30) accepts the theological shaping of the narratives but argues that they accurately reflect the sectional/factional conflicts involved in the development of new political situations. They reflect the dynamic development of social and political conditions. This is in line with Mendelsohn's influential view (1958), based upon comparisons with Ugaritic evidence, that 1 Samuel 8 reflects contemporary opposition to the introduction of monarchy. Crüsemann (1978), drawing upon anthropological studies of segmentary societies from the work of Sigrist, also sees the opposition to the inauguration to kingship as contemporary with the monarchy rather than as a late Deuteronomic redaction. Popular unrest during the reign of David provided fertile ground for the growth of anti-monarchical literature. The anti-monarchic attitude, he believes, stems from the opposition of segmentary societies to centralization and was expressed more fully during the Solomonic era.

The growth of interest in the potential and utilization of social scientific research for biblical studies has led to new ways of viewing the nature and development of Israelite kingship. Recent changes in approaches to ways of reading biblical narratives, especially new literary and canonical studies, have combined with this renewed interest in the application of social scientific methods and research to open up the debate on how the Israelite state arose. An important area of recent study has focused on the transition from pre-state Israel to the formation of a state with an hereditary kingship and its centralized institutions.

C. The Formation of the State

The evolutionary anthropologist E. Service (1962; 1975) was responsible for identifying the stages of development of sociopolitical societies through increasingly more complex forms. He identified four stages of development: band, tribe, chiefdom, and state. He subsequently realized that bands and tribes were practically indistinguishable. In particular, the study of such segmentary societies, especially chiefdoms, has been utilized in order to shed light on the crucial period of the transition from tribal confederation to state. Flanagan (1981) has argued on the basis of a study of biblical genealogies in comparison with anthropological studies that the periods of Saul and David were chiefdoms. Similarly, Frick (1979; 1985; 1986) has tested information about chiefdoms against the biblical data and has produced an extensive treatment of early Israel as a chiefdom. Such studies have identified important areas of future research which ought to add to our understanding of the complex developments which led eventually to the early monarchy in Israel.

Anthropological studies on state formation have also been used to suggest new ways of understanding the introduction of kingship into Israel. A variety of studies of Israelite state formation (Frick 1985; 1986; Coote and Whitelam 1986; 1987; Hauer 1986) suggest that the rise of the Israelite monarchy was due to a complex interrelationship of different factors. They all call into question the standard view that the origin of the Israelite state was due to Philistine pressure alone. In effect they stress the importance of internal developments in combination with various external pressures.

Hauer (1986), Coote and Whitelam (1986; 1987) and Otto (1986) draw upon a modified version of Carneiro's theory (1970) that circumscription had an important role to play in state origins. They emphasize the environmental and social constraints which operated as a counterweight against the tendency to disintegrate and eventually led to centralization. The geographical and social location of early Israel in the central highlands and southern Palestine was circumscribed by semiarid steppe and desert regions along with the network of lowland city-states, the Philistines, the Midianites, and the Amalekites. Frick (1985: 136–88) and Coote and Whitelam (1986; 1987), following Marfoe (1980), have drawn attention to the importance of highland farming strategies, such as terracing and intensive orchard cultivation, which demanded long-term investment, as important factors in the process of centralization. These studies also identify the pressure of demographic growth on circumscribed resources as an important factor in agricultural intensification which contributed to the move toward centralization and eventually resulted in the introduction of kingship into Israel.

The emphasis upon the complex interrelationship between various internal and external factors extends the study of the rise of kingship beyond many traditional approaches to understanding the biblical text. Future research, dependent to a large extent upon archaeological work at present being conducted in the region, needs to shed light on the relationship between the inauguration of kingship in Israel and the rise of almost simultaneous state formations in Edom, Moab, and Ammon.

D. Royal Ideology

One of the distinguishing features of early agrarian states is the way in which a network of beliefs grew up around and in association with the king. The justification and legitimation of the king's rule was of paramount importance. The dissemination of a royal ideology containing important images, attitudes, and ideals associated with kingship was carried out by a centralized bureaucracy and specialists. Such ideals of kingship can be found in literary traditions, ceremonial, and iconography in many different societies. The scepter (Ps 45:6), the crown (2 Sam 1:10; 2 Kgs 11:12; Pss 89:39; 132:18), and the throne (2 Sam 14:9; 1 Kgs 2:12) were all important symbols of kingship expressing the justness and legitimacy of the king's reign. Royal or official state religion was a crucial element in the legitimization and reinforcement of the social structure with its distribution of power and privilege.

The Hebrew Bible provides the major source for understanding the central elements of Israelite royal ideology. Archaeological material offers important, though limited evidence, which adds to this understanding. Attempts to reconstruct royal ideology remain tentative due to the fragmentary stature of the source material and continuing disputes over the dates or use of texts. The justification of kingship with its centralized social structure was based upon a guarantee of order, security, prosperity, fertility, etc., in return for loyalty and subservience. The manner and means by which such royal ideology was disseminated to the population of the state or even to potential enemies outside the territorial boundaries is also an important aspect of the study of king and kingship in Israel.

A vast wealth of textual and iconographic material dealing with kingship has been preserved from many different ANE societies spanning a vast geographical and temporal expanse. This material reveals many important formal correspondences covering ideas of kingship in these different societies. British and Scandinavian scholars (Hooke 1933; 1935; 1958; Engnell 1943; Widengren 1955), the so-called "myth and ritual" and Uppsala schools, tried to identify a common cultic pattern of divine kingship throughout the ANE. Their work provides an important landmark in the debate on the divine or sacral nature of the king and the various rites and ceremonies of kingship. Their conclusions, however, have been challenged by subsequent scholarship (Frankfort 1948).

It is important to remember that the formal similarities in the ideal picture of kingship throughout the ANE do not necessarily mean that the practical application and understanding of the functions of the king would have been the same in all societies. Particular ideologies were part of whole social systems and must be understood as far as possible in systemic terms before cross-cultural comparisons can be meaningfully carried out (Chaney 1986). Our evidence for Judean and Israelite royal ideology is fragmentary and often difficult to interpret; it is not even clear what differences there were between the two kingdoms. It is of immense value to be able to compare this evidence with material from similar agrarian kingships in order to suggest questions and lines of research into the organization and dynamics of the whole social system under consideration. But it is essential to consider differences as well as mere formal similarities since various factors such as environmental constraints may have played an important part in shaping different ways in which monarchies functioned.

E. Yahweh as King

One of the most important features of kingship in many different societies is the concept of the deity as king and the relationship with the earthly occupant of the throne. Thus the study of Yahweh's kingship has important implications for understanding the concepts of king and kingship in Israelite thought. The origin and nature of the concept of Yahweh's kingship in Israel has been the source of considerable debate. It is a matter of some controversy whether or not the idea was an important feature of Israelite religion from an early date. References to Yahweh as king in the Pentateuch and Deuteronomistic History (Exod 15:18; Num 23:21; Judg 8:23; 1 Sam 8:7; 10:19; 12:12) are notoriously difficult to date. It is a

common concept throughout the Near East that the god, or high god, was the king of the state or polity. This was an important element of royal ideologies since the king ruled as the earthly representative of his god. In general terms it can be said that the earthly king's rule, or at least the ideal aspects of kingship, was merely a reflection of the heavenly king's rule.

The theme of Yahweh's kingship is given its most explicit treatment in the Psalter and, to a lesser extent, in the prophetic literature of the Hebrew Bible. H. Gunkel's (and J. Begrich 1933) classic study of psalm types identified Psalms 47, 93, and 96–99 as Enthronement Psalms celebrating Yahweh's kingship. He has been followed by H.-J. Kraus (1951) and C. Westermann (1965) in seeing these psalms as late and eschatological. In contrast, S. Mowinckel's pioneering study (1922, 1962) remains influential. He extended this category of psalms to include Psalms 95 and 100 while Mowinckel also pointed out that a number of other psalms were closely associated with this group in subject matter (Psalms 8; 15; 24; 29; 33; 46; 48; 50; 66a; 75; 76; 81; 82; 84; 87; 114; 118; 132; 149; as well as Exod 15:1–18). Furthermore, he produced a strong case for seeing these psalms as part of the important monarchic autumn festival.

The Enthronement Psalms deal with Yahweh's accession to his royal throne and exercise of royal power over the divine council, creation, and Israel. Yahweh is declared as king (Pss 47:6–8; 93:1; 96:10; 97:1; 98:6; 99:1), by virtue of his victory over the forces of chaos as represented by the primeval waters (Ps 93:3–4). Yahweh is able to subdue all opposition and guarantee the security of Israel (Pss 47:3–4, 8–9; 97:3, 7, 9; 98:2; 99:1–2). The guarantee of order, *mišpāṭ*, peace, security and well-being, is fundamental to Yahweh's kingship. He is depicted as the divine Judge (Pss 96:10–13; 97:2, 8; 98:9; 99:4). The theme of Yahweh's kingship is developed in very similar terms in the large collection of psalms which Mowinckel associated with the Enthronement Psalms. Yahweh's claim to kingship stems from his victory over the waters of chaos or rebellious sea monsters (Pss 74:12–14; 89:10–11) as well as earthly opponents (Pss 48:3–4; 68:30). He is the king of the gods in the divine council and responsible for the guarantee of justice and peace among the underprivileged (Psalm 82; cf. Deuteronomy 32). The very base of his throne is established upon justice and righteousness (Ps 89:14). Yahweh as king is able to order and sustain his creation (Pss 24:1; 74:15–17; 89:11–12; 29; 68:9).

The recurrent phrase *yhwh mālak,* announcing Yahweh's kingship, is a feature of the Enthronement Psalms. The translation and meaning of this phrase has been the subject of considerable debate. Kraus, following Gunkel, believed that the verb was a prophetic perfect which pointed to an eschatological understanding of these psalms. Mowinckel believed that it referred to something new and important that had just taken place, and therefore he translated it as "Yahweh has become king" (see also Lipiński 1963). Others argue that it refers to an enduring and lasting condition and ought to be translated as "Yahweh is king." Gray (1979: 20–25) has a good discussion of the various suggestions. It may be better to think of psalms which celebrate Yahweh's enduring kingship since theologically there is not a time when Yahweh was not king (Ps 93:2). In the context of the canon as a whole, rather than a supposed historical context, all aspects of this phrase as past, present, and future combine in the assertion that Yahweh was, is, and continues to be king.

Mowinckel's reconstruction of a New Year Enthronement festival to celebrate Yahweh's kingship has become one of the landmarks of biblical scholarship. The so-called "myth and ritual school" drew upon his research in extending the discussion of the nature of this Israelite festival with a comparison of similar ideas and themes elsewhere in the ANE, particularly the Babylonian *akītu* festival. Mowinckel identified the celebration of Yahweh's enthronement at the New Year Festival with the Feast of Tabernacles (*Sukkoth*). The debate has continued as to the nature and main characteristics of this festival. A. Weiser (1962), for instance, interpreted the Enthronement Psalms in the context of a Covenant festival which celebrated the Exodus at the central sanctuary of the Israelite league. Kraus (1951) envisages the celebration of Yahweh's kingship at a royal Zion-festival which celebrated the divine election of Jerusalem and the Davidic dynasty. For him, as for Gunkel, the emphasis upon the kingship of Yahweh did not take place until after the end of the Davidic dynasty in 587 B.C.E. However, Mowinckel's arguments have carried the greatest support in locating the celebration of Yahweh's kingship at the great autumnal festival of the New Year in the Jerusalem temple. The principal aspects of this celebration were

the kingship of Yahweh, the defeat of the waters of chaos, the creation of the world, and the defeat of Israel's enemies. The Enthronement Psalms present Yahweh as the Divine Warrior who subdues the waters of chaos and then rises to judge the earth and thereby guarantee justice and order.

The prophetic literature treats similar themes of Yahweh's kingship. Although this is not always explicit in various oracles such ideas clearly underlie much of the prophetic material. The themes of Yahweh's kingship, his victory over the primeval forces of chaos, the defeat of earthly enemies, and the salvation of Israel all feature in this literature (Isa 24:21–23; 41:21–24; 44:6–7; 52:7; Jer 10:6–10; Zech 14:9, 16–17; Zeph 3:14–19). The concept of the Day of Yahweh, which has been particularly controversial in biblical scholarship, treats ideas similar to the conception of Yahweh's kingship in the Enthronement Psalms. A notable feature of the use of these ideas in the prophetic literature is that the twin themes of salvation and judgment, including of course the judgment and punishment of Israel, are closely related. The complex nature of prophetic literature with the interweaving of oracles and later interpretations makes it notoriously difficult to try to date individual passages. However, clearly Yahweh's royal attributes as Divine Warrior and Judge remain important themes in Israel's religious traditions as preserved in the Hebrew Bible.

F. The Royal Ideal

The expectation that the king's ideal attributes correspond to the central elements of Yahweh's kingship reflects the importance of religious legitimation in the establishment and maintenance of royal power in early agrarian states. The royal psalms (Psalms 2; 45; 72; 101; 110), which were identified by Gunkel, provide the clearest evidence for the main themes of Israelite, or rather Davidic royal ideology. Once again Mowinckel extended this group of psalms (Psalms 28; 44; 60; 61; 63; 64; 66; 68; 80; 83; 118; and 1 Sam 2:1–10) and argued that they had their setting at the great autumnal festival. Eaton (1976) and Mettinger (1976) have recently reassessed this material and argued for the inclusion of a wider range of material, including 2 Sam 23:1–7, as evidence for the royal ideal. The greatest problems of interpretation stem from disagreements over how to understand the nature of the language applied to the king: whether it is to be taken literally or to be understood as court hyperbole. The history of this debate also covers attempts to reconstruct the use of this material at the autumn or other festivals.

Considerations of the king's precise role in cultic rites have again formed part of the extensive yet inconclusive debate on the reconstruction of the great autumnal festival as a celebration of Yahweh's kingship. Johnson (1967) and Eaton (1976) are recent representatives of the view that the king took part in a great sacral drama of humiliation and then glorification as part of the annual renewal of kingship. Their views represent a more moderate position than the earlier advocates of the myth and ritual school who saw this drama as being linked to the king's divine nature. Considerable doubt surrounds attempts to reconstruct the autumn festival and its central features (Mettinger 1976: 3–4, 308). However, it is generally recognized that most of the royal psalms and associated material, as hymns from the royal sanctuary, provide crucial evidence for the complex of beliefs associated with the king in Israel.

The king was the central symbol of the social system. His prime function was the establishment and maintenance of order throughout the kingdom. The king's functions as warrior (1 Sam 8:20), judge (1 Sam 8:5; 2 Sam 12:1–15; 14:1–24; 15:1–6; 1 Kgs 3; 21:1–20; 2 Chr 19:4–11), and priest (1 Sam 13:10; 14:33–35; 2 Sam 6:13, 17; 24:25; 1 Kgs 3:4, 15; 8:62; 9:25; 12:32; 13:1; etc.) are all interrelated elements of this fundamental task. They were all essential to the maintenance of a divinely ordained order which was conceived of in cosmic terms and covered all aspects of a society's and individual's existence. This notion of kingship is evidenced from vast literary deposits throughout the ANE from Mesopotamia, through Syria-Palestine to Egypt over many centuries. Royal Sumerian hymns, the well-known prologues and epilogues to the law codes of Lipit-Ishtar and Hammurabi, and various royal inscriptions and documents from Egypt offer a strikingly similar view of the nature of kingship. Lipit-Ishtar of Sumer was divinely commissioned by Anu and Enlil "to establish justice in the land, to banish complaints, to turn back enmity and rebellion by the force of arms, (and) to bring well-being to the Sumerians and Akkadians" (*ANET*, 159). The prologue to Hammurabi's law code later echoed almost exactly this understanding of the kingly task.

In Mesopotamia the term *mēšarum* designated divine, cosmic order as the responsibility of the king, while in Egypt the Pharaoh was responsible for preserving *maʿat.* The true exercise of his duty as warrior was to protect and defend the state against internal and external military threat; as judge, to guarantee order through the establishment of justice; and as priest, to guarantee cultic order, so that the well-being of the kingdom was maintained through the fulfillment of the wishes of the divine realm. Both *mēšarum* and *maʿat* are often translated by the term "justice." Both terms, however, have a much wider connotation than the normal meaning of the English word justice. They denote the importance of "justice," "order," and "truth" for the whole of society and entail the notions of well-being, fertility, and prosperity. They are the gifts of the gods to the king who is the earthly representative of the divine realm and charged with the task of ushering in *mēšarum/maʿat* on his accession to the throne.

The importance of this idea in Egyptian royal ideology is illustrated in the myth of creation. Re was celebrated as expelling the powers of chaos through his act of creation. The establishment of *maʿat,* also personified as the daughter of Re, was fundamental to the very structure of creation. The Pharaoh as "Lord of *maʿat,"* an epithet given to Re, preserved and protected Re's creation. The constant threat to world order posed by the powers of chaos was realized at the time of the Pharoah's death. The accession of a new Pharaoh to the throne expelled chaos and reestablished *maʿat.*

In Mesopotamia, the Babylonian creation epic *enuma elish* functioned as a justification for monarchy. It illustrates similar ideas about the ideal nature of kingship. There Marduk, who proves himself fit to be king of the gods, expels chaos by defeating the sea monster Tiamat in a dramatic battle. The law codes and other royal inscriptions provide the clearest evidence for the king's duty to establish and maintain a divinely ordained order. The Ugaritic legends of Krt and Aqht along with more fragmentary royal inscriptions throughout the Levant point to the widespread acceptance of similar ideas about the ideal nature of the king.

The Israelite royal psalms witness to similar notions about the functions of kingship. Psalm 72 is generally, though not universally, accepted as part of the enthronement ceremony of the king thereby proclaiming the ideal aspirations and hopes for the new reign. This psalm embodies most of the main elements of the ideals of kingship. The request (Ps 72:1–2) that the king be granted the divine gift of justice, *mišpāṭ,* is tied to the fertility and prosperity of the nation as a whole. His basic duty is then to preserve and protect the order and harmony of the kingdom and thereby the whole of Yahweh's creation (Ps 72:3, 5–7, 15–17). He is promised universal dominion and the defeat of his enemies, i.e., the defeat and expulsion of chaos (Ps 72:8–11). All these themes are found expressed in the other royal psalms and associated material in the Hebrew Bible. The king is the fount of justice (Pss 45:4, 6; 101; 2 Sam 23:3), fertility and prosperity (Pss 45:2, 8–9; 111:3; 2 Sam 23:4), and order (Pss 45:3; 101; 110:1–2, 5–7; 89:21–23; 2 Sam 23:6–7).

G. The Nature of the King

These themes of justice and fertility, the maintenance of cosmic and natural order, and universal dominion are the same themes and attributes of Yahweh's kingship celebrated in the Enthronement Psalms. The nature of the precise relationship between Yahweh and the king has been the subject of an intense and extensive debate. A major difficulty here is whether the exulted language of the royal psalms is to be taken literally or treated as court style or hyperbole.

The claim is advanced in a number of royal psalms and other texts that the king was the "son" or "first-born" of Yahweh, while Yahweh was the "father" of the king (Pss 2:7; 89:27; 2 Sam 7:14; cf. Isa 9:6). This is clearly an important ideological claim which underlies the right of the occupant of the throne to rule on behalf of the deity of the state. The precise meaning of such claims is the subject of an unresolved dispute. Scholars such as Hooke (1933; 1935; 1958), Engnell (1943) and Widengren (1955) defended the position that the Israelite king was of divine descent. Their appeals to analogous beliefs throughout the ANE have been decisively challenged. It is conceded that the Egyptian Pharaoh was believed to have been the offspring of Re and worshipped as the incarnation of Horus, Osiris, and Seth. Frankfort (1948) has been the most influential in challenging similar interpretations of Mesopotamian material. The Hittite king it is argued was not deified until after his death. One of the epithets of Keret at Ugarit was the

"offspring of El." But Gray (1969; 1979), and others, deny any notion of the divine nature of the Ugaritic king, the emphasis rather being upon his sacral status.

The evidence within the Hebrew Bible for Israelite beliefs about the nature of the king is particularly problematic. The well-known *crux interpretum* in Ps 45:6 has figured prominently in this debate. The problem is whether or not the king was addressed as and thought to be "god" (*ʾĕlohîm*). Those who deny he was a god-king offer various explanations as to the understanding of the MT. The most common of which are to take this term as an adjective referring to the king's "divine throne," to argue for textual corruption through haplography, or to assume that the verse contains an ellipsis. Similar problems arise with Isa 9:6 which G. von Rad (1966) saw as analogous to the Egyptian royal protocol containing the Pharaoh's throne names at the time of his coronation. Suggestions that the king was addressed as "mighty god" (*ʾēl gibb̃r*) have been strongly contested. Alternative explanations understand the term in a metaphorical rather than literal sense as referring to the king's special nature which sets him apart from the human sphere (cf. Isa 10:21; Jer 32:18).

This is also a common understanding of the "father"-"son" relationship between Yahweh and the king. Thus the decree of Yahweh in Ps 2:7 that "You are my son, today I have begotten you" is interpreted as a formula of adoption on the day of the king's coronation. The king is understood to have a special relationship with Yahweh which sets him apart from other mortals. However, this divine sonship is an expression of the sacral importance and functions of the king rather than the expression of a belief in the divine nature of the king. The divine qualities of the king, his god-like abilities, are referred to frequently (2 Sam 14:17, 20; 1 Kgs 3:4–15; 16–28; 4:29–34; 10:1–9, 24; Isa 11:2–4). Mettinger (1976: 260–75) represents the more general understanding that the king's divine sonship was not understood in mythological terms as literally a divine descent, but rather an expression of a special relationship which began only at the time of the king's accession to the throne. Frick has recently (1986: 32) suggested on the basis of African comparisons that it was the kingship rather than the king which was thought to be divine. The fact that the prophetic material does not attack royal claims to divinity is often cited as crucial, even if silent, evidence that the king in Israel was not understood to be divine.

It is more common to talk of the sacral nature of the king. This finds expression particularly in the ritual of anointing which accompanies the coronation. There are only two brief descriptions of the royal enthronement ceremony in the Hebrew Bible (1 Kgs 1:32–40; 2 Kings 11). The proclamation of the king as "the anointed of Yahweh" (*māšîaḥ yhwh*; 1 Sam 24:6, 10; 26:9, 11, 16, 23; 2 Sam 1:14, 16) implies the inviolable and sacrosanct nature of the king's person (cf. 2 Sam 19:21–22; 1 Kgs 21:10, 13). The term is used most frequently in the Hebrew Bible to refer to the Davidic king in Judah, although it is used in other contexts of various individuals. However, there is no consensus as to the specific significance of the rite. Kutsch (1963) remains the most extensive treatment of the rite and its significance throughout the ANE where it ranges in use from the transfer of property to the delegation of authority. Mettinger (1976: 185–94) has a useful review of previous literature on the subject. He identifies a development in the Israelite rite of anointing the king from a secular authorization by the people to a divine designation through the priest. The title was clearly an important ideological claim to the king's legitimacy and right to rule. It is closely linked in this respect to the divine promise of a Davidic dynasty in perpetuity (2 Sam 7:8–16; Ps 89:19–37).

The kingly ideal of the royal psalms, the special character of the king through his unique relationship with Yahweh, and the title *māšîaḥ yhwh* provided the foundations for the development of messianic beliefs of later Judaism and Christianity. The ideal of a future ruler in prophetic oracles was coached in royal terms (Isa 9:6–7; 11:1–5; Jer 23:5–6; Mic 5:2–4; Zech 9:9–10). Later messianic expectations had their origins in the process of reinterpretation of this ideal and the promises to the Davidic dynasty following the traumatic defeat and loss of kingship at the hands of the Babylonians in 587 B.C.E.

H. The Nature of Israelite Kingship

There has been considerable debate about the precise nature of kingship in Israel: whether or not it was dynastic or charismatic, elective or absolute. Alt put forward the view that the monarchy of Saul was charismatic and that the N kingdom of Israel did not accept the dynastic principle until the time of Omri.

This influential idea shaped a great deal of scholarly research into many different aspects of the nature of Israelite kingship. It has been decisively overturned by Buccellati (1967) and Ishida (1977) who provide extrabiblical and biblical evidence (1 Sam 20:31; 2 Sam 2:8–11; 1 Kgs 14:10–14; 15:28–29; 16:3–4, 7, 11–12) that a dynastic understanding of kingship was a basic feature of ancient Near Eastern, including early Israelite, kingship.

Israelite kingship is frequently seen as governed or restrained by covenantal obligations. Von Rad (1966) identified the problematic *ʿēdût* of the coronation ceremony (2 Kgs 11:12) with the Egyptian royal protocol containing throne names and the rights and duties of kingship. The term *hoq* (Ps 2:7) and *ʿēdût* are frequently understood as some form of document or inscription containing the rights of kingship or the terms of the Davidic covenant. This is often compared with the *mišpāṭ* of the kingdom (1 Sam 10:25; cf. 8:11) and the so-called law of the king (Deut 17:14–20) as evidence for a constitutional understanding of Israelite kingship. Halpern (1981) provides an extensive treatment of the various aspects of this problem. He concludes that Judean and Israelite monarchies were determined by legal constraints.

Many of these passages are extremely ambiguous and notoriously difficult to date. The repeated use of the root *špṭ* in 1 Samuel 8 and 10:25, with its dual meaning of "govern" and "judge," clearly represents the basic functions of kingship in early agrarian states. However, the negative tone of these passages and Deut 17:14–20, whether a Deuteronomistic assessment of kingship or not, illustrates the striking differentiation between the ideal presentation of the duties of kingship and the stark reality of a society subject to the widespread powers of a highly centralized agrarian monarchy. Whitelam (1979) offers an extensive survey of royal influence and effect upon the administration of justice (cf. Macholz 1972a, b). There is no consensus on the question of whether or not the king promulgated law or radically reorganized the judicial system. Given the problematic nature of the evidence it is inevitable that many questions concerning the exact nature of the principles governing Israelite and Judean kingship will remain unsolved.

I. Royal Religion and Ideology

One of the most striking features of all early agrarian states, from Egypt and Mesopotamia to the Indus Valley and Mesoamerica, was the use of religion to establish and preserve the exercise of royal power in a centrally organized society. The *enuma eliš* is one of the best known state foundation myths which legitimizes the royal status quo. Israelite kingship was no exception in using state religion to legitimize and maintain royal rule (see Ahlström 1982). The king, as noted above, was presented as the chosen of the deity with the right to rule on earth as the god's representative. He was responsible for the organization and administration of the cult including cultic reform (1 Kgs 15:12–15; 2 Kgs 18:1–7; 22:3–23:23).

The Hebrew Bible provides ample evidence of syncretistic elements of royal and popular religion during the monarchic period (Jer 44:17–18; 2:27; Ezek 20:30–31; Mic 5:13–14; 2 Kgs 21:7; etc.). The sustained condemnation of royal religious apostasy from the theological perspective of the Deuteronomistic Historian and the prophetic critique of the cult (Amos 5:21–27; Isa 1:10–17; Jeremiah 7; etc.) illustrate clearly this feature of the ritual system. Archaeological evidence from various Israelite shrines, the inscriptions from Kuntillet Ajrud, and, to some extent, the evidence from Elephantine have added significantly to the understanding of cultic practices during the monarchic period. The syncretistic royal cult is seen by many as further evidence that kingship was alien to early Israel. Mendenhall (1975) has strongly advocated this position with his assessment of the monarchy under David and Solomon as representing a rapid reversion to LB Age paganism. The reconstruction of a premonarchic Israelite cult is difficult and controversial thus making it difficult to draw comparisons with later monarchic developments. Further research is needed to ascertain how the royal cult with all its syncretistic features functioned within Israelite society as a whole.

J. The Temple-Palace Complex

One of the major responsibilities of ANE kingship was the provision of a temple for the god of the state. This act of temple building provided the symbolic expression of the god as the guarantor of the state and the dynasty (2 Sam 5:12). The temple above all else defined the political, economic, and religious center. It was, thereby, a symbolic statement of the king's relationship with the god and his divine right to rule.

The temple, among other things represented heaven upon earth (Ps 1:4). As the dwelling place of the deity upon earth, situated next to the king's palace and part of the same complex, it symbolized the king's special relationship with the divine world and the political and religious center of the state. In Judah, this was expressed in the royal Davidic ideology of a double election of Jerusalem as the dwelling place of Yahweh and the promise to David of a dynasty in perpetuity (2 Sam 7:1–17; Ps 89:1–37). Similarly Jeroboam's renovation and promotion of Bethel in the north was a statement of his own sovereignty and special relationship with the deity of the state.

The temple-palace complex was the central, organizing, unifying institution in the ANE. It not only legitimated the political role of the king but was central to the economic structure of the state (1 Kings 5–9). The maintenance of the ritual system of the temple formed part of the king's control of the state economy. The state cult required a heavy investment of labor and resources. But it also drew vast resources to the royal court and cult as tribute, taxation, and sacrificial inputs. In return, the royal cult system was presented ideologically as a guarantee of fertility and prosperity for the general population.

A vast literature has been devoted to the Solomonic temple in Jerusalem (Businck 1970; Gutmann 1976). Much of the discussion has focused on the ancient Near Eastern prototypes and architectural patterns. In recent years, more interest has been shown in examining how the temple and its rites formed an essential element of the political ideology of the royal state (Meyers 1983; Lundquist 1982; Whitelam 1986). Foreign patterns and symbols were appropriated by and mediated through the royal bureaucracy in order to symbolize fundamental aspects of the king's relation to the deity. The symbolic aspects of the temple and palace were extremely complex and worked on many different levels. The fortified exterior of the Solomonic temple was visual and immediately conveyed the important notion of power and authority (Meyers 1983). By contrast, the complex iconography of the interior, portraying more sophisticated images of the king's importance, was seen only by the royal court, urban elite, and religious functionaries.

K. Royal Propaganda

Royal ideology was disseminated in a number of ways and directed at many different audiences. The reigns of David and Solomon were typical of early state formations in the development of monumental art and architecture. The investment of labor and vast resources in the building of royal fortifications, temple-palace complexes, and other public buildings was repaid by their importance in displaying the king's might, power, and wealth to all potential enemies. The visibility, simplicity, and size provided impressive displays of royal power. The use of ashlar masonry in the Solomonic gates at Megiddo and Gezer and its use in other royal buildings offered striking and immediate images of the king's power. The other most common architectural feature of royal buildings was the so-called Proto-Aeolic capital found at Jerusalem, Hazor, Megiddo, Samaria, and Ramat Rahel. These features were important symbols of royal power and the king's right to rule. The royal fortifications made explicit the protection offered by the state against external and internal military threat. Border fortifications were important symbols of the king's power which guaranteed protection while at the same time defined the limits of the state.

The use of literary material to propagate and disseminate royal ideology is less well understood and less secure. The so-called Succession Narrative (1 Samuel 9–1 Kings 2) was seen by Rost (1982) as Solomonic propaganda. It has recently been compared, along with other material in the books of Samuel, with the Hittite "apology of Hattusilis" which seeks to legitimize a usurper to the throne (McCarter 1980; 1981; Whitelam 1984). Recent development in new literary and canonical studies have challenged long held presuppositions about the social location of biblical texts or how they can be used for historical reconstruction. This forms part of a continuing debate which will shape much future research into the nature of kingship in early Israel.

KING JAMES VERSION. See VERSIONS, ENGLISH.

KING'S GARDEN (PLACE) [Heb *gan hammelek* (גַּן הַמֶּלֶךְ)]. A garden area in the Kidron Valley near the City of David, just below the terraced structures of the city, near the wall of the Pool of Siloam (Neh 3:15), near the gate between the two walls (Jer 39:4; 52:7). It, no doubt, extended just E and S of the City of David to take advantage of the intermittent flow of water coming down from the Kidron brook. It also took advantage of "the gently flowing waters of Shiloah" (Isa 8:6) coming from the water channel which had been cut along the W side of the valley. Other sources of water were the overflow from the Pool of Siloam (which was fed from the Gihon waters coming through Hezekiah's Tunnel; 2 Kgs 20:20; 2 Chr 32:30 [Mare 1987: 123]), and water issuing from the spring En-rogel (cf. Josephus *Ant* 9.10,4 §225) near the confluence of the Kidron and the Hinnom Valleys (cf. Mare 1987: 108, 176; Simons 1952: 109, 127, 193).

W. HAROLD MARE

KING'S HIGHWAY (PLACE) [Heb *derek hammelek* (דֶּרֶךְ הַמֶּלֶךְ)]. The great roadway traversing the Transjordan from N to S along the desert border, connecting Damascus with the Gulf of Aqabah. The name is derived from the OT (Num 20:17; 21:22) and may not have been the actual name for the route, but rather a reference to an official road otherwise known as "the highway" (Num 20:16). The N section of the highway was known as "the way of Bashan" because the road went from Heshbon to Ashtaroth, the capital of Bashan (Num 21:33; Deut 3:1). The King's Highway facilitated the export of precious perfumes from S Arabia and competed for international commerce with the *Via Maris* (or "the way of the sea"), the other important international highway which crossed Palestine along the Mediterranean coast.

The earliest biblical reference to the King's Highway was the campaign described in Genesis 14. Under the leadership of Chedorlaomer, king of Elam, the four kings of the north campaigned from Ashtaroth and Karnaim in Bashan, to Ham in N Gilead, then to Shaveh-kiriathaim on the Moabite plateau, to the southernmost point of Elath on the Gulf of Aqabah and then back to Enmishpat (Kadesh-barnea). Ashtaroth, Karnaim, and Elath were located on the highway, and Ham was not far from it. Kiriathaim was more to the W (see Josh 13:19) and the location of Shaveh is unknown.

The King's Highway was also mentioned in connection with the wilderness wanderings, as the Israelites marched from Kadesh-barnea to the plains of Moab opposite Jericho (Num 21:10; 33:43–49). At Kadesh-barnea the Israelites asked permission to use the roadway (Num 20:19; 21:22), but were refused access by the kings of Edom (Num 20:14–21) and Moab (Judg 11:17; see also Num 21:21–35) and were forced to seek an alternate route (Num 21:4; Deut 2:8). Some scholars, relying on speculative identifications of several sites listed in the biblical itinerary, believe that the Israelites marched from Kadesh-barnea across the N end of Edom and then followed the King's Highway northward. If correct, then the stations listed in Num 21:11–20 and 33:44–46 must also have been located along the King's Highway.

The alternate route, however, went "by the way of the Red Sea, to go around the land of Edom" (Num 21:4; cf. Judg 11:18). The Israelites moved from Kadesh-barnea S to Elath and then N to the southern end of Edom. From there they traveled on an alternate route located E of the King's Highway, called "the way of the wilderness of Edom" and "the way of the wilderness of Moab," along the fringes of the desert (Deut 2:8; not according to RSV). This eastern route paralleled the King's Highway and circumnavigated the four major wadis and their deep canyons: the Yarmuk, the Jabbok, the Arnon, and the Zered. "The way of the wilderness of Edom" and "the way of the wilderness of Moab" followed the most convenient topographical line, the same course that the modern railroad follows, avoiding the difficult fords on the King's Highway. The alternate road rejoined the King's Highway at Rabbath-ammon, a strategic site for

controlling both routes. The disadvantage of this route was that it was farther out in the desert, where settlements and water supplies were sparse.

Because of the special military and economic advantages afforded by the King's Highway, the route became a strategic focalpoint in Israel's later political controversies. David secured absolute control over this important roadway (2 Chr 19:7; see also 1 Kgs 4:24) and Solomon capitalized on the new avenue of trade to the S (1 Kgs 9:26–10:22; 2 Chr 8:17–9:21). After the death of Solomon, both the Moabites (2 Kgs 1:1; 3:4–27; and the Mesha Stele) and the Edomites (2 Kgs 8:20–22; 2 Chr 21:8–10) regained temporary control over the highway. Their control was eclipsed by the Arameans who, under Ben-hadad I and Hazael, expanded their authority in the Transjordan to include the King's Highway (2 Kgs 10:32–33; see Mazar 1962: 103–8). After the decline of the Arameans, both Israel (2 Kgs 14:25, 28) and Judah (2 Kgs 14:7; cf. however, 2 Kgs 14:7–14 and 2 Chr 25:5–24; and see 2 Kgs 14:22; 2 Chr 26:2) regained control of the King's Highway.

The road maintained its significance throughout antiquity. When the Assyrians conquered Damascus and the Transjordan, the King's Highway also opened avenues to Arabia. The road was rebuilt by the Roman Emperor Trajan in 106 C.E. A modern road known as the Tariq es-Sultani follows the same route as the ancient road.

KING'S POOL (PLACE) [Heb *bĕrēkat hammelek* (בְּרֵכַת הַמֶּלֶךְ)]. According to Neh 2:14, the King's Pool was in the vicinity of the Fountain Gate, which from its name is to be connected with a source of water, no doubt the spring En-rogel in the Kidron Valley. The Water Gate was farther N in the vicinity of the Gihon Spring (Neh 3:26; Simons 1952: 121). The Fountain Gate is mentioned again in Neh 3:15 in connection with the wall of the Pool of Siloam. Thus the Pool of Siloam and the King's Pool seem to be alternative names for the same reservoir located near the King's Garden, the overflow of which would supply additional water to that garden (Mare 1987: 123; Simons 1952: 193). The King's Pool appropriately continued to carry that designation into Nehemiah's time, no doubt because Hezekiah, the king, was its builder (2 Kgs 20:20).

KING'S VALLEY (PLACE). See SHAVEH, VALLEY OF; KIDRON, BROOK OF.

KINGDOM OF GOD, KINGDOM OF HEAVEN. The "Kingdom of God/Heaven" is a subject of major importance in the Bible for two primary reasons: its frequency in the first three canonical (synoptic) gospels of the NT, and the conviction that it stands at the very center of the message of the historical Jesus. Its meaning, which is derived from a world of oriental monarchs and monarchies that is very different from modern Western democracies, has been interpreted in various ways. Historically it has been associated with the future state of the resurrected, immortal blessed; the Church; monastic contemplation; mystical ecstasy; pious religious experience; the progressively redeemed society inspired by love; the future transformation of this world; apocalyptic hope for the next world; and an open-ended symbol possible of many interpretations.

This entry explores this concept in two articles. The first surveys the concept of the "Kingdom of God/Heaven" as it is presented in the Hebrew Bible, in early Judaism, and in the Greco-Roman world. The second surveys its use in the New Testament and in other early Christian writings.

A. Linguistic Considerations

"The Kingdom of God" literally translates Gk *hē basileia tou theou,* and is found in NT texts, especially Mark, Luke, and Acts. The variant preferred by Matthew, "the Kingdom of Heaven," or literally, "the Kingdom of the Heavens" (Gk *hē basileia tōn ouranōn*), corresponds to Heb *malkût šāmayîm* or Aram *malktā› dišmayā›*. The conventional argument is that the plural "heavens" in this variant does not refer simply to the transcendent realm, but is a "circumlocution," an expression which avoids uttering or writing the Divine Name (YHWH); if so, "the Kingdom of (the) Heaven(s)" is equivalent to "the Kingdom of God" (Dalman). There are other equivalent Jewish and NT expressions, for example, "the Kingdom" and "the Kingdom of the Father." It has usually been argued that the "Kingdom of God/Heaven" is not primarily spatial, territorial, political, or national; therefore, it should be translated as "kingly rule," "reign," or "sovereignty" rather than "kingdom" (Dalman). While this view still predominates, it has recently been challenged (Koch; Buchanon; see below). Even if one maintains this view, the political, economic, and social dimensions of ancient oriental kingship by way of analogy must not be forgotten.

B. The Old Testament

The expression "Kingdom of Heaven" (Heb *malkût šāmayîm*) is not found in the OT; this fact has led some scholars to deny its importance in that literature. However, the expression "Kingdom of YHWH" does occur (1 Chr 28:5; 2 Chr 13:8) and there are a few indirect references to YHWH's kingdom by means of a personal pronoun (1 Chr 17:14; Pss 103:19; 145:11, 12, 13) or the equivalent (Ps 22:28; Obad 21; 1 Chr 29:11; cf. Aram Dan 4:3, 34; 7:27 + 2:44). There are also many passages which refer to YHWH as "king" *(melek)* or as "reigning" (*yimlōk,* etc.). These passages indicate that God was imagined as the reigning king over Israel, all peoples, and, indeed, nature itself. Thus, other scholars have concluded that

although the exact phrase is missing, the *idea* of the Kingdom of God is present, indeed even widespread, in the Hebrew Scriptures (Bright; Patrick; Schnackenburg; Perrin).

The idea of the Kingdom of God in the Hebrew Scriptures has usually been related to a widespread polytheistic nature myth among the peoples of ANE monarchies; that is, in creating the world, God acted as a primordial, sacral king who defeated the evil powers. God then sustained his creation by making the land fertile. Expressions of the Israelite adaptation of this nature myth are enshrined in certain "enthronement psalms" (Pss 47, 93, 96–99) which have as a frequent refrain, "YHWH has become king!" (e.g., Pss 93:1; 96:10; 97:1). These psalms were probably recited in Israel's adaptation of an annual New Year's festival when the actual reigning, earthly king was enthroned. If so, a certain correlation between heavenly and earthly kings is implied. However, for the Israelites there was only one God, YHWH, who had delivered his people from bondage in Egypt and had given them the promised land (Deut 6:20–24; 26:5b–10; Josh 24:2b–13). YHWH reigned as king not only over nature, but also over history when he redeemed and sustained his people (Exod 15; Isa 30:7; 41:9; Pss 87:4; 89:11; 136). The myth had clear national-political overtones.

The implied Kingdom of God was not equivalent to the kingdom of Israel. Though Israel adapted Near Eastern ideas of "divine kingship" for the earthly king, God and the king were not identical; the god/king of the world was also the god/king over the people of Israel, and therefore superior to any earthly "divine king." Correspondingly, there was also tension between these two kingdoms. Moreover, the prophets were often critical of the monarchy. In this context, there developed a hope for a better Kingdom of God in the future (Isa 33:22; 52:7–11). The prophet Isaiah wrote: "For YHWH is our judge, YHWH is our lawgiver, YHWH is our king; he will save us" (33:22).

C. Daniel and Palestinian Pseudepigrapha

Most of this literature is strongly dominated by apocalyptic eschatology, the major exception being the *Psalms of Solomon.* Interestingly, that document contains the only precise reference to "the Kingdom of God" (*Ps. Sol.* 17:3). As in the case of the Hebrew Scriptures, some scholars conclude from the single reference that the apocrypha and the pseudepigrapha are not very important for understanding the Kingdom of God; as in the case of the Hebrew Scriptures, however, others argue that the *idea* of the Kingdom of God is implied in general kingdom references and references to God as king, largely in apocalyptic contexts (Lattke; Collins). See APOCALYPSES AND APOCALYPTICISM.

1. Daniel. Canonical Daniel is considered here primarily because of its late date (ca. 165 B.C.E.) and the apocalyptic orientation of its last six chaps. Daniel contains three types of Kingdom references (Collins). (a) Daniel 1–6 portrays the schema of four world kingdoms succeeded by a final, eternal, *earthly* kingdom "set up" by God (Dan 2:44; cf. Daniel 7; cf. the Roman chronicler, Aemilius Sura, ca. 175 B.C.E.; *Syb. Or.* 4, 1st century B.C.E.), which is presumably the Jewish nation. (b) This human kingdom can be distinguished from the "everlasting kingdom" of God superior to all human kingdoms (Dan 4:25); it is mentioned in short hymns of the same section (4:3 = Aram 3:33; 4:34–35 = Aram 4:31–32; 6:26) and shows influence of the enthronement psalms (see above). (c) The four-kingdoms scheme is taken up again in the apocalyptic section (Daniel 7–12) where they are represented as beasts from the sea (the "combat myth"), but now they are succeeded by everlasting "dominion, glory, and kingdom" conferred by God, the Ancient of Days, on "one like a Son of Man" (7:13–14); subsequently this kingdom is received by "the Holy Ones of the Most High" who are to possess it forever, and to whom all other kingdoms are subject (7:18; cf. 7:27). In Daniel, the Son of Man seems to be identified with the "Holy Ones," but who are they? The Jewish people as a whole? A sect of pious, righteous Jews, that is, the *hasîdîm* or "Holy Ones" (1 Macc 1:62–63; 2:29–42; 2 Macc 14:6; cf. Dan 11:33–35; 12)? The angels in the likeness of human beings (Dan 8:13; *1 En.* 14:22–23), with the Son of Man as Michael, Israel's heavenly representative (cf. 1QM 17:7; Collins)? If the latter is correct, the earthly rule of the Jewish people would be paralleled by the heavenly rule of the angels. To make matters more complicated, all three Kingdom ideas seem to merge in Daniel 7.

2. *Jubilees* 1:28. The book of *Jubilees* (mid-2d century B.C. Palestinian Jewish document originally written in Hebrew; fragments from the QL) refers in 1:28 to God as a "king" who rules "upon Mount Zion forever and ever."

3. *1 Enoch.* There are various ideas about the final period of history in the composite work called *1 Enoch* (early 2d century to the late 1st century B.C.E.). (a) In the Book of Watchers (*1 En.* 1–36), the elect people of God, including those who are resurrected (*1 En.* 22), will live in a final paradisiacal state on earth where God, whose throne is on a mountain, is an "eternal King," "King of Kings," or "King of the Universe" (9:4; 25:7; 12:3; 25:3–5; 27:3). (b) In the Book of Dream Visions (*1 En.* 83–90) God is addressed in prayer as follows: "Lord King, great and powerful in your majesty, Lord of the whole creation of heaven, King of Kings and God of the whole world" (*1 En.* 84:2). (c) In the Animal Apocalypse (*1 En.* 85–90) the Lord judges and then sits on his earthly throne "in the pleasant land" (Israel), a transformation of the earth which seems to involve a resurrection (*1 En.* 90:20). (d) In the Apocalypse of Weeks (*1 En.* 93:1–10; 91:12–17) there is reference to both historical and eschatological temples, judgment, and the final consummation. (e) The Book of the Similitudes (*1 En.* 37–71; probably early 1st century C.E.) is the most apocalyptic and closely related to Daniel. In it, the Lord of Spirits, who is once called "King (Lord?) over all kings" (63:4; cf. 4:29), sets the Son of Man on his throne of glory (68:1; 62:5; cf. 69:29). "That Son of Man," who is also "messiah," assumes traditional kingly functions (in heaven? cf. 48:10; 52:4) and judges and destroys all the earthly kings (cf. 46:4–5; 48:4–5; 62–63).

In short, in *1 Enoch* God is called king and the Son of Man is a king/"messiah." There are several paradisiacal states mentioned, and there is great stress on the final judgment of all the kings and kingdoms of the world by both figures.

4. *Psalms of Solomon.* The *Psalms of Solomon* (63 B.C.E.; Gk and Syr extant; original Heb) speaks of the now familiar themes of God as "king of the heavens, judging even kings and rulers" (*Pss. Sol.* 2:30) and God as "Lord, our king for evermore" (17:1). Most important, it contains the only explicit reference in the apocryphal and pseudepigraphal literature to the precise expression "the Kingdom of God": "And the Kingdom of God is forever over the nations in judgment" (17:3; cf. Exod 15:18 and sec. G.5 below). Thereafter, the messiah-king, the "Son of David," is prophesied to rule over a restored national-earthly kingdom (Duling 1973). The question is how this important "Kingdom of God" reference should be interpreted. Because of the Son of David's role, it has been usually taken in a national-political sense; yet, because nationalistic ideas fade in the rest of the passage (17:33–38) and there are some apocalyptic emphases in relation to resurrection of the dead (3:12; 13:11; 14:3; 15:13) and to the superiority of God's rule over earthly kingdoms (e.g., 17:7, 22–25), the Kingdom has also been interpreted apocalyptically (Perrin 1963).

5. *Testament of Moses.* The *Testament of Moses* (from the Maccabean period down to the period contemporary with Jesus) purports to be Moses' last words to his successor Joshua (cf. Deuteronomy 31–34). It comes close to the apocalypse genre and it is full of predictions about the future. The portrayal of the history of Israel as a revelation of sin and punishment (*T. Mos.* 2–7) culminates in eschatological crisis (perhaps the persecution of Antiochus IV Epiphanes beginning in 168 B.C.E.) and the martyrdom of a certain Taxo (8–9; cf. the *maskîlîm*, "those who are wise," in Dan 11:35), whose death seems to bring on God's apocalyptic judgment. This is followed by an eschatological hymn (*T. Mos.* 10) which stresses the destruction of the evil one, cosmic apocalyptic events, and the exaltation of Israel to the heavens (10:9; cf. Daniel 12). The eschatological hymn contains the most important verses for the Kingdom:

(1) Then *his/God's/Kingdom* will appear throughout his whole creation.
Then the devil will have an end.
Yea, sorrow will be led away with him.
.....
(3) For the Heavenly One will arise from his kingly throne.
Yea, he will go forth from his holy habitation with indignation and wrath on behalf of his sons.
(*T. Mos.* 10:1, 3, trans. J. Priest)

Again, when the Kingdom appears, there will be destruction; as with Daniel and the *Similitudes of Enoch*, it is brought about by God and his angels, not by a human agent.

6. *Testaments of the Twelve Patriarchs.* The composite Testaments (2d century B.C.E.? probably written in Greek; contain Jewish elements and Christian redaction) are especially known for their two messiahs conception. In the *Testament of Benjamin* 9:1 "the kingdom of the Lord" will be taken from "among you" because (with few exceptions) "you will be sexually promiscuous like the promiscuity of the Sodomites." In 10:7 the patriarchs will be raised up over their respective tribes and prostrate themselves before "the King of heaven" *(basileus tōn ouranōn*), after which the general resurrection and judgment occur. The *Testament of Dan* 5:7–13 is an apocalyptic eschatological poem in which God wins his war against Beliar and grants paradisiacal peace to his saints in the New Jerusalem. The last verse, which shows some signs of Christian reworking, includes the passing reference:

> The Holy One of Israel will rule over *(basileuon)* them (in humility and poverty,
> and he who trusts in him shall reign in truth in the heavens.)

(*T. Dan.* 5:13, trans. H. C. Kee)

7. Summary. Palestinian Jewish literature, with the exception of the *Psalms of Solomon*, is heavily dominated by apocalyptic eschatology; this literature contains casual references to God as king, to his heavenly and universal reign, to the superiority of his (or the Son of Man's) reign over human kingdoms, to the final judgment, and to the final paradisiacal state of his people, usually (though not always) on earth. The only explicit reference to the expression "the Kingdom of God," *Pss. Sol.* 17:3, occurs in a mildly nationalistic text, which nonetheless has some apocalyptic overtones; thus, some scholars have also interpreted the reference apocalyptically.

It should be noted that there is a social significance to the Kingdom references in this literature. The major theme is the ultimate vindication of the persecuted "elect" against the powerful and mighty kingdoms of the world. These "elect" represent the perceived negative social experience ("alienation," "anomie"), if not the actual persecution, of marginal groups/sects.

D. The Dead Sea Scrolls

The Dead Sea Scrolls (latter 2d century B.C.E. to 1st century C.E.; mainly Heb; also Aram, Gk) contain several terms for "kingdom," that is, *malkût* (ca. 15 times); *mělukāh* (twice); *mamlākāh* (once); *memšālāh* (31 times); *miśrāh* (3 times) (Viviano 1987a).

Although a number of these are references to the kingdoms of this world, there are eleven references to God as "king" *(melek)* (e.g., 1QH 10.8, a hymn) and there occurs the verb "to reign" (Heb *mālak*) in a citation of Exodus 15:18, "Yah/w/eh will reign *(yimlôk)* for ever and ever" (4QFlor. 1:3, a commentary; cf. 1QM 12:3?). One also finds the "dominion" *(mamšālāh)* of God over all things in contrast to the rule of the demon Beliel (1QS 1:18, 23–24; 2:19–21; cf. 1QS 9:24: *mimšol*; cf. Viviano 1987a).

The main and most important references to God as king and to his kingdom are in the *War Scroll* (Lattke; Viviano 1987a). There God is called "King of Honor" (1QM 12:8; cf. 19:1) and perhaps "King of Kings" (14:6 based on 4QMa). There is also mention of the eschatological kingdom of *Israel* in Jerusalem, a kingdom established by the priestly Prince of the Congregation. Thus, "kingdom" is also associated with peace, justice, and a purified cult in a renewed temple (Exod; 1QM 12:3, 16; 19:8; cf. 1QSb 3–5; 10:12; 17:8). Closest to the NT "Kingdom of God" language are the statements, "And to the God of Israel shall be the Kingdom, and by the saints of his people will he display might" (1QM 6:6) and, "You, O God, resplendent in the glory of *your Kingdom* … (1QM 12:7). Thus, God will intervene on behalf of his people—in the latter case through his angels—in the war against earthly kingdoms, and he will establish a kingdom of justice (12:10) and blessing (12:12). The key passage (1QM 12:7–15) probably closes with the earthly rule of God's people, Israel, over the nations (1QM 12:16–17, damaged; cf. 1QM 19:8, also damaged). This would imply a correlation between the kingdom of God and the earthly kingdom of a purified Israel, a distinctly political connotation.

The political dimension of the War Scroll recalls the defeat of "Manasseh" (= Alexander Jannaeus 103–76 B.C.E.?) in the final age (cf. 4QpNah 3:10–4:9) and, of course, the Davidic messianism of the scrolls:

"For to him / the Messiah of Israel / and to his seed was granted the covenant of kingship over his people for everlasting generations" (4QPB 1:4; cf. 4QFlor. 10–13).

The social dimensions of the Kingdom are also clear, especially in the following example: "The Master shall bless the Prince of the Congregation … and shall renew for him the covenant of the community that he may establish the kingdom of his people forever, / that he may judge the poor with righteousness and / dispense justice with / equity to the oppressed / of the land …" (1QSb 5:20–21).

In summary, the Dead Sea Scrolls contain references to God as King and Israel as an eschatological Kingdom. There is, nonetheless, a nationalistic expectation in which God intervenes on behalf of his people, and a promise of a renewed covenant in which there will be justice and peace for the poor and oppressed. As with the apocalyptic literature, the correlation between the Kingdom and a purified, priest-directed Israel ruling over the nations reflects the perceived negative social experience of a marginal group, presumably the Essenes (see C, above).

E. Josephus

The ancient Jewish historian Josephus has many references to the words "king" and "kingdom," especially in relation to a political office or government over a territory (citations in Buchanon). Some modern scholars have argued that among the revolutionary "Zealots" the Kingdom of God must have been conceived in this-worldly terms, that is, as equivalent to the people of God politically liberated from Rome (e.g., Brandon; Hengel). While this reconstruction has merit in the light of Jewish ideas in general, there are two major problems: (1) the surviving writings of Josephus contain no explicit Kingdom of God sayings in relation to revolutionary movements; and (2) the scholarly convention of positing a single, ongoing revolutionary Zealot movement in 1st-century Palestine has been challenged.

F. Jewish Prayers

1. The Kaddish Prayer. This Aramaic synagogue prayer reads:

> Magnified and sanctified be his great name in the world that he has created according to his will.
> May he establish his Kingdom *(malkŭtêḥ)* in your lifetime and in your days and in your lifetime of all the house of Israel, even speedily and at a near time.

The Kaddish represents an eschatological hope for the establishment (not "coming") of "his (= God's) Kingdom" in the near future. The major question is its date. The prayer is preserved in the more formal Aramaic of the later Rabbinic schools (Elbogen) and is not specifically mentioned as part of the synagogue liturgy before the 6th century C.E. (*EncJud* 10: 661). Yet, the prayer contains simple eschatological ideas, does not mention the destruction of the Temple, and is similar to other early Jewish prayers, as well as to the Lord's Prayer (Matt 6:10; Luke 11:21). Thus, the Kaddish remains a possible, but debated, parallel to the Kingdom of God teaching in the Lord's prayer (Matt 6:10 = Luke 11:2).

2. Benediction Eleven of the Synagogue Prayers. In the eschatological portions (petitions 10–14) of the synagogue prayers called the "Eighteen Benedictions" (*Shemoneh Esreh,* or *Amidah*), Benediction Eleven speaks of a future time when Israel will no longer be under foreign domination, when YHWH will be king: "Restore our judges as of old and our counsellors as in the beginning; put away from us sorrow and sighing; and be alone King *(ûmĕlôk)* over us, O Y-Y, in mercy and compassion, in grace and justice! Blessed art You, O Y-Y, a king *(melek)* who loves grace and righteousness." There is no explicit reference to the "Kingdom of God." More distinctive and therefore probably more noteworthy is the fourteenth benediction, which expresses hope for the Kingdom of the Messiah from the house of David (Lattke).

G. Rabbinic Literature

The Rabbis often referred to God as King and to His kingdom in nonpolitical terms. Their most frequent and characteristic expression is "to take the yoke of the Kingdom of Heaven upon oneself," which refers especially to difficulties incurred by those who confess the oneness of God in the *Shemaʿ* (Deut 6:4–9) and accept the demands of Torah. While the Rabbinic literature in general is later than the NT, it is argued that a few of these references may date back to the late 1st century C.E. (Dalman; Lattke; Chilton 1978, 1979). In any case, some of the earliest references are found in the following documents.

1. Mekilta de-Rabbi Ishmael on Exodus. In material ascribed to Rabbi Eliezar ben Hyrcanos, student of Rabbi Yohanan ben Zakkai (a 1st century Palestinian teacher), this commentary on Exod 17:14 states, "R. Eleazar says: When will the name of these people (= Israel's enemies, the Amalekites) be blotted out? At the time when idolatry will be eradicated together with its worshippers, and God will be recognized throughout the world as the One, *and His kingdom will be established for all eternity*" (Lauterbach). This comment is followed by quotations of Zech 14:3, 9 (cf. *Tg. Zech.* 14:9). Here, the Kingdom seems to be universal.

2. Sipre Leviticus 20:26. Rabbi Eleazar ben Azariah (ca. 100 C.E.) is said to have spoken of "the yoke of the Kingdom" as attempting not to transgress the purity laws.

3. Sipre Deuteronomy 113. This commentary on Deuteronomy states that the manifestation of God's rule began with Abraham: "Before our father Abraham came into the world, God was, as it were, only the King of heaven: but when Abraham came, he made Him King over heaven and earth."

4. Talmuds. Rabbi Yohanan ben Zakkai (ca. 80 C.E.) is said to have contrasted "the yoke of the Kingdom of Heaven" with "the yoke of flesh and blood," that is, human governments (*y. Qidd.* 59b). Rabbi Gamaliel II from the early 2d century C.E. is said to have spoken about the "yoke" of the Kingdom in terms of monotheism as confessed by reciting the *Shema‹* (Deut 6:4–9) and the commandments (cf. Str-B 1: 177); An example is found in *b. Ber.* 2.2, from about 150 C.E.:

> R. Joshua b. Korḥa said: Why does the section *Hear, O Israel* (Deut 6:4–9) precede / the section / *And it shall come to pass if ye shall harken / diligently to my commandments/?*—so that a man may first take upon himself the yoke of the Kingdom of Heaven (*‹ôl malkût sûāmayîm*) and afterward take upon him the yoke of the commandments (*‹ôl miṣôt*).

5. Targums. Over a period of several centuries beginning already in pre-70 C.E. Temple days, Aramaic paraphrases of the Hebrew text were made for Aramaic-speaking Jews of the synagogues who no longer understood classical Hebrew. Eventually, under the direction of the Rabbis, these were set down in writing. In contrast to the rarity of *explicit* "Kingdom of God/Heaven" references in the Jewish literature discussed so far, the Latter Prophets Targum (the Targum Jonathan) has ten explicit references to "the Kingdom of YHWH" (esp. *malkûtā› daY-Y*) in 8 contexts (*Tg. Isa.* 24:23; 31:4; 40:9; 52:7; *Tg. Ezek.* 7:7, 10; *Tg. Obad.* 21; *Tg. Mic.* 4:7, 8; *Tg. Zech.* 14:9). The Palestinian *Targum Neofiti* I on the Pentateuch, which may be basically pre-Christian (McNamara), comments on the Exodus at the Red Sea (*Tg. Exod.* 15:18): "For His (= the Holy One's) is the crown of kingship; and He is the King of kings in this world, and His is the kingship in the world to come. And His it is and shall be for ever and ever" (cf. *Tg. Onkelos Exod.* 15:18; Mekilta Rabbi Nathan Exod 15:18; *Pss. Sol.* 17:3). The relative frequency of "Kingdom of God" language in the Targums, the fact that the expression is not associated with the Law (as in the remaining Rabbinic literature, see above), and the eschatological tone of the paraphrases are striking and have revived discussion about the possible relation of these paraphrases to sayings attributed to Jesus in the NT (Chilton; Koch; Buchanon).

The *Targum Jonathan* adds "Kingdom of Y-Y" or "Kingdom of your God" to the Hebrew text. In Heb Zech 14:9 the catchword "king" *(melek)* in "YHWH will be king over all the earth" (on "that day," the day of judgment) evokes the "Kingdom of God" interpretation: *"the Kingdom of God (malkûtā› daY-Y) will be revealed on earth to all humankind in the future";* that is, the fact that YHWH will reign in the future is interpreted to mean that an already present reign of God will be made manifest universally in the future. A reference to Zech 14:9 in relation to the Kingdom in Mekilta Exod 17:14 suggests that the Targumic interpretation may be from the 1st century.

In Obad 21 the term "kingdom" in the Hebrew text ("the kingdom *(hammelûkā›)* shall be the Lord's") is rendered *"the Kingdom of God (malkûtā› daY-Y) will be revealed upon all the dwellers of the earth,"* a similar wording as in *Tg. Zech.* 14:9, suggesting a common tradition. In both passages, the Kingdom is universal, as it is in Mekilta Exodus.

In the four Isaiah passages, three contain no *m-l-k* ("to reign") root in the original Hebrew. Yet, the Targum consistently renders the activity of YHWH as "Kingdom of God" (*malkuÆtaµ < daY-Y*). The phrase "YHWH of hosts will descend to fight upon Mount Zion" in Hebrew Isa 31:4 is again seen as a

future revelation of the Kingdom, that is, "the kingdom of Y-Y of hosts *will be revealed to dwell* on Mount Zion." The link of the Kingdom with YHWH and the revelation on Mount Zion is found again in *Tg. Isa.* 24:23 where "YHWH of hosts will reign *(mālak)* on Mount Zion" becomes "the *Kingdom* of God (*malkûtā› daY-Y*) of hosts will *be revealed* on Mount Zion." Similarly, "behold your God" spoken by the herald of good tidings (to?) Zion/Jerusalem in Hebrew Isa 40:9 becomes "*the Kingdom of* your (pl.) God is *revealed*" (followed by God's self-revelation "in power"; cf. Mark 9:1) and "Your God reigns" in Hebrew Isa 52:7, spoken by the one who publishes salvation and says to Zion, is given almost the same exact paraphrase ("your" is sing.). In these Isaiah Targums, the place of revelation, Mount Zion, is clear and the imagery sounds more militaristic.

The final passages are in Ezekiel and Micah. In Ezek 7:7(10) your "doom (crown?) has come (to you)" in reference to the day of the Lord is rendered "the *kingdom* is *revealed upon* you." In Mic 4:7b, 8, the context is a prophecy about Israel's glorious future and the restoration of the Davidic throne. This is clearly a more nationalistic context and both Biblical and Targumic texts deserve to be quoted in full:

7b) and the Lord will reign (*mālak*) upon them in Mount Zion
from this time forth and for evermore.
8) And you, O tower of the flock,
hill of the daughter of Zion,
to you it will come,
the former dominion (*memšalā›*) will come,
the kingdom (*mamleket*) of the daughter of Jerusalem.

The Targum paraphrases:

and *the kingdom of* Y-Y will *be revealed* upon them in Mount Zion
from this time forth and for evermore.
and you, *Messiah of Israel that is hidden from before the sins of the congregation of Zion,*
to you *the kingdom* is about to come,
even the former dominion will come *to* the kingdom of the *congregation* of Jerusalem.

In this more complex interpretation, there are three references to the kingdom: (1) the familiar Kingdom of God revealed on Mount Zion some time in the future; (2) the kingdom which will "come to" the "Messiah of Israel" who is currently hidden because of the sins of "the congregation of Zion"; and (3) the kingdom of the "congregation of Jerusalem" to which the "former dominion" "will come." It would appear that the kingdom that comes to the Messiah is equivalent to the "former dominion" which comes to the Kingdom of the congregation of Israel, and that both are related to the eschatological Kingdom of God to be revealed on Mount Zion, but hindered because of the sins of the congregation of Zion. In other words, the Kingdom of God, the Kingdom of the Messiah, and the dominion of Israel over the nations are related (Koch). The question here is whether this overtly nationalistic text is early enough to belong with the others (so Chilton).

H. Hellenistic Kingship

In the period of classical Greece, the major idea about *basileia* ("kingdom," "rule") was that the (philosopher-) king transcends common law; he is subject to a higher, Natural Law. By the Hellenistic Age, this view was modified in the light of ideologies about oriental Divine Kingship and Hellenistic absolute monarchies (Goodenough). Pythagorean philosophical fragments concluded that the king *is* the higher law, or Animate Law; he is one who represents and reveals divine Natural Law in his kingdom. He is therefore divine, and acts as a god in leading the military, dispensing justice, and carrying out his priestly functions as leader of the religious cult.

> Now the king bears the same relation to the city-state *(polis)* as God to the world; and the city-state *(polis)* is in the same relation to the world as the king is to God. For the city-state, made as it is by a harmonizing together of many different elements, is an imitation of the order and harmony of the world, while the king who has an absolute rulership, and is himself Animate Law, has been metamorphosed into a deity among men. (Diotogenes *On Kingship,* quoted by Stob. 4.7.61 [Goodenough, 68]).

Such a king is not subject to passion; he is subject to virtue. He is a "wise man," a "lawful imitator and servant of God" (Pseudo-Sthenidas in Stob. 4.7.63 [Goodenough, 73–74]). In a passage which seems to bring together traditional Greek ideas and oriental sun symbolism, the Pythagorean Ecphantus stated,

> … the earthly king can fall short in no particular of the virtue of the heavenly king; but just as the king is an alien and foreign thing which has come down from heaven to man, so anyone would suppose that his virtues were the work of God, and have become the king's through God (Stob. 4.7.66 [Goodenough, 77–78]).

Plutarch concluded that the king is not only the incarnation of the Law; he is the incarnation of the divine Logos (*Ad principem ineruditum* in *Mor.* 10 [LCL]). In short, "rule/kingdom" *(basileia)* became a projected metaphor for the virtuous rule of the superior being.

I. The Stoics and Cynics

Stoics and Cynics applied the popular Hellenistic philosophical ideas about the king to the wise man. For the Stoics, the sage was the only true king; the city-state *(polis)* was blessed and stable if it had a sage in it.

The Cynic sage could be portrayed as a king, his kingdom being a countercultural "kingdom" (*basileia;* Höistad). He was "sent" by God to correct the human predicament and offer true enlightenment. Correspondingly, the true king was typified by such countercultural virtues; the tyrant was typified by vices (Epic. *Disc.* 3.22.63, 76, 80). Since the sage lived "according to (true) nature" *(kata physin)* or was governed by the *logos* or *sophia,* and embodied a *basileia* of countercultural virtue, in some sense he was divine; there is no mention, however, of "Kingdom *of God.*"

J. Literature of the Jewish Diaspora

In the literature of the Jewish people outside of Palestine, the idea of the reign of God as king is quite prevalent, though the expression is rare (Wis 10:10; Philo *Spec Leg* 4.164; cf. Wis 6:4). Sometimes the idea has an apocalyptic sense. In more philosophical texts, it reflects Hellenistic kingship and wisdom philosophy and it takes on spiritual or ethical connotations.

1. Tobit, Additions to Esther, 2 Maccabees, *3 Maccabees.* Hellenistic Jewish prayers address God as King. A prayer in Tobit (originally Aram; before 200 B.C.E.; uncertain provenance, although probably from the Diaspora [Nickelsburg]) refers to God as "King of the ages" (13:6, 10), "King of heaven" (13:7, 11), and "the great King" (13:15). Similarly, in prayers in the Additions to Esther 13:9–17 (originally Heb?) God's name is added to Esther when Mordecai addresses him as "O Lord God and King, God of Abraham …" (13:15) and Esther calls him "our King" (14:3b) and "O King of the gods and Master of all dominion" (14:12). 2 Maccabees (Gk; perhaps 1st century B.C.E. Egypt) contains a priestly sacrificial prayer in 1:24–29 which begins, "O Lord, Lord God, Creator of all things, who art awe-inspiring and strong and just and merciful, who alone art King *(basileus)* …" In general, God is the creator, lawgiver, and just judge and is called the "King of the Universe" (7:9: *tou kosmoubasileus*), as he is throughout Jewish liturgical prayer. In this case he will raise the martyrs who died for the Torah (probably under Antiochus IV Epiphanes); he is also called "King of Kings" (13:4) as one who has control over history. In *3 Maccabees* (composite Gk; probably early 1st century B.C.E. Egypt) the prayer of Simon the High Priest addresses God as "Lord, Lord, King of the heavens, ruler of all creation, holy among the holy ones, sovereign, conqueror of all …" (2:2), and the prayer of Eleazar begins, "King, great in power, Most High, all-conquering God, who governs the whole creation with mercy …" (6:2).

2. *Sibylline Oracles.* Most of the third oracle of the *Sibylline Oracles* (composite; from the 2d century B.C.E. to the 7th century C.E.; Diaspora) comes from 2d century B.C.E. Diaspora Egypt (Collins). Like Daniel, it has a list of world kingdoms (*Sib. Or.* 3:156–61), as well as historical kings of deliverance (e.g., 3:286 [Cyrus]; 3:192–93 [Ptolemy VI?]). Also, God "the Great (immortal) King" (3:55, 499, 560, 616, 716, 808) will raise up an eschatological kingdom that is apparently different from the reigns of the historical kings, but it is nonetheless an earthly kingdom with the Jerusalem temple as the goal of pilgrimage for all nations (3:767–95). A late addition close to the time of Christianity (after the Roman conquest of Egypt, 31 B.C.E.) expects that "the most great kingdom of the immortal King will become manifest over men" (3:47–48), be ruled by a "holy prince" (perhaps a Jewish messiah), and be the

occasion for "the judgment of the Great King, immortal God" (3:56). Such ideas are somewhat like those found in the Targums.

The fourth oracle (ca. 80 C.E.) has the schema of four world kingdoms in a context of apocalyptic destruction, resurrection, and final judgment, but it does not have a final "Kingdom of God." A final addition to the fifth oracle inserted just before the Diaspora Revolt in 115 C.E. tells of judgment brought by "a certain king sent from God" (5:108), and later he is said to descend from heaven and to refashion Jerusalem (5:414–28). However, it is finally God who is the King (5:499), and the dominant emphasis is on his universal eschatological kingdom, an earthly kingdom with its center at Jerusalem.

3. *4 Maccabees.* In *4 Maccabees* (Greek; probably 1st century C.E.; possibly Antioch), if man lives his life by the Law, which is given to the intellect, he will "reign over a kingdom" characterized by the four cardinal virtues (2:23). Eleazar, who stoically follows the Law in opposition to tyrant and torture, is called "great king, ruler of the passions" (7:10).

4. The Wisdom of Solomon. In the Wisdom of Solomon (Gk; 1st century B.C.E. Egypt or Syria) a sage who identifies himself with Solomon combines apocalyptic (1:1–6:11) and wisdom (6:12–9:18) materials with God's acts of judgment in history (10–19). The document contrasts the tyrants without wisdom, who oppress their innocent righteous victims, with the eternal order of God's creation as characterized by hidden wisdom and the conviction that God will surely vindicate his people. The Lord will "overturn the thrones of rulers" (5:23) and eternally "reign over" the resurrected righteous who will judge the nations and "rule over" the peoples (3:8; 5:16). Addressing the fictional "kings of the earth" (6:1) as "servants of His (= the Lord's) Kingdom" who did not rule rightly (6:4), the sage shows that those monarchs who desire wisdom will receive it (6:9–11) and will participate in God's Kingdom after death:

6:17) The beginning of wisdom is the most sincere desire for instruction
and concern for instruction is love of her,
18) and love of her is the keeping of her laws,
and giving heed to her laws is assurance of immortality,
19) and immortality brings on near to God;
20) so the desire for wisdom leads to a kingdom *(basileia).*

The advise that follows: "honor wisdom that you may reign forever" (Wis 6:21).

In the "book of wisdom," as the history of Israel's saints and sinners shows, Jacob is praised by being shown "the Kingdom of God":

10:9) Wisdom rescued from troubles those who served her.
10) When a righteous man fled from his brother's wrath.
she guided him on straight paths;
she showed him the Kingdom of God *(basileia tou theou),*
and gave him knowledge of angels …

In short, the Wisdom of Solomon, while influenced by apocalyptic ideas reminiscent of Daniel, does not expect a Kingdom of God on earth; rather, the Kingdom of God tends to be identified with wisdom and righteousness, and thus with immortality granted to those who have virtue. The influence of Hellenistic popular philosophy is apparent.

5. Philo of Alexandria. The Kingdom in writings of Philo of Alexandria, a contemporary of Jesus, also betrays the influence of Hellenistic popular philosophy. The term "kingdom" *(basileia)* can refer to the control exercised by the mind *(nous)* or wisdom *(sophia)* over the sage. This *basileia* is also equivalent to "wisdom" *(sophia)* or "virtue" *aretē);* a life lived in accord with it can be designated "kingdom of the sage" *(basileia tou sophou),* which is superior to the *basileia* of empirical kings (*TDNT* 1; Mack; cf. *Miqr Abr* 197; *Som* 2.244). Thus, "God grants the kingdom of the sage *(basileia tou sophou),* and the man of excellence receives it," and as a result, "he [the sage] brings no harm to anyone, but the acquisition and enjoyment of good things to all his subjects, to whom he is the herald of peace and order" (*Abr* 261).

Philo also mentions the "Kingdom of God." Since the requirements of the Mosaic Torah are consistent with the patterns of the created order *(physis),* the wise king will "write" a copy of the Torah on his soul;

in so doing, he takes on the image of the "archetype, the Kingdom of God" (*Spec Leg* 4.164; cf. *Mut* Nom 135; *Som* 285).

L. Patristic Literature: A Summary

A. Gospel of Mark

The Gospel of Mark contains 20 references to the word "kingdom," 14 of which are to the "Kingdom of God" and 6 to the word "king" *(basileus)* as ironic references to Jesus. Mark 1:14–15 states: "Now after John was arrested, Jesus came into Galilee, preaching the gospel of God, and saying, 'The time is fulfilled, and the Kingdom of God is at hand *(ēngiken);* repent, and believe in the gospel.' " Location and technical vocabulary suggest that this saying is "Markan" and programmatic. The perfect tense in Greek *(ēngiken)* is *past* with *present* implications; yet, the *future* is implied insofar as the Kingdom is not yet present with full apocalyptic "power" (cf. 9:1; 14:25; 15:43). The temporal ambiguity may also suggest that the Kingdom has symbolic meaning, as does "Galilee" (Kelber). This tension about time also corresponds to the Kingdom's presence as mysteriously hidden, incomprehensible to outsiders, such as religious authorities, but revealed to insiders (Mark 4:10–12 [Isa 6:9–10]; 4:26–29; 4:30–32; contrast *Gos. Thom.* 20; 21). However, the boundaries about insiders/outsiders become uncertain (4:31–8:21) when Jesus encounters resistance from his family (6:1–6a; cf. 3:20–35) and misunderstanding from his disciples (6:52; 8:17, 21).

The central section (8:22–10:52) contains a key apocalyptic saying, Mark 9:1: "Truly, I say to you, there are some standing here who will never taste death before they see the Kingdom of God come *(elēlythyian)* in power." This unusual "seeing" the Kingdom "come (perfect participle *elēlythyian)* in power" was composed by Mark with the advent of the Son of Man (8:38; 13:20) and the Messianic Banquet (14:25) in mind (Perrin 1967). What has been "at hand" and mysteriously present but hidden will be seen in the future in its apocalyptic fullness.

There are six other Kingdom sayings in this central section (9:47; 10:14, 15; 10:23, 24, 25). The apocalyptic goal of the "way" that goes through suffering service is the Kingdom (9:47; 10:15, 23, 24, 25). To "enter," one must not be led into (individual?) temptation (9:47) and one must be childlike (Mark 10:14, 15). While one saying about "entering" is clearly future (10:15), baptismal symbolism (10:14: "hinder," cf. Acts 8:36 and 10:47; 10:15: the simile "like a child"; "enter," cf. John 3:3, 5; cf. also Matt 18:3; *Gos. Thom.* 22), the quality of "possessing" the Kingdom (Mark 10:14; cf. Matt 5:3), and the likelihood that the Markan author changed the language to "receiving the Kingdom" (10:15; cf. "receiving *the child*" in Mark 9:37; Luke 18:17; Matt 18:5; cf. also 10:40) suggest the continuing present dimension. Within the same central section, Mark elaborates the story of the rich young man (Mark 10:17–22) with two Kingdom sayings (10:23, 24b) about the difficulty of "entering" the kingdom on the part of those who have riches. He then adds the well-known aphorism, "It is easier for a camel to go through the eye of a needle than for a rich man to enter the Kingdom of God" (Mark 10:25). In the final, Jerusalem section (11:1–16:8), the "good scribe" who is "not far" from the Kingdom by agreeing with Jesus' summation of the Law as love of God and neighbor (Mark 12:34) seems to mark an added ethical dimension to the Kingdom of God. In short, "entering" the Kingdom has present dimensions and requires an "ethic" which reverses accepted social norms: "But many that are first will be last, and the last first" (10:31).

The last saying of Jesus is in the concluding frame of a discipleship section (Donahue 1973) of the Last Supper scene, Mark 14:25: "Truly I say to you, I shall not drink again of the fruit of the vine until that day when I drink it new in the Kingdom of God." "That day" shows that Jesus' final Passover anticipates another, future meal "in the Kingdom of God." It is not clear whether the disciples will be present (contrast Matt 26:29).

The final Kingdom saying says that Joseph of Arimathea was also "looking for the Kingdom of God" (15:42). This is apparently an apocalyptic reference.

The most eschatological (9:1; 14:25), christological (1:15), and communal (4:11) Kingdom sayings have been composed by Mark himself. The coming of God's mysterious Kingdom is set within a larger apocalyptic drama extending from the prophets to the End (Perrin and Duling; Mack). It will reach its fullest expression in the future. However, it is already mysteriously present in the work and words of Jesus Christ, God's suffering Son, an authoritative and powerful miracle worker, preacher, and teacher from Galilee. He overcomes demonic opposition but is temporarily defeated by a human political opposition (Ambrozic; Kelber). This special quality of kingship is revered in the Greco-Roman world in general and Judaism in particular (Robbins). It is present to those who in contrast to the outsiders understand and follow Jesus, that is, those who love the one God and the neighbor as oneself, who are childlike, and who resist temptation. Does Mark intend to include the disciples (Weeden and Kelber vs. Kee and Tannehill 1977)? Does mysterious presence of the Kingdom persist into the writer's time, or is it past and future, and therefore absent for the period of the writer (Boring 1987)?

B. *Secret Gospel of Mark*

In a recently discovered letter of Clement of Alexandria, Clement describes a "more-spiritual gospel" of Mark written for the instruction of the initiated (M. Smith 1973a; 1973b), the "Secret Gospel of Mark." See MARK, SECRET GOSPEL OF. Some modern critics speculate that perhaps canonical Mark and *Secret Mark* came from a common tradition (M. Smith 1973a; 1973b), or that canonical Mark was a purged form of "Secret Mark" (M. Smith; Koester 1983; Crossan 1985; contrast Brown 1974). If so, *Secret Mark* was earlier, not later, than canonical Mark.

Clement quotes from a passage in *Secret Mark* not found in canonical Mark at 10:34; there is also reference back to this passage in his version of 10:46. The new passage is related to the Lazarus episode

in John (John 11; cf. M. Smith 1973a; Brown 1974). It tells about the arrival of the Jesus group at Bethany, the request of a woman for Jesus' help in relation to her young brother who had died ("Son of David, have mercy on me," cf. Mark 10:47–48), the resuscitation of the youth who was rich and loved Jesus, Jesus' command that "after six days" (cf. Mark 9:2) the youth came to Jesus at night "wearing a linen cloth over his naked body," Jesus' teaching "the mystery of the kingdom of God" (cf. Mark 4:10–12), and Jesus' departure to the other side of the Jordan.

Teaching the mystery of the Kingdom of God in this context seems to imply some connection with a nocturnal initiation rite of baptism, as well as what was believed to have been Jesus' own baptismal practice (esp. the baptism sayings in Mark 10:38–39; cf. also the "young man" who fled from the garden naked, Mark 14:51–52; 1 Cor 2:7; Eph 1:9–13; 5:32; 6:19; *Gos. Thom.* 37, 62; Hipp. *Trad. ap.* 21). It may therefore shed light on various baptismal practices related to the kingdom (M. Smith 1973a; 1973b; Koester 1983; Crossan 1985; J. Smith; see A, above; and below).

C. Gospel of Matthew

Statistically, a commanding 54 references to "kingdom" and 38 to "Kingdom of Heaven/God" or its equivalents are scattered throughout Matthew. The vast majority of these are to "Kingdom of Heaven" (32 references; 4 "Kingdom of God" references). All are spoken by, or related to, Jesus but one (Matt 3:2: John the Baptist), and the majority are located in Matthew's five great discourses (30 references). God is given the widespread oriental designation "Great King" only in Matt 5:35 (cf. 22:2, 7, 11, 13). The gospel affirms that Jesus is descended from David, addressed as "Son of David" usually in healing contexts (Duling 1978), and is mockingly called "King of the Jews/Israel" in the trial scene (chap. 27) and "the King" by Jerusalem crowds (21:5). The future, judging Son of Man, who is correlated with "the least of these," is also called "the King" in his kingdom (25:34, 40).

Matthew has a special emphasis on preaching "the gospel of the Kingdom." Key summaries (4:23; 9:35; cf. 5–7; 8–9) emphasize that Jesus was a Galilean wanderer who went about teaching in "their" synagogues, preaching "the gospel of the Kingdom," and "healing every disease and infirmity among the people." Jesus is preeminently preacher and teacher of "the gospel of the Kingdom" (cf. 10:7; 28:20). However, when Matthew also says that this gospel "… will be preached throughout the whole world as a testimony to the nations" (24:14; cf. 26:13), the later gentile mission is in view. In such sayings, the Kingdom preaching *of* Jesus merges with the Kingdom preaching *about* Jesus himself.

Jesus' inaugural proclamation, "Repent, for the Kingdom of Heaven is at hand *ēngiken)"* (4:17; cf. Mark 1:15) and the Baptist's anticipation of this proclamation (3:2; cf. Q) show that the future Kingdom is in some sense already present both spatially and temporally (Kingsbury), especially with reference to the God who "draws near" in his Son who, in turn, is now known on earth (1:23; 18:20; 28:20). There are a few other past/present sayings that imply christology. Matthew 11:12 states: "From the days of John the Baptist until now the Kingdom of Heaven has suffered violence *(biazetai),* and those of violence *(biastai)* snatch it away *(harpazousin).*" Matthew reinterprets this Q saying (= Luke 16:16) probably to refer to demonic forces and their human agents which "snatch away" (cf. 12:29 *harpasai* and 13:19 *harpazei*) the Kingdom in the interim between John and Jesus. In another slightly modified saying from Q, Jesus defends himself against a "witchcraft" accusation (Neyrey): "But if it is by the Spirit of God that I cast out demons, then the Kingdom of God has come upon *(ephthasen)* you." These sayings should be compared to those which stress the "present earthly" Son of Man (8:20; 9:6; 11:19; 12:8, 32; 13:37), the "suffering" Son of Man (17:22; 20:18–19; cf. 16:21), the risen "Lord" as object of worship (8:2, 6, 8, 25; 14:28, 30; 15:22; 17:15; 20:30?, 31, 33), the ironic references to Jesus as earthly king (2:2; 27:11, 29, 37, 42), and the correlation of the King/Son of man with those who are unfortunate (25:34, 40; cf. 5:3, 10). Certain parables also imply the growth of the Kingdom from small beginnings (e.g., 13:33, the leaven [Q]). Presumably Jesus and his teaching are also present to Matthew's church (Kingsbury and Meier). This conclusion has been taken one step further by claiming that "the gospel of the Kingdom" also refers to Matthew's *literary document*, a "capsule-summary" of his work (Kingsbury; Matt 13:19; cf. Mark 4:15).

Most frequent and more dominating in Matthew are the eschatological sayings (5:19 [twice], 20; 6:10; 7:10, 21; 8:11, 12; 13:38, 41, 43, 47; 16:28; 18:1, 3; 19:23, 24?; 21:31?; 23:13?; 25:1; 26:29). Jesus'

prayer, "Thy Kingdom come" from Q (Matt 6:10 = Luke 11:2), falls into this category. A number of sayings extend the Markan metaphor of "entering" the Kingdom in the future (5:20; 7:21; 18:3; 19:23, 24; 23:13; cf. 7:14; 18:8, 9 ["life"]; 25:21, 23 ["the joy of your master"]; cf. also "shut" [23:13] and "narrow gate" [7:13]). Quite distinctive are those future sayings that refer to an alternative Kingdom, especially of the apocalyptic Son of Man (13:41; 16:28; cf. 20:21) who is the final judge. An example is, "The Son of man will send his angels, and they will gather out of *his Kingdom* all causes of sin and all evil-doers and throw them into the furnace of fire; there men will weep and gnash their teeth. Then the righteous will shine like the sun in *the Kingdom of their Father*" (13:41–43a). Here, the Kingdom of the Son of Man seems to be a provisional Kingdom which includes both righteous and unrighteous; it is presumably the Matthaean community. It is distinct from the Kingdom of the Father which will include only "the righteous." This view is supported by the parable of the Last Judgment (25:31) where the Son of Man, who is "King" (25:34, 40), will separate the sheep from the goats. Only "the righteous" will inherit "the Kingdom prepared … from the foundation of the world" and that is because of their good works (25:34–46). Other parables of the Kingdom reinforce the distinction between insiders and outsiders at the eschatological judgment (e.g., the weeds, 13:24–30; the net, 13:47–50; the ten maidens, 25:1–13).

There are also Kingdom sayings with ethical and communal implications. The joy of finding and/or risking all can be found in the parables (13:44, 45). The works, or "fruits" (e.g., 7:16, 20) of "the righteous" who will ultimately be permitted to "enter" are measured by the standard of "righteousness" typified by Jesus who fulfills all righteousness (3:15) or by John the Baptist who is believed by the tax collectors and harlots (21:31–32). The norm is the "higher righteousness" (5:17–20; 21:23, 32, 43). "Therefore I tell you, the Kingdom of God will be taken away from you and given to a nation producing the fruits of it" (21:43; 27:25). Those who are not worthy (22:1–14) or who cannot humble themselves like children (18:3–4) and, despite positive hints about the urban rich (esp. 5:3), "the rich" (19:23, 24) will have special difficulty entering the Kingdom. The Kingdom of God is also opposed by supernatural forces, namely, the Kingdom of Satan (12:26), the "Tempter" (4:3) or "Evil One" (6:13; 13:19). This opposition is highlighted by the continual battle between Jesus and Satan (12:25–37).

Despite the spurning of "offices" found in Judaism (23:8–12), the Kingdom sayings in Matthew can be related to an inevitable institutionalization in the Matthaean community. For example, there are authoritative roles, functions, and corresponding social structures that include discipline (esp. 16:19; cf. 18:15–20; Duling 1987).

In summary, the Kingdom of Heaven in Matthew is the message of Jesus (and John the Baptist), but also the message about Jesus. It is anticipated in the present which flows from the past, and it grows mysteriously; it is anticipated in the Matthaean community, which shows some hints of emerging institutionalism, but the Church is not yet the Kingdom. It is therefore temporal and primarily eschatological and christological. However, it is also spatial. It "draws near" with Jesus; it is some place the righteous will "enter." The prerequisites for "entering" are ethical: with Jesus (and John) as models, it is imperative to strive for the higher righteousness and "bear fruit," which implies concern for those who have been dealt a bad hand (Matt 25:40). Those who are outsiders, primarily Pharisaic opponents, are dominated by the Kingdom of Satan.

D. Luke-Acts

The term "kingdom" occurs 46 times in the gospel and 8 times in Acts. The most common expression is "the Kingdom of God" (Luke: 32 references; Acts: 6 references; 10 from Mark, 8 from Q, 17 with no parallels). In the gospel, all Kingdom sayings are spoken by Jesus except 3 (Luke 1:33; 4:5; 19:11); in Acts the sayings are generally continuations of Jesus' preaching by the apostles, especially Paul. "King" *(basileus)* occurs in the gospel 11 times, in Acts 20 times. Most are references to earthly kings. Jesus himself is called "king" only in (false) charges (Luke 23:2, 3; Acts 17:7), mocking contexts (Luke 23:37, 38), or the Jerusalem crowds' acclamation (Luke 19:38). Yet, Luke-Acts claims that Jesus is descended from King David and, through the resurrection/exaltation, the recipient of the royal promises to David and his sons (Luke 1:32; 3:31; Acts 2:30; 13:22–23, 33–40).

The first reference to the Kingdom in Luke-Acts is Luke 4:43: "I must preach the good news of the Kingdom of God to the *other cities* also; for I was sent for this purpose" (4:43). Despite the reference to "other cities," it is striking that earlier programmatic passages at Nazareth and Capernaum (4:31–37) do not explicitly refer to the Kingdom (contrast Mark 1:15 and Matt 4:17). Moreover, the reference is casual; it comes late in the narrative; and it lacks Mark's and Matthew's characteristic language (Kingdom "at hand," *ēngiken*). This shift in perspective demands explanation. One approach has been to relate the Lukan Kingdom to the Lukan "history of salvation" (Conzelmann modified; cf. Perrin-Duling). A key Lukan reformulation of a Q saying (see F below) at Luke 16:16 reads: "The law and the prophets were *until* John; *since then* the good news of the Kingdom of God is preached, and every one enters it violently" (cf. Acts 10:37–38; 13:25). The "law and the prophets" mark out the old era of Israel; the Baptist marks a transition (Luke 1–2) to the new era of the Kingdom proclamation ("since then"); and the Ascension marks another transition to the era of the Church (Luke 24:51, P^{75}). Creation occurs at the very beginning (Acts 14, 17) and the Parousia and Judgment will be in the *distant* future (e.g., Acts 1:6–7; 10:42). See PAROUSIA. Correspondingly, the Kingdom is associated with the period of Jesus and the continuing proclamation of simply "the Kingdom" by the apostles in the Church (Luke 9:2; Q [?] 9:60; cf. Acts 8:12; 20:25; 28:23, 31). Other generalized sayings in which Jesus "proclaims," "brings," and/or "speaks about" the Kingdom confirm this perspective (Luke 8:1; 9:11; Acts 1:3).

There are, to be sure, traditional sayings from the tradition that speak of, or imply, that the Kingdom of God is future (Luke 13:28–29 [Q]; 18:24–25 = Mark 10:23; cf. the future Kingdom of Jesus in Luke 22:29, 30; 23:42), and some speak of its "nearness." However, the two types are not usually correlated. For example, "The Kingdom of God has come near *(ēngiken)* to you" (Luke 10:9) is what the disciples are supposed to say *after they heal the sick* (similarly, 10:11). An apparent exception to this tendency is the Son of Man's coming in a cloud with power and great glory (Luke 21:27 = Mark 13:24) in connection with the Kingdom: "when you see these things taking place [the withered fig tree], you know that the Kingdom of God is near *(engus).* Truly I say to you, this generation will not pass away till all has taken place" (Luke 21:31–33; cf. 21:35). Nonetheless, the actual time of the "return" of the Son of Man is not quite clear (21:7–26, 32–33), especially if "this generation" refers to Luke's generation.

Observations about the "coming" of the Kingdom produce a similar result. Two traditional sayings (11:2 [Q]: "Your Kingdom come"; 22:18 [Mark 14:25]: "… I shall not drink of the fruit of the vine until the Kingdom of God comes") do not stress its nearness. While Luke maintains a traditional apocalyptic Son of Man saying (9:26: "taste before death"; cf. Mark 8:38; Matt 16:27–28), he appears to avoid the apocalyptic Kingdom "come in power" (= Mark 9:1) and to add a "presentizing" expression (9:23: taking up one's cross daily; see however 21:27). Luke 17:20–21, makes a similar point: "Being asked by the Pharisees when the Kingdom of God was coming, he answered them, "The Kingdom of God is not coming with signs to be observed; (21) nor will they say, 'Lo, here it is!' or 'There!' for behold, the Kingdom of God is in the midst of you *(entos hymōn)*." The context deals with the day(s) of the Son of Man (17:22–24), but some delay is expected (17:25) and the Kingdom saying rejects (merely preliminary? [see H.3 below]) apocalyptic signs (the resurrection at Jerusalem? cf. 17:11; 19:11); the Kingdom is already present "among you." Luke 19:11 may be related: "As they [the crowd, cf. 19:3] heard these things, he proceeded to tell a parable, because he was near to Jerusalem, and because they supposed that the kingdom of God was to appear *(anaphainō)* immediately." The parable of the pounds that follows (19:11–27; cf. Matt 25:14–30) implies a delay of the Parousia: "Trade with these [pounds] until I come." In addition, the Q saying in Luke 11:20, "But if it is by the finger of God that I cast out demons, then the Kingdom of God has come upon *(ephthasen)* you," associates the presence of the Kingdom with miracle working (cf. Luke 9:2; 9:11; 10:9). For Luke the Kingdom is not tied to the delayed Parousia; indeed, "seeing the Kingdom" suggests some other perception—perhaps the Transfiguration (9:26, 32), or the "power" of the Holy Spirit (Luke 4:16–30, the Spirit only on Jesus, cf. healing in 10:9 and 11:20; Acts 1:8, the Spirit on the community).

Luke also builds upon his sources to stress that the Kingdom has ethical implications. "Seeking" his Kingdom as a priority reduces anxiety for material things which nonetheless will accrue (12:31, from Q);

the Father "gives" the Kingdom to the "little flock" that sells possessions, shows charity to the poor, and the like (12:32, expanded from a Q context); the Kingdom of God "belongs" to the little children (18:16; Mark 10:14); whoever does not "receive" the Kingdom of God like a child shall not "enter" it (18:24; Mark 10:15); it is easier for a camel to go through the eye of a needle than for a rich man to "enter" the Kingdom of God (18:25); finally, the wandering follower who leaves home and family "for the sake of the Kingdom of God" (Mark 10:29: "for the sake of the gospel!") has a reward that illustrates present-future tension in Luke-Acts, for he will "… receive manifold more in this time, and in the age to come eternal life" (18:29).

Finally, Luke's Kingdom of God points to a view of Jesus, a group, and ethics. The initial Kingdom saying in 4:43 could subtly imply what has been said and done at Nazareth and Capernaum after all (see above), that is, the arrival of the Spirit-filled prophet-Messiah who preaches good news to the poor, release to the captives, recovering of sight to the blind, liberty of the oppressed, the acceptable year of the Lord, and healing for the gentiles (4:16–30, at Nazareth); and who works miracles (4:31–41, at Capernaum) (Völkel; Merk; Tannehill 1986). To be a witness to Jesus means to continue this sort of "Kingdom" proclamation (Luke 9:60; 10:9; Acts 1:8; 8:12; 19:8; 20:25; 28:23, 31); but it is also to bear witness to the Proclaimer who is the prophet-Messiah, the one who suffers, dies, rises, and ascends in fulfillment of the Scripture (Luke 24:26–27; Acts 17:3; 28:23, 31): the risen and exalted Lord Jesus Christ (Acts 8:12; 28:23, 31). At the same time, continuing the Kingdom proclamation and living it as Jesus lived it "daily"—one "enters" the Kingdom through tribulations (Acts 14:22)—brings with it a passionate concern for political, social, and economic realities of Christians of all walks of life, especially women, the poor, the sick, and imprisoned. Perhaps the Lukan author is a client who, of all the gospel writers, wishes to legitimate to his "most excellent" patron Theophilus (Luke 1:3; Acts 1:1) an urban social group that is moving beyond its sectarian beginnings toward some "ecclesiastical" organization in the mainstream of society (cf. Esler).

E. Johannine Literature

The explicit language of the Kingdom of God in the gospel of John is limited to two sayings (3:3, 5) and three virtually equivalent sayings about "my (= Jesus') Kingdom" in one verse (18:36). God is not called "King," but there are 15 direct references and one indirect reference to Jesus as "King"; most of these have a questioning or mocking (ironic) sense.

In John 3 Nicodemus claims that Jesus' signs show that Jesus has been sent from God (3:1–8). Jesus responds: "Truly, truly, I say to you, unless one is born *anōthen* ("again" or "from above") he cannot *see* the Kingdom of God" (3:3). Nicodemus understands *anōthen* in the sense of being born "again" literally from the womb (3:4). Jesus reinterprets: "Truly, truly, I say to you, unless one is born *of water and the Spirit,* he cannot *enter* the Kingdom of God" (3:5). Most interpreters agree that the evangelist had access to a Jesus tradition about "seeing"/"entering" the Kingdom of God (John 3:3; cf. Mark 9:1; 10:15; Matt 18:3; Luke 18:17) and that he interpreted it in terms of his view of Jesus as the "Man from heaven" (Meeks 1972). Either the evangelist interpreted "born *anōthen"* as a nonliteral "born again" in the sense of "born of the Spirit" (3:5), which he then related to his belief about the descending-ascending Son of Man (3:10–21), and a later ecclesiastical redactor added "water and" to make the connection with baptism (Bultmann); or the tradition already included "water and" in relation to baptism (see A and B above, and also below) and he reinterpreted born *anōthen* to mean either "born from above" in the sense of begotten by a heavenly Father "from above," just as Jesus/Son of Man (3:9–21, 31–36; Brown *John 1–12*), or as an eschatological cleansing and heavenly instruction; that is, as the agency of the Law has now been replaced by the agency of Jesus (Lindars).

Whether related to the tradition of baptism or not, the evangelist interprets "to see" or "to enter" the Kingdom of God as to be born *anōthen,* for the Son is born *anōthen* (3:31), as the Spirit is *anōthen* (John 14–16). The meaning is present-spatial, not future-temporal (cf. Barrett). Thus, Jesus responds to Pilate's political question about his status as "king": "*My* kingdom is not of this world" (18:36). Similarly, while Jesus is confessed and hailed as "king of Israel" (1:49; 12:13), he is already "king of the Jews" in some ironic sense (18; 19). For the believer, to "see" or "enter" the Kingdom of God is to have "eternal life"

(3:15, 16)—*already.* This Johannine viewpoint may reflect a Johannine "otherworldly" sect (Meeks 1972), though there have also been attempts to connect this group with other early Christian groups (Brown 1974).

Why is the Kingdom teaching so sparse in the Fourth Gospel? The usual suggestion is that John has little or no futuristic eschatology. Another possibility is that the Kingdom is sometimes being used negatively by competing gnostic groups within the Johannine circle (Hodgson).

F. "Q" Source

Scholars who accept the Two Source Theory reconstruct a source behind Matthew and Luke called "Q" and designate chapter and verse in it with the Lukan chapter and verse. Apart from a general Kingdom reference (Q 4:5), Q contains 8 or 9 explicit references to the Kingdom of God, two variations (Q 12:31 P^{45}; 11:2), two sayings often defended as Q sayings (Luke 9:60; 9:62), and another saying which probably implies a reference to the Kingdom of God (Q 12:2).

The first clear Kingdom of God reference is the beatitude "blessed are you poor for yours is the Kingdom of God" (Q 6:20). Beatitudes are a form of wisdom instruction, and wisdom instruction normally reinforces accepted social norms and values. This beatitude, however, is an "anti-beatitude" (Betz) that subverts values about poverty and riches; it supports a "radical wisdom of the Kingdom" (Kloppenborg). Some scholars are reminded of the Cynics' countercultural idealization of poverty (Theissen; Mack; otherwise Horsley 1987; see H.6). The following three Q beatitudes (hunger, sorrow, and persecution) are also "anti-beatitudes." All four point to a community that experiences itself as poor, hungry, sorrowful, and persecuted.

The next Kingdom saying is Q 7:28, "I tell you, among those born of women none is greater than John; yet he who is least in the Kingdom of God (Matt 11:11b: Kingdom of Heaven) is greater than he" (Q 7:28; cf. *Gos. Thom.* 46b). The emphasis of the latter part of this saying is on the higher value of the one who is least in the Kingdom (probably not Jesus). The inclusion of John in the former part of the saying corresponds to the earlier form of Q 16:16 in Matthew 11:12: "From the days of John the Baptist until now the Kingdom of Heaven has suffered violence *(biazetai),* and men of violence *(biastai)* take it by force." In this form, John, like Jesus/Son of Man, is a Kingdom envoy against the violent opponents (see C), just as he joins Jesus against the outsiders ("this generation") in his preaching of repentance and judgment (Q 3:16–17).

Luke 9:60, "Leave the dead to bury their own dead; but as for you, go and proclaim the Kingdom of God" (if it is in Q) is part of an instruction on discipleship and mission modeled on the homeless Son of Man (Q 9:58; cf. Q 9:57–62; 10:2–16, 21–24). This saying subverts the social norm to bury one's parents (*m. Ber.* 3:1). Similarly, Luke 9:62 juxtaposed to Luke 9:61 (if they are in Q) states that the one who follows the homeless Jesus and who is fit for the Kingdom need not bid farewell to the family, as did Elisha (1 Kgs 19:19–21). Both sayings express the "radical wisdom of the Kingdom."

The command to the disciples to heal and to say, "The Kingdom of God has come near to you" (Q 10:9) is similar in form and content to Q 11:20, "But if it is by the finger of God that I cast out demons, then the Kingdom of God has come upon you." Here the Kingdom is manifest by Jesus' exorcisms (cf. also Q 7:22; cf. 4:1–13; 7:7–8; 17:6). In the first saying, miracle working is associated with the homeless, provisionless, wandering missionary (Q 10:2–12); in the second, the opponents label Jesus' exorcisms as the deeds of Beelzebul (Q 11:15–19). Jesus is defended by counter-labeling: "this generation" which rejects Jesus' Kingdom preaching and miracle working activity is in league with Beelzebul and deserves judgment (Q 11:29–32). The opposition between God's and Satan's Kingdoms has apocalyptic overtones.

"Your (sing.) Kingdom come" (Q 11:2) is an address to God as Father. It begins a section on prayer in which God as patron provides for the daily needs of community members, and its orientation is future (contrast Q 11:20; cf. 19:9). If it is correlated with "Give us each day our daily bread" (Q 11:3; cf. Q 12:22–31), it points to a way of life.

Q 13:28 and 13:29 are better represented by the single, unified saying in Matthew 8:11–12: "I tell you, many will come from east and west and sit at table with Abraham, Isaac, and Jacob in the Kingdom of Heaven, while the sons of the Kingdom will be thrown into the outer darkness; there men will weep and

gnash their teeth." This prophetic pronouncement states that the "sons of the Kingdom," probably Israel, will be excluded from the Kingdom, but that the gentiles will be included; presumably the mission to the gentiles is in view (cf. Q 7:1–10; 10:13–15; 11:31–32). Preaching in the gentile mission (Q 12:2–7) stresses that which is hidden (Q 12:2), perhaps an implied reference to the Kingdom; it would then be related to the Kingdom parables, the Mustard Seed (Q 13:18) and the Leaven (Q 13:20), which stress that what is small and hidden will grow to large proportions.

It has been generally recognized that Q is dominated by two types of material, wisdom sayings and prophetic/apocalyptic sayings; these are probably two literary strata (Lührmann; Jacobson; Kloppenborg). The conventional argument is that the prophetic/apocalyptic sayings are earlier (e.g., Schultz), a view often correlated with the historical Jesus as an apocalyptic prophet (see H.3 and H.4). Recently, it has also been argued on the analogy of the *Gospel of Thomas* (see G) that most of the eschatology and especially the apocalyptic Son of Man is a later accretion to Q (Koester). Another analysis (Kloppenborg) says that six "wisdom speeches" portraying Jesus as a teacher (Q1) may have been later modified by apocalyptic words and prophetic announcements of judgment against "this generation" (attributed to the Baptist and Jesus/Son of Man), by openness to the gentiles, and by the Deuteronomic perspective that God punishes an impenitent Israel (Q2). Wisdom teaching has been transformed by conflict with the synagogue into apocalyptic/prophetic polemic. The temptation story (Q 4:1–13) pushes the genre toward historical "biography" (Q3; contrast *Gos. Thom.*). There are ten Kingdom sayings in the earlier "wisdom speeches" stratum (Q 6:20; 9:60; 9:62; 10:9; 11:2; [12:2]; 13:18; 13:20; 13:28; 13:29) and three in the "announcement of judgment" stratum (7:28; 11:20; 16:16). Other scholars, however, claim that some of the wisdom sayings were actually spoken by early Christian *prophets* (Boring 1982).

In any case, the Kingdom is related to a radical, nonnormative ethic of a group that affirms the virtues of voluntary poverty, nonviolence, love of enemies, and discipleship as a separation from family and home, ideas perhaps reminiscent of Cynic virtues. Other apocalyptic/prophetic sayings of Q appear to be correlated with the rejection of Jesus (and John) by "this generation" (= Israel), especially the rejection of Jesus' preaching and miracle working as manifestations of that Kingdom. Implied is a rejection of God, wisdom, the prophets sent to Israel, and indeed the Q preachers/healers themselves, for whom Jesus as Son of Man is a role model. While the ostensible recipients of such sayings are outsiders ("this generation"), the actual recipients are undoubtedly insiders, the members of the "Q community," which experiences itself as a totally committed, elect group which is rejected, persecuted, and in protest against normative society (and other groups).

G. *Gospel of Thomas*

Of the 114 sayings attributed to Jesus in the Coptic *Gospel of Thomas* (1st century C.E. Syria or Egypt?) about 20% (22 sayings) refer explicitly to the "Kingdom of Heaven/God." The form of expression often varies from synoptic usage, often in the same saying, and the *Gos. Thom.* also has Kingdom references where the Synoptic Gospel sayings have none and vice versa. The most frequent expression is simply "the Kingdom" (12 references), then "the kingdom of the (my) Father" (7 references), while the more familiar "Kingdom of Heaven" occurs only 3 times.

It is striking that the Kingdom in *Gos. Thom.* is not apocalyptic. In *Gos. Thom.* 3a, the "Kingdom *within* you (pl.)"clearly refers to knowledge *within,* or knowledge of the self (cf. Luke 17:21; *Gos. Mary* 8:14–21). However, in *Gos. Thom.* 3b the Kingdom is also "*outside of* you (pl.)." *Gos. Thom.* 113, which explicitly denies apocalyptic eschatology, also claims that the Kingdom is *without,* that is "spread out upon the earth" where it awaits discovery. Non-apocalyptic, mysterious presence is also found in other sayings (*Gos. Thom.* 18; 51). Most scholars have concluded that such references imply the gnostic "knowledge" *(gnōsis).* However, wisdom alone is also possible (Davies), especially when *Gos. Thom.* 3b seems to know a wisdom midrash based on Deut 30:10–15 in which wisdom and light are both *within* the wise man and *throughout all creation* (cf. Job 28:12–15; Bar 3:29–4:1; Sir 1:1–10, 14; also Rom 10:5–10).

The cluster of sayings around *Gos. Thom.* 3 (e.g., *Gos. Thom.*2–6) shows that it is important to "seek and find" the mysteriously present Kingdom (cf. *Gos. Thom.* 27, 49, 76) and this activity can also refer to

seeking and finding Jesus, who is wisdom, light, and the "Living One" (*Gos. Thom.* 24, 38, 43, 52, 59, 77, 80, 91, 92, 94, 108). When one does find it (him), (s)he becomes childlike, has "Life," and is faced with ethical demands (King). *Gos. Thom.* 49, unique to *Gos. Thom.*, adds, "Jesus said, 'Blessed are the solitary and the elect, for you will find the Kingdom. For you are from it and to it you will return' "; and *Gos. Thom.* 82 states, "Jesus said, 'He who is near me is near the fire, and he who is far from me is far from the Kingdom.' "

"Entering the Kingdom" in reference to becoming like children in *Gos. Thom.* 22 (from "Thomas" himself, so King) probably symbolizes the initiation of the Thomas group by baptism. A primitive baptismal practice (cf. Jewish proselyte baptism and the Hellenistic Mysteries) also lies behind *Gos. Thom.* 37 and 21: the disciples undress, are naked and are unashamed, tread upon their garments, and become like little children, all of which symbolizes a return to the primal innocence and sinlessness of Adam and Eve in the Garden prior to the Fall (J. Smith; Meeks 1982; cf. Gen 3:15; cf. 1 Cor 12:13; Gal 3:28; Col 3:11). Becoming a child in *Gos. Thom.* 22 is becoming a "single one" (cf. *Gos. Thom.* 4, 16, 23; probably redactional, so Davies), a status which denies the dualities of "the world," especially male and female. Being "acquainted with the Kingdom" as a little child is also being superior to the Baptist (cf. esp. Luke 7:24–35 = Matt 11:7–19).

In connection with "entering the Kingdom," *Gos. Thom.* 114 must be considered: "Simon Peter said to them, 'Let Mary leave us, because women are not worthy of the Life.' Jesus said, 'Look, I shall guide her so that I will make her male, in order that she also may become a living spirit, being like you males. For every woman who makes herself male will enter the Kingdom of Heaven.' " This saying has been interpreted as an original male androgyny, as a contrast between this world ("the female") and the spirit ("the male"), and as a reference to celibacy (cf. King). It might imply that there were women in the Thomas group. Yet, it may be an addition since it does not accord with the denial of male (as well as female) sexuality in the androgyny of *Gos. Thom.* 22 (Davies).

Further impressions about the Kingdom and the Thomas group can be discovered by looking at four cases where *Gos. Thom.* adds Kingdom references to traditions paralleled in the synoptics (21, 99, 103, 107; Cameron; King). In the Lost Sheep (107; cf. Luke 15:3 = Matt 18:12), "finding" the "largest sheep" is probably redactional (cf. 8:1: "large fish"; 20: "large branch"; 96: "large loaves"; Cameron). It has usually been interpreted as *gnōsis* (Gärtner), though again it may be wisdom (Davies). A group emphasis is to be found in *Gos. Thom.* 21:3 and the related beatitude in 103 (the Thief in the Night; cf. Matt 24:42–44 = Luke 12:39–40; Mark 3:27; Matt 12:29) which are concerned with the identification of the Kingdom with "house" that must be protected from outsiders (not apocalyptic "watching"). The last of the four sayings, *Gos. Thom.* 99, states that those who "enter the Kingdom" are the true brothers and mother who do God's will (cf. Mark 3:31–35 = Matt 12:46–50 = Luke 8:19–21). Other ethical emphases are the demand for strictness in fasting in order to "find" the Kingdom (*Gos. Thom.* 27 [= POxy 1]) and "Thomas' " antibusiness theme tacked on to the parable of the Banquet: "Businessmen and merchants shall not enter the places of my Father" (*Gos. Thom.* 64:2; cf. 54; Luke 6:20; Matt 5:3).

Of the fourteen Thomas parables, nine refer explicitly to the Kingdom and three of them are unique to *Gos. Thom.* (21:1; 97; 98). *Gos. Thom.* 21:1 (Children in the Field) is one of two key baptism passages (cf. *Gos. Thom.* 37); it fits the childlike innocence of "entering" the Kingdom group by baptism (J. Smith). The loss of meal from the broken-handled jar in *Gos. Thom.* 97 might refer to the wise person's ability to see what is foolish (King). The parable of the Sword in *Gos. Thom.* 98 seems to refer to the wise person's preparation for overcoming powerful enemies, that is, it reflects conflict with outsiders.

Turning to Matthean parallels, the Weeds with its reference to the future harvest in *Gos. Thom.* 57 (= Matt 13:24–30) lacks Matthew's allegorical, apocalyptic associations (Matt 13:36–43); it probably refers simply to the wise person's dealing craftily with enemies. The Pearl in *Gos. Thom.* 76:1 is given an ascetic conclusion that points to spiritual wealth (76:2: "the treasure which does not perish"; contrast Matt 13:45). The Treasure in *Gos. Thom.* 109 is usually considered to be a gnostic interpretation of Matt 13:44 (cf. also *Midr. Cant.* 4:12 and Aesop's fables; Grant and Freedman) because the father and the son "did

not know" about the treasure (see, however, Hedrick); if "lending at interest" at the conclusion is taken literally, not "spiritually," it sharply conflicts with *Gos. Thom.* 95 (cf. *Gos. Thom.* 64:2; 54).

The two parables which parallel Q are the Leaven (*Gos. Thom.* 96:1; cf. Luke 13:20–21 = Matt 13:33) and the Lost Sheep (*Gos. Thom.* 107; cf. Luke 15:4–7 = Matt 18:12–13). The "large loaves" in the former and the "largest sheep" in the latter are redactional and refer (if not to *gnōsis* then) to wisdom. The theme of "searching" for the largest sheep also recalls seeking and finding wisdom (cf. "finding" the "large fish").

Finally, the Mustard Seed in *Gos. Thom.* 20 (Mark 4:30–32 = Matt 13:31–32 = Luke 13:18–19), which takes the form of an "aphoristic dialogue" (Crossan 1983), does not have the OT allusions found in the synoptics (Dan 4:21; Ezek 17:23 or 31:6). This has been taken as "gnosticizing" ("plowed ground" = gnostic laboring; "large branch" = the "heavenly man"; tiny seed = *gnōsis;* cf. Montefiore and Turner). However, one could also interpret the tiny seed as wisdom (again, the "large branch," cf. 8:1; 96:1; 107). This is the only Thomas parable which compares the Kingdom to an inanimate object (R. Cameron), reinforcing the possibility that the Kingdom in *Gos. Thom.* implies "belonging to the group/community" (King).

In summary, the Kingdom in *Gos. Thom.,* as in the gospel of John, is a present reality. It has usually been associated with gnostic "knowledge"; a current alternative is to see it as wisdom, especially since the Kingdom is not only within the self but outside the self. Many metaphors express this mysterious theme, for example, the notion of "largeness." Group overtones and ethical norms abound. "Entering the Kingdom" seems to be analogous to entering the Thomas group by means of baptism. The resulting new life is expressed as becoming a "single one," a status equivalent to the innocent child who, like Adam and Eve in the Garden before the Fall, is not characterized by the dualities of "the world." Presumably, the initiated insider has "found" the Kingdom that is within and without, and at the same time (s)he is mysteriously unified with Jesus. Finally, the purity of the group is defended against outsiders.

H. The Historical Jesus and the Kingdom

The attempt to interpret the Kingdom of God in the message and life of Jesus demands critical correlation of meanings of the Kingdom of God in Jesus' environment, in the Christian Gospels and Acts, and in Jesus' teaching critically reconstructed. There are many obstacles, notably the relative paucity of explicit "Kingdom of God" sayings in non-Christian texts and the centrality of the Kingdom in the Christian evangelists, who do not define it and indeed contribute to its form and content. The question of Jesus' teaching concerning the Kingdom of God is therefore part of a larger "question of the historical Jesus." See JESUS.

1. The Political Kingdom. There have been two major approaches to the political view of Jesus' Kingdom teaching: (1) setting Jesus within the political movements of 1st century Palestine and (2) comparing his teaching to analogous Kingdom sayings found in the Aramaic Targums politically interpreted. These approaches can overlap.

The first approach attempts to trace the history of the revolutionary "Zealot" movement in Josephus; it then views Jesus in relation to that history (esp. Brandon; cf. Bammel and Moule). Accordingly, Christian evangelists in the late 1st century C.E. transformed the revolutionist Jesus into a nonpolitical pacifist because they feared that Christianity would be confused with the Jews who had recently revolted against Rome (66–70 C.E.). Remnants of Jesus as revolutionist can nevertheless be found, for example, crucifixion between two "brigands" for sedition, the *titulus* "King of the Jews," and a disciple named Simon the "Zealot" (Luke 6:15; Acts 1:13). It is inferred that Jesus' Kingdom was of necessity political.

A second, more moderate, approach stresses the Targum Jonathan to Isaiah (Koch; cf. already Reimarus; also Buchanon). The two Kingdoms in the Targum—the eschatological "self-revelation" of the Kingdom of God in the present and the future eschatological Kingdom that "comes to" the Messiah related to the dominion of Jerusalem over the nations—is a reflective separation (cf. also Matthew and Paul) of what Jesus had blended together when he spoke of the eschatological presence, yet "coming," of the Kingdom of God (Koch, based esp. on *Tg. Mic.* 4:7).

Both approaches have been combined in an even more extreme position: the Kingdom of Heaven was a code word for God's *political* restoration of the Davidic kingdom with Jesus as king and his followers as his chief counselors (Buchanon).

The political-historical approach boldly accepts political realism and faces the apolitical redactional tendencies in the Gospels. Its weaknesses are: (1) it neglects the *teaching* of Jesus (e.g., Matt 5:44, "Love your enemies …"; the parables); (2) Josephus does not refer to "the Kingdom of God"; (3) there may have been no ongoing, unified Zealot movement in Palestine (M. Smith 1971; Horsley and Hanson); and (4) the traditional characterization of Galilee as revolutionary may be inaccurate (cf. e.g., Freyne; Mack). The use of the Targums has the advantage that they contain ten Jewish references to "the Kingdom of God" (Koch; Chilton) which may have political overtones (Koch). The difficulties are: (1) dating the references (esp. *Tg. Mic.* 4:7) and (2) the extent of the political nuances (cf. Chilton). Radical political reconstructions (Buchanon) face the same difficulties. A more subtle approach relates *God's* ultimate overthrow of repressive political forces to Jesus' *nonviolent social-economic-religious* revolution (e.g., Horsley; Sanders' "restoration theology"; cf. Borg; see H.3).

2. The Kingdom and Present Ethical Action. The present ethical approach has drawn on the rabbinic literature and the present-oriented sayings of Jesus (Dalman; Dodd; Vermes; Flusser). If freedom from the yoke of Rome (*Tg. Zech.* 14:9) had not yet happened because Israel had failed to keep "the yoke of the Torah" (*Tg. Ezek.* 2:10; *Sipre Deut.* 32:29), the Kingdom of Heaven among the rabbis was nonapocalyptic and anti-Zealot (Flusser; cf. *Abot de Rabbi Nathan; Mekilta of Rabbi Nathan* on Exod 15:18; *t. Soṭa* 14:4 [1st century C.E.]; *Ketub.* 66b). Yet, individuals who take the yoke of the Torah upon themselves may be members of the Kingdom already in the present (*Pirqe Abot* 3:6; see Flusser).

The best-known approach to the Jesus-related and present Kingdom is called "realized eschatology" (Dodd; cf. Flusser). This position claims that Jesus' present sayings (e.g., *ephthasen*, "has come," Luke 11:20) are determinative for his future sayings (e.g., *engiken*, "at hand," Mark 1:15). For example, "repent, for the Kingdom of Heaven is at hand" (Mark 1:15) means that human beings should work for the Kingdom; or the future messianic banquet (Matt 8:11 = Luke 13:28; Mark 14:25) means "the transcendental order beyond time and space" (Dodd). The parables of the Kingdom demonstrate its presence; ethics provide a "moral ideal" for those who have already accepted it. Thus, the emphasis lies on the Kingdom "in the midst of you" (Luke 17:21) or that "has come upon you" (Luke 11:20); it has suffered violence since the days of John the Baptist (Matt 11:12). Related approaches have gone in two directions: either an individual submission to God (Vermes) or a social message for the poor, the hungry, the meek, the mourners, and the persecuted (Matt 5:3–6, 10 = Luke 6:20–22; Flusser).

This position rightly stresses the present ethical implications of the Kingdom. However, the "transcendental order beyond time and space" sounds too Platonic (see, however, *T. Mos.* 10). There are other questions. The present ethical emphasis may not be timeless and does not easily fit apocalyptic eschatology; there is considerable caution about using mostly later rabbinic texts about the Law for interpreting Jesus; and some suspect that modern, democratic ethical ideals about individual equality and social welfare may have influenced these interpretations.

3. The Future Apocalyptic Kingdom. The dominant alternative of the last century has been to stress the context of Jewish apocalyptic eschatology for the Kingdom: *God*, not revolutionary human beings, will act to redeem his people in the *future* by judging worldly kingdoms, destroying his people's Satanic enemies, and reversing the present order of the world. Either Jesus' apocalyptic *sayings* (esp. Weiss; in part, Hiers; see H.4) or his apocalyptic *life* (Schweitzer; Sanders; in part, Hiers) is emphasized.

The key *sayings* speak of the Kingdom "at hand" interpreted apocalyptically (*ēngiken* in Mark 1:15; Matt 4:17; 10:7; Luke 10:9; 10:11; and *engus estin* in Luke 21:31): the Kingdom coming "in power" (Mark 9:1); drinking wine new in the Kingdom of God (Mark 14:25 = Matt 26:29; cf. Luke 22:18); and for some, related passages about the apocalyptic Son of Man, the defeat of Satan in exorcisms, the signs of the End, and final judgment. The "present" sayings cause more difficulty. The Kingdom "has come" *(ephthasen)* is interpreted in a future sense (Aramaic *mětā;* so Weiss; cf. Luke 10:9) and "has come [*ephthasen*] upon you" by exorcisms (Luke 11:20 = Matt 12:28) is said to mean *preparation* for the

nearness of the Kingdom, not presence. The Kingdom "… not coming with signs to be observed …" (Luke 17:20–21a) denies only *accompanying* signs; and the Kingdom "in the midst of you" (17:21b) can refer to the future in Aramaic. Finally, the difficult saying about the Kingdom's suffering violence since John (Matt 11:12 = Luke 16:16) can mean that between John and Jesus there was a period of tribulation followed by the final victory of God's Kingdom on earth (Hiers). The parables make a contrast between present and near future.

In the classic approach called "thoroughgoing eschatology" (Schweitzer), Jesus' whole *life* was so absorbed by his expectation of the coming Kingdom that he sought to *bring it about* by taking the preliminary "messianic woes" upon himself in his suffering passion. Jesus' ethics meant repentance *before the End,* or "interim ethics."

A recent apocalyptic approach to Jesus' *life* stresses that the dominant scholarly focus on unique *sayings* predisposes the interpreter to see Jesus as a teacher isolated from Judaism; also, it does not explain why he was executed as an insurrectionist (Sanders). The key event in Jesus' life was his overturning the tables in the Jerusalem temple (Mark 11:15–19 = Matt 21:12–13 = Luke 19:45–48) interpreted as a prophetic, symbolic act about temple destruction (cf. Mark 13:1–2 = Matt 24:1–3 = Luke 21:5–7; Mark 14:57–58 = Matt 26:60b–61). This event was consistent with "Jewish restoration theology." While sayings in general are less important, the significant ones deal with the usual apocalyptic themes. Related *Kingdom* sayings are "entering" the Kingdom (Matt 7:21; Mark 10:15 = Matt 18:3 = Luke 18:17; Mark 10:23 = Matt 19:23 = Luke 18:24); "Thy Kingdom come" (Matt 6:10 = Luke 11:2); sitting at Jesus' right hand in the Kingdom (Matt 20:21; cf. Mark 10:37 ["glory"]); drinking new wine in the Kingdom (Mark 14:25 = Matt 26:29 = Luke 22:18); and a parable (Matt 20:1–16). "Present" Kingdom sayings (Luke 11:20 = Matt 12:28; Luke 17:21) are either less important or interpreted as future (Matt 11:11–12 = Luke 7:28).

Decisive for this view are the "almost indisputable" facts of eschatological setting for John, Jesus, and the early apostles. Jesus was a "restoration prophet," or an "eschatological charismatic" who held a version of "Jewish restoration theology" (cf. Theudas and "the Egyptian," *Ant* 20.97, 169–70). However, the Kingdom was not conceived in military/political terms (cf. e.g., Horsley; contrast Buchanon).

Two general questions about the apocalyptic approach constantly arise: (1) Was the apocalyptic ethos in 1st century Palestinian Judaism as widespread and dominant? (2) If it was, did Jesus' teaching and life conform to it, or were he and/or his teaching distinctive (the form critical "criterion of dissimilarity")? Specifically, how determinative should the temple "cleansing" story be for the meaning of the Kingdom (Evans)?

4. The Modified Apocalyptic Kingdom. Many 20th century critics have accepted a modified "reduced apocalyptic" position (Bultmann 1958). Correspondingly, Jesus rejected the usual cosmic signs by stressing the imminence of the Kingdom, and by seeing his own prophetic, but non-Messianic, activity as the sign of its dawning, though not yet present, character—an "already, not yet" emphasis. Thus, Jesus summoned hearers to repent, warned them of impending disaster, proclaimed deliverance to those who heeded the message, anticipated the Kingdom in his meals (Luke 22:15–18); while the Kingdom was wholly future, he affirmed that it was already dawning in his exorcisms (Luke 11:20: "has come"), was "in the midst of" the people (Luke 17:21), and offered hope to the poor, hungry, and weeping (Luke 6:20–21). There is a dialectic between present and future; one is in the crisis of decision in such a way that chronological time is collapsed into each new existential moment of decision (the "NOW").

A modification of this position (Perrin 1963) concludes that of both Judaism and the teaching of Jesus the following can be stated: (1) *malkût (ā)* referred to the "kingly rule" of God (Dalman); (2) the Kingdom was an apocalyptic "concept" (Weiss) centered on two central themes: (a) God's final and decisive intervention in human history and human experience and (b) the resulting final state of the redeemed. The major difference between Judaism and Jesus is that Jesus used the Kingdom of God expression and returned to the *prophetic* understanding which avoided linear, apocalyptic time schemes. Again, a tension between present and future exists; it is part of the existential experience of the individual hearer. The ethics of the Kingdom is a response to the experience of this tension.

Some judge that these views destroy the futurity of the apocalyptic Kingdom and that they are too existentialistic and individualistic; others note that the focus on *distinctive sayings* isolates Jesus from Judaism (esp. Sanders). Nonetheless, many modifications and variations of this view exist. A somewhat related view has arisen in more recent literary and Targumic interpretations.

5. The Atemporal Kingdom. There is a distinction between literal language with one-to-one meanings and open-ended language with a variety of possible meanings, that is, between "sign" and "symbol" (Ricoeur) or "steno symbol" and "tensive symbol" (Wheelwright). It is possible similarly to distinguish between apocalyptic "sign" (Jewish and early Christian texts) and the Kingdom "symbol" (Jesus) limited only by the constraints of Israel's cultural myth (see Perrin 1976). This "literary turn" has been paralleled by renewed doubt about the extent of apocalyptic eschatology on Jesus (see above and H.6). The most important sayings are the traditionally "present" ones (e.g., Luke 11:20; 17:20–21; Matt 11:12). This perspective is also related to other literary discussions in NT study such as symbol and myth (Wilder), parable as metaphor (Funk) or "aesthetic object" (Via), and the language of "reversal" which shatters the world of accepted values (Crossan 1973). Correspondingly, the Kingdom of God symbol challenged Jesus' hearers to take the myth of God's activity on behalf of his people with renewed seriousness (Perrin 1976).

While the contrast between Jewish/early Christian apocalyptic "sign" and Jesus' Kingdom "symbol" has been too sharply drawn (Perrin 1976 admitted that the Kingdom in the Kaddish prayer is a symbol), and there is disagreement about whether the whole phrase "Kingdom of God" is a symbol, this interpretation of the Kingdom has produced a number of responses (cf. Duling 1984). One view attempts to correlate atemporal "structuralist" readings of certain parables with "present" Kingdom sayings to arrive at a preconceptual, intuitive insight into the Kingdom symbol as that which shatters one's familiar world and creates a new world; this, it is said, was Jesus' experience of God (Scott; cf. Crossan 1973). Another possibility (Breech) draws on the three most important "present" sayings (Luke 11:20; 17:20–21; Matt 11:12) and recategorizes other sayings (Luke 9:62; Mark 10:15, 23b, 25) to demonstrate that Jesus did not "shatter the world" but was a poet who taught about Palestinian peasant life with gentle humor (cf. Wilder), "demythologized" the Kingdom (cf. Perrin 1963), and shattered *religious expectation.* These atemporal, literary orientations to Jesus' Kingdom teaching are important for bringing out the richness of Jesus' Kingdom language. The problem some scholars see is that they, like existentialist interpretations before them, do not always take seriously enough the ancient, concrete, sociohistorical context.

Finally, the distinctive Targumic Kingdom passages have also been interpreted in an atemporal manner (Chilton 1978, 1979). Accordingly, the Targum's most nationalistic-political interpretation (*Tg. Mic.* 4:7–8) is a late 4th-century C.E. narrowing of the earlier Targumic interpretations. These stress that the Kingdom points to a revelation of a dynamic, powerful, personal God who was and is and is to come (cf. Isa 41:4) and who acts on behalf of his people. As such, they can be seen to cohere with Jesus' atemporal, nonpolitical Kingdom teaching. However, others have taken the Kingdom sayings in the Targums in a more political sense (Koch; Buchanon).

6. The Kingdom, Wisdom, and Gnosticism. Curiously, the modern literary atemporal approach to the kingdom has a distant analogy in the internalized Kingdom of the *Gospel of Thomas,* which contains no apocalyptic Son of Man expectation or apocalyptic kingdom sayings (see G above). The question is whether *Gos. Thom.* is a "gnosticizing" interpretation and elaboration of Jesus' most original sayings (Koester) or a wisdom interpretation (Davies).

A somewhat different wisdom orientation to the Kingdom built on popular (esp. Cynic) philosophy has emerged (Mack 1988). It draws on recent archaeology (Meyers and Strange) and the study of pre-70 C.E. Judaism (Smith 1978; Neusner) to establish that Galilee was *not* dominated by the three factors usually said to influence Jesus' view of the Kingdom: politically revolutionary Zealots, Pharisaic/rabbinic legal-ethical teaching, and apocalyptic fervor. Rather, Galilee had become "an epitome of Hellenistic culture" (Mack 1988). If the earliest literary stratum of Q was wisdom (Kloppenborg); if certain of Jesus' proverbs were "countercultural"; if Jesus' pronouncements were Greek *chreiai,* that is, clever wisdom sayings which challenge accepted norms and values; and if Jesus' wisdom can be described as "aphoristic," that

is, short sayings that were formally like proverbs, but unlike proverbs in challenging ancestral authority and conventional wisdom with individual authority and personal insight (Crossan 1983)—then perhaps Jesus might be seen in relation to a popularized combination of Cynic "metic" wisdom and Hebrew wisdom. Among the Cynics the sage is "King," and the sage's countercultural wisdom and itinerant vocation become a special sort of "Kingdom." If correct, the conventional view of Jesus as the prophet of the apocalyptic Kingdom was a later, imaginative creation of early Christian communities whose group formation involved opposition from and toward outsiders, that is, the synagogue (esp. the gospel of Mark). This perspective about Jesus is said to cohere with his three major "present" Kingdom sayings (Luke 11:20; 17:20–21; Matt 11:12).

Debate about this recent interpretation should continue in the following areas: Will the non-apocalyptic *Gos. Thom.* bear the weight some give it? What is the relative importance of Q and/or its wisdom stratum for Jesus' Kingdom teaching? Can one reduce the influence of the Pharisaic Jews in the Galilee of Jesus' day (see Saldarini)? Will archaeology so revolutionize discussions of S Galilee that one can really see it as an "epitome of Hellenistic culture" (see Freyne)? Will the dominating apocalyptic/prophetic perspective be so easily removed from discussions of the Kingdom (see Boring)? To what extent are countercultural wisdom and countercultural prophecy cut from the same or similar cloth?

7. Summary. The discussion of the Kingdom of God in the life and teaching of Jesus has been dominated in modern times by the extent to which its meaning has been determined by Jewish apocalyptic eschatology. The both/and, present/future "reduced apocalyptic" view of Jesus' Kingdom sayings that emerged as a consensus in a previous generation can still be found, but the contours of alternative positions have also surfaced. The radical political perspective on Jesus' Kingdom teaching is still current, but it remains a minority position; if a more modest version related to social, economic, and religious factors continues to be developed, it will not have the advantage of parallel Kingdom references in Josephus; Kingdom *ideas* in the apocryphal and pseudepigraphical literature and/or eschatological Kingdom *sayings* in the Targums will have to fill in the gap, but they must contend with dating issues, especially in the case of *Tg. Mic.* 4:7–8.

The more extreme apocalyptic position on Jesus' *life* as a basis for his Kingdom *teaching* has persisted as a minority position. A modified alternative to this perspective has been developed in relation to "Jewish restoration theology." Its advantage is the general apocalyptic context of much of early Judaism and early Christianity; its major difficulty is sustaining a perspective on Jesus' life in the face of critical methods that argue that the apocalyptic flavor of the Synoptic Gospels derives from early Christianity.

The "ethical" interpretations of the Kingdom still persist, and there is every indication that they will be developed further by those interested in the social dimensions of the Jesus group/movement and various early Christian groups/movements. It is interesting to note that the present sayings on which the ethical approaches have been based have also been correlated with "countercultural" wisdom in relation to the early strata of Q and in some cases the gnostic trajectory). All countercultural challenges to normative values have ethical implications, as the traditional prophetic interpretations have indicated.

Finally, the atemporal literary approaches now abound, especially in North America. While the sociohistorical dimension in these perspectives has been somewhat muted, in part they have emerged as a warning that all interpretations, from the evangelists to the present, will never totally contain the full import of Jesus' message about the Kingdom of God.

I. The Writings of Paul

Three of Paul's seven undisputed letters contain six explicit references to "Kingdom of God," and two other references to the Kingdom in relation to God. Four of the six references refer to "inheriting the Kingdom" (1 Cor 6:9, 10; 15:50; Gal 5:21). Distinctive form (the definite article "the" *(hē)* is missing and the use of "inherit" in Gal 5:21 is unique to Galatians; cf. Matt 25:34; cf. 19:29; Mark 10:17 = Luke 10:25; Luke 18:18) and common content (all four sayings are apocalyptic) point to a stereotyped pre-Pauline tradition. In 1 Cor 15:50, "flesh and blood cannot inherit the Kingdom of God" refers to the future resurrection of the transformed, spiritual body. The two references in 1 Cor 6:9–10 and one in Galatians 5:21 point to the future apocalyptic judgment in the form of a "threat" saying: "the unrighteous,"

characterized by vices, "will not inherit" the Kingdom of God (unless they have been "washed," 1 Cor 6:11); implied is that those characterized by virtues will inherit the Kingdom (Gal 5:22–23). This moral division implies group boundaries marked by rites of entry, that is, baptism (cf. Rom 6:1–6; Gal 3:28; 1 Cor 5:9–13; Meeks 1982).

1 Cor 15:24 is also apocalyptic and implies an anticipatory Kingdom, that is, the reign of Christ: "Then comes the end when he delivers the Kingdom to God the Father after destroying every rule and every authority and power." The anticipatory Kingdom may also be implied in 1 Thess 2:12 in a possible baptism context (*axios;* cf. Phil 1:27): "We exhorted each one of you and encouraged you and charged you to lead a life worthy of God, who calls you into his own Kingdom and glory." The anticipatory presence of the Kingdom is implied again in Paul's attempt to steer the middle course between the extremes of asceticism and libertinism in food practices (cf. Theissen 1982); the "antithetical definition formula" (Haufe) says: "For the Kingdom of God is not food and drink but righteousness and peace and joy in the Holy Spirit" (Rom 14:17). In a similar formula, 1 Cor 4:20 states: "For the Kingdom of God does not consist in talk but in power." Here the positive reference is apparently to miracle working (esp. 2 Cor 12:12; cf. Mark 9:1; Luke 11:20 = Matt 12:28).

In short, the undisputed writings of Paul point to a tension between the present, anticipatory "Kingdom of Christ," which in some passages seems to imply an anticipatory "Kingdom of God," and the future apocalyptic consummation of the Kingdom of God at the End. Because the contexts often imply baptism, Paul has probably remolded baptismal traditions about the Kingdom for proclamations and exhortations related to group boundaries (Donfried; Meeks 1982).

J. The Pauline School

1. 2 Thessalonians. In a highly apocalyptic context about judgment "in that day" (2 Thess 1:10), the Paulinist hopes that the recipients of the letter may be made "worthy" *(axios)* of the Kingdom of God for which they are suffering (1:5). Here, the future Kingdom dominates, but is correlated with present suffering in the group.

2. Colossians. In contrast, Colossians 1:13–14 introduces the Colossians hymn about the present reign of the cosmic Christ (Col 1:15–20): "he has delivered us from the dominion of darkness and transferred us to the Kingdom of his beloved Son, in whom we have redemption, the forgiveness of sins" (Col 1:13–14). Here, the Christians already possess citizenship in "the Kingdom of the beloved Son" in so far as they are "saints of light" who are victorious over darkness; perhaps the terms "part" *(tēn merida),* "lot" *(tou klērou),* and "saints of light" in the previous verse (Col 1:12) imply heavenly communion with angelic beings (cf. Heb *gōral,* "lot" in QL). In any case, purity and group boundaries are present, although "the kingdom of the beloved Son" is more comprehensive than the church. The same meaning seems to be present in the expression "fellow workers for the Kingdom of God" (Col 4:11).

3. Ephesians. The christology of Christ's present, cosmic reign and its implications for the growing institution have also influenced Eph 5:5: "Be sure of this, that no fornicator or impure man, or one who is covetous (that is, an idolator), has any inheritance in the Kingdom of Christ and of God." The Kingdom of Christ and the Kingdom of God again overlap and are already present, albeit in hidden form; group purity is in view (on "inheriting" the Kingdom in Paul, see I above).

4. 2 Timothy. Finally, in 2 Tim 4:1 Christ's function as final judge does not clearly distinguish the eschatological Kingdom of Christ from the eschatological Kingdom of God: "I charge you in the presence of God and of Christ Jesus who is to judge the living and the dead, and by his appearing and his kingdom." In 2 Tim 4:18 the author says, "The Lord will rescue me from every evil and save me for his heavenly kingdom. To him be the glory for ever and ever. Amen." Here the author contrasts his present perilous existence on earth with hope for the future after death.

The writings of the Pauline School show that tension between the Kingdom of Christ and the Kingdom of God has often become somewhat muted. In 2 Thessalonians the focus seems to be totally future; this view resurfaces in 2 Timothy. In Colossians and Ephesians, however, the focus is present, and that is consistent with the cosmic Christ and the developing institution of the church. Finally, in Colossians, Ephesians, and 2 Timothy the two Kingdoms seem to merge, although not completely.

K. Other Canonical Christian Literature

1. James. In the form of a rhetorical question (Jas 2:5), the literal poor "before the world" are "rich" with respect to faith and "heirs of the kingdom which he has promised to those who love him" (cf. 1:9–11 [Isa 40:6; Jer 9:23–24]; 2:5–12; 5:1–6). They are also models of the pious who endure under trial (1:12; texts in Dibelius-Greeven). The theme has strong roots in the Jewish Scriptures and writings, as well as in the Lukan form of the teaching of Jesus (Luke 6:20). The Kingdom saying has apocalyptic overtones ("heirs"; "promised") and social implications (rich and poor).

2. Hebrews. In Heb 12:28, the pilgrim people are being warned to be grateful for receiving "a kingdom that cannot be shaken." As the context makes clear (cf. Heb 12:26–27, [Hag 2:6]), "what has been shaken" refers to transitory earthly copies or shadows of the true, eternal heavenly realities that are already provisionally present for Christians, to be consummated only in the future (11:27; cf. 2:5; 6:5; 9:11; 10:1; 13:14). The response should be "acceptable worship, with reverence and awe; for our God is a consuming fire." Otherwise, Scriptural language about "thy (= God's) Kingdom" which is "forever" (Ps. 45:6) is used in relation to the Son (Heb 1:8; cf. manuscript variations) who is a priest according to the order of Melchizedek, the "*king* of Salem, priest of the Most High God," the "*king* of righteousness," "the *king* of peace" (Heb 7:1–2). Finally, some heroes of faith are described as those who have conquered (earthly) kingdoms and enforced justice (11:33).

3. Revelation. Only two of the nine explicit references to the term "kingdom" in the book of Revelation refer to God (11:15; 12:10). Nonetheless, royal symbolism pervades the book and the heavenly Jerusalem (Rev 21:1–22:5) has been equated with the cosmic Kingdom of God (Schnackenburg).

God, Christ, the witnesses/martyrs, and earthly rulers are portrayed in royal terms. God is a great king sitting on his throne in the heavenly courtroom (Revelation 4). He is praised by the persecuted martyrs in heaven as the "King of the nations (ages?)," an apparent reference to the pilgrimage of the nations to Mount Zion (15:3–4 [Jer 10:7; Ps 86:9; Isa 2:1–2; cf. Mic 4:1–4; Jer 16:19]). Jesus Christ, the slain lamb (3:21; 22:3; chap. 5) who "has conquered" by his death, is also enthroned on God's throne. He is the royal Davidic king (esp. 17:14; 21:7; 22:16), "the prince of the kings of the earth" (1:5; cf. 15:3 [some manuscripts]), "King of kings," and "Lord of lords" (17:14; 19:16; cf. Deut 10:17). Correspondingly, at the trumpet call of the seventh angel the kingdom of the world will be transformed into the "Kingdom of our Lord and of his Christ" who will reign forever (11:15; cf. 10:7). In another vision (12:1–17), "the Kingdom of our God," accompanied with the salvation, the power, and "the authority of his Christ" (12:10), "have come" when Satan and his angels have been cast down from heaven to the earth. Since the Kingdom of God and the Kingdom of the Messiah seem to be coterminous (cf. 3:21; 22:1, 3), the question must be raised whether the 1,000-year "millennial reign" of Christ (20:1–6) is an interregnum before the final Kingdom of God (Schnackenburg).

Finally, the one who conquers, loves his followers, and has freed them from their sins by his blood, makes *them* a "kingdom, priests to his God and Father" (1:5b–6) or "a kingdom and priests to our God" (5:10; cf. 20:6; Exod 19:6; Isa 61:6; *Jub.* 16:18); "they shall reign on earth" (5:10; cf. 20:6; 22:5). While their struggle with the earthly kingdoms persists in the present, they will have a share in the final reign of God and Christ. This appears to be anticipated when John of Patmos shares the "kingdom" of those to whom he writes, those who are enduring tribulation and patient endurance under the temporary sway of the kingdoms of the earth (1:9).

In summary, when the powers of Satan are defeated, the Kingdom of God and of his Christ that now rule in heaven will prevail over the earthly kingdoms that are temporarily under the power of the Beast (16:10; 17:12, 17–18); it will be a cosmic reign over heaven, earth, and the underworld; it will transform the kingdoms of the world, will be centered in the new Jerusalem on earth, and rule will be shared with the faithful (3:21; 22:3–5). Apocalyptic religious themes related to perceived experiences of political, social, and economic oppression lead to the strongest political implications about the Kingdom of God in the NT.

4. 2 Peter. An attempt to reassert the apocalyptic expectation and hope in the face of the delay of the Parousia and against "false teachers" is found in 2 Pet 3:1–13. In 2 Pet 1:10–11 those who are zealous in

the calling—purity in the group is highlighted—are promised "an entrance into the eternal kingdom of our Lord and Savior Jesus Christ" (cf. 3:13, 18). Though this "entering" language is familiar from the Gospels (e.g., Mark 10:15 = Matt 18:3 = Luke 18:17; John 3:5), it is the kingdom of Christ, the Patron/Benefactor, that is stressed (cf. Eph 5:5).

L. Patristic Literature: A Summary

Many of the Kingdom references in the Church Fathers are quotations and allusions from the Bible (Lampe; Ferguson; Viviano 1987b). In the early period (2d century), statements generally fall into three categories. First, there are polemics against various opponents to show that the Christians are the true heirs of the Kingdom (e.g., Just. *Dial.* 140; Iren. *haer.* 3.21.9; cf. Matt 8:11–13). Second, there are polemics against the gnostic tendency to see the Kingdom as interior (e.g., Hipp. *haer.* 5.2–3; *2 Clem.* 12). Third, there is the opposite tendency, namely, apologetics show that the Christian view of the Kingdom is not politically subversive, even though "kingdom" is the normal word for "empire" (e.g., *1 Clem.* 61:1; Athenag. *Leg.* 18). In the two latter cases, the eschatological, heavenly, angelic nature of the Kingdom is generally emphasized (e.g., *1 Clem.* 42:3; *Did.* 16; Ign *Eph.* 16:1; Polyc. *Phil.* 5:3; *2 Clem.* 11:7; Hegesippus in Eus. *Hist. Eccl.* 3.20.4), though millennialist views of an interregnum on earth occasionally appear (Papias in Eus. *Hist. Eccl.* 3.39.12). In all of these cases an emerging corporate self-definition occurs. It may also be that Christian use of pagan wisdom sayings brought about a reference to wisdom as the Kingdom of God (*Sent. Sex.* 311).

With 3d century Origen there was a shift to a more internal, spiritual-mystical meaning of the Kingdom (*or.* 25); with the Constantinian era and the legitimate acceptance of Christianity, earthly political dimensions of the Kingdom were correlated with the Empire; and with Augustine's *City of God* a correlation of the present Church with the millennial Kingdom was introduced, despite the possibility that chaff was mixed with the wheat, and despite the possibility that those outside the Church might ultimately be in the final, heavenly, perfected Kingdom (cf. 20:9).

KINGDOMS, BOOKS OF. The four books (1–4 Kingdoms) in the LXX which correspond to what is more commonly known as 1–2 Samuel through 1–2 Kings. Also called the Books of Reigns.

KINGFISHER. See ZOOLOGY.

KINGS, BOOK OF 1–2. The eleventh and twelfth books in the Bible (Catholic and Protestant canons). In the Jewish canon Kings is found in the second division of the Hebrew Bible, known as *nĕbî᾽îm,* "Prophets," where it constitutes the fourth book of the "Former Prophets," after Joshua, Judges, and Samuel.

A. Title and Place in the Canon

The division of Kings into two books is an artificial one from the standpoint of contents (the history of King Ahaziah of Israel bridges the gap, 1 Kgs 22:51–2 Kgs 1:18); like the books of Samuel, the two books of Kings were originally one. In the textual tradition of the Hebrew Bible, this practice is attested no earlier than certain medieval manuscripts, and it first appears in print in Daniel Bomberg's *Biblia Rabbinica* (1516–17), explicitly under the influence of non-Jewish versions, presumably the LXX (Greek) and Vg (Latin) (Ginsburg 1966: 930–31; Bedouelle 1989: 78). Likewise, the separation between Samuel and Kings does not reflect a genuine change in subject matter as the narrative of 1 Kings 1–2 forms a natural continuation of the characters and events in 2 Samuel 9–20. Gk mss of the Lucianic recension place the division between Samuel and Kings at 1 Kgs 2:11, after the death of David. Some scholars believe that a change in Gk translators occurs at that point, and conclude therefore that Kings originally began at 1 Kgs 2:12 (Thackeray 1923: 18–19); others find the Lucianic evidence inconclusive and surmise that the text began elsewhere (Tov 1984: 117). The tradition of beginning the book of Kings at 1 Kgs 1:1 is ancient. The earliest known Heb manuscripts of Kings, some leather fragments preserved among the Dead Sea scrolls, were copied no earlier than the 1st century B.C.E. and appear to indicate that the scroll began at 1 Kgs 1:1 (Milik, 1962: 171–72; Shenkel, 1968: 123). The Septuagint presents the books of Samuel and Kings under the rubric of *Basileiōn a-d,* "1–4 Reigns"; Kings comprise the third and fourth books of this unity, corresponding to *tertius, quartus Regum liber* (3 and 4 Kings) of the Vg. In the Peshiṭta (Syriac tradition), "3 Kings" ends at 2 Kgs 2:18 (Gottlieb and Hammershaimb 1976: i).

In Christian and Jewish canons, the books comprising the "Former Prophets" recount a theological history of the nation, beginning with the conquest of the land of Canaan in Joshua and concluding with the destruction of Jerusalem and the Babylonian Exile in 2 Kings. This "history" is couched in terms of a pattern of prophecy and fulfillment that accepts as normative the Law of Moses as promulgated in Deuteronomy.

   b. Solomon's Reign (1 Kgs 3:1–11:43)
      (1) Solomon the Wise (1 Kgs 3:1–4:34)
      (2) Solomon's Construction of the Temple and His Palaces in Jerusalem (1 Kgs 5:1–7:51)
      (3) Solomon's Dedication of the Temple (1 Kgs 8:1–66)
      (4) Incidents from the Reign of Solomon: Theophany, Forced Levy, Visit of the Queen of Sheba, Economic Exploits (1 Kgs 9:1–10:29)
      (5) Solomon the Foolish (1 Kgs 11:1–43)
2. Synoptic History of the Divided Monarchy to the Fall of the Northern Kingdom (1 Kgs 12:1–2 Kgs 17:41)
   a. Division of Solomon's Kingdom (1 Kgs 12:1–13:34)
      (1) Division of the Kingdom: Rehoboam, King of Judah, and Jeroboam I, King of Israel (1 Kgs 12:1–20)
      (2) Prophecy of Shemaiah in Judah and Response (1 Kgs 12:21–24)
      (3) The Sin of Jeroboam I (1 Kgs 12:25–33)
      (4) Prophetic Polemics Against the Northern Kingdom and the House of Jeroboam I (1 Kgs 13:1–14:20)
   b. Synchronized History of the Divided Monarchy to the Elijah Stories (1 Kgs 14:21–16:34)
      (1) Rehoboam, Abijam, and Asa, Kings of Judah (1 Kgs 14:21–15:24)
      (2) Nadab, Baasha, Elah, Zimri, Omri, and Ahab, Kings of Israel (1 Kgs 15:25–16:34)
   c. The Elijah Cycle (1 Kgs 17:1–2 Kgs 1:18)
      (1) The Elijah Stories: Three-Year Drought, Raising of the Phoenician Widow's Son, Contest on Mount Carmel, Flight to Horeb, Call of Elisha, Episode of Naboth's Vineyard (1 Kgs 17:1–19:21; 21:1–29)
      (2) Prophetic Stories Surrounding the Syro-Israelite Wars: Ben-Hadad, King of Syria; Ahab, King of Israel; Jehoshaphat, King of Judah; the Prophet Micaiah versus the False Prophets (1 Kgs 20:1–43; 22:1–40)
      (3) Jehoshaphat, King of Judah (1 Kgs 22:41–50)
      (4) Ahaziah, King of Israel (1 Kgs 22:51–2 Kgs 1:18)
   d. The Elisha Cycle (2 Kgs 2:1–8:29)
      (1) The Prophetic Succession From Elijah to Elisha (2 Kgs 2:1–25)
      (2) Joram (Jehoram), King of Israel (2 Kgs 3:1–27)
      (3) The Elisha Stories (2 Kgs 4:1–8:15; 9:1–3; 13:14–21)
      (4) Jehoram (Joram) and Ahaziah, Kings of Judah (2 Kgs 8:16–29)
   e. Synchronized History of the Divided Monarchy to the Fall of Israel (2 Kgs 9:1–17:41)
      (1) Jehu, King of Israel (2 Kgs 9:1–10:36)
      (2) Athaliah, Queen of Judah and the Accession and Reign of Joash, King of Judah (2 Kgs 11:1–12:21)
      (3) Jehoahaz and Jehoash, Kings of Israel; the Death of Elisha the Prophet (2 Kgs 13:1–25)
      (4) Amaziah, King of Judah (2 Kgs 14:1–22)
      (5) Jeroboam II, King of Israel (2 Kgs 14:23–29)
      (6) Azariah (Uzziah), King of Judah (2 Kgs 15:1–7)

(7) Zechariah, Shallum, Menahem, Pekahiah, and Pekah, Kings of Israel: Assyrian Aggression (2 Kgs 15:8–31)
(8) Jotham and Ahaz, Kings of Judah (2 Kgs 15:32–16:20)
(9) Hoshea, King of Israel, and the Fall of Israel to the Assyrians; Theological Rationale for the Fall; Samaritan Origins (2 Kgs 17:1–41)

3. The Kingdom of Judah from Hezekiah to the Babylonian Exile (2 Kgs 18:1–25:30)
a. Hezekiah, King of Judah: Religious Reform and Assyrian Invasion; Isaiah the Prophet (2 Kgs 18:1–20:21)
b. Manasseh and Amon, Kings of Judah (2 Kgs 21:1–26)
c. Josiah, King of Judah: Discovery of the Book of the Law and Religious Reform (2 Kgs 22:1–23:30)
d. Jehoahaz, Jehoiakim, Jehoiachin, and Zedekiah, Kings of Judah: Babylonian Aggression and Fall of Jerusalem (2 Kgs 23:31–25:21)
e. Judah Under Babylonian Administration: Gedaliah (2 Kgs 25:22–26)
f. In Babylon, in Exile: Upgrading of Jehoiachin, King of Judah, from Prison to House Arrest (2 Kgs 25:27–30)

C. Sources and Text

1. Sources. The book of Kings deals with events covering roughly 400 years of Palestinian history. Like any historical work, its narrative account is based on a variety of sources, some of which are identified in the text, though most are not. These sources have been subject to sustained editing and literary adaptation, which result in a creative and unique literary composition whose very complexity continues to baffle those who would surgically isolate the original sources from the document called Kings that appears in the Bible. To further complicate matters, it is widely agreed that Kings is but part of a larger composition in the Hebrew Bible conventionally known as the Deuteronomistic History (Deuteronomy–2 Kings) in which the key religio-political ideals of Deuteronomy are used to describe and judge the checkered "history" of the People of Israel, from the conquest of Canaan to the fall of Judah to the Babylonians. It is well to emphasize at the outset that there is no manuscript evidence for a discrete "Deuteronomistic History" or sundry pre-deuteronomistic sources; they are working hypotheses the tentativeness of which is illustrated by the proliferation of theories and concomitant lack of consensus among scholars today.

a. Sources Identified in Kings. Kings makes reference to three sources of information: the "Book of the Deeds of Solomon" (1 Kgs 11:41), the "Book of the Daily Deeds/Chronicles of the Kings of Judah" (1 Kgs 14:29; 15:7, 23; 22:45, etc.), and the "Book of the Daily Deeds/Chronicles of the Kings of Israel" (1 Kgs 14:19; 15:31; 16:5, 14, etc.). Formulaic expressions used when these sources are cited indicate that the biblical information is to be understood as an extract from a larger work; no trace of the corresponding original and independent work is known to exist. Scholars have long assumed that the genre of these sources is comparable to other ANE historical archives such as Egyptian, Persian and Hellenistic daybooks maintained by court functionaries (Van Seters 1981: 175–76).

Again, it is commonly supposed that the kings of Judah and Israel maintained state archives in the form of annals that recorded such events as royal accessions and deaths, military campaigns and invasions, monumental building enterprises, and perhaps records from the state cult, including prophecies and royally sponsored innovations. Actual chronographic records of particular kings with notices of significant political and cultic events are extensively attested for the Neo-Babylonian kings (TCS 5: 70–111). It is also likely that "king-lists," probably analogous to specimens recovered from Mesopotamia, were compiled at some point for the rulers of Judah and Israel. Judging from the heterogeneous information supplied in 1 Kings, one should not automatically assume that the "Book of the Deeds of Solomon" was of the same genre as the two previously mentioned "Books of the Daily Deeds." The former contains an account of Solomon's reign and includes extensive cultic and building data (1 Kgs 6:1–8:66), contradictory figures for teams of forced labor (1 Kgs 5:16 vs. 9:23), lists of high officials and taxation districts (1 Kgs 4:1–19), trade and foreign relations (1 Kgs 5:1–12; 10:1–29); visions and folkloristic accounts of his "wisdom" (1 Kgs 3:3–28; 4:29–34; 9:1–9) and an itemized condemnation and

sentence for apostasy (1 Kgs 11:1–40). Efforts to precisely describe the authorship, extent, and genre of these three pre-deuteronomistic sources must remain in the realm of conjecture.

The Talmud ascribes the authorship of Kings to the prophet Jeremiah (*B. Bat.* 15a; Montgomery and Gehman *Kings* ICC, 1), in keeping with a tendency to legitimate scriptural sources by attributing them to notable "literary" figures in the Hebrew Bible (compare Solomon). Attempts to identify the occupation of the author or authors of Kings ("scribe," "priest," "court official," "Wisdom teacher," etc.) are part and parcel with the task of identifying the sources, the editor(s) of the sources, and their original purpose or genre ("king-list," "prophetic history," "temple records," "programmatic reform document," etc.).

b. Source criticism. Wellhausen, building on the insights of Kuenen, argued that composition of a Deuteronomistic History (DtrH) from a welter of pre-existing sources was inspired by the religious reform of Josiah (ca. 621), which was itself motivated by the discovery of the book of Deuteronomy hidden in the temple. The tradition that the "book of the law" which was found in the Jerusalem temple at the time of Josiah was part of the canonical Deuteronomy is at least as ancient as Origen and entered the modern critical arena through de Wette's dissertation of 1805. According to Wellhausen, the compiler of DtrH, for the book of Kings, created a chronological framework by inserting a formula at the beginning and conclusion of the narrative accounts of the Judahite and Israelite kings, thus synchronizing their reigns and providing other information of a historical nature, in addition to giving a "verdict" regarding the cultic purity of their reign. The compiler was also responsible for a number of extended narratives in the form of commentaries which reflect the judgments of history in accordance with the religious tenets of Deuteronomy, specifically, the uncompromising demands for Yahwistic monotheism. Since the "glamor" of Josiah's reform colored the balance of the composition, the major redaction of DtrH, including Kings, probably took place no later than 600 B.C.E. (Wellhausen 1889: 298–301). An "appendix," carrying the history of the Judahite monarchy from the death of Josiah to the release of Jehoiachin from prison ca. 561 B.C.E., and other features scattered throughout Kings indicate a redaction during the Exile. Wellhausen related the Exilic redaction of Kings to the activity of the Priestly source in the "Hexateuch" (Genesis-Joshua). Much of the source-critical work dealing with DtrH by Wellhausen and scholars influenced by him was concerned with demonstrating the continuity of Pentateuchal sources from Joshua through 2 Kings ("JEDP").

Contrary to Wellhausen's belief, deuteronomistic language and theology is diagnostic neither of authorship nor of date of composition. Close parallels to "deuteronomistic theology" can be found in the Mesha Stone (Moab, 9th century) and Assurbanipal's annals (Assyria, 7th century). Deuteronomistic catchphrases and theology are readily imitated, as witness Tobit, 1 Maccabees, and *Jubilees,* Jewish texts of the Persian and Hellenistic period.

According to Noth, Deuteronomy through 2 Kings was authored by an individual or individuals from the point of view of the Deuteronomic Law. Earlier collections of pre-deuteronomistic narratives that dealt with key moments and figures in the history of Israel were assembled into a larger unified work, DtrH, during the Exile by a Judean author. Noth's analysis concluded that the sources identified by Wellhausen in Genesis through Numbers (J, E, P) had no intrinsic continuity with those found in Joshua through Kings; the general theological coherence and repetitive phraseology in Deuteronomy through 2 Kings led him to attribute it to the work of a single editor (*NDH*, 9–12). Although scholars before Noth had posited an Exilic redaction for Kings (König 1893: 267–69), none had made such an elegant argument for the unity of the composition. Evidence for this single work stems primarily from a linguistic analysis of repeated phrases and terminology, and secondarily from the chronological schema and the series of speeches and evaluations which reflect the theology of Deuteronomy. The Deuteronomistic Historian (DTR) was at his greatest liberty to express his theological evaluation in the book of Kings. The inconsistencies in DtrH that fuel the redaction-critical approach were attributed by Noth to DTR's respect for his sources (Noth NDH, 84), as well as to materials inserted by post-DTR redactors which conflicted with the underlying DtrH.

Childs (*IOTS*, 286–87) registers three major critiques of Noth: (1) objection to the proposition that DtrH was composed by a single author with a unified historical and theological outlook; (2) the problem with

the dating of DTR; the majority opinion at the moment is pushing for a considerable portion of preexilic redaction and perhaps authorship; and (3) dissatisfaction with Noth's thesis regarding DTR's supposed concentration on the negative lesson of history. Von Rad, for example, championed the view that the dynastic promise to David informs the entire work, concluding with an optimistic notice of the release of Jehoiachin from prison, while H. W. Wolff (1975: 90–100) argues that the theme of the necessity of repentance and "return" to Yahweh is central to the author.

Smend and his followers propose a threefold redactional process for the deuteronomistic history during the Exile. Unlike Noth, the Smend school locates the inconsistencies and perceived internal contradictions in DtrH (Smend's DtrG) in the activity of two redactors with unified theological agendas (Smend 1978: 120–25; 134–39). The first, DtrP, opposed the monarchy (contrary to DtrH) and added both prophetic comments and extended speeches to DtrH (Dietrich 1972: 107–109; 134–48). Likewise, the final redactor, DtrN, made contributions which attempted to moderate the anti-monarchic stance of DtrP by insisting that the Davidic dynasty would endure if the sacred Law was maintained (Veijola 1975: 138–42). The presupposition which guides the redaction-critical efforts of this school entails the assumption that DtrH was without internal contradictions as a theological and historical work. Contradictions present in the canonical Kings are explained as "additions" of two exilic redactors at odds with the thought of DtrH, and assumes both DtrP and DtrN are subject to detection, with varying degrees of certainty, by the modern redaction critic. Halpern challenges the Smend school and similar approaches by posing the question why, if the goal of the later redactors DtrP and DtrN was to reform the message of the source, they did not completely rewrite it instead of juxtaposing conflicting narratives (1988: 112).

Cross's enormously popular thesis represents a revival of the critical assumptions of Wellhausen and Kuenen that dominated the field up to the publication of Noth's seminal study. For Cross, DtrH was composition of a redactor during the reign of Josiah, king of Judah; it originally ended with 2 Kgs 23:25. This redactor, whom Cross identifies as Dtr^1, emphasized a "call" for the "return" to Yahwistic monotheism, the unconditional promise of eternal kingship made to the Davidic lineage, and the consequences of the "sin of Jeroboam" for the Northern Kingdom (Cross *CMHE*, 278–85; 287–89). Noth's understanding of the emphasis on national judgment in DtrH is challenged by Cross's notion of Dtr^1 as embodying a call for return to Yahwistic monotheism under Josiah and a reunification of the Divided Monarchy. Dtr^2, the exilic redactor(s) that updated Dtr^1, made the promise of "eternal" kingship to the Davidids conditional on their fidelity to Yahweh, thus providing a theological retreat for the political disasters of the Exile. Dtr^2 blames the fall of Jerusalem on the inexpiable sin of Manasseh, a feint by which the redactor could "salvage" the theology of the Josianic Reform without implicating the kings of Judah that followed Josiah with abrogating his efforts at reform (*CMHE*, 285–87; Halpern 1988: 113–14). The viability of Cross's Dtr^1 rides on his construction of the religious and political aims of the Josianic reform and its chronology; any challenge to the theory's historicity would seriously undermine its credibility.

Several studies have investigated the possibility of pre-deuteronomistic redaction in Kings, that is, the nature and extent of the editorial work on the sources available to DTR prior to the composition of DtrH. Jepsen believed that ca. 580 B.C.E. a priestly redactor composed a history of the monarchy extending from Solomon to Hezekiah by combining "political" sources which contained a record of Solomon's rule, a synchronized history of the Divided Kingdom, and a "priestly" record from Jerusalem (Jepsen 1956: 10, 22–23, 106). Primarily on the basis of lexical evidence and regnal formulas, Helga Weippert seeks to demonstrate a threefold redaction of Kings. The first redaction predated DtrH, for it covered the history of the Divided Kingdom from Jehoshaphat of Judah and Joram of Israel down to Ahaz of Judah and Hoshea of Israel; she concludes it was compiled during the reign of Hezekiah (Weippert 1972: 319–23). Lemaire, building on the work of Weippert, finds evidence of a composition written at the time of Jehoshaphat in the mid-9th century; he proposes seven levels of redaction in Kings (1986: 232).

The sizable corpus of prophetic narratives in Samuel-Kings has suggested to some the existence of a pre-deuteronomistic "prophetic history." Garbini, analyzing several literary motifs, posits the existence of a narrative created during the reign of Jehu of Israel. Citing examples from Judges 9 through 2 Kings 10,

he concludes that it was composed by a prophetic school opposed to the monarchy (Garbini 1979: 31–35). Building on the research of McCarter and Veijola, McKenzie offers another theory regarding an 8th-century prophetic source, arguing that most of 1 Kgs 17–2 Kgs 13 was composed by a "Prophetic Historian" (McKenzie 1985: 216).

Both Hoffmann and Van Seters understand DtrH to be a unified work produced by an author living in the postexilic period. Hoffmann sees cultic reform as the major theme of DtrH; the composition was intended as an object lesson to foster religious conformity within the postexilic Jewish community by rehearsing the history of the political disasters that befell the people of Israel whenever they compromised their fidelity to Yahweh. Hoffmann is pessimistic about the possibility of isolating pre-deuteronomistic sources in DtrH due to the author's thoroughgoing integration and stylization of his sources (1980: 316–17). Van Seters studies the compositional technique of DTR in light of the historiography of Herodotus and parallels from the ANE. He sees the inconsistencies in DtrH as reflecting the author's tolerance of inconsistency in his sources (Van Seters 1983: 258–64; 320–21). Rofé finds evidence for a postexilic dating of the accounts of Ahab's Syrian wars and the Naboth's Vineyard incident (1 Kgs 20:1–21:1–16); he argues that the formation of the Former Prophets is more adequately viewed as a process lasting some 400 years, from the 8th century to the latter end of the Persian period (1988: 103).

Peckham describes two levels of redaction in DtrH. The first (Dtr^1) is pre-deuteronomistic and preexilic in composition; it focused on the Davidic dynasty and the law of centralization and extended from Deuteronomy through 2 Kings 19:37 (Hezekiah, king of Judah). The second redaction (Dtr^2) culminated in Genesis through 2 Kgs 25, building on forms of the classic Pentateuchal sources J, E, and P: "the principal author and historian is Dtr^2, who rewrote these sources as the history of Israel from creation to the fall of Jerusalem" (Peckham 1985: 1). Other recent studies attempt to relate the formation of the Pentateuch to the activity of DTR (O'Brien 1989: 18, n. 54). Provan, on the basis of the regnal formulas and the treatment of the *bāmôt* ("high places, sanctuaries"), also posits a twofold redaction of DtrH: the first, probably Josianic in date, begins with Judges 17–21 or 1 Samuel 1 and concludes with 2 Kings 19 (Hezekiah); its major theme is cult centralization, and it concludes with the portrayal of Hezekiah as a second David. The second redaction was exilic and endeavored to bring the history of Judah up to date by blaming the Exile on the apostasy of the Judean kings (Provan 1988: 171–73).

The burgeoning diversity of conjectures regarding sources and dating does not inspire confidence in the historical reliability of source- and redaction-critical efforts in Kings. One detects a current readiness on the part of many scholars to isolate pre-deuteronomistic redaction (= sources) in Kings; there is, at the same, an impressive scholarly constituency arguing for a postexilic dating for much of the Former Prophets.

2. Text. Textual criticism has as "its highest achievable end the reconstruction of the biblical text in the form in which it was current during a certain period" (Mulder 1988: 103). It is likely that the MT represents but one of the Hebrew texts in circulation during the 4th and 3d centuries B.C.E. Textual criticism is useful for correcting errors in the transmission of the MT and establishing the textual traditions behind the versions of the Hebrew Bible; there is no justification, however, for employing the tools of textual criticism to recover the "autograph" or "Urtext" of any part of the Hebrew Bible. Normally, the salient manuscripts are limited to Heb, Gk, Aram, Syr, Lat, and, in the case of the Pentateuch, Samaritan.

a. General Textual History of the Hebrew Bible. The discovery of the Dead Sea scrolls in 1947 pushed the date of the earliest known manuscripts of the Hebrew Bible back a thousand years to the 3d century B.C.E. Surprisingly, textual analysis of these manuscripts demonstrated that major variants in text traditions, assumed to have been created by the rigorous standardization of canonic texts in Jewish and Christian circles around the 1st and 2d centuries A.D., were actually well developed centuries earlier. Variations from the MT attested principally in the Gk versions preserve a record of the development of the pre-MT of the Hebrew Bible (Talmon *QHBT,* 1–5). It should be emphasized that the "autograph text" of Kings, in the unlikely event that one ever existed at all, in light of the documented plethora of sources

and editorial hands, would perforce date to a period preceding the divergent textual traditions preserved in the Dead Sea manuscripts.

b. Manuscript Tradition of Kings: Heb, Gk, Lat, Aram, Syr. The Heb manuscripts of Kings recovered from Qumran, unlike the extensive remains of the Samuel scrolls, consist of a series of leather and papyrus fragments that rarely add up to a discernible column from the original scroll. Texts identified and published to date include, from cave 5Q, 1 Kgs 1:1, 16–17, 27–37 (Milik 1962: 171–72); from 6Q, 1 Kgs 3:12–14; 12:28–31; 22:28–31; 2 Kgs 5:26; 6:32; 7:8–10; 7:20–8:5; 9:1–2; 10:19–21 (Baillet 1962: 107–12). Unpublished portions of a scroll from 4Q of 1 Kgs 7 and 8 reportedly remain in the possession of Frank Moore Cross (Shenkel 1968: 123, n. 14). Unfortunately, the paucity of Kings manuscript attestations from Qumran provides scant hope for resolving the current scholarly debate over the value of the Gk witnesses for correcting the MT; it is incautious to extrapolate, from Qumran, the same textual history for Kings from what is known of Samuel.

The findings at Qumran have served to reemphasize the importance of the Gk witnesses for research on the early textual tradition of the Hebrew Bible. An influential theory championed by Cross and his students is that of the "three local recensions texts" to explain the textual history of the Hebrew Bible between the 5th and 1st centuries B.C.E. Cross postulates a "proto-Hebrew" text of the Bible as the source of Palestinian and Babylonian recensions for use by local Jewish communities no later than 400 B.C.E. The Palestinian recension was, ultimately, the textual source of the Samaritan Pentateuch, whereas the Babylonian recension culminated in the "proto-MT." The earliest Gk versions were translations of a Heb text prepared for Egyptian Jews from the Palestinian recension. Texts based on the Palestinian recension are "characterized by conflation, glosses, synoptic additions, and other evidence of intense scribal activity" (Cross *QHBT*, 283). Cross claims that the LXX version of Samuel-Kings was prepared from an Egyptian Heb text that gained independence from its parent Palestinian tradition not later than 300 B.C.E. and which was "updated" in the 2d or 1st century B.C.E. by correcting it against Heb manuscripts in the Palestinian textual tradition. This "updating" of the LXX is recoverable today in part from "proto-Lucian" manuscripts. Cross contends that, since the Gk manuscript tradition that attests to the "proto-Lucianic" recension of the Hebrew Bible preserves readings from a translation of a Heb text predating the final form of the MT, and, since the MT of Samuel-Kings shows extensive textual corruption, "proto-Lucianic" readings may be profitably used to reconstruct a more pristine text for these books (Cross *QHBT*, 191–92; Klein 1974: 27–50). This approach has been most assiduously applied to the textual study of Samuel because of the extensive Heb manuscript corpus from Qumran (4QSam), a substantial portion of which agrees with "proto-Lucian" against the MT and the LXX.

Cross's "three local recensions texts" theory has come under heavy criticism in recent scholarship, due in part to its presuppositions regarding the scribal activities of Babylonian Jews from the Persian Period to the Common Era, of which virtually nothing is known, and to the theory's over-simplification. According to Tov, in addition to the Heb text-forms which correspond to the LXX, the Samaritan Pentateuch, and the MT which has been found at Qumran (Cross's Egyptian, Palestinian, and Babylonian recensional traditions, respectively), one and possibly three other text-forms have been identified (Mulder 1988: 102, 104). The utility of "proto-Lucian" for textual criticism of the Hebrew Bible was recognized long before the discovery of the Dead Sea scrolls, and therefore is not dependent on the validity of the "three local recensions texts" theory (Marcos 1984: 169; Tov 1988: 186–87).

There is considerable ongoing debate about the nature of the Gk versions of Kings and their usefulness for textual criticism. The LXX varies from the MT in both arrangement and content; compare the order of 1 Kgs 4–11 and 20–21 (LXX) (Swete 1914: 232). The LXX account of Jeroboam I and the division of the United Monarchy (1 Kgs 12:24a–z) supplies novel and sometimes contradictory information to the account found in the MT and elsewhere in the LXX. The summarizing "miscellanies" regarding Solomon's reign found after 1 Kgs 2:35 and 2:46 (LXX) have no consecutive counterparts in the MT. As an illustration of the use of the LXX and "proto-Lucian" for text-critical work in Kings, consider 1 Kgs 22:32 "and they turned against him to fight, and Jehoshaphat cried out" (MT); "and they surrounded him to fight, and Jehoshaphat cried out" (LXX); "and they surrounded him to fight, and Jehoshaphat cried out,

and the Lord saved him" ("proto-Lucian"); 1 Chr 18:31 "and they surrounded him to fight, and Jehoshaphat cried out, and Yahweh saved him" (MT) (Klein 1974: 50). While "proto-Lucian" Kings agrees with MT Chronicles against MT and LXX Kings, little is gained by accepting the longer text over the shorter.

There are weighty objections to the rather optimistic view that text-critical work favoring Gk versions can often restore a more "pristine" Heb text for Kings. Substantial departures from the MT, such as 1 Kgs 12:24a–z (LXX), generally provide better evidence of midrashic reworkings of the Heb text than solid clues for "textual archaeology" (Gooding 1967, 1976; Evans 1983). Gooding in particular has argued that the extensive rearrangement of the text found in the LXX (and "proto-Lucian") reflects a desire on the part of the translator to portray Solomon as wise, greatly enhancing the evil character of Jeroboam I while tending to whitewash the flaws of David, Solomon, and, curiously, Ahab (Gooding 1969). The Lucianic reading of 2 Kgs 17:2 "corrects" the MT's slightly positive evaluation of Hoshea, the last king of Israel, making him the most wicked Israelite king of all and therefore patently deserving of a doomed kingdom (Burney 1903: 329). It would be rash to assume that wherever "proto-Lucian" and other witnesses to the oldest traditions of Gk translations of Kings diverge from the MT the latter should be brought into conformity with the former. The integrity of textual criticism depends upon examination of each verse, variant by variant, using all versional evidence at one's disposal, raising the possibility at each step that a given textual variant may be due to theological or literary polishing, as well as the usual alterations due to the accumulation of errors and erring corrections.

The OL version of Kings was based primarily, though not exclusively, on the Gk translations, and provides an important witness to Lucianic readings (Burney 1903: xxxv–xxxvi; Trebolle Barrera 1986: 94; Kedar 1988: 308–11). The Vg, Jerome's authoritative Lat translation of the Old and New Testament (ca. 390–405 C.E.), is based on a Heb text identical or very similar to the MT for the books of Kings, though in places it is evident Jerome was influenced by the OL and various earlier Gk versions (White 1902: 883–85; Driver *NHT*, liv). Claims that he was particularly dependent on the Gk version known as Symmachus are exaggerated (Kedar 1988: 323).

The Targum (= Aramaic translation) of Former Prophets, Targum Jonathan, is clearly based on the same textual tradition as the MT; unlike most Targums of the Hebrew Bible, it generally avoids extended midrashic expansions of the underlying text, adhering instead to a literalistic style of translation. The basic translation of Targum Jonathan was probably made before 135 C.E., in Palestine, although redaction may have continued in Babylonia up to the Arab conquest (Burney 1903: xxxi–xxxii; Harrington and Saldarini 1987: 3–4; Smolar and Aberbach 1983: xxviii).

The Peshiṭta (Syriac version) of Former Prophets is not attested in manuscript before the 6th century C.E. In general, it is thought that the Heb textual tradition underlying the Peshiṭta is very close to or identical with the MT. Some scholars stress the possibility that, for Peshiṭta Pentateuch and possibly other portions of the Bible, translators worked from Targums and not directly from the MT. Berlinger, in one of the few studies devoted exclusively to Peshiṭta Kings, adduced evidence that the translator consulted Targum Jonathan in difficult places (Dirksen 1988: 258, 291; on manuscript families in Peshiṭta Kings and their chronology, see Dirksen 1989).

D. Chronology

1 and 2 Kings offers a variety of chronological notices regarding the reigns of the kings of Judah and Israel and contemporary events in the surrounding kingdoms. The rigid regnal formulas that give the work its distinctive historical ambience provide two complementary systems of dating: (1) the total span of years covered by the reign of each king, e.g., "Amaziah the son of Ahab … reigned two years over Israel" (1 Kgs 22:51), and (2) a synchronism between the accession date of the king of one kingdom and the contemporary regnal date of the other, e.g. "Amaziah … began to reign over Israel in Samaria in the seventeenth year of Jehoshaphat, king of Judah …" (1 Kgs 22:51). Other dates include "internal" developments, such as the time from the Exodus to the founding of the Jerusalem Temple by Solomon (1 Kgs 6:1), international events, e.g., Pharaoh Shishak's invasion of Palestine (1 Kgs 14:25), and the age of

a king at the time of accession, e.g., "Jehoshaphat was thirty-five years old when he began to reign …" (1 Kgs 22:42).

A few minutes' labor with a hand calculator will convince the reader not only of serious discrepancies between tallies of the individual regnal years of the kings of Judah and Israel but of outright contradictions between different citations of the same chronological event. For example, 143 years and seven months is the total for the reigns of the Israelite kings from Jehu through Hoshea; for the corresponding reigns in Judah, the tally is 166 years. Joram (Jehoram) of Israel began his reign in the eighteenth year of Jehoshaphat of Judah in 2 Kgs 3:1. In 2 Kgs 1:17, the same Joram is said to begin his reign in the second year of the son of Jehoshaphat. Omri came to the throne of Israel in the thirty-first year of Asa of Judah and is said to have reigned twelve years (1 Kgs 16:23). Omri's son is said to have become king in the thirty-eighth year of Asa (1 Kgs 16:29); but 31 years + 12 years = 38 years. Furthermore, Asa reportedly ruled only forty-one years (1 Kgs 15:10). If the information in 1 Kgs 15:10 is accurate, Asa had been dead at least a year before Omri's son ascended the throne.

Critical scholarship has adopted three major approaches to the vexatious arithmetic of Kings. The first operates on the suspicion that the dates were a product of free composition and numerological speculation; these dates were fabricated to fill in a largely fictional scheme of cultic and national "history" extending from creation to the Exile (Genesis–2 Kings) and to endow the text with an air of historical verisimilitude (Begrich 1929: 10–15). Few modern scholars would unreservedly subscribe to this approach; most would claim that the number of correspondences between datable ANE and biblical events outweighs the limited evidence of purely typological schematization like 1 Kgs 6:1. A less draconian form of this stratagem assumes that the author(s) in their lack of concern with precise chronography rounded off the figures of the reigns at will.

The second approach, which has won widespread acceptance today, accepts as axiomatic that the figures of the MT, or the textual traditions underlying it, are basically correct; this is to say, the regnal dates in Kings can somehow be made to correspond to an absolute chronology (B.C.E.). There are essentially three ways this axiom has resulted in concrete scholarship. (1) The first method maintains that discrepant figures are due to textual corruptions and subsequent scribal efforts at correction. The usual solution is to amend the text by accepting the accuracy of a given date and, from that Archimedean point, "adjusting" all figures perceived to be in error until a coherent sequence of reigns for each kingdom is established (Burney 1903: xli–xliv). Practitioners of this method frequently rely on the handful of events that can be more or less correlated with extra-biblical sources, e.g. the Battle of Qarqar, in which Ahab, King of Israel, participated (853 B.C.E.); the first Fall of Jerusalem to the Babylonians (March 16, 597 B.C.E.). (2) The second method assumes that regnal years were reckoned from different calendars in use during the Divided Monarchy; one began at Tishri, the indigenous autumnal New Year, the other in the Spring (Nisan); there is an ongoing debate as to whether Israel used one system and Judah another, and if so, how the chronology of Kings is affected (Thiele 1983: 51–54). In accordance with Assyro-Babylonian practice, the regnal dates of a king were calculated from the date of the first New Year that fell within his reign until his death; the days, weeks, or months of his reign that elapsed before that first New Year were not formally ascribed to his reign. It is maintained that many discrepancies in the MT can be explained by breaking the silence of the biblical text regarding regnal antedating and postdating, and by noting when the change occurred from a Tishri to a Nisan calendar (Hayes and Hooker 1988: 12–15; 87–88). While it is generally accepted that the earliest calendar in use during the Divided Monarchy was based on a Tishri New Year and that Nisan dating was used in Palestine during the Persian Period, there is no compelling biblical indication that a formal change in calendar occurred during the reign of Josiah (contra Hayes and Hooker 1988: 87) or any other king of Judah or Israel (Mowinckel 1932: 175); this method of reconciling the regnal dates in Kings must be viewed as highly speculative. (3) The third and last major methodological variation within this approach assumes the existence of co-regencies (when a king and his successor held joint rule), most plausibly for the reigns of David and Solomon (1 Kgs 1:38–40; 2:10–12) and Ahaziah (Uzziah) and Jotham (2 Kgs 15:5); the years of the co-regency were ascribed to both kings, thus throwing off the total (Begrich 1929: 44–54). Thiele identifies a total of 9 co-regencies and

overlapping reigns for the kings of Judah and Israel (1983: 61–65). Although co-regencies are attested at various times and places in the ANE, a lack of consensus regarding their indication in the biblical text limits the usefulness of this assumption for disentangling the chronology of Kings. More sophisticated studies employ all of these approaches.

Proponents of the third approach to dating in Kings acknowledge the seriousness of the chronological incoherence of the MT but argue that the OG version bears witness to a separate Heb textual tradition that is primary; the chronology in the MT is derivative and secondary (Burney 1903: xli; Shenkel 1968: 37–42; 109–11). Critics of this approach focus on the selective use made by its advocates of the Gk textual tradition, e.g., from Omri of Israel (1 Kgs 16:23) to Joram of Israel (2 Kgs 1:18 [LXX]). Critics also stress the strong possibility that the internal coherence of this tradition reflects a later effort at making sense of the same or a similar chronological system preserved in the MT, and provides no independent witness (Thiele 1983: 88–101).

Although chronological information useful for ordering events and determining length of reigns is found in Kings, efforts to comprehensively convert the dates in Kings to absolute dating (B.C.E.) yield results which are approximate at best. A fact lost sight of in most studies of chronology in Kings is the nature of the text: it is a *theological* history; a precise and accurate exposition of historical events was not the primary concern of the authors. For example, Kings can distort its sources in the service of making a theological point. Sennacherib, the Assyrian king whose emissary blasphemed Yahweh, dies in the temple of his god at the hands of his sons immediately following his siege of Jerusalem (= 701 B.C.E.) according to 2 Kgs 19:36–37; in fact, the historical Sennacherib died in 681 B.C.E. Literary juxtaposition situates the rise of Solomon's "adversaries" *śāṭān)* (Hadad the Edomite, Rezon the Syrian, and Jeroboam the Ephraimite) in his sinful old age (1 Kgs 11:14–40). These political scourges expressed proof of Yahweh's displeasure over Solomon's cultic infidelity in his dotage (1 Kgs 11:9–13), whereas, as historical threats to the political order, they probably dated anywhere from Solomon's accession to his death.

E. Literary Structure in Kings and Kings as Literature

1 and 2 Kings has earned an undeserved reputation as a pedestrian assemblage of names and numbers. The composition as a whole gives evidence of meticulous attention to detail through a unifying structure and schematization of themes; it contains a wealth of character sketches, nuanced dialogue, and dramatic scenes of a high order of literary finesse that reward a sensitive reading.

1. Literary Structure. 1–2 Kings is organized chronologically by reign. The distinct historiographic format of Kings derives from the stereotyped regnal formula which brackets the entry and exit of most monarchs on the historical scene. As a literary device, the repetitive enumeration of the vital statistics of the kings of Judah and Israel, dynast and usurper alike, reinforces the inexorable march of their kingdoms toward the fulfillment of prophesied doom. For the kings of Israel, a representative accession formula is:

> In the *x* year of PN (proper name), king of Judah, PN the son of PN began to reign over all Israel at Tirzah/Samaria, and reigned for *x* years. He did what was evil in the eyes of Yahweh.

Jehu is given no accession formula (2 Kgs 9–10:36). For the death of an Israelite king, with minor variations,

> Now the rest of the deeds of PN, and all that he did, are they not written in the Book of the Daily Deeds of the Kings of Israel? And PN slept with his fathers, and was buried at Tirzah/Samaria; and PN (his son) reigned in his stead.

For the accession of a king of Judah, the formula reads

> PN the son of PN began to reign over Judah in the *x* year of PN king of Israel. PN was *x* years old when he began to reign, and he reigned *x* years in Jerusalem. His mother's name was PN the daughter of PN. And PN did what was good/evil in the eyes of Yahweh.

Athaliah the Omride is given no accession formula (2 Kgs 11:1–20). For the death of a king of Judah,

> Now the rest of the deeds of PN, and all that he did, are they not written in the Book of the Daily Deeds of the Kings of Judah? PN slept with his fathers, and was buried with his fathers in the city of David his father; and PN his son reigned in his stead.

In overall structure, the contents of Kings are organized into three sections: the reign of Solomon (1 Kgs 1:1–11:43), a synoptic history of the Divided Monarchy to the fall of the Northern Kingdom (1 Kgs 12:1–2 Kgs 17:41), and the Kingdom of Judah alone, from Hezekiah to the Babylonian Exile (2 Kgs 18:1–25:30). Savran (1987: 148–49) describes a chiastic structure of leading themes that lends the work a dynamic literary and theological unity:

A Solomon/United Monarchy	1 Kgs 1:1–11:25
B Jeroboam/Rehobaom; division of kingdom	1 Kgs 11:26–14:31
C kings of Judah/Israel	1 Kgs 15:1–16:22
D Omride dynasty; rise and fall of Baal cult in Israel and Judah	1 Kgs 16:23–2 Kgs 12
C' kings of Judah/Israel	2 Kgs 13–16
B' fall of Northern Kingdom	2 Kgs 17
A' kingdom of Judah	2 Kgs 18–25

The framing sections *A* and *A´* focus on the rise and fall of the Davidic dynasty (the promising accession of Solomon [1 Kgs 3–10] in contrast to the inglorious fates of Zedekiah and Jehoiachin [2 Kgs 24–25]) and the parallel fortunes of the national shrine in Jerusalem (the founding of the Temple by Solomon [1 Kgs 6–8] versus its desecration by Manasseh [2 Kgs 21], including a brief repristinization by Josiah [2 Kgs 22–23] and systematic destruction by the Babylonians [2 Kgs 25]).

Sections *B* and *B´* mimic the fate of Judah as they chronicle the genesis of the "sin of Jeroboam" and its divinely ordained outcome in the fall of the Northern Kingdom. Jeroboam, chosen king by God through prophetic proxy, fatally poisons his legacy by consecrating the notorious golden calves as a breakaway cult for his newly founded kingdom (1 Kgs 11:35–39; 12:25–33). The Northern Kingdom suffered its misfortune on account of the "sin of Jeroboam" (2 Kgs 17:21–23); like her sister nation, Judah, she was laid waste and led into exile by a Mesopotamian superpower. Sections *C* and *C´* dwell on the warlike relations between Israel and Judah through most of the Divided Monarchy; chronologically, the balance of their history as competing states is compressed into these five pithy chapters.

Section *D* is the literary pivot of the work; roughly forty years of history, one-tenth of the total covered in Kings, occupies over one-third of the chapters in 1–2 Kings. At issue in this crucial section is the history of the royal sponsorship of the Baal cult in Israel and Judah and the prophetic and priestly response. The Baal cult is founded by the ruling Omrides under Phoenician influence in a manner reminiscent of Jeroboam's apostasy; ultimately it is violently extirpated in Israel at prophetic initiative (2 Kings 9–10) and, in Judah, under the leadership of a priest (2 Kings 11). The Elijah and Elisha cycles (1 Kgs 17:1–2 Kgs 8:29) are extended collections of miracle stories that pit the faithful prophets of Yahweh against the idolatrous policies of Israel; whether the prophets lead the king to military triumph or humiliatingly denounce his crimes, the superiority of the "men of God" to the forces of the crown is never in question. As Savran observes, the depiction of the prophetic succession from Elijah to Elisha, at the heart of this section (2 Kings 2), is unique in the Hebrew Bible and underscores the enduring prophetic "mission" bearing the irresistible Word of God to the fluctuating succession of temporal monarchs (1987: 149).

2. Themes. a. "Right Cult" versus "Wrong Cult." Major speeches and dramatic confrontations in Kings, such as Solomon's dedicatory prayer (1 Kgs 8:23–60), the *ex eventu* prophecy against Jeroboam (1 Kgs 13:1–10), Elijah's contest with the prophets of Baal on Mt. Carmel (1 Kgs 18:20–40), the fall of the Northern Kingdom (2 Kgs 17:7–18) and the Rabshakeh's address to Jerusalem (2 Kgs 18:19–25; 27–35), center on the opposition between the stringent demands of monotheistic Yahwism and competing religious traditions. The ecumenical spirit is utterly condemned. The king of Judah who wins highest marks after the archetypal king David is Josiah, whose meritorious conduct centered on his ejection of non-Yahwistic paraphernalia and practices from the Temple and who reinstituted the Passover (2 Kgs 23:1–25). The worst king was Manasseh, who viciously "made Judah to sin with his idols" (2 Kgs 21:11) by promoting a plethora of non-Yahwistic religious practices. The fundamental and ultimately fatal

illegitimacy of the Northern Kingdom is due to the "sin of Jeroboam," that is, a national cult neither purely Yahwistic (by the standards of DTR) nor centralized in Jerusalem.

b. Jerusalem Temple. The object of the cult was Yahweh; "the city which thou [Yahweh] has chosen, and the house which I [Solomon] have built for thy name" is Jerusalem and its Temple (1 Kgs 8:48). Half of Solomon's reign in 1 Kings is taken up with the building preparation, description, and dedication of the Temple (5:1–9:9). Its construction demonstrates Solomon's obedience to Yahweh and the fulfillment of Yahweh's promise to David. In Kings, the Temple which contains the Ark of the Covenant concretely symbolizes the reciprocal covenant between the descendants of David and Yahweh, namely, that in exchange for the exclusive worship of Yahweh he (Yahweh) would preserve the Kingdom of Judah. The violation of the Temple's covenantal function by Manasseh's introduction of non-Yahwistic cults is credited with its destruction by the Babylonians as divinely sanctioned punishment (2 Kgs 21:10–15; 23:26–27).

c. Prophecy and Fulfillment. In contrast to the prophetic corpus in the Hebrew Bible, virtually every prophecy (by a true prophet) in Kings is pointedly linked with its fulfillment in the realm of history. The repeated actualization of the prophetic word of God in the face of political opposition serves to drive home the theological lessons of the author. Four prophecies dominate the work: (1) the promise made to David by Nathan the prophet that a descendent shall rule over his kingdom and build a temple to Yahweh (2 Sam 7:11–16) (fulfilled by the accession of Solomon to the throne and the construction of the Jerusalem Temple); (2) the prophet Ahijah's prediction of the division of the United Monarchy by reason of Solomon's apostasy (1 Kgs 11:29–39); (3) the prophet Ahijah's prediction of the fall and exile of Israel as due to the "sin of Jeroboam" (1 Kgs 14:15–16); (4) the fall and exile of Judah, predicted by the prophet Isaiah (2 Kgs 20:17–18) and the prophetess Huldah (2 Kgs 22:16–17) (Savran 1987: 161). The famous *ex eventu* prophecy in 1 Kgs 13:1–10, supposedly uttered at the time of Jeroboam I, forecast Josiah's "cult reform" at Bethel some three hundred years later and is melodramatically drawn to Josiah's attention in 2 Kgs 23:16–18.

d. Dynastic Promise. The promise made to David in 2 Sam 7:11–13, that Yahweh will establish the throne of his descendants "forever," is made conditional on the conduct of the king in 1 Kgs 9:4–7 and is used to justify the persistence of the nation through external dangers and cultic defections. The restructuring of the original prophecy transforms the destruction of the Southern Kingdom into an object lesson illustrating the horrifying consequence of royal disloyalty to Yahweh (2 Kgs 21:10–15). The idealized figure of David, a paragon of fidelity to Yahweh, is held up as a template for the reigns of several kings and as a summary judgment in their regnal formula: "and he [Josiah] did what was right in the eyes of Yahweh, and walked in all the way of David his father" (2 Kgs 22:2).

3. Characterization. a. Yahweh. In Kings, Yahweh speaks in Deuteronomic theology, whether imparted directly (1 Kgs 3:11–14; 9:3–9; 2 Kgs 23:27) or through the lips of the prophets (1 Kgs 11:31–39; 13:3; 14:7–11; etc.). Unlike the two-dimensional human personae in Kings whose emotions and motivations are rarely described, the mind and feelings of Yahweh are unambiguously transparent to the author. Yahweh is pleased (1 Kgs 3:10), angry (1 Kgs 11:9, etc.), or jealous (1 Kgs 14:22). He is moved to act out of loyalty or concern (1 Kgs 11:12; 2 Kgs 13:4); most extraordinarily of all, Yahweh's motivations and influence over the affairs of history are specifiable (2 Kgs 10:32; 17:18, 20; 24:3–4; Nelson 1988: 45–46). Prophets routinely bear the message of God to human ears; Yahweh communicates only once through the written word (the book of the law found in the Temple, 2 Kgs 22:19; 23:3). Exceptionally, Yahweh addresses Solomon directly through the medium of dreams (1 Kgs 3:11–14; 9:3–9).

b. Solomon. The reign of Solomon, like that of his father David, is literarily partitioned into two phases: "good king" and "bad king." Initially Solomon exemplifies the ideal king by the standards of the ANE: he fosters the national cult by building a temple in his capital city and establishing a sacrificial system (1 Kgs 5:1–8:66), he promotes the cause of justice (the trial of two harlots, 1 Kgs 3:16–27), he brings political peace, military might, and economic prosperity to his realm (1 Kgs 4:24–26; 10:14–29), and he is supernaturally endowed with wisdom (1 Kgs 3:3–28; 4:29–34; 10:23–25). After he secures the throne by

the customary assassination of rival claimants (1 Kgs 2:23–25; Athaliah is condemned for the same practice in 2 Kgs 11), he leads an exemplary career as a pious and hugely successful monarch until he dedicates the Temple. In his second vision at Gibeon a warning note is sounded: if Solomon or his descendants prove unfaithful to Yahweh, the kingdom and its temple will fall (1 Kgs 9:6–9). In spite of, or perhaps at the price of the international prestige, luxury, and wealth that accrued to him (1 Kgs 9:10–10:29), Solomon's foreign policy led him to cultic shipwreck. In 1 Kgs 11:1–40 Solomon in his old age becomes the "bad king": he commits apostasy to accommodate his foreign wives and incurs the displeasure of Yahweh (11:9–13) which, by literary juxtaposition, led to the creation of two international and one domestic adversaries at the close of his career (11:14–40).

c. Elijah. At several points the figure of Elijah the prophet is pointedly cast as a second Moses. Elijah is the greatest exponent of inflexible Yahwistic monotheism in Kings; both the lone figures of Moses and Elijah stalwartly represent the true faith in defiance of the overwhelming might of pagan nations, pharaonic Egypt and Omride Israel. Elijah's public contest against the pagan god and prophets on Mt. Carmel echoes the episode of the Golden Calf in the Wilderness; both figures lead the People of Israel to renew their covenant with Yahweh (1 Kgs 18:19–40; Exod 32). Both Elijah and Moses journey to Mt. Horeb at divine summons and there experience a theophany (1 Kgs 19:1–18; Exod 3:1–4:17; 33:17–23). The description of the succession of Elijah by Elisha as prophetic leader, complete with Elisha's parting of the Jordan and crossing over to Jericho from Transjordan, duplicates Moses' commissioning of Joshua and the latter's entry into the Promised Land (2 Kgs 2:1–15; Num 27:12–23; Josh 1–3). Even the deaths of Elijah and Moses are mysteries shrouded in divine silence (2 Kgs 2:1–18; Deut 34:1–6; Carroll 1969: 409–10; Carlson 1969: 437–39).

d. Women. In the main, women who engage in power politics in Kings are assigned a negative role. An exception is Bathsheba, the mother of Solomon, who engineered her son's succession to David's kingdom; she is portrayed as acting under the direction of Nathan, a faithful Yahwistic prophet, and thus escapes censure (1 Kgs 1:11–31). The Queen of Sheba serves as a foil to lend spectacle to Solomon's international importance and legendary wisdom (1 Kgs 10:1–13). Thereafter, women of temporal authority in Kings live to commit idolatry. Solomon's foreign wives lead the once-wise king into apostasy in his dotage (1 Kgs 11:1–10). Jezebel, a Phoenician princess who married into the Omride House of Israel, arguably bears the most flagrantly wicked personality in the Hebrew Bible. In contrast to her husband, Ahab, she is shrewd, decisive, ruthless, and terrifying in her machinations against Yahwism and traditional Israelite values, and she is held responsible for inciting Ahab to do evil (1 Kgs 18:19; 19:1–3; 21:1–26). At the command of the arch-Yahwist Jehu, she dies with a flair, hurling a sophisticated double entendre at her murderer (2 Kgs 9:31). Athaliah, daughter of Jezebel and the only reigning queen of Judah, supports a Baal cult in Jerusalem and attempts to wipe out the Davidic dynasty (2 Kings 11). She alone of Judahite monarchs is not introduced with the customary regnal formula: her royal credentials are impugned through silence.

4. Genres. a. Miracle Stories. Although the heaviest concentration of miracle stories in Kings occurs in the Elijah and Elisha cycles, miraculous events liberally pepper the narrative. Form critical approaches to miracle stories (legenda) usually emphasize their folkloristic kernel, which has often been "sophisticated" by adding a moral or having it demonstrate a loftier theological value. Virtually every miracle story in Kings strives to magnify or legitimate the figure of a prophet by demonstrating his ability to exercise control over supernatural phenomena. One hundred soldiers and their disrespectful captains are consumed by fire called down from heaven by Elijah, showing one and all that he is a "man of God" (2 Kgs 1:9–12). Several miracle stories appear to function primarily as aretalogies, stories intended simply to glorify the figure of a prophet as a wonder worker. Forty-two children are mangled by bears for pestering a prophet (2 Kgs 2:23–24); a borrowed axehead lost in water is caused to float (2 Kgs 6:1–7); a corpse is revivified because it touches the bones of Elisha (2 Kgs 13:21). Other stories use the miraculous as a didactic measure to win belief in the living God (Rofé 1974: 145). The divine vindication of the prophet Elijah over the prophets of Baal on Mount Carmel cause "all the people of Israel" to declare "Yahweh, he is God; Yahweh, he is God" (1 Kgs 18:39). Elijah resurrects a dead child in the name of Yahweh (1 Kgs

17:21–22); evidence of the miracle prompts the revived child's mother to confess, "Now I know that you are a man of God, and that the word of Yahweh in your mouth is true" (17:24). In 2 Kings 5 the Syrian Naaman is cured of his leprosy by washing in a river at the direction of Elisha; his response: "Behold, I know that there is no God in all the earth but in Israel" (5:15). The miraculous destruction of the altar at Bethel and withering of King Jeroboam I's hand in 1 Kings 13 is dramatically linked by prophecy to the activity of Josiah of Judah in Bethel some three hundred years later; literarily, this prophetic vignette tethers the careers of Jeroboam I, chief architect of cultic mischief in the Northern Kingdom, and Josiah, the reformer-king extraordinaire of Judah.

b. Legitimation Apologetic. 2 Kings 11 describes how the Omride Athaliah came to power in Judah by massacring all potential Davidic claimants to the throne—all but one, Joash, who was hidden by an aunt in the Jerusalem Temple for six years with the cooperation of the priest Jehoiada. In Joash's seventh year Jehoiada engineered a coup d'état by revealing him to troops loyal to David and "the people of the land." Historically, the concealment of an infant in the royal chapel for six years from Athaliah and her followers is improbable, to say the least. The form of the story follows a literary pattern attested other places in the Hebrew Bible (Moses, Hadad of Edom in 1 Kgs 11:14–22) and in the ancient world, namely, the Tale of the Hero Exposed at Birth. A child of noble birth must be abandoned; it is saved from certain death, raised by a human, adopted by royalty (a Davidic princess) and a servitor of a god (a priest of Yahweh); ultimately he becomes king. Versions of this tale were used to support the royal claims of Sargon II, Cyrus, and various pseudo-sons of Nabonidus, probably all usurpers: it is a stock legitimation birth narrative for royal pretenders (Handy 1988).

c. The Cult Reform. Positively evaluated cult reforms in Kings (Asa, Jehu, Joash/Jehoiada, Hezekiah, Josiah) inevitably show a return to "traditional" religion (monotheistic Yahwism). They are never depicted as capricious innovations undertaken at the king's whimsy or as religio-political capitulations to foreign powers. The validity of the greatest cult reform, that of Josiah's, is guaranteed by the prophetess Huldah (2 Kgs 22:14–20); comparable texts in Assyrian sources validate a projected reform through a series of favorable omens. Negatively evaluated cult reforms (Jeroboam I, Ahab, Ahaz, Manasseh) entail innovation or a return to Canaanite practices by introducing a plurality of deities and rites into the preexisting (Yahwistic) cultus. Such innovations, unsanctioned by prophet or priest, force the hapless people into sin (1 Kgs 12:30; 2 Kgs 21:16). Since every Israelite king, including Jehu (2 Kgs 10:31), was guilty of the "sin of Jeroboam" (the fostering of Yahwism and other cults outside a Jerusalem context), they were all religious innovators in the literary historiography of Kings.

The narrative of the "anti-reformer" Manasseh of Judah in 2 Kgs 21:1–18 shows evidence of thematic patterning from the perspective of the Josianic reform; Manasseh (re-)introduces into the Jersualem cult the same triad of non-Yahwistic deities that Josiah removes, Baal, Asherah, and the Host of Heaven (2 Kgs 21:3; 23:4). The literary portrait of Manasseh has been executed in such a manner as to cause him to appear as the evil antitype of Josiah, the depths of his cultic apostasy adding luster by contrast to Josiah's return to "old time religion" (Hoffmann 1980: 162–67; Spieckermann 1982: 163). The destruction of the high places, sacred pillars and female cult image in Hezekiah's reform (2 Kgs 18:4) is a stock figure in Kings which clashes harshly with the apostasy of Manasseh; Hezekiah's political resistance to the pagan Assyrians and their contempt for his reform (2 Kgs 18:19–25) theologically prepares the way for the thoroughgoing purge of foreign cults by Josiah.

F. History and Historiography in Kings

1 and 2 Kings is a theological history; it does not attempt to offer an objective or dispassionate reportage of the "facts." Its authors were primarily concerned with the didactic possibilities of the reigns of their kings for illustrating the interplay of the divine and human wills in light of the present (the Jewish community for whom Kings was written). A "history" in the modern academic sense of the word denotes, among other things, a document that consciously and critically weighs the accuracy of its sources and makes no appeal to supernatural causation as a means of explaining the course of historical events. As the title intimates, Kings provides historical datum on the reigns of Israel's and Judah's monarchs; names and dates follow chronologically, interspersed with domestic and international events deemed salient by the

author. In common with other historical works from antiquity, private conversations (Jezebel and Ahab, 1 Kgs 21:5–7), prayers (Hezekiah alone in the Temple, 2 Kgs 19:14–19), and actions of which no record could reasonably be expected to exist, miracles (the blinding and capture by Elisha of a Syrian army, 2 Kgs 6:11–23) and miraculous interpretations of events (the withdrawal of the Assyrian siege from Jerusalem, 2 Kgs 19:35–36) are integral to the literary artistry of the composition. Despite the focus on the royal court and national cult, Kings provides only isolated notice of national economic status; social, political, and military history; international relations; achievements in the arts; or even utilitarian material culture—what people wore, slept on, and cooked their meals in. Likewise, as a "history" devoted to the interaction of king and cult, there is surprisingly little information on the priesthood and other temple functionaries, specific oracles or omens by which the will of the national god influenced military and political decisions of the monarchy, the fiscal apparatus governing the organic relationship between royal taxes, tribute, and temple revenues, etc.

1 and 2 Chronicles is also a theological history of the Chosen People, beginning with Adam and concluding with Cyrus' Edict to the Judahite exiles. Because its synoptic narrative of the Divided Monarchy provides details "missing" in 1–2 Kings, generations of historians have selectively utilized it to create a conflated or harmonized image of "sacred history." More so than DTR, the Chronicler altered his sources and introduced *midrašim* to "rectify" his historical datum according to the exigencies of his theological program; the historical value of Chronicles is slender, and should be used with great caution for the purposes of historical reconstruction.

The relatively meagre success of Syro-Palestinian archaeology at verifying or refuting various historical assertions in Kings turns upon the nature of material remains surviving from antiquity and upon the particular interests of the authors that guided their selection of topics for inclusion in the text. The most conspicuous remains to date are traces of monumental architecture unearthed or exposed at the site of large urban centers (generally *tells*), for instance, the stone foundations of city walls, gates, palaces. Unfortunately, such vestiges of the past, when bereft of inscriptions or representative artwork that would positively identify the rulers who ordered their construction, are historically ambiguous. The organics preferred for writing Hebrew (wood, leather, papyrus) decompose rapidly in the climate of Palestine outside the immediate environs of the Dead Sea; hence, the predictable paucity of textual remains from the period of Kings unearthed by Syro-Palestinian archaeologists. The modern typologies developed to account for the chronological and geographical progression of pottery designs rarely, if ever, are subtle enough to distinguish between the reigns of specific Israelite and Judahite kings; thus, potsherds alone will not provide the criteria necessary for distinguishing whether, for instance, the Hazor city gates of Stratum X were built by Solomon, or Ahab, or perhaps even Jeroboam II.

1. Religion in Judah and Israel. The guiding concerns of the authors of Kings were focused upon the illustration of a pattern of prophecy and fulfillment from rise to fall of the kingdoms of Israel and Judah, specifically, the fidelity of the rulers and people to the religio-political vision outlined in Deuteronomy. The monumental remains that one would expect to correspond to the descriptions provided in Kings, for example, the elaborate specifications of the temple of Solomon and the royal palace in Jerusalem (1 Kings 6–7, clearly the dominant architectural achievements in the text), cannot be verified due to the legal and political impossibility of conducting archaeological investigations on the site of the central Temple Mount. The construction of the Temple was reportedly a collaborative Phoenicio-Israelite enterprise; the iconography of its decoration and ornamentation described in Kings (cherubim, lions, bulls, floral motifs, pomegranates, palm trees, 1 Kgs 6:23–7:37) is consonant with known Phoenician and North Syrian artistic traditions, as is the design of the floor plan (Busink 1970: 261–67).

The biblical portrayal of the Solomonic Temple as exclusively devoted to Yahweh worship from its inauguration to its destruction, with sharply defined "paganizing" interludes, is both anachronistic and tendentious. Archaeological research does not support the notion that monotheistic Yahwism was normative for either the people or rulers of the Divided Monarchy. Clay figurines (most frequently of bulls, horses, and nude women), probably cultic in origin, have been excavated in profusion at Jerusalem and at other urban sites in Palestine in contexts sufficiently diverse to rule out the likelihood that they

were manufactured exclusively during the reigns of religiously "permissive" kings like Ahab and Manasseh (Ahlström 1984: 136–38). Similarly, research in onomastics (the formation of proper names) for the period indicates the great popularity that the national god Yahweh enjoyed as the divine element in proper names in both Judah and Israel, but not to the exclusion of other divine names (Tigay 1986: 37–41); a comparable onomastic milieu prevailed in other contemporary West Semitic kingdoms. Reports of cult centralization in Jerusalem during the reigns of Hezekiah (2 Kgs 18:22) and Josiah (2 Kgs 23:5–14, 24) are neither confirmed nor challenged by excavation findings (Ussishkin 1988: 156).

Regarding the historical verisimilitude of the presentation of the cult in Kings, the Baal cult is a case in point. According to literary division *D* (1 Kgs 16:23–2 Kings 12), following Savran, this cult in Israel received royal patronage under the Omrides, only to be bloodily purged from the land under the fanatical usurper Jehu (2 Kgs 10:18–28). In Judah, the Jerusalem temple to Baal, sanctioned if not erected by Athaliah, Omride scion, was said to have been destroyed by a popular movement led by a Yahwistic priest (2 Kings 11). The historiography of Kings therefore intimates that a full-blown Baal cult lasted around forty years, revived later by Manasseh in Judah, only to be liquidated by the reformer-king Josiah. In Syro-Palestine, Baal worship is a documented fact from at least ca. 1500 B.C.E. to 200 C.E. There is ample evidence both from Kings itself and from archaeological research that the state cults of both Judah and Israel were cults of many gods, with Yahweh at the apex of both pantheons throughout the Divided Monarchy (Ahlström 1982: 69–71; 1984: 137; Lemche 1988: 229; Mulder 1989: 55–58). There is a virtual flood of recent scholarship acknowledging the worship of the goddess Asherah alongside Yahweh in Judah (Day 1986: 391–99).

2. Kings and Rulers. Generally speaking, the names and order of reigns of the monarchs of Israel and Judah in Kings are historically accurate. The chronological proximity, prevailing political relationship between the two Kingdoms, kinship, and identical names of Joram of Israel and Jehoram (Joram) of Judah (2 Kgs 1:17; 8:16, 25) have suggested to some scholars that the two are one and the same person; perhaps the biblical historiographers were confused (Miller and Hayes 1986: 280–82). Failure to provide Jehu of Israel and Athaliah of Judah with standard regnal formulas may reflect dramatic license (the Israelite Jehu alone is anointed as king by Yahwistic prophet (2 Kgs 9:6) or the author's covert polemic against their right to the throne, 2 Kgs 11:1–3. From both biblical and epigraphic evidence, it has been suggested that Gedaliah, appointed to rule Judah by the Babylonians following the deportation of king Zedekiah to Babylon, was actually installed as a vassal king (2 Kgs 25:22–25; Miller and Hayes 1986: 421–24). The reluctance of the author of Kings to call non-Davidic rulers of Judah "king" (or "queen") may account for Gedaliah's curious lack of titles (*RSV* supplies "governor" in 2 Kgs 25:22, 23).

Determination of the historicity of particular events in Kings is realistically restricted to rational inference from what is known from the better documented Egyptian and Mesopotamian kingdoms to the internal affairs of the relatively obscure West Semitic kingdoms of Judah and Israel. Most studies on Kings draw attention to the notable disparity between the substantial military and political achievements of Omri and Ahab of Israel, which are known from excavations and textual sources (Assyrian and Moabite), and the Bible's cryptic (six verses for Omri, 1 Kgs 16:23–28) or pointedly unflattering accounts of their reigns (six chapters on Ahab, most of which contrast his personal and political weaknesses with the effective dynamism of the prophet Elijah, 1 Kgs 16:29–22:40). The Elijah and Elisha cycles are coterminous with the reigns of the Omrides and Jehu; the overriding goal of the author to subordinate political to prophetic power led to the inclusion or composition of much folkloristic material, rendering the actual sequence of historical events difficult or impossible to recover (1 Kings 17–2 Kings 10). Hezekiah, whose headstrong foreign policy provoked Assyrian military countermoves which brought Judah to the brink of national destruction and the reduction of its territory to Jerusalem and its environs, "did what was right in the eyes of Yahweh" (2 Kgs 18:3). His son Manasseh held the reins of state longer than any other Judahite king and successfully steered his kingdom as an Assyrian vassal-state through the various administrations of Sennacherib, Esarhaddon, and Assurbanipal. It is extremely likely that, like other Assyrian vassals, it was both expedient and obligatory for Manasseh to support Assyrian cults and practices in the Jerusalem Temple and elsewhere (Spieckermann 1982: 170, 319–22; Würthwein *Könige*

ATD, 441–42); perhaps for this, and for returning the national cult to the status quo that existed before Hezekiah's cultic innovations, his reign incurs the severest condemnation of any ruler in Kings (2 Kgs 21:1–18; Ahlström 1982: 75–81).

It is to the credit of DTR as an historian that the informing Deuteronomic principles of reward for obedience and prophetic fulfillment were set aside for Josiah of Judah, the prize example in Kings of aggressive obedience to the Deuteronomic ideology. The king is struck down on the battlefield, apparently giving the lie to Huldah's prophecy (2 Kgs 23:29–30; 22:20).

3. Military History. Painting with the broadest possible strokes, the outline of military and political history set forth in Kings appears to correspond to what really happened. The Solomonic "Empire" (the actual extent and value of Solomon's geographical holdings may have been subject to considerable exaggeration in the Hebrew Bible) arose in the Western Asian power vacuum following an eclipse of the Egyptian, Hittite, and Assyrian superpowers. The effective division of the imperial heartland into two rival kingdoms, Israel and Judah, resulted in swiftly shifting alliances and vassalships between them and their neighboring states (Philistine, Phoenician, Aramaean, Ammonite, Moabite, Edomite), moves characteristic of small nations jockeying for power and survival. The expansion of the two Mesopotamian conquest nations, Assyria and Babylonia, led ultimately to lopsided military confrontations in which the territories of both Israel and Judah were devastated, their capital cities destroyed, and their populations subjected to mass deportation, all time-tested measures calculated to break down political resistance and national identity.

The account of Pharaoh Shishak's invasion of Palestine in 1 Kgs 14:25–26 mentions only Jerusalem and the booty he carried off from the Temple and palace; the literary nuancing of the narrative emphasizes the political weakness of Rehoboam, Solomon's unworthy successor (1 Kgs 14:27–30). The Egyptian account of the invasion fails to mention Jerusalem; it lists more cities taken in the territories of Israel and Syria than in Judah. The biblical historiographer appears to have been more anxious to portray Shishak's activity in Palestine as a blow to Rehoboam's prestige than as a significant military incident for the fledgling Northern Kingdom (*ANET*, 263–64; *LBHG*, 323–30; Ahlström 1982: 56–57). The date given in Kings, "the fifth year of King Rehoboam," cannot be tested due to chronological uncertainties in both Egyptian and Hebrew sources.

The date, geography and identity of the kings involved in the central Syro-Israelite wars are tentative by reason of the highly legendary nature of the biblical narratives (the Elijah and Elisha cycles), coupled with the anonymous titling of the "King of Israel" in 1 Kings 20 (use of Ahab's name is probably secondary); 22:1–36; 2 Kgs 6:8–7:20; 8:7–15. The royal Syrian names Ben-Hadad (Aramaean Bar-Hadad) and Hazael, attested in extra-biblical sources, were probably held by more than one ruler in Kings; a clear succession of kings of Damascus from the Rezon associated with Solomon (10th century, 1 Kgs 11:23–25) to the Rezin associated with Pekah of Israel (late 8th century, 2 Kgs 15:37) is impossible to determine. The relative military strength and weakness of the Syro-Palestinian states prior to the western campaigns of Tiglath-pileser III in the 8th century are difficult to assess; the contradictory state of military preparedness imputed to Ahab's Israel by the historiography of 1 Kgs 20–22:40 is decidedly at odds with the rank of Ahab in the international coalition described in the Kurkh Monolith of Shalmaneser III (Borger 1984: 360–62). Descriptions of Syro-Israelite military confrontations in Kings outside the Elijah-Elisha cycles (1 Kgs 15:16–22; 2 Kgs 12:17–16:9) are probably more historically informative than those within the cycles; see Miller and Hayes (1986: 250–87).

The terse description of the fall of the Northern Kingdom to the Assyrians (2 Kgs 17:1–6) and subsequent happenings in the province of *Samerina* (2 Kgs 17:24–41) telescope a number of events. Although Shalmaneser V probably captured the capital city, Samaria, in 722, the city had to be retaken in 720 by Sargon II, who was responsible for the massive deportations of the kingdom's inhabitants. The account of the cultic mixing of the Yahwism and idolatry practiced by the natives and newly imported aliens under the unnamed "King of Assyria" in 2 Kgs 17:24–33 is an anachronistic and polemic description of the origins of the Samaritans.

Kings appears to describe two separate campaigns of Sennacherib against Judah: in the first, 2 Kgs 18:13–16, a victorious Sennacherib receives submission from Hezekiah and booty stripped from palace and temple; in the second, 2 Kgs 18:17–19:37, a high official from the Assyrian court, cognizant of Hezekiah's cult reforms, parleys with the defenders in the local Palestinian dialect. The prophet Isaiah emboldens the Judahite king to resist; the Assyrian army is miraculously slaughtered by the angel of Yahweh; Sennacherib returns empty-handed to Nineveh, to be ingloriously slain by his sons "in the house of Nisroch, his god" (2 Kgs 19:37). Assyrian and Babylonian sources provide no reasonable justification for supposing that Sennacherib undertook a second campaign to Palestine after 701 B.C.E.; it is quite clear that at that time Judah was conquered by a savagely punitive military offensive (Ussishkin 1982: 19–58; 67–126), and that Hezekiah purchased his capital city, Jerusalem, and his life by paying a massive bribe to the Assyrian king and offering submission (for the Assyrian annal account of Sennacherib's third campaign, see Borger 1984: 388–90). The two biblical accounts each provide selected items of accurate information regarding the same historical campaign, even though the "miraculous" delivery of Jerusalem in the second account, and probably the dramatic rhetoric of the Rabshakeh's speeches, are theologically motivated fiction.

The surrender of Jerusalem to Nebuchadnezzar II and capture of Jehoiachin (2 Kgs 24:10–17) is datable in cuneiform sources to March 16, 597 B.C.E. (Cogan and Tadmor *II Kings* AB, 311). The biblical account of the subsequent sack of Jerusalem and second Judahite exile (2 Kgs 24:18–25:21; Jer 39:1–14; 52:1–27) is the only extensive documentation to survive; excavations at various fortified cities in Judah bear witness to the punitive devastation wrought by the Babylonians. "The fall of the city [Jerusalem] and the exile of many of its citizens marked a watershed in Judean history and have left fissure marks radiating throughout the Hebrew Scriptures" (Miller and Hayes 1986: 416).

G. Theology

1. Deity. The god, Yahweh, that was worshipped in the Solomonic Temple of Jerusalem was the only living God; belief in any other god or goddess was both illusory and sinful; compare the story of Elijah versus the prophets of Baal on Mount Carmel (1 Kgs 18:19–40), and Hezekiah's prayer, a transparent example of Deuteronomic theology (2 Kgs 19:14–19). Yahweh is god of all nations, a point ironically driven home in the speech of the Assyrian Rabshakeh (2 Kgs 18:25); Yahweh's forgiveness is available to the faithful even in exile (1 Kgs 8:46–53). The most heinous of sins committed in Kings are cultic (tolerance and proliferation of non-Yahwistic worship), not ethical (murder, theft, perjury). In the historiography of Kings, monotheistic Yahwism dates to the time of Moses; "later" paganizing rulers of Israel and Judah consistently ignored the example of David and "orthodox" prophetic exhortations.

2. History. Deuteronomic theology is rooted in the particular historical circumstances of a western Asiatic people. The infidelity of the kings and people of Israel was punished according to Deuteronomic law "in order to demonstrate how Israel's continual disobedience to the laws of God finally caused the nation to be destroyed through divine judgment" (*IOTS*, 286). It is fairly said that, in Kings, history is how the prophets see it. The Divine Will, against which humans cannot successfully resist, is made known through the prophets (2 Kgs 17:13; 21:10–15) and through Deuteronomic law (2 Kgs 22:16). Nevertheless, history and Deuteronomic theology engage in sporadic conflict: God lies through the prophets (1 Kgs 22:19–23); unconditional dynastic promises are modified (1 Kgs 9:4–9); Josiah, the one king who fulfills the Deuteronomic law "with all his heart, and with all his soul and with all his might" (2 Kgs 23:23) dies before a heathen Pharaoh. The raw and ambiguous stuff of history, even that of the Chosen People, occasionally overflows the boundaries fixed by the theological agenda of the author(s) of Kings.

KINGSHIP, SACRAL. See SACRAL KINGSHIP.

KINSHIP. See FAMILY.

KIR (PLACE) [Heb *qîr* (קִיר)]. Apparently the name of two places mentioned in the Hebrew Bible. The word *qîr* in Hebrew means "wall," but in Moabite it means "city."

1. A Moabite town (Isa 15:1), probably the same as Kir-Hareseth (Isa 16:7), modern Kerak. Although the LXX of Isa 15:1 has *to teichos,* "the wall, fortress," most translations regard Heb *qîr* as a proper name. Isaiah introduced his oracle against Kir by referring to the sudden destruction of Ar and Kir; the former is often identified with Rabbah, but this is far from certain. Thus, after citing two of Moab's most important towns, Isaiah 15–16 lists many other Moabite places names, all of which stand under Yahweh's judgment.

GERALD L. MATTINGLY

2. The original home of the Arameans (Amos 9:7), and the place to which they were exiled by the Assyrians (2 Kgs 16:9; cf. Amos 1:5). Kir is also mentioned (along with Elam) in Isa 22:6. LXX^{A} translates Kir as the Libyan Cyrene in 2 Kgs 16:9 (followed by Vg), but otherwise Kir is not a place in the LXX. For this verse, in place of the proper name, the Greek has *apōkisen,* "removed." It has *ek bothrou* for Amos 9:7: God brought the Syrians "from the deep (the ditch, the pit)." This could be an enclosure for the reception of exiles, or it could be the writer's sense of humor, his opinion of the enemy Arameans. The Greek for Amos 1:5 is *epiklētos:* the Syrians shall be led captive. The LXX of Isa 22:6 describes a "gathering" (Gk *synagōgē*) for battle.

John Gray (*1 and 2 Kings* OTL, 633) identified *qîr* "as a common noun, 'the city,' i.e., the Assyrian capital Nineveh, cf. Istambul, a corruption of *eis ten polin* ('to the city'). The Assyrians regularly referred to their holy city of Assur as 'the City,' and the deportation to 'the City' may refer to dedication of prisoners of war. There is, we think, no connection with *qîr* named in Amos 9:7 as the original home of the Arameans. This we regard as a corruption of qeraqir, cf. Arabic broken plural, meaning 'waterholes' or oases of the North Arabian steppe." The origins of or the native land of the Arameans (Amos 9:7) is obscure so this verse is not helpful in itself. Assyro-Babylonian literature of the 14th century B.C. refers to Arimi, or Ahlame, nomads wandering in the wilderness W of Mesopotamia (Gehman *NWDB,* 57). Arameans appear in the fourth-year records (*ANET,* 275) of Tiglath-pileser I (1115–1077). May (*Amos* OTL, 157–58) notes the migration of Arameans into the area in the early 12th century. Such data would not rule out an Aramean origin in the desert near S Mesopotamia as more or less "adjacent" to today's Iran.

Prophetic oracles were poetry, however, and perhaps Amos's metaphor should not be taken too literally. He was making a theological point about God's power over various people and lands, and God's concern with others, not just the Israelites. There may also be a threat (Amos 1:5) that as the Syrians can be sent back to where they came from, so can the Israelites (cf. Gordon *IDB* 3: 36). May (*Amos* OTL, 31) offers the interpretation that Yahweh will send the Arameans back to Kir, obliterating their accomplishments,

"the complete abrogation of the proud political history of the Arameans" (Wolff *Joel and Amos* Hermeneia, 157). Yahweh makes history and cancels it.

It has been suggested that Elam and Kir in Isa 22:6 are sources of mercenaries in the Assyrian army. The association of the two countries suggest proximity in geography, but Amos 9:7 has Egypt, Caphtor (Crete?), and Kir together, so one might doubt the proximity as necessary. Still, one could guess Kir is a country in Mesopotamia on the basis of Isa 22:6. Isa 21:2 relates Elam and Media, so this might strengthen the proximity view of Elam and Kir in Isa 22:6. Gehman (*NWDB*, 540) noted the identification of Kir with the plain between the Tigris River and Elam. Astour (*IDBSup*, 524) relates *qîr*, West Semitic for "wall," with the Akk *duru*, as a translation of the city-name Der, E of the lower Tigris, on the main road from Elam to Babylon. Tiglath-pileser III (745–727 B.C.) transferred its citizens to Damascus in 738, and in 732 exiled Damascus citizens to Duru. In the Neo-Babylonian period, it was the capital of the province of Gutium. Its governor, Gubaru, joined Cyrus and was the first with his troops to enter Babylon in 539. If this identification of the biblical Kir is correct, one would expect that among Gubaru's troops were descendants of the Damascenes from 732 B.C.

Several scholars have suggested the identification of Kir as a country by the river Kur *(Kuros, Kurros)* which begins in N Armenia, runs into the Araxes, and flows to the Caspian Sea (Keil n.d.a., 404; n.d.b. 244–45). Another alternate suggestion for Kir is the one noted above by Gehman. Kir may be the mountain region, el-Kaiyara, a range that marks the N boundary of Syria.

HENRY O. THOMPSON

KIR-HARESETH (PLACE) [Heb *qîr ḥăreśet* (קִיר חֲרֶשֶׂת)]. A capital of ancient Moab identified with modern Kerak (M.R. 217066), located ca. 17 miles S of the Arnon and 11 miles E of the Dead Sea. Strategically located on a promontory that overlooks the Dead Sea, Kerak sits astride a major intersection of the King's Highway and the E–W road across the plateau. This position has witnessed many important events in the region's history, in the days of Mesha (2 Kgs 3:25–27), during the Crusades, and into the present. Kir-hareseth is mentioned in Isa 16:7, and Kir-heres, an alternate name, appears in the oracles of Isa 16:11 and Jer 48:31, 36. KIR (Isa 15:1) is probably the same town.

GERALD L. MATTINGLY

KIRIATH-ARBA (PLACE) [Heb *qiryat ʾarbaʿ* (קִרְיַת אַרְבַּע)]. The former name of Hebron (cf. Gen 23:2; Josh 14:15; Judg 1:10; etc.) This name is associated with several significant events. The death of Sarah is placed here, and she is buried in the nearby Cave of Machpelah (Gen 23:2). Jacob/Israel comes to Kiriath-arba (here also identified as Mamre) and there witnesses his father Isaac's death (Gen 35:27). Kiriath-arba/Hebron is given to Caleb on account of his faithfulness in the episode of the aborted southern invasion of Canaan (see the narrative at Numbers 13 and 14). Here it is noted that the one after whom this city is named was one of the Anakim, who were said to be especially imposing (Josh 14:15, cf. Num 13:32–33). This information is repeated in Josh 15:13, where Caleb's portion is shown to be among the people of Judah. Kiriath-arba is specifically placed in the hill district of Judah (Josh 15:54), is said to be a City of Refuge (Josh 20:7), and is reassigned as a Levitical City (Josh 21:11–12). In a postexilic text, the equation of Kiriath-arba with Hebron is no longer made when the city is listed as one of those in which the returning exiles lived (Neh 11:25).

The name "Kiriath-arba" means "city of four," perhaps a reference to a cluster of four cities in the Hebron area (Aner, Eshcol, Mamre, and Hebron; see Boling *Joshua* AB, 358, and the citation there) or a veiled divine name having Babylonian or Hurrian elements (on the first see Burney 1918: 43–44; on the second, see Blenkinsopp 1972: 113 n. 9). On the issue of the Levitical Cities, see Hauer 1982 and the bibliography cited there.

JEFFRIES M. HAMILTON

KIRIATH-BAAL (PLACE) [Heb *qīryat* (קִרְיַת) *baʿal*]. See KIRIATH-JEARIM.

KIRIATH-HUZOTH (PLACE) [Heb *qiryat ḥūṣôt* (קִרְיַת חֻצוֹת)]. The city to which Balak first took Balaam following the latter's arrival in Moabite territory (Num 22:39). Once there, Balak offered sacrifices prior to Balaam's oracular activity (Num 22:41–24:25). Although the precise location of Kiriath-huzoth defies identification, it was apparently near Bamoth-baal (Num 22:41). Joshua 13:17 places Bamoth-baal in the tableland of Heshbon, territory then allotted to the tribe of Reuben. The City of Moab (Num 22:36), from which Barak and Balaam left on their way to Kiriath-huzoth, apparently was located near the Arnon River, and Kiriath-huzoth was probably situated somewhere between it and Bamoth-baal to the N. If so, Balak led Balaam into territory once lost by Moab to the Amorite king Sihon (Num 21:26) and which had been since regained by Moab or neutralized by the Israelites.

According to Rabbinic tradition, Kiriath-huzoth can be identified with a certain Bîrôšâ, perhaps the site of el-Barrishî near Rabbah *(Tg. Jonathan).* However, such a location is seemingly too far N to suit the description in Numbers 22. More reasonable is Abel's suggestion of el-Qeryeh, situated some 7.5 miles NE of Dibon (*GP* 2: 421). For Heb *qiryat ḥūṣôt* ("city of streets"), the LXX reads *poleis epauleōn* ("city of residences"). Probably behind this translation stands an original Heb *qîryat ḥăṣērōt* ("city of courts").
TERRY L. BRENSINGER

KIRIATH-JEARIM (PLACE) [Heb *qiryat yĕʿārîm* (קִרְיַת יְעָרִים)]. Var. KIRIATHARIM; KIRIATH-BAAL. A city which lay at the intersection of the boundary of Judah (Josh 15:9) and the W boundary of Benjamin (Josh 18:14 and 18:28). Kiriath-jearim is listed in the cities of Judah in the hill country district (Josh 15:60). Kiriath-jearim was also associated with the original tribal claim of Dan who encamped there on their way to Laish/Dan (Judg 18:12). The site has been identified as modern Tell el-Achar, about 8 miles N of Jerusalem (Cooke 1925; McCarter *1 Samuel* 137).

Kiriath-jearim figures prominently in two narratives, the pact with the Gibeonites (Joshua 9 and 10) and the narrative about the Ark of the Covenant (esp. 1 Samuel 6 and 7). In the first of these stories, Kiriath-jearim appears as one of the cities from which the Gibeonites came (Josh 9:17; the other cities are Gibeon, Chephirah, and Beeroth). Together these cities controlled the northwest approaches to Jerusalem (Boling *Joshua* 266). It would appear that there are two different versions of this incident, one which records an account of treaty relations with indigenous elements, and another which explains this treaty as the result of duplicity on the part of the Gibeonites.

Kiriath-jearim appears in the narrative of the wanderings of the Ark following its capture by the Philistines as the city to which the Ark was sent upon its return by the Philistines (1 Sam 6:19–7:2). From the fact that the Ark was sent to Kiriath-jearim it may be inferred that the city was a cultic center of at least a minor sort. From here the Ark was taken by David to Jerusalem (2 Sam 6:2, where "Baalah" is to be taken as a reference to Kiriath-jearim—cf. Josh 15:9, 1 Chr 13:6, and the textual analysis in McCarter *1 Samuel* 162–63). The transfer of the Ark from Kiriath-jearim to Jerusalem is also mentioned in 2 Chr 1:4.

In addition to 2 Sam 6:2 mentioned above, Kiriath-jearim is referred to as "Baalah" in Josh 15:9 and as "Kiriath-Baal" in Josh 15:60 and 18:14. The first of these names can be rendered "wife" or "lady," with reference to the goddess Asherah/Anat/etc. (Boling *Joshua* 369), and the second can be taken as an example of demythologizing, where Canaanite god and goddess elements in place-names are replaced by

more palatable substitutes. As it stands, "Kiriath-jearim" means "city of woods" (*BDB,* 900). See the discussion in Boling *Joshua* AB, 267, 369.

Kiriath-jearim is also listed as the hometown of Jeremiah's rival Uriah (Jer 26:20), thus confirming its cultic stature; and as a city in the census of the returned exiles (Neh 7:29; cf. Ezra 2:25 where it appears as Kiriatharim).

JEFFRIES M. HAMILTON

KIRIATH-SANNAH (PLACE) [Heb *qiryat-sannâ* (קִרְיַת־סַנָּה)]. According to Josh 15:49, the former name of the city of Debir. Precisely because this reading is problematic, Noth (1935: 44–50) assumed that the text indeed originally listed Kiriath-sannah, and that the equation with Debir was a later gloss. Orlinski (1939) offered a rebuttal, noting that the LXX reads *polis grammatōn hautē (estin) Dabir,* "city of books, i.e., Debir." Elsewhere the LXX uses *polis grammatōn* ("city of books") to render "Kiriath-sepher," which is elsewhere identified as the former name of Debir (Josh 15:15–17). The reading of *qryt-snh* is therefore probably erroneous, and the text probably originally read "Kiriath-sepher."

GARY A. HERION

KIRIATH-SEPHER (PLACE) [Heb *qiryat-sēper* (קִרְיַת־סֵפֶר)]. Alternative name of a Canaanite, and later Judahite, town located in the SW hill country of Judah. It later became known as Debir. The name Kiriath-Sepher means something like "scribe town" or perhaps "town of the treaty-stele" (Boling and Wright *Joshua* AB, 293). The only OT passages to use the ancient name (Josh 15:15–16=Judg 1:11–12) tell us that Caleb, following his capture of Hebron, promised the hand of his daughter Achsah to whomever would take Kiriath-Sepher/Debir. This task is said to have been accomplished by Caleb's nephew Othniel (Josh 15:17=Judg 1:13). Although these verses show signs of subsequent editorial activity, they most likely depend on an ancient tradition which may well record the memory of actual historical events (Boling and Wright *Joshua* AB, 373–76). See DEBIR (PLACE) for a discussion of the controversy surrounding the location of this ancient town.

WADE R. KOTTER

KIRIATHAIM (PLACE) [Heb *qiryātayim* (קִרְיָתַיִם)]. **1.** A town in Moab's tableland assigned to the tribe of Reuben (Num 32:37; Josh 13:19). The Mesha Inscription (line 10) says that Mesha rebuilt Kiriathaim; this town was still in Moabite hands when Jeremiah (48:1, 23) and Ezekiel (25:9) pronounced oracles against Moab. A number of sites have been identified as ancient Kiriathaim: (a) el-Qereiyat (M.R. 215105), ca. 5 miles NW of Dhiban; (b) Kh. el Qureiyeh, ca. 6 miles W of Medeba; (c) Qaryat el-Mekhaiyet (M.R. 220128), ca. 3 miles WNW of Medeba; and (d) Jalul, ca. 3 miles E of Medeba. Shaveh-kiriathaim, the "plain of Kiriathaim" (Gen 14:5) may be associated with the Kiriathaim in the territory of Reuben.

2. A levitical city in the territory of Naphtali (I Chr 6:76), probably the same as Kartan (Josh 21:32), probably identified with modern Kh. el-Qureiyeh.

GERALD L. MATTINGLY

KIRIATHARIM (PLACE). See KIRIATH-JEARIM.

KISH (PERSON) [Heb *qîš* (קִישׁ)]. The name of five individuals. Its etymology is uncertain. One proposal relates it to Akk *qāšu,* "bestow," and *qīštu,* "gift" (*IPN,* 171 n. 3). Another relates it to *qyš h/qyš* in the Aramaic inscriptions from Higr and compares it with the Arabic tribal and personal name *qais* (Nöldeke 1886: 167).

1. The father of Saul, first king of Israel; Kish is likewise the son of Abiel and brother of Ner. He was a member of the Benjaminite clan of Matri (1 Sam 10:21). His patrimonial land holdings appear to have been located at Zela, where he was buried (2 Sam 21:14).

Kish achieved the status of *gibbôr ḥayil*, "wealthy citizen" or "member of the landed, taxable class of citizenry" (1 Sam 9:1). The phrase is frequently used to describe elite military ranking as well as possession of material substance and social status (McKane 1957–58: 28–31). It seems likely that military officers and mercenaries received landed property and the associated gentry status in return for their military service and loyalty to a liege majesty (Weber 1952: 16–18, 24–25, 47, contra McKane 1957–58: 32–33). Kish probably earned his status as a landowner of social standing through mercenary service to the ruler(s) of an unnamed city-state within Benjamin (1 Sam 9:1). The city in question could have been Gibeon, particularly in light of the report in 1 Chr 8:33 and 9:39 that Kish was a descendant of the founder of Gibeon.

Since it is likely that the Saulide genealmgy in Chronicles was artificially grafted onto a list of postexilic clans who resettled the site (see NER), the historicity of Kish's association with the city must remain uncertain, even if probable. Saul's confiscation of Gibeonite land during his reign (2 Sam 21:1–3) would have led to the acquisition of royal estates in the city, though it is not clear whether they could have become part of his inherited estate (Ben-Barak 1981: 79–84). If some of these lands were included among the holdings of Saul that David restored to Meribaal (2 Sam 9:7; 19:29) and which would then have been passed on to his descendants, the Chronicler might have been familiar with the association of the Saulide family with Gibeon and could have assumed that Saul's ancestors began that association.

2. The son of Mahli and brother of Eleazer, who was a member of the levitical division of Merari. His eldest son apparently was Jerahmeel (1 Chr 24:29). Kish is reported to have been among the Levites who were numbered in a census in the days of David. He is to have served at the "house of Yahweh," the main sanctuary in Jerusalem. His sons are said to have married their female cousins, the daughters of Eleazer, to preserve the line of Mahli (1 Chr 23:21–23). Many consider the intermarriage to fulfill the guidelines laid out in Num 36:6–9 in the case of Zelophehad's daughters (i.e., Curtis and Madsen *Chronicles* ICC, 265; Williamson *Chronicles* NCBC, 161). However, the provision in Numbers is designed to maintain inherited property within its traditional tribe. Since Levites were government agents (Ahlström 1982: 47–51) and were not to have received patrimonial lands (Deut 18:1–8; Josh 13:14), intermarriage would seem to make more sense as an adaptation of the Levirate law in Deut 25:5–10, which is designed to perpetuate a family line through the marriage of a widow to the dead husband's brother.

3. The son of Abdi and a Levite belonging to the division of Merari (2 Chr 29:12). He is to have participated in the cleansing of the temple in Jerusalem in response to Hezekiah's command to reconsecrate the sanctuary and remove its impurities after its temporary closure by his predecessor Ahaz (2 Chr 28:24–26; 29:6–7). He is one of two representatives for Merari and is said to have assembled his brethren (29:15), suggesting that he was in a position of authority within his levitical division at the time. The list of fourteen Levites among which his name appears seems to be a stylized presentation designed to show how all the main branches of the levitical families responded equally to Hezekiah's command and worked together (Williamson *Chronicles* NCBC, 354). Two representatives each are assigned to the four main levitical divisions of Kohath, Merari, Gershom, and Elizaphan (see 1 Chr 15:4–10 for the less familiar Elizaphan) and the three families of levitical singers, Asaph, Heman, and Jeduthun.

Following the standard ideology of the Chronicler, the Levites serve as subordinates to the priests. They were to have been restricted to the cleansing of the temple court area, while the priests cleansed the innermost part of the sanctuary (29:15). The Levites were then to have disposed of the refuse gathered by the priests from the inner sanctuary by removing it to the Kidron Valley (29:16), a long-standing burial ground (i.e., 2 Kgs 23:6) whose associated impurity made it a logical nearby dumping ground for the impure material.

4. A Benjaminite named as a distant relative of Esther; he was to have been the great-grandfather of Mordecai who adopted and reared Esther, the daughter of his uncle Abihail, after she was orphaned (Esth 2:5).

The accuracy of the genealogy given for Mordecai in Esth 2:5 has been debated. Some have accepted it as a genuine list of Mordecai's immediate three forebears (i.e., Cassel 1888: 52–53; Hoschander 1923: 17; Gerlemann *Esther* BKAT, 77). Others, following Josephus and the creators of the Targums of the book, have regarded Shimei and Kish to have been remote ancestors, Kish the father of Saul (1 Sam 9:1; 14:51; 1 Chr 8:33) and Shimei the Benjaminite rebel in the days of David (2 Sam 16:5; 1 Kgs 2:8, 36, 40). While accepting Jair possibly to be Mordecai's actual father, they believe that the author of Esther deliberately skipped over intermediate genealogical links to highlight Mordecai's well-known ancestors and so foreshadow the new face-off between Saul's descendant and Haman, the descendant of Agag, king of the Amalekites (Haupt 1907–08: 115; Paton *Esther* ICC, 176–78; *Esther* KAT, 299; Moore *Esther* AB, 19; R. Gordis 1974: 27). In 1 Samuel 15, Saul had been ordered by God to exterminate Agag and all his people and possessions but reportedly had spared his enemy's life. In Esther, his descendant Mordecai causes Agag's descendant to be killed, leading to a belated literary fulfillment of the divine command to Saul made centuries earlier.

Kish's identity as Mordecai's great-grandfather or the father of King Saul is further influenced by how one understands the grammatical force of the relative pronoun *ʾăšer* that begins v 6, following Kish's name and the phrase *ʾîš yĕmînî*, "a (Ben)jaminite man." Most agree that the relative pronoun must modify Kish, the subject of the sentence, understanding the intervening three-generation genealogy to be, in effect, a parenthetical statement interrupting normal narrative flow. However, since *ʾăšer* is thought to have developed from a demonstrative pronoun that would have stood immediately after the noun to which it referred (GKC, §138), grammatically, *ʾăšer* would most logically refer to the immediately preceeding phrase, "a Benjaminite man," which in turn is in apposition to the name Kish. Mordecai has already been identified as a Jew at the beginning of v 5 and so needs no further introduction as a Benjaminite. In addition, if the relative clause introduced by *ăšer* is associated with Mordecai, it results in a man who is over 116 years old at the time of the story, the reign of Xerxes (465–425 B.C.), since the person is question was part of the first wave of deportation in the wake of Jehoiachin's surrender in March, 597 B.C.E. (2 Kgs 24:10–17). By contrast, in having the relative clause modify Kish, the span from the first deportation to the early reign of Xerxes is bridged by four generations, a very plausible situation. Others have emphasized as well that had Kish, the father of King Saul, been Mordecai's intended ancestor, the author almost certainly would have referred to Saul by name to formalize the connection (i.e. Cassel 1888: 53; Hoschander 1923: 17).

Mordecai's ancestor Kish would have been considered a member of the army, the court, the temple staff, or the artisans of Jerusalem exiled with Jehoiachin, and would have been a fellow exile with the prophet Ezekiel. His family tree strongly suggests that he was to have been understood to have been a Levite, a member of the Merari division. He is said to have been the father of Shimei and the grandfather of Jair, in addition to his relations to Mordecai and Abihail. The name Kish appears elsewhere in 1 Chr 6:44, 23:21–23 and 2 Chr 29:12 as a clan or personal name associated with Merari. Shimei is listed as a clan of Merari in 1 Chr 6:29, while Abihail is the patronymic of the leader of the divisions of Merari during the idealized wilderness wanderings in Num 3:35. In light of the apparent attempt to root Esther's family in levitical Merari origins, the fictional nature of her family tree is likely. Thus Kish may not have been a real person who was exiled under Jehoiachin, but may represent a use of the Merarite clan of Kish to represent a fictitious ancestor.

In addition to the clear links with Merari, Esther's relatives have connections with Saul. Kish was Saul's father and is specifically named as a Benjaminite in 1 Sam 9:1. Shimei was a Benjaminite who cursed David as he fled Jerusalem during Absalom's coup and accused him of exterminating the Saulide royal family (2 Sam 16:5; 1 Kgs 2:8, 36, 40), while Jair recalls the site of Kiriath-Jearim, the reported site of the Ark during Saul's reign (1 Sam 7:1–2). When combined with the characterization of Haman as "the Agagite" (3:1), it is difficult to escape the allusions to 1 Samuel 15, as many have noted.

However, the secondary nature of the Saulide links needs to be considered carefully. The Greek rendering of Haman's epithet does not presume Hebrew *hʾggy,* "the Agagite," but rather, *hgʾgy,* "the Goagite," or *hbgy*, "the Bagoite," depending on the manuscript. The first seems to reflect a Persian title of

honor meaning "man of authority" (Cassel 1888: 89), while the second seems to be related to the Persian word *baga,* "God" (Hoschander 1923: 22; contrast Haupt 1907–08: 123). In the context of the story it would be most appropriate for Haman to bear a title of Persian origin, since he is a court official. Therefore it seems likely that his original title was corrupted through letter transposition to read "the Agagite," which in turn may have led to the secondary association of Mordecai's forefather Kish with his well-known namesake the father of King Saul. With this development the appositive phrase "man of (Ben)jamin" at the end of v 6 may have been secondarily inserted in order to allude to Saul's genealogy in 1 Sam 9:1. It should be noted that the identical phrase *ʾîš yĕmînî,* without the *ben* element, occurs after Aphiah, and while intended to refer to the first of seven generations (see BECORATH), may have been mistaken by a scribe or copyist to refer back redundantly to Kish. The proposed insertion would have reinforced for the perceptive reader the resulting play on the Saul-Agag story in 1 Samuel 15, while obscuring the original Merarite connections.

5. The son of Jeiel and founder of the postexilic settlement at Gibeon (1 Chr 8:29–30; 9:35–36). His status as the premonarchic founder of the site (Williamson *Chronicles* NCBC, 85–86) or its postexilic rebuilder is often considered unclear (Rudolph *Chronikbücher* HAT, 80; Myers *1 Chronicles* AB, 62). However, his postexilic context is apparent from the remark that he and his sons lived opposite their kinsmen in Jerusalem (8:32; 9:38). The comment presumes the lot-casting procedure used to resettle Jerusalem in Neh 11:1–2, which would have removed the unnamed kinsmen from their recently resettled home in Gibeon to the former capital city as part of an official provincial decree or decision. Many of the tribal genealogies in 1 Chronicles 2–9 contain late "updates" that provide information about the population of the postexilic community of Jehud. It is conceivable that he was a distant descendant of Kish ben Abiel and that he was named after his forefather. His choice to resettle Gibeon may have been due to his preexilic ancestral links to the site.

DIANA V. EDELMAN

KISH (PLACE). Ancient city of Babylonia, situated on a now dead branch of the Euphrates, 15 kms E of Babylon. This city does not appear in biblical texts, but it draws its prestige from the role it played during the Early Dynastic periods (first half of the 3d millennium), for the appeal it held for the Mesopotamian sovereigns (the title of King of Kish), and for the longevity of its existence.

The site is formed from a series of tells of fairly substantial size. They cover a primarily E–W band for nearly 5 km in length and more than 1.5 km in width. The principal ones are el-Khazneh, el-Oheimir, and the Ingharra group, bordered to the N by the Bender tell and to the S by the A tell; others, designated by letters, were the objects of important varied research. It has been shown in excavations conducted by different teams and by MacGuire Gibson, that in its present state, these tells do not represent in any way the old city within its natural limits, but that we can recognize there the vestiges of the changes of an urban habitat through the vicissitudes of a long existence, linked to the transfer of natural water lanes and to the construction of canals. It is, therefore, impossible to present a clear image of the configuration, of the limits and of the ancient city's organization.

Visited by many travelers in the 19th century, the site was identified with the ancient city of Kish by G. Smith in 1873. Clandestine digs which took place at the beginning of the 20th century brought to the market an abundance of cuneiform tablets. That prompted Abby H. de Genouillac to excavate there at the

beginning of 1912. After the First World War, exploration started up again from 1923 to 1933 by the Herbert Weld and Field Museum of Natural History of Chicago, under the successive direction of S. Langdon, E. Mackay, and C. Watelin. Unfortunately, the results were incompletely published and indicate a mediocre archaeological standard.

The beginnings of the ancient city go back to the end of the 4th millennium or to the beginning of the 3d, that is to say, to the last predynastic phase, according to the major sounding taken from the west of Ingharra tell. According to the king-lists, certainly compiled at a fairly late date, it is at Kish that Kingship descended from heaven and was given to men; it is thus that these same lists attribute four dynasties to the ancient city. This could show that the remembrance of a repeated domination of the city over the Babylonian world, perhaps expanded to Sumer on certain occasions, was maintained under a mythic form and would explain also the prestige wielded by the title of king of Kish over the larger part of the great Mesopotamian sovereigns; it is also thought that one can recognize in these remembrances indications of the role played by the city in the development of the monarchic power in Mesopotamia. It is from Kish again that tradition has Sargon leaving for Akkad when engaged in the formation of his empire. Moreover, archaeology seems to confirm the importance of the city in this period. It is in effect at the end of ED II and at the beginning of ED III that one must fix two important monuments of the city: Palace A and the "Plano-Convex Building" that represent two of the oldest examples of monumental civil architecture; the cemetery that was located in the ruins of the palace also belongs to the end of the same period. But the transfer of the capital from Kish to Akkad by Sargon marks, in fact, the end of the primacy of the old city that will henceforth play a rather small role up until the Sassanids. The archaeological evidence attests to some fairly important installations from the Old Babylonian period (tell el-Oheimir) with habitation and ziggurat, diverse installations, tombs and a Neo-Babylonian fort in tells X and W, and ziggurats and particularly imposing temples from the same period as at Ingharra, an undoubtedly Parthian fortress in the Bender tell, and finally, palaces and Sassanid residences in tell H. The longevity of the installation is thus remarkable, but the quarters seem to have been displaced over the course of time, and the city never regained its great importance—not even, it seems, during the period of the large temples from the Ingharra tell.

Among the monuments worthy of attention, one must note Palace A and the Plano-Convex Building because they are perhaps the oldest remains of royal architecture. Of the first, which takes its name from the small tell that contained its ruins, only two buildings have been found on the sides of a mostly open space: a majestic staircase created the entrance to the northern building, a four-columned portico, the façade of the second. They appeared to be independent, but in reality, links existed from one building to the other on the level of the first floor; the staircases show that this floor extended over the entire surface of the buildings, and the architectural analysis leads one to place the apartments and the reception rooms there, the ground floor having been occupied by stores and services. The room with four columns of the southern building owes this particularity to the fact that it had to support a wall on the upper level and not, as has long been thought, because it had some kind of special function. The Plano-Convex Building, located more than 1500 m to the N of the palace in an isolated setting, is also very incomplete; its organization is apparently more confused, but one can make out the principles that govern the monumental architecture of the Early Dynastic periods. Even if nothing proves it with certainty, it is traditional to consider both of these buildings as palaces: in any case they offer no religious characteristics.

On the other hand, the buildings unearthed by Genouillac, Mackay, and Watelin on the Ingharra tell are two temples from the Neo-Babylonian period, perhaps constructed by Nebuchadnezzar (4th century) of large dimensions and conceived according to a classical plan for the period: in the center a large, almost square courtyard surrounded by a simple or double crown of elongated rooms (annex chapels, treasuries, stores, priests' rooms) with a cella on the facing side, eventually preceded by an antecella with a cultic niche. Two ziggurats were closely associated with these two temples.

The site has given few important objects. One will note, however, some fairly rich funerary material for the Early Dynastic periods (in particular, tombs containing vases, weapons, copper bridles) and the Neo-Babylonian period.

KISHI (PERSON) [Heb *qîšî* (קִישִׁי)]. See KUSHAIAH (PERSON).

KISHION (PLACE) [Heb *qišyôn* (קִשְׁיוֹן)]. Levitical city allotted to the Gershonites and found in the distribution list to Issachar (Josh 19:20; 21:28). There is no parallel to Kishion in the Levitical City list in 1 Chronicles. Outside of the biblical record there is one possible reference to Kishion, in the Thutmose III list of conquered towns. *q-š-n* is the thirty-seventh city in this 15th century Egyptian list (Yeiven 1950) and it has been identified with biblical Kishion. Because of the uncertainty of the location of Kishion, there is wide disagreement about with which tell it should be associated. Three sites are usually considered to be candidates for Kishion: Tell el-Ajjul, Tell el-Muqarqash, and Khirbet Qasyûn.

Tell el-Ajjul (M.R. 185225) has been identified as a possible site for biblical Kishion by Abel (*GP*, 61–62, 422–23). The tell is located 2 km SW of En-dor, 7 km SSW of Mt. Tabor. The view rivals that of Mt. Tabor, with the entire Esdraelon Plain to the crest of the Jordan rift seen to the N, E, and W. There are several wadis cutting the surface of the land, indicating a plentiful water supply around the tell. Ajjul is magnificent, but the tell is all but sherdless; however, there is scanty evidence of ancient structures. The archaeological surveys conducted at Ajjul indicate occupation during Iron I, Iron II, Roman/Byzantine, Hellenistic, and Medieval periods.

Albright (1926: 231) was the first to identify Tell el-Muqarqash (M.R. 194228) with biblical Kishion. Originally Albright (1923: 12) had associated the site with Beth-shemesh, but he changed his position in 1926 in favor of Kishion. Albright used *qšn* in the Thutmose list as one of the determinatives in choosing Tell el-Muqarqash, just as Abel had done with Tell el-Ajjul. Muqarqash is located 7 km SE of Mt. Tabor, on the Wadi esh-Sherrar, at the junction of two valleys. The land around the tell is rich agriculturally and there is an excellent water supply for it is here that the Wadi Siran empties its waters into Wadi esh-Sherrar. The archaeological surveys conducted at Muqarqash have found occupation at the site during the Iron I, Iron II, and Byzantine periods.

The third site associated with biblical Kishion is Khirbet Qasyûn (M.R. 187229). Aharoni (*LBHG*, 148) has been the exponent of this identification, although he identifies it with a question mark in the campaign list of Thutmose III. He arrived at his conclusion by associating the name in the Thutmose list *(q-š-n)* with "Tell Qisyon." However, there is a problem. The name Khirbet Qasyûn is recent. The older 1:20,000 Palestine map calls the site El-Khirba. It was not until 1946 that Zimbalist (1946) discovered the site and first proposed its identification with the biblical Kishion.

Khirbet Qasyûn is located 2 km S of the base of Mt. Tabor in the Esdraelon Plain. The land around Qasyûn is important for understanding this site because it stands so much in the shadow of Mt. Tabor. There are three mounds that make up Khirbet Qasyûn: the one to the E is the lowest and smallest of the three; the one to the NNW and the one to the W with a S appendage are of equal height. Six different archaeological surveys have been conducted at Khirbet Qasyûn and pottery has been identified from the EB, MB, LB, Iron I, Iron II, Hellenistic and Roman/Byzantine periods. If the old Arabic root of this tell had been associated with Qasyûn, there would be good reason to associate it with biblical Kishion.

However, because the original name was el-Khirba, there is no strong reason to make this identification. Overall, Tell el-Muqarqash is the preferred site for biblical Kishion. See also Peterson 1977: 141–65; Saarisalo 1927–28: 68.

JOHN L. PETERSON

KISHON (PLACE) [Heb *qišyôn* (קִשְׁיוֹן)]. A river mentioned in the Bible in connection with the battle of Deborah (Judg 4:7, 13; 5:21; Ps 83:10 [—Eng 83:9]) and with the contest between Elijah and the Priests of Baal on Mt. Carmel (1 Kgs 18:40). The usual identification is with Wadi al-Muqatta that drains the Jezreel westward, flowing N of the Carmel reaching the Mediterranean at Haifa. In modern Hebrew this had been named Kishon River.

However, Zori (Zimbalist) suggested that the Kishon of the battle of Deborah is to be identified with Wadi el-Bira (Nahal Tabor) that flows E from Mt. Tabor to the Jordan (Zimbalist 1946–47). A site close to the sources of this river is called Tel Kishyon (M.R. 187229). En-dor, associated with the battle of Deborah (Ps 83:11—Eng 83:10), is in the same region. It is apparently this river that appears on Hieronymus' map as the river Kishon (Rohricht 1890: map 12), and in the 14th century Eshtori ha-Parhi noted that this river was called *qison* in Arabic, and thus he also identified it as the Kishon (Edelman 1852: 21b, 47a). Both Zori and Eshtori ha-Parhi imply that there were two rivers by the name of Kishon. Most scholars, however, believe there was only one river; taking the phrase "Taanach on the waters of Megiddo" (Judg 5:19) as evidence that the battle of Deborah took place near these towns, they insist that the River Kishon should be located in the same vicinity. This also accords with the lower section of the same river being the Kishon of 1 Kings 18 (i.e., near Mt. Carmel).

In the song of Deborah, the Kishon appears in poetic parallelism with Heb *nahal qĕdûmîm* (AV "ancient river"; RSV "onrushing torrent"). Abel suggests that the version in LXX A and other manuscripts, Kaduseim, is closer to the original, and understands this to have designated "the river of Kadesh," suggesting that "Kadesh" here is Tell abu Qudeis (M.R. 170218) between Megiddo and Taanach (*GP*, I: 469). Similarly, Abel suggests that the river Pacida/Pagida, Pliny's alternative name for the river Belus (*HN* V.17–75), is the Kishon and that it is perhaps the Latin translation of Kishon (both connected to the meaning "to lay a trap").

The name Kishon does not appear in the descriptions of the tribal territories in Joshua, but sections of Wadi el-Muqatta (the Kishon) were almost certainly the border between Asher and Manasseh (there called Shihor-Libnath; Josh 19:26), the border between Zebulun and Manasseh ("the river that is before Jokneam"; Josh 19:11), and perhaps also the border between Issachar and Manasseh.

RAFAEL FRANKEL

KISS (NT). Placing the lips upon a person or thing as a mark of homage or affection. It is a common phenomenon in many religions; generally directed towards inanimate objects (*RGG*^{3}, 4: 190). Early Christian sources confine their prescriptions of the kiss to a greeting between two people. Its practice within community strengthens the ties of affection that exist in the fellowship.

A. NT Usage

The noun "kiss" *(philēma)* is mentioned seven times in the NT. Two of these occurrences are in Luke: Jesus suggests to Simon his host that he expected a welcoming kiss from him when he entered his house (7:45), and asks Judas about kissing the Son of Man when he was handed over (22:48). The other NT occurrences of the noun appear in connection with the verb "greet" in the imperative mood: four times in Paul (*philēma hagion* "holy kiss": Rom 16:16; 1 Cor 16:20; 2 Cor 13:12; 1 Thess 5:26), and once in 1 Pet 5:14 (where it is called the *philēma agapēs,* "kiss of love." The verb *kataphileō* appears six times—once each in Matthew (26:49) and Mark (14:45) in connection with Judas, and three times in Luke: the woman who expressed her love to Jesus is commended for kissing his feet (7:38, 45); and the father greets the returning prodigal by falling upon his neck and kissing him (15:20). Acts portrays Paul's emotional farewell from the Ephesian elders: "they wrapped their arms around Paul and kissed him" (20:37). In these two instances it includes an embrace and the placing of the lips of one person on either the lips or the cheek of another. One case involves a woman kissing a man; the rest presumably refer to men kissing each other. Only the heterosexual instance has possible erotic connotations; all are public.

B. The Kiss in Ancient Judaism

There is no agreement on the origins or significance of this practice in Judaism or Christianity. Hofmann (1938) first gave the kiss major attention and concluded that its roots were animistic and that the holy kiss was a means of conveying power from one person to another. Blank (*IDB* 3: 40) describes the holy kiss as a "ceremonious greeting comparable to the practice reflected in the OT." Perella takes it primarily in a liturgical sense, as conveying the Holy Spirit (1969: 18–23), or related to prayer (so also Stählin *TDNT* 9:139).

Analogies have been sought in the practices of Judaism, but without shedding much light on Jewish practices of the Second Temple period. Josephus uses the noun *philēma* four times exclusively in the death scene at Masada, when the fathers bid farewell to their loved ones before they massacre them (*JW* 7.391). In the Hebrew Bible it is said that Jacob kissed Rachel at their first meeting (Gen 29:11). The story created problems; some Jewish commentators explained that Jacob subsequently wept because those who saw him kiss Rachel insinuated that he would introduce some new form of licentiousness. (John Calvin was so offended by the story that he insisted the biblical text must have inverted the order; *first* Jacob introduced himself and then he kissed Rachel!) In Josephus it is Rachel that weeps, and there is no kiss, although Jacob is "overcome with love for the maid" and "amazed" at her beauty, and Rachel "flung her arms around Jacob" (*Ant* 1.288–91). When Jacob and his family left without notice, Laban complained that he was not even able to kiss his daughters and grandchildren farewell (Gen 31:28). There are two other instances in which the kiss crosses the sexual barrier without censure: one is in Esther's encounter with King Artaxerxes, a pagan although her husband (AddEsth 15:8–12); the other concerns Raguel, who kissed his daughter (Tob 10:12). There is no evidence that non-relatives could kiss each other without censure.

In Judaism three types of kisses were considered valid: the kiss of reverence, the kiss of reunion or reconciliation (Gen 45:15), and the kiss of farewell. No general admonition to kiss each other is to be found in Jewish sources (Low 1921). The highly symbolic use of the kiss in Philo does not lead to the conclusion that the kiss of peace was practiced as a "formal and ceremonial institution of the Jewish synagogue" (Perella 1969: 15–16).

The story of *Joseph and Asenath* (Burchard 1983) has the fullest range of references to the kiss. It is certainly pre-Christian, although there are Christian interpolations. Asenath greets her parents with a kiss (4:1) and her father in turn kisses her (4:7). When Joseph arrives, her father urges her first to greet Joseph. After they have exchanged greetings he urges her, "Go and kiss your brother." As she moves toward Joseph to kiss him, Joseph stretches forth his right hand, lays it between her breasts, and says: "It is not fitting for a god-fearing man who blesses the living God with his lips … to kiss a foreign woman …" (8:4–5). He goes on: "But a god-fearing man will kiss his mother, and his sisters born of his mother, and the sisters related to him, and the wife he sleeps with, who bless the living God with their mouth. Similarly it is not proper for a god-fearing woman to kiss a strange man, for it is an abomination before God" (8:6–7).

The male custodians of Asenath show no reluctance to kiss her when she is depressed (18:3). After her conversion to Judaism, Joseph kisses Asenath without hesitation. Indeed, the scene of their reunion—while dominated by the three kisses by which he imparts the spirits of life, wisdom, and truth—distinguishes clearly between their warm greeting, embraces and the kiss itself. The interaction between erotic motifs and others is finely drawn.

In the quasi-enthronement scene (20:1–4) Asenath's willingness to serve Joseph as a slave are natural steps toward the climax in which the erotic dimensions of the feet washing interact with the servant motif. Joseph draws Asenath by the right hand and kisses her (hand?), and she kisses his head and takes her place by his right hand on the throne. In the betrothal scene Pharaoh "turned them around to face each other and led their mouths towards each other and brought their lips together and they kissed each other" (21:7). In a similar vein, when Asenath first met Jacob, he called her to himself, blessed her, kissed her, and she "stretched out her hands and she put her arms around the neck of Jacob … and kissed him" (22:9). Finally, in her attempts to moderate the anger of Joseph's brother, Simeon, she "stretched out her right hand and touched the beard of Simon and kissed him" and was able to persuade him to act kindly toward his enemies. Levi likewise kissed her hand as he recognized that she was interested in the life and not the death of the enemies (28:14–15). The kiss appears here as a reverential greeting, a part of a reunion, as an act with erotic overtones, and as a part of a reconciliation.

We conclude that by the first century the kiss was not seen as a merely formal act by devout Jews. Like Egyptian men and women who would not kiss Greek lips defiled by animal sacrifice (Herodotus 2.41) and later Christians who would not kiss pagans, Jews had also set restrictions. At the same time the freedom of expressing feelings of warmth and intimacy is evident in *Joseph and Asenath.* In the Second Temple period it is quite probable that among Jews the public kiss was not generally practiced: one commentary on Genesis (*Gen.Rab.* 70 [45b]) writes: "In general kissing leads to immorality: there are however three exceptions, namely kissing someone to honour that person [Samuel kissing Saul, 1 Sam 10:5], or kissing upon seeing someone after a long absence [Aaron kissed Moses, Exod 4:27], and the farewell kiss [as when Orpah kissed Naomi (Ruth 1:14)]." R. Tanchuma added the kissing of relatives: Jacob kissed Rachel (Gen 29:11; Str-B 1.995–96). Kissing of a cultic object is rejected (1 Kgs 19:18), and Hosea (13:2) ridicules those who even kiss calves while they slaughter people. Job is proud that he has not even kissed his hand in homage to idols (Job 31:26–27).

C. The Kiss in Greco-Roman Society

In Greco-Roman society the role of the public kiss changes with the levels of society and geographic location. It is reported that the elder Cato cast Manilius out of the Senate because he kissed his wife in the presence of his daughters. He allowed his wife to hug him only during a thunderstorm, and expressed his delight when Jupiter thundered! (Plut. *Cato* 17E). Julius Caesar is said to have been kissed by his mother on the way to the polls (Suetonius 13), and later, Clement of Alexandria (*Paed.* 3.12) rules that a man is never to kiss his wife in the presence of domestics, and never even to greet her in the presence of slaves.

Greco-Roman society treated the public kiss, both hetero- and homosexual, with considerable reticence (PWSup 5: 513). Dio Chrysostom portrays the return of a young lad from the hunt who gives his betrothed a kiss with the hare he has caught (*Orat.* 7:67). But Dio, when he approached and kissed the two hunters with whom he had been reunited, was ridiculed, and he "understood that in the cities people do not kiss one another" (*Orat.* 7:59).

The kiss is practiced at a time of reunion of loved ones or after a long period of separation. A special place seems to have belonged to the kiss exchanged by slaves who discovered their spiritual kinship as slaves (Aristophanes *Frogs* 754), and a newly inducted robber chief was greeted with a kiss of welcome (Apul. *Met.* 7.9). Plutarch (*Mor.: Bravery of Women* 244) seeks to explain the Roman custom of women kissing their kinsmen "on their lips," and wonders whether it was a way for men to test whether their wives had been drinking wine in their absence, or a sign of reconciliation after the Trojan women burned their ships to end their wandering (where he appeals to Aristotle [Frag. 609]); or something bestowed on women as a sign of privilege bringing honor and power in the household, or finally as a "token of kinship" in which "affection proceeded only so far as a kiss" (265B–E).

Plutarch's life of Fabius Maximus contains an incident in which Minucius admits that he is not competent to lead and goes over to Fabius' tent. There, after a speech, he embraces Fabius and kisses him. The soldiers do the same thing and embrace each other and kiss each other. Joy reigns in the whole encampment (18). Clearly the kiss serves here to confirm reconciliation.

Whatever the Greco-Roman world did to encourage or discourage kissing, it cannot be described as a source of the Pauline admonition. It may however be the case (as Thraede [1968–69: 143, n. 48] suggests) that the public kiss of greeting was becoming the fashion in the early imperial period. If public kissing was becoming a formal custom, it may have been easier for the church to make the public kiss into a group rule and provide it with a deeper motivation.

D. The Holy Kiss

There is general agreement that the "holy kiss" had its origin in the practice which emerged in the early church among the believers themselves, with the impetus probably coming from the shape of their life with Jesus himself. Nothing analogous to it is to be found among any Greco-Roman societies, nor indeed at Qumran. Lowrie (1955: 242), following Cabrol (*DACL* 2: 117–30), has suggested that Jesus originated the practice. Judas kissed Jesus in the garden, a sign which would convey one message to outsiders but would be the usual form of greeting and hence arouse no suspicions to the inside group. Others see the beginnings of the kiss in the post-resurrection appearances (Benko 1986: 82). While clearly the erotic kiss is virtually unmentioned in the NT, there is no polemic against it.

The Song of Songs, which most explicitly lauds the erotic kiss, was interpreted in 1st-century Judaism as an allegory. Christianity also did not find the Song's uninhibited affirmation of the kiss as a means of erotic communication of love congenial. The kiss as an erotic form of communication had an uneasy place in the canon. The OT scriptures warn of the dangers of the "woman's kiss" (Prov 7:13) but also depict its erotic delights without inhibition (Cant 1:2; 8:1; note that the latter sees the kiss as an unshameful public act).

The erotic element is present in Luke 7:36–50, where objection is taken to Jesus' allowing his feet to be publicly kissed by a woman (cf. Ov. *Ars* 2.534; Epict. *Disc.* 4.1.17). Interpreters are inclined to interpret the woman's continued kissing of Jesus' feet as an act of gratitude (Godet 1887: 357) or more frequently as an act of reverence (Marshall *Luke* NICNT, 309). Stählin affirms that "the kiss is the decisive embodiment of *agape*" and that the "significance of the whole event is here gathered up in the kiss (*TDNT* 9:138–46). Few follow Schlatter's view that Luke saw it as an act of "expressing her burning love for Jesus in response to the way he had expressed to her his singular authority" (Schlatter 1960: 264). It would be incorrect to describe her action as an erotic act; nevertheless, her act itself and Jesus' acceptance of it, in the light of his reference to it as he criticizes his host's lack of grace, borders on the public display of affection decried in Proverbs and praised in the love poems of Song of Songs. Jesus risked receiving kisses of love from a person of unsavory reputation.

In contrast, the free and uninhibited exchange of kisses with maidens as part of an evening of play which leads to sleeping together "as a brother, not as a husband" with relative strangers depicted in the Shepherd of Hermas seeks to prove something quite different. Is it that the erotic element has been conquered as an enemy? (*Herm. Sim.* 9:11). Equally difficult to interpret is the *Gospel of Philip*'s affirmation: "It is by a kiss that the perfect conceive and give birth. For this reason we also kiss one another. We receive conception from the grace which is in each other" (59). The same Gospel reports that Jesus kissed Mary Magdalene often on her mouth and that the other disciples were offended (63–64; Perella 1969: 18–23).

Paul four times urges his readers to practice the "holy kiss" (not the "kiss of peace" as the NEB renders it in each of the four passages). Ethical teachers are not noted for urging people to kiss; many, following the Stoics, attained stature by showing people the value of and means whereby they could restrain expressions of ardor. Paul puts no restrictions on his command. In the earliest instance, the conclusion of 1 Thessalonians, with the request to his readers to pray for him, then adds: "Greet all the brethren *en philēmati hagiō* (with a holy kiss)" (5:26). The second half of this sentence is not to be used to narrow the

meaning of the first half (Lightfoot 1902: 90); *all* members of the community are meant here, not merely the elders or the males.

In the remaining three references in the letters to Corinth and Rome he urges them to greet "each other" with the holy kiss. Since this admonition is in the midst of a discussion of greetings to and from others, it seems evident that the reason for this imperative is to assure that the mutual greeting not be neglected. The frequency of the imperative suggests that this new practice needs encouragement.

The social context of the practice involves the form of salutations emerging among the first Christians. Each of the occurrences of the "holy kiss" appears in the context of greetings, and Paul appears to have taken leadership in establishing literary greetings; indeed, he may well have been the first to draw up lists of people to greet (*TDNT* 1:495). He was certainly the first popular ethical teacher known to instruct members of a mixed social group to greet each other with a kiss.

The addition of the adjective *hagios* clearly puts the Pauline admonition in a class by itself. It is a "sacred kiss." The imperative need not be limited to one's own gender for the protection of the holy kiss resides in what it communicates. It was not an erotic act, but an act meant to express *agapē,* as 1 Peter saw clearly. Paul is as liberated in attitudes toward women as Jesus himself had been, and in comparison with his Jewish and Hellenistic moralists, only Musonius Rufus comes close to him (Klassen 1984). In each of the instances in which heterosexual kissing is done in biblical narratives the male takes the initiative, except in Luke. Paul opens the door to a situation in which a woman will give a man unrelated to her a holy kiss in public.

Thraede concludes that the common thread in all five cases of the holy kiss is its position at the conclusion of a letter (1968–69). Four times in greetings appearing in the postscript it is embedded in variants of commands to greet people. Of the seven genuine Pauline letters, four have this command. Hofmann's suggestion "that the demand can only be followed when the church is gathered and hears the letter read … in the assembly of the congregation in worship" (Hofmann 1938: 23–24) restricts the admonition too narrowly. It is more likely that Paul saw the holy kiss as something Christians should practice wherever they met. The most frequent meeting place would be the assemblies several times a week, but it can hardly be restricted to one context, not even to those times of worship associated with the action of the Holy Spirit (Kreider 1987: 31). There is certainly no evidence in the NT that it was connected with the Eucharist; indeed that connection does not appear until Justin Martyr.

The holy kiss is to be seen in a living context of people who are building a new social reality, rather than in restrictive eucharistic or liturgical terms, laden as these terms are in any case with centuries of dispute and controversy (Selwyn 1952: 244). Before we describe it as "one of the most ancient of rituals" (Bigg *1 Peter* ICC, 198) we must try to understand how it departs from 1st-century usage and what purpose it was meant to serve.

Wayne Meeks (1974: 182) has isolated the revolutionary concept of humanity expressed in Gal 3:28 and affirmed in baptism. Paul draws the concept of holiness into the regular workaday world in which people live out the oneness which they have experienced in baptism and the church. If the Christians at Philippi and elsewhere were to be greeted as "saints" (4:21), the "holy kiss" is nothing more than the kiss which "saints" give each other when they meet. The admonitions to kiss one another serve to stress the liberty to express without inhibition to all people of whatever background, rank or gender, the ardor of *agape* in any context. The "holy kiss" is a public declaration of the affirmation of faith: "In Christ there is neither male nor female, Jew nor Greek, slave nor free" (Gal 3:28).

KITE. See ZOOLOGY (FAUNA).

KITRON (PLACE) [Heb *qiṭrôn* (קִטְרוֹן)]. A town in the territory of Zebulun from which the Israelites were unable to expel the Canaanite inhabitants (Judg 1:30). Kitron is often equated with the Kattath of Josh 19:15 (*LBHG*, 235), because both occur only in passages with Nahalal. Kallai has noted, however, that there are neither compelling textual nor linguistic reasons to equate the two towns, which he believes should be considered separately (*HGB*, 418). The statement that the Israelites could not conquer the town led Albright to argue that it must be located in a plain, where the Canaanites could be assumed to hold the military advantage (1921–22). Despite a lack of evidence to indicate that Zebulun control extended into the Plain of Acco, Albright located Kitron at Tell Qurdaneh/Tel Afeq (M.R. 160250), while Abel (*GP* 2: 423) supported the suggestion to locate Kitron at Tell el-Far (M.R. 160242). It seems unlikely that the location of Zebulunite towns should be found in the Plain of Acco. Aharoni's suggestion to seek Kitron's location along the fringes of the NW Jezreel Valley seems more plausible.

KITTIM [Heb *kittîm* (כִּתִּים)]. In the Table of Nations, the word refers to the descendants of Javan (Gen 10:4; cf. 1 Chr 1:7), but in other passages, the word refers to a place (cf. Num 24:24; Dan 11:30; 1 Macc 1:1).

The Kittim are descendants of Javan, grandson of Noah through Japheth, according to the Table of Nations (Gen 10:4; and the parallel genealogy in 1 Chr 1:7). They are associated with peoples from the region of the Aegean and the E Mediterranean. Balaam notes this maritime link in his fourth oracle (Num 24:24), where he predicts that ships from Kittim will cause difficulties for Assur, apparently the Assyrians, and Eber, possibly ancestors of the Hebrews (see Gen 10:21–25). This likely refers to the incursion of the Sea Peoples into the Levant during the 13th century B.C. Daniel 11:30 also mentions ships of the Kittim, and Jer 2:10 and Ezek 27:6 refer to its maritime setting. In the last text, their area is a source of wood used in the construction of Phoenician ships. It is also to be the source of the news of the destruction of the main Phoenician city, Tyre, according to Isa 23:1. Its distance from Phoenicia is stressed in Isa 23:12, since even flight to that far place will not provide refuge. Distance is also stressed in Jer 2:10.

The Heb term is apparently derived from the name of the town of Kition (Phoen *kt* or *kty;* Eg *ktn;* cf. Josephus *Ant* 1.28), which is near modern Larnaca on the south-central coast of Cyprus. It was a site of major importance from at least the Bronze Age (Barnett 1975: 370, 376). Some of the OT references could refer to the city itself, but the term seems to have expanded its scope to cover the entire area (Num 24:24; Isa 23:1; Ezek 27:6).

Even further expansion of the term is evident in some of the early versions of the OT and in the Apocrypha. 1 Macc 1:1 refers to Kittim as the birthplace of Alexander the Great, who is identified in that verse as "Alexander of Macedonia." The term has thus expanded its usage westward to signify the Greek peninsula. It is even further extended by the Targum Onkelos in its reading of Kittim in Num 24:24 as Rome. The Vulgate reads this verse as Italy, as it also does Ezek 27:6 and Dan 11:30. It seems that the

term might have become proverbial, referring to a location or people far distant from Israel's customary purview, much as Timbuktu is used in American English. This would well fit the context of Num 24:24, Isa 23:12, Jer 2:10, and Dan 11:30. The Syriac Peshitta also stressed the geographical distance of Kittim by reading it as China (Cathay).

In the ostraca from the late 7th century B.C. found at Arad in the Judean desert, mention is made of Kittim with Greek names (Aharoni 1968:11). This could point to the existence of Greek, if not Cypriot, soldiers in the service of the Israelite king, Josiah.

The Midrash Pesher of Habakkuk reflects the historical and socioreligious context of its Essene authors during the Roman occupation of Palestine. The Pesher interprets the Chaldeans who will oppress Israel according to the canonical Habakkuk text (1:6) as the Kittim (2.12). In the Pesher, these Kittim have dominion over an Israel which is apostate in the eyes of the separatist Qumran community. These Kittim will come from far coastlands to inflict atrocities on all peoples (3.9–11), and their power will cause universal fear (3.4). Their distant maritime homeland and their apparent domination of Israel at the time of the Pesher itself support the interpretation of the Kittim as the Romans. Some propose a Syrian identification, but this locale does not appear to be sufficiently distant to fit the context (Brownlee 1979: 70).

Kittim are also mentioned in *Jub* 24:28–29, where they seem to be an archetypical, ultimate enemy who will confront the Philistines as the result of a curse upon them. No clear understanding of their identity, however, is possible from the context.

DAVID W. BAKER

KNOWLEDGE, INTERPRETATION OF (NHC XI,*1*). The first of two Valentinian tractates occupying the first half of Nag Hammadi Codex XI, and written in the first of the two scribal hands responsible for the inscription of that codex. The language of composition is a rather standard Subakhmimic dialect of the Coptic language, bearing many resemblances to the compositional language of Codex I (the "Jung Codex"), whose inscriptional hand is quite similar to that of Codex XI, and whose contents are for the most part also Valentinian. The text bears a subscript title (and evidence of a superscript title as well) "The Interpretation of Knowledge," which, however, does not reappear elsewhere in the body of the tractate, nor is there any reference made to it elsewhere in ancient literature. The entire ms has suffered extensive damage, necessitating extensive reconstruction.

The style and structure of *Interp. Know.* is that of a homily, perhaps meant to be delivered during a service of worship. Frequently the author speaks in the second person plural, as if addressing a congregation of which he is a member. The content of the last third of *Interp. Know.* seems aimed at a community which the author regards as beset with jealousy over the issue of spiritual gifts possessed by some members but not others, such as the ability to address the congregation. Those who possess such gifts seem to regard those who do not as ignorant, while the latter regard the former with envy.

The author attacks this situation by reminding the congregation that the oneness of the divine Father and the humiliation undergone by the Savior, as well as his offer of forgiveness of sins and release from death, are the true criteria for the behavior and attitude of the members toward one another. Using Paul's metaphor of church as the body and its members, as well as the deutero-Pauline metaphor of Christ as the head of the body, the author reminds them that, in spite of the diversity of gifts, all participate in the same body and head. Indeed, all together share the same power and grace which enables some to speak and others to understand. Therefore, any demonstration of jealousy or hate is a sign of ignorance and unwillingness to receive the grace of the Savior, which ought to be gratefully received even if it is manifested through the spiritual gifts of certain of the members. As plants have roots which are entirely intermingled, but may have many fruits, all should become equal, like the roots.

Throughout *Interp. Know.*, the author illustrates these points with passages drawn from the NT gospels (especially Matthew), which are mainly used to characterize the teaching of the Savior in the first half of the tractate, and in the second half, which is mostly parenetical in content, from the Pauline letters (especially Romans and 1 Corinthians), as well as the deutero-Pauline letters Colossians and Ephesians. The passages selected are topically arranged, often conflated with one another, and generally quoted imprecisely, as if from memory.

Most importantly, although the author clearly uses the theological terminology common to most early Christian texts, extensive use is also made of Valentinian Christian terminology and theology to illustrate certain points. For example, *Interp. Know.* begins with a distinction between those who believe because of signs and wonders and appearances of the resurrected Jesus in corporeal form, and those who can envision the presence of the Savior apart from such aids, a notion common to the Gospel of John and most gnostic Christianity. Nevertheless, the author maintains the superiority of both these approaches to a total lack of faith on the part of ordinary people who inhabit the "world" ("the place of unbelief and death"). The text then goes on to discuss what appears to be the descent of Sophia (i.e., Lady Wisdom, here called "word" and "virgin") and her receipt of a "husband," apparently the Savior, his encasing the unformed offspring of Sophia into "nets of flesh" subject to the "energies," and his subsequent descent and crucifixion: "And he was crucified and died—not his own death, for he did not deserve to be killed because of the Church of mortals. They removed him so that they might keep him in the Church. And he answered her with humiliations." The text then goes on to distinguish between two teachers, a teacher of immortality, and another teacher who uses the scriptures to teach us "about our death," presumably the Demiurge or Creator God of the OT. Instead, the good teacher, the Savior, teaches about the true and only Father; he teaches what seems to be the female seed of Sophia to accept not an earthly form, but rather the form that exists with the Father. In his redemptive descent, the Savior has "become small" and taken on a "garment of condemnation" (a visible form) in order to bear his members (the seed) aloft on his "shoulders," in order that they might enter the divine world "through the rib whence you came" (meaning to undergo a separation of the spirit from the beastly passions, a play on John 19:34; cf. Clement of Alexandria *Exc. Thdot.* 42.2; 61.3). It is Sophia who provided the flesh in which the Savior appeared, and which received the descending "majesty" (Gk *megethos*) so that the Savior might enter the "one who was disgraced" (i.e., the visible Jesus) for the salvation of the seed. The author also distinguishes between the salvific activity of the visible Jesus ("the one who was reproached") from that of "the one who was redeemed": from the former, believers receive forgiveness of sins; from the latter they receive grace. Such concepts are thoroughly at home in Valentinianism, especially in such texts as *The Gospel of Truth* (NHC I,*3:* 16,31–43,24) and Clement of Alexandria's *Excerpts from Theodotus*.

Throughout *Interp. Know.* the author seems to distinguish between ordinary Christians (in Valentinian terms, the "psychics" or "called") and Christians possessed of a higher insight (in Valentinian terms, the "pneumatics" or "elect"). The former believe through visible signs and see salvation as granted by the visible Savior, while the latter already possess a natural vision of the Savior independent of the witness to his corporeal passion and resurrection and seem already to live in the aeonic Church. Nevertheless, the essential point scored by the author is that both groups have the same Savior, and although some now already experience salvation, when the "consummation" occurs (apparently when Sophia is "completed" by (i.e., joined with) the Savior, "the [psychic] seeds that remain will endure until the All is separated and takes shape" (by the union of the aeonic male angels brought by the Savior with the female [psychic] seed produced by the Savior from Sophia's passions). Thus there should be no divisiveness in the Church, since all have the same Savior, and thus all will be saved eventually.

Given these characteristics, one would tend to place *Interp. Know.* at a point after the rise of a corpus of Christian writings which included minimally one or more gospels, a collection of Pauline and deutero-Pauline letters, and the development of an exegetical technique that would be widely recognized in Valentinian circles, say around A.D. 200, but before the composition of most of the Nag Hammadi Codices, around A.D. 350.

KNOWLEDGE, TREE OF. See TREE OF KNOWLEDGE AND TREE OF LIFE.

KOA [Heb *qôaʿ* (קוֹעַ)]. People mentioned in a military setting in Ezek 23:23. It forms a pair with SHOA. It is equally unknown apart from this passage, where it is named as part of the Babylonian army. Generally it is tentatively identified with the Quti, but the lack of phonetic correspondence presents an overwhelming difficulty (Zadok 1978: 179; Hallo *RLA* 3: 719). Eichrodt (*Ezekiel* OTL, 328) recognized wordplay in the three names Pekod (punishment), Shoa (cry for help), and Koa, which he related to shrieking. Although it is unlikely that a related verb occurs in the OT (Baumgartner *HALAT* 3: 1042), one may cite the postbiblical Heb *qiʿqēaʿ* "cackle" (cf. Syr *qĕʿâ* "cry out"). Seemingly it was this desire for artistic paronomasia that caused a distortion of the name, so that the prophet could draw a passionate picture of Judah's fate.

From the 3d millennium the Quti, also known as "Guti" and so "Gutians," were established and vigorous denizens of an area E of the Tigris, on both sides of the Lower Zab, although by the 1st millennium the term tended to be geographical rather than gentilic and was used more vaguely of the Transtigridian region (Hallo *RLA* 3: 718–19). It was the Babylonian governor of the Guti, Ugbaru, who went over to the Persian king Cyrus and captured Babylon for him. See SHOA for fuller treatment.

KOHATH (PERSON) [Heb *qĕhāt* (קְהָת)*; qŏhāt* (קָהָת)]. KOHATHITE. A son of Levi, i.e., a tribe of Levites. The name, vocalized in some Hebrew mss *qŏhāt* but in most *qĕhāt,* is of uncertain etymology. It seems cognate to the Ugaritic name *ʾAqht* and syllabic *A-qá-tum* (Nougayrol 1965: 34); perhaps it is related to the Phoenician name rendered in Egyptian as *ıÙ3wmqht3* (Albright 1928: 245) and to the late Hebrew name *to (w)qhat* (2 Chr 34:22). The root might be *qht,* but it would be otherwise unknown in Semitic. The Hebrew root *qhy,* "to be blunt," is a possible source, but the sense would be odd for a personal name. Since hollow roots are known to replace the middle radical with *he* in Aramaic (e.g., Aram *rhṭ,* Heb *rwṣ*), we cannot rule out the roots *qwt* and *qwy,* which in Arabic connote "sustenance" and "power." Most likely, however, the root is *yqh,* for the loss of an initial *yod* and the addition of a feminine suffix would form the infinitive construct of such roots. For example, the root *yld* generates *ledet, lat* (< **lidt*), and *lēdâ* (< **lidat*), or the root *yʿd* both *ʿēt* (< **ʿidt*) and *ʿēdâ* (< **ʿidat*). Similarly, a root *yqh* might have had archaic infinitives **qiht* and **qihat.* The former would ordinarily have become **qaht* and the latter **qēhâ.* But the form **qiht* might also have, irregularly, become *qĕhat;* note that *dĕbaš* and *šĕʾār* probably come from **dibš* and **šíʾr.* Another possibility is that by Philippi's "law" **qiht* > **qaht,* which came to be pronounced **qāt;* in this case *qĕhāt* would be a development analogous to *bĕʾēr* < **bēr.* By any explanation the vocalization *qĕhāt* is to be preferred to *qŏhāt;* note that the LXX has *Kaath.* At any rate the root *yqh* also appears in Hebrew in the construct noun *yqht* (Gen 49:10); some discern another example in Prov 30:17, but see Thomas (1941) and Greenfield (1958: 212ff.). The root *yqh* seems to mean "to obey" or "command," for such are the senses of *wqh* in Arabic and Old South Arabic; the latter even has a noun *qht* meaning "command" or "obedience" (*DOSA,* 144–45). Akk *waqû,* "await," might

also be a cognate, but it could also be a metathetic variant of *qu››u* (Heb *qiwwâ*) with the same meaning. If *yqh* is the root of the names Kohath, Tokhath, and Aqhat, they probably mean "obedience."

We know nothing of Kohath the son of Levi save his lifespan of 133 years (Exod 6:18). But he is in fact the personification of a clan, not an historical individual. The rest of our discussion will hence be devoted to the clan of Kohath.

The three sons of Levi according to the Zadokite genealogies were Gershon, Kohath, and Merari (Gen 46:11; Exod 6:16; Num 3:17; 26:57; 1 Chr 5:27—Eng 6:2; 6:1—Eng6:16; 23:6). Ordinarily this order would imply that the Kohathites were of secondary rank, yet the Zadokite priests of Jerusalem claimed descent from Aaron, the eldest son of Amram, the eldest son of Kohath. Furthermore, their duties in the desert and the location of their cities show that Kohath was the most important levitical tribe during the monarchy, and so they precede the Gershonites, as in Num 4:24–45; 1 Chr 15:5–7; 2 Chr 29:12. One supposes that the genealogy crystallized in a day before the Kohathite ascendency, when either the Aaronides had not yet gained supremacy or had not affiliated themselves with Kohath. Of these possibilities the former is more likely; otherwise, why would the Aaronides revise their place in the genealogy and not reverse the order Gershon, Kohath?

According to priestly tradition, the Kohathites of the desert period, except for the house of Amram (Num 3:38), camped on the S side of the Tabernacle (Num 3:29). Their duty was to transport by hand the most sacred paraphernalia—ark, table, candelabra, altars, etc. (Num 3:31; 4:15–20; 7:9)—once they had been safely wrapped by the Aaronide priests (Num 4:5–15, 17–20). At that time the clan supposedly numbered 8,600 males more than one month old (Num 3:28), or 2,750 between the ages of 30 and 50, the career ages of cultic personnel (Num 4:36). It is believed that these census figures originate in later Israelite history.

Similarly, the assignment to the tribe of Levi of 48 cities, ascribed to the age of Joshua by the Bible, probably derives from the 8th century (Peterson 1977; Boling *Joshua* AB, 492–97). Be that as it may, to the various subclans of Kohath the following are assigned: to the house of Aaron, thirteen cities in the S heartland of Judah, Simeon, and Benjamin, including the Judean capital Hebron and the cult city Gibeon (Josh 21:4, 10–19; 1 Chr 6:39–45—Eng vv 54–60); to the rest of Kohath, ten towns in Ephraim, Dan, and Manasseh, including the old national center Shechem (Josh 21:5, 20–26; 1 Chr 6:46, 51–55—Eng vv 61, 66–70). In other words, as might be expected, the Aaronides were based in the S, and the Kohathites as a whole were ensconced in the center of the country.

The Kohathites periodically appear in the Chronicler's survey of history. These materials, largely genealogical, are often of dubious authenticity, as the same individuals may appear as contemporaries of both David and Hezekiah, or Josiah and Ezra. The following is a report of what Chronicles says, but much of it may not reflect preexilic tradition.

First, Samuel is supposed to be a member of the house of Korah, according to the two genealogies in 1 Chr 6:7–13, 18–23. This may well be accurate, for 1 Sam 1:1 says only that Elkanah was an Ephraimite, i.e., that his family came from the area of Bethlehem, Kiriath-jearim, and Gedor in Judah. Hence they might be either Judahites or S Levites that migrated to the N. If the Chronicler is correct, the house of Kohath looms all the larger in Israelite history: besides the priests of Jerusalem, the prophet Samuel belongs in its ranks.

The second of the above-mentioned genealogies takes us into David's time, when Heman the singer, Samuel's grandson, serves in David's tent (1 Chr 6:18—Eng v 33). 1 Chr 15:5–10 says that one Uriel leads 120 Kohathite priests. This passage follows a different schema from the genealogical passages, inasmuch as Kohath, Merari, Gershon, Elizaphan, Hebron, and Uzziel are accorded equal status (v 11). 1 Chr 24:20–25 lists the subdivisions of the Kohathite Levites (to be distinguished from the Aaronide Amramites, the priests); note that Hebron must be restored to the beginning of v 23. The four Kohathite families are also included among the Levites keeping the sacred treasury in David's time (1 Chr 26:23).

Under Jehoshaphat we hear of Kohathites and Korahites together singing Yahweh's praises (2 Chr 20:19); here it does not seem that Korah is a family of Kohath as in the genealogies.

In Hezekiah's time the leader of the Kohathites is said to have been Joel the son of Azariah (2 Chr 29:12). Here Kohath, Merari, Gershon, Elizaphan, Heman, and Jeduthun seem to be of equal status (vv 12–14).

Josiah employs Zechariah and Mushullam of the house of Kohath to make music during his reconstruction of the Temple (2 Chr 34:12). In fact these men are probably Levites of Ezra's day (Ezra 8:16; Neh 8:4) retrojected into the 7th century.

Finally, in the restoration Kohathites are in charge of the Sabbath bread (1 Chr 9:32). However, the more reliable sources in Ezra and Nehemiah do not refer to the house of Kohath.

The genealogies ascribe to Kohath four sons; i.e., the Kohathites consisted of four sub-clans: Amram, Yizhar, Hebron, and Uzziel (Exod 6:18; Num 3:19, 27; 1 Chr 5:28—Eng 6:2; 6:3—Eng v 18; 23:12). 1 Chr 6:7—Eng v 22 lists one Amminadab as a sub-clan of Kohath, but this seems to be an error; we expect instead Izhar (the reading of Greek Codex Alexandrinus), elsewhere the father of Korah (Exod 6:21; Num 16:1; 1 Chr 6:22–23—Eng vv 37–38). The error could have arisen from the graphic similarity of Amram and Amminadab (admittedly slight), or perhaps Amminadab is an intrusion from the genealogy of Uzziel (1 Chr 15:10). Otherwise the sources are unanimous as to the composition of the house of Kohath.

The major ambiguities concerning the house of Kohath are its relation to the house of Amram and the relation of the house of Amram to the priesthood. The problem is analogous to the relation of the priests and Levites: at times they are opposed groups, at times the priests are the chief Levites. And just as some believed that all Levites were entitled to priesthood (see LEVITES AND PRIESTS), it seems that the Aaronides contested with other Kohathites the right to sacrifice to Yahweh, for Korah is of the house of Kohath (Num 16:1). In other words, the term "Kohathite," like "Levites," has both an inclusive and an exclusive sense. When used exclusively these terms refer only to nonpriestly members of the group in question. Hence while Elizaphan, the son of Uzziel, is the leader of the Kohathites in the desert (Num 3:30; note the prominence of Elizaphan in 1 Chr 15:8 and 2 Chr 29:13) the supreme leader of all the Levites is Eleazar, the son of Aaron. In Numbers 4, while the Kohathites are allowed to carry the holy paraphernalia, they must first be wrapped by the Aaronides. Joshua 21 and 1 Chronicles 6, in the list of levitical cities, take care to distinguish the Aaronides from "the rest of the sons of Kohath." 1 Chr 23:13–14 makes it clear that while the Aaronide half of the house of Amram is set apart by Yahweh to be his priests, the Mosaic half is reckoned to the Levites.

It may be that the figure of Amram was a creation of the genealogist to link Moses and Aaron; in the older, Elohistic source, it is unlikely that they are considered actual brothers, but rather fellow members of the tribe Levi (Exod 4:14). Thus it is probable that in older traditions Amram was not the father of *both* Moses and Aaron.

Since all our genealogical information on the Levites comes from the Aaronide priests of Jerusalem (note that Exod 2:1 does not even tell us the name of Moses' parents), we do not know how others organized the levitic clans. Surely there were differences, since location in a genealogy is a reflection of social status. As noted above, that Kohath is the second son of Levi is thus a telling admission that another group of Levites, the Gershonites, made a widely accepted claim to preeminence among the clans of Levi.

WILLIAM H. PROPP

KOLA (PLACE) [Gk *Kōla* (Κωλα)]. A site mentioned in the book of Judith, otherwise unknown (Jdt 15:4). It is possible that the site should be equated with Kona (Jdt 4:4), but this identification is unclear. See KONA. According to the passage in which it appears, Kola must be fairly close to Bethuliah. See BETHULIA. The text gives no other clues as to its location. The site is sometimes equated with Holon (Josh 15:21; 21:15), a village in the hill country of Judah, usually located SW of Hebron. See HOLON. This location is probably incorrect for Kola, since Bethuliah is in the Samaritan hill country. Given the genre of the book of Judith, it is probable that the name is fictitious.

SIDNIE ANN WHITE

KOLAIAH (PERSON) [Heb *qôlāyâ* (קוֹלָיָה)]. **1.** The father of Pedaiah and an ancestor of Sallu, a Benjaminite and provincial leader who agreed to settle in Jerusalem (Neh 11:7). Although Sallu's line is referred to in both the list in Nehemiah 11 and 1 Chronicles 9 (cf. v 7), Kolaiah is not mentioned. This, like other differences in the two lists, suggest that there is no direct literary relationship between the two lists (contra Kellermann 1966: 208–27 and Mowinckel 1964: 146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (*HSAT* 2: 42–43; Brockington *Ezra, Nehemiah and Esther* Century Bible, 187; cf. Myers *Ezra-Nehemiah* AB, 185). In any event, the presence of Kolaiah in the list provides no further evidence of use in resolving the problem. The name may mean "voice of Yahweh" (cf. *IDB* 3: 49). If, however, it is an alternative pronunciation for the name Kolaiah, which is found in the LXX of Ezr 10:23, then it may be more difficult to be certain of the name's significance (Brockington *Ezra, Nehemiah and Esther* Century Bible, 189). The latter may mean "accepted" or even "dwarf" (Brockington Ibid., 115).

2. Father of the false prophet Ahab, who is mentioned in Jer 29:21.

KOM, KHIRBET EL- (M.R. 146104). A strategically important fortified town-site in the Judean hill country, W. of Hebron, situated at the head of the small Wâdī eṣ-Ṣaffar near the Wâdī Qubeibeh (Naḥal Lachish), one of the main access routes from the coastal plain to Hebron and the central hill country. From the standpoint of economic and political geography it is associated with the Shephelah (Dorsey 1980: 189; Rainey 1980). Lachish (11 km to the W-NW) is plainly visible from Kh. el-Kom.

ARCHAEOLOGY

A. Identification

The Arabic name means "ruins of the pile/heap," although a derivation from *qawm,* "fellow tribesmen, kindred: tribe, race, people, nation" is not impossible. The modern names of the site (an alternative name of Tell ʾAbyad, referring to the white color of the local Senonian chalk outcroppings, was also offered by local informants) give no clue to its ancient name. A likely candidate is Makkedah (Josh 10:10–29; 12:16; 15:41), described by Eusebius as lying 8 Roman miles to the E of Eleutheropolis (Beit Jibrîn; *Onomast.* 126.22–25); the name may be preserved in transmuted form by Kh. Beit Maqdûm, less than 1 km away (Holzinger 1901: 39, et alia, cited in Dorsey 1980: 188; cf. also Rainey 1980: 196–97). This latter site is, indeed, very close to 8 Roman miles SE of Beit Jibrîn.

Survey work in the area indicates that the earliest occupation for Kh. Beit Maqdûm is Iron IIB, but the bulk of the pottery stems from the Byzantine period and later (Kochavi 1972: 60, 83–84, Site 136, listed as Kh. Beit Maqdûs; cf. Dorsey 1980: 190 n. 7), which suggests a possible shift of the name from a defunct site (Kh. el-Kôm) to a nearby living one in late antiquity. A further point to support the identity of Kh. el-Kom with Makkedah is the fact that the region is characterized by karstic caverns, fitting the character of Makkedah as narrated in Josh 10:16–27, in which five Canaanite kings initially found refuge,

and where they eventually were buried. Against the identification is the fact that, despite extensive survey and excavation, Kh. el-Kôm has yielded no trace of LB occupation (cf. Josh 12:16), nor any trace of Iron Age I. Since all but one (Josh 15:37–41) of the biblical traditions involving Makkedah are set in the Conquest period, the lack of LB/Iron Age I remains poses a serious problem for the identification, or one must be prepared to ignore much of what the book of Joshua says about the S Conquest tradition; the tradition may instead reflect relationships as understood in later times (the list of "the kings of the land" cited in Josh 12:9–24 also includes the king of Arad, which was similarly unoccupied for more than a millennium prior to its Iron I resettlement).

The proposed identification of Kh. el-Kôm with biblical Shaphir (Mic 1:1), based upon the Arabic Wâdī eṣ 3Ṣaffar (Abel *GP* 2: 447–48), is more tenuous, since, as Dorsey points out (1980: 192), biblical *š* should become Arabic *s*, or, rarely, *š,* but not *ṣ*.

B. Ancient Significance

Kh. el-Kôm's significance in the EB II–IV has yet to be worked out. However, during the Iron Age II, probably beginning already in the late 10th/early 9th century (Holladay 1970: 176–77), the strongly fortified site probably formed part of the overall defensive network guarding the approaches to Hebron and thence to Jerusalem. If the identification with Makkedah is accepted, Josh 15:37–41 places the site in the S administrative district of the Shephelah (Rainey 1980: 194–97). Olive presses (not *in situ*) found at Kh. el-Kôm indicate one important aspect of the Iron II site's economy, linking it in this respect to nearby Tell Beit Mirsim and the Philistine site of Ekron (cf. Gitin and Dothan 1987: 206–21). The site was deserted or, at best, lightly occupied during the Persian period, but was reoccupied and refortified during the Hellenistic Period (Holladay 1970; 1971)—possibly as briefly as from ca. 332 or 301 B.C. to 276 B.C. (Geraty 1983: 546). During this period, Kh. el-Kôm seems to have been a pacifying element of the Greek central administration, projecting government power into an area of Idumean strength (Geraty 1983: 546; cf. Amiran 1953: 68–78). Personal names witnessed in the Kh. el-Kôm ostraca (below) include those of Arabic, Aramean, Edomite, Egyptian, Greek, Jewish, and Nabatean origin (Geraty 1983: 545–46), testifying to a polyglot, multicultural environment suitable to a quasi-frontier setting, and probably implying trade linkages with more distant areas.

Although at least two strong wells of modest antiquity are located within a 1-km radius, the Iron II town depended heavily upon cisterns carved in the soft chalky rock, which does not require lime plaster linings. Large underground stables/sheepfolds at the site and elsewhere in the vicinity seem to derive from the Hellenistic period and may indicate a major pastoralist orientation during that period. It is most likely, however, that some or all of them were originally large cisterns. In that case, irrigation gardening may have played a role in the site's subsistence strategy. Byzantine surface remains occur in the region, particularly at Kh. Beit Maqdum, but neither the Israeli survey, the earlier salvage work, nor the 1971 Canadian excavations found any evidence of occupation of that period at Kh. el-Kôm, thus reducing the probability that the outsized cisterns/stables were of Byzantine origin.

C. Significance to Modern Scholarship

Apart from its general economic and strategic implications, and pending publication of the pottery and small finds, Kh. el-Kôm's chief importance to modern scholarship derives from: (1) inscriptions discovered prior to and during the course of salvage work in the Iron Age II cemetery (Dever 1970); (2) a collection of ostraca from the Hellenistic village (Geraty 1983); and (3) the publication to two of the more than 100 Iron II tombs discovered by tomb robbers at the site (Dever 1970).

The most important Israelite inscriptions are from tombs. Inscriptions 1 and 2, respectively on the left of the doorway and over the doorway to Chamber 3 of Tomb 1, read: "Belonging to ʿOphai, the son of Nethanyahu, (is) this tomb chamber" (Dever 1970: 151–56); and "belonging to ʿUzza, son [or daughter] of Nethanyahu" (Dever 1970: 156–58; Barag 1970: 216–18). Inscription 3, from Tomb 1, is the second longest funerary inscription (after the Royal Steward's Tomb inscription; Avigad 1953) yet discovered from the OT period. Together with the accompanying deeply incised and strangely inverted "hand of Fatimah" motif, the inscription constitutes one of the most important contemporary literary testimonies to syncretistic or heterodox Judean religious practices (Dever 1984: 22, 30–31; Zevit 1984; Holladay 1987:

275–80; see also PALESTINIAN FUNERARY INSCRIPTIONS). This evidence derives, minimally, from the last years of the Judean monarchy, or, maximally, from the period stretching from the late 8th century to the early 6th century. Although most of the inscription is clear, a detailed reading of the inscription is difficult (Dever 1970: 159–69). Following, for the most part, Z. Zevit (1984: 43–46), it reads:

[Belonging to] Uryahu, the prosperous, his inscription.
Blessed by Uryahu by YHWH
and from his enemies, Oh Asherata, save him.
By Abiyahu.
[?]?? and to Asherata
[?] A[she]rata

Other Judean inscriptions were purchased in the antiquities market and have been traced to the site. These include a typical 8th–7th century Judean wine decanter with *lyḥml,* "belonging to Yaḥmu/ol," deeply incised upon the shoulder; a late Judean folded-rim bowl with *ʾl*, "El" or "God," incised on the interior, just below the rim; and a group of 11 inscribed late Judean weights (Dever 1970: 169–87). An internally burnished saucer of uncertain origin bearing the inscription *lšl* on its base has also provisionally been linked to Kh. el-Kôm (Lemaire 1977).

The Hellenistic ostraca, collectively termed the "Khirbet el-Kôm Ostraca," consist of two ostraca from fill operations connected with the Hellenistic rebuilding of the town's defenses, plus a small household archive of six ostraca which includes a wholly Greek ostracon and the first bilingual Aramaic (Edomite?)-Greek ostracon yet found in Palestine (Geraty 1975; 1981; 1983).

The bilingual docket records a loan made by one *Qôs-yadaʿ,* an Edomite (or, at this time, Idumean) *kapēlos,* or, possibly, "publican," to the Greek *Nikēratos* (for a varying interpretation, cf. Skaist 1978). Of special significance is the exact dating of the transaction: "the 12th of *Tammuz* (*Panēmos* in the Greek section), year 6." The year date probably refers to the 6th year of Ptolemy II Philadelphus, i.e., 277 B.C. (Geraty 1983: 545). Found lying on the floor of an abandoned Hellenistic house, together with numerous loom weights, it probably comes from the final years of the site's occupation. Other data, mostly onomastic, gleaned from the ostraca have already been cited above.

The multichambered Iron Age II tombs, particularly Tomb I, with its carefully carved body recesses, are valuable extensions to the S tomb typology already known from Tell en-Naṣbeh, the environs of Jerusalem, Beth-shemesh, Lachish, Kh. Beit Lei, Dhahriyeh *(Tell ez-Zaherîyeh),* and Tel Ḥalif.

D. History of Excavation and Site History

Initial salvage work at the site was conducted in 1967 by W. G. Dever, after antiquities appearing on the market earlier in the year had been traced back to Kh. el-Kôm. Further salvage excavations, which sought to provide firm archaeological contexts for the Iron II epigraphic, funerary, and ceramic remains discovered by Dever (1970), were conducted in 1971 by J. S. Holladay, Jr., accompanied by J. Strange (Holladay 1970; 1971). The results of the three major excavation areas, all on the perimeter of the tell, harmonize well with the archaeological profiles of other Shephelah sites such as Tell ʿAitun and Tell Beit Mirsim.

Field 1 was in an olive orchard just inside the easternmost walled area, where EB II–III levels were discovered within 15 cm of the present surface. This area also included Hellenistic and Iron II intrusions, including a one-room (wine?) cellar and an early bottle-shaped cistern, in which was a good collection of (provisionally dated) 9th-century pottery. The Iron II town wall proved to have been set in an open-sided trench dug to bedrock and appears to have been the first fortification wall at the site.

Field 2 was to the S, beneath a threshing floor. This area yielded Hellenistic remains (courtyards and casemate rooms butted the defensive wall system) beneath which were late Iron Age II remains; EB and Chalcolithic materials were then found on the underlying rock surface. Some of the series of Judean weights published by Dever purportedly came from an area only 20 or 30 m farther W.

Field 3 lay some 200 m farther E, in the area of the town gate. A two-entry (two-roomed with benches) gate of the late Iron Age II period succeeded an earlier, probably originally four-roomed, gateway of the

early Iron Age II period. In its last Iron II phase, Kh. el-Kôm was fortified with a solid "offsets"-style wall not entirely dissimilar to the "offsets" wall at Tell Arad or Tell en-Naṣbeh. The Iron II gate was rebuilt and refurbished at the beginning of the Hellenistic occupation of the site. This town-site, though substantial and well built, was short lived, probably beginning soon after either 332 B.C. or 301 B.C., and was possibly abandoned as early as 276 B.C. (Geraty 1983: 546). The site remained deserted until its reoccupation during the post–World War I *pax britannica* (Amiran 1953: 68–78, 205–09).

JOHN S. HOLLADAY, JR.

OSTRACA

Khirbet el-Kôm is the modern Arabic name given to a village that overlies an ancient site that goes back to the EB Age. It is situated almost midway between Hebron and Lachish, overlooking the Shephelah of S Palestine (M.R. 146104; also known as Khirbet el-Qôm). It first came to the attention of archaeologists when large-scale robbing of antiquities occurred after the outbreak of the Arab-Israeli hostilities in 1967. Late that year, W. G. Dever undertook a salvage excavation of some Iron Age tombs in the vicinity and published the Iron Age epigraphic finds (1969–70). In order to set these important Hebrew inscriptions in their stratigraphic context before further robbing, and before new building in the modern village precluded excavation of the occupational levels of the ancient town proper, John S. Holladay, Jr., undertook new salvage work in 1971 (1971: 175–77), choosing three widely separated fields on the W, S, and E edges of the village for detailed stratigraphic investigation. Eight ostraca came from the latter two, Field II (S) consisting primarily of a Hellenistic structure rebuilt on the foundations of an Iron Age structure against the city wall, and Field III (E) a Hellenistic rebuilding of an Iron Age city gate.

Ostraca numbers 1–6 came from a single room in the final phase of a Hellenistic structure rebuilt on Iron Age foundations against the city wall (Field II), and appear to be records from the archives of Qos-yada‹ bin Hanna›, an Idumean moneylender (called a *kapēlos* in one of the inscriptions). The locus from which the first four ostraca came was delimited laterally by the four walls of the structure's "west room," entered from another room to the E. To judge from the support pillar or pedestal (built up of large superimposed stones) in the center of this room, it had probably been roofed, perhaps even with a second floor. When this superstructure collapsed, it filled the (approximately) 2.5-m-square room with debris to a depth of 80 cm. The lower half of this detritus was the locus from which ostraca numbers 5 and 6 came, the change in locus numbers having been made when it had become certain that excavation of the room's last living surface had begun. The field reading of the sherds from the upper locus included undistinguished, EB, Iron Age II, Persian, and Hellenistic, though the call for the sherds from the lower locus and especially the floor itself was confined to undistinguished and Hellenistic. In addition to these

sherds, many of which yielded restorable vessels, bone and various types of organic material were found, along with a chalkstone loomweight, ten unbaked clay loomweights, two whetstones, a worked bone instrument, fragments of a large chalkstone basin, a fragment of light greenish-blue faience, and the following iron objects: nail, spatula (?), point, and tanged blade.

The script of ostraca numbers 1, 2, 4, and 5 is Aramaic, though the language is ostensibly Edomite. The script and language of number 6 is Greek. Perhaps of greatest interest is number 3, a 9-line bilingual (Edomite and Greek) which contains a double date in a 6th year of an unspecified king or era. The combined evidence of Aramaic and Greek paleography along with other chronological factors suggest the 6th year of Ptolemy II Philadelphus: 277 B.C. Thus these ostraca provide the first firm 3d-century peg for the Palestinian Aramaic and Greek scripts—a notable contribution to LXX text criticism and the palaeographical study of the manuscripts from Qumran.

Ostraca numbers 7 and 8 came from foundation trenches of the initial Hellenistic rebuild of the Iron Age city gate in Field III. Though the inscriptions are poorly preserved, they are clearly in an Aramaic script of the late 4th century B.C.

These ostraca are among the few primary sources for the history of Palestine, its life, language, and onomasticon in the late 4th and early 3d centuries. Judging from the apparent language and name of the *kapēlos,* we have what is our first primary evidence of Edomite (or by this time, Idumaean) presence in the area. Whatever his exact profession as a *kapēlos,* it appears to have brought Qos-yada‹ into contact with Nabateans, Arameans, Jews (?), Greeks, Arabs, and Egyptians (to judge from the personal names mentioned in the ostraca). Though the script of the ostraca appears to be similar, if not identical, with Aramaic, their locale, the Qos name of the *kapēlos,* the use of *bn* rather than *br,* and *Hiph‹il* rather than *›Aph‹el,* suggest a strong Canaanite influence if not a full-blown Edomite dialect. Ostraca numbers 3 and 6 may be the earliest extant indigenous Greek inscriptions to be found in Palestine. The evidence of the corpus must be considered when defining the Greek term *kapēlos.* Though normally translated something like "retailer" or "peddler," perhaps its meaning must now include in its scope the profession implied in the ostraca, i.e., "moneylender." This may have a bearing on the usage of the word in Isa 1:22 (LXX) and 2 Cor 2:17.

LAWRENCE T. GERATY

KONA (PLACE) [Gk *Kōna* (Κωνα)]. A site mentioned in the book of Judith which is otherwise unknown (Jdt 4:4). Kona is one of the towns which prepares to meet the onslaught of Holofernes as he comes down from the N. It is located, according to the author of Judith, N of Jerusalem. The name was early corrupted in certain Greek manuscripts to "villages" (Gk *kōmas*), indicating that the name was unfamiliar from a very early period (see also Old Latin^{S}, Syriac). Stummer (1947: 16) makes a tentative identification with Kamon, the village in Gilead of the judge Jair (Judg 10:5). See KAMON. He identifies this with modern Qamm, 3 miles N of Taiyibeh (M.R. 218221). Aharoni and Avi-Yonah (*MBA*) also indicate this as a possibility, as well as Camus, according to Polybius one of the cities conquered by Antiochus III (Polyb. 5.54–56). Camus is located NE of Pella. These identifications are possible only if one accepts the equation Kona equals Kamon. Given the genre of the book of Judith, it is entirely possible that the name is fictitious.

KORAH (PERSON) [Heb *qōraḥ* (קֹרַח)]. KORAHITES. Names based on *qrḥ,* "bald, bald head," are frequently attested in Semitic languages. In addition to several individuals named Korah, there is also the biblical Kareah, Qrḥ in Ugaritic and Arad Ostracon 49:2; Akkadian *Qar-ḫa-a* and *Qa-ri-ḫi;* Thamudic Qrḥ; Nabatean Qrḥ, Qrḥw, Qrḥh; and Arabic Qāriḥ, Qarāḥ, etc.

1. Son of Esau and Oholibamah (Gen 36:5, 14, 18; 1 Chr 1:35). However, Gen 36:16 lists him as a son of Eliphaz, and therefore Esau's grandson. He is credited with being one of the "tribal chiefs" (Heb *allûpîm*) of Edom, and as such his name probably represents a tribe or clan within the Esauite/Edomite tribal system.

ULRICH HÜBNER

2. One of the principal families involved in leadership in the Jerusalem temple. The earliest attestation to the role of the Korahites is perhaps to be seen in 2 Chr 20:19, where the Korahites are listed alongside the Kohathites as leading the people in praise. Though it is generally assumed that the temple arrangements as projected by Chronicles are postexilic, this reference must date to a time prior to the development of the formal postexilic levitical genealogy. Here the Korahites and the Kohathites are parallel and equal participants in the cultic leadership, a state that conflicts with the later tradition which establishes Kohath as one of the primary eponyms of levitical leadership and the Korahites as but one sub-subgroup of the Kohathites.

The note in Num 26:58 likewise reflects a relatively early tradition, listing the family of Korah as one of five major levitical families. Already, however, we most likely see a development in which the levitical families of Gershon, Kohath, and Merari have established themselves as dominant phratries, and the major families—Libni, Hebron, Mahli, Mushi, and Korah—are understood to be the major representatives of these phratries. According to the genealogy of Exodus 6, Libni is the son of Gershom, Hebron of Kohath, Mahli and Mushi of Merari, and Korah the grandson of Kohath.

The early importance of the Korahites in Israelite worship is also attested to by the numerous psalms derived from the "Korahite Psalter" (Psalms 42, 44–49, 84–85, 87–88). The "prophesying" of an Asaphite Levite (2 Chr 20:14–17), along with the connection of both Korah and Asaph to cultic psalmody, has led many to make a connection between preexilic cultic prophecy and the development of the postexilic temple offices.

The early prominence of the Korahites in the postexilic (and possibly already preexilic) temple apparently faded during subsequent generations. Although there is genealogical instability, the dominant tradition establishes them as a sub-subgroup of the Kohathites. The various genealogies are as follows:

Exod 6:18 presents the shortest genealogy:

Kohath → Izhar → Korah, with the sons of Korah listed horizontally as Assir, Elkanah, and Abiasaph

1 Chr 6:22–24 extends the horizontal dimension vertically:

Kohath → Amminadab → Korah → Assir → Elkanah → Ebiasaph → Assir → Tahath → Uriel → Uzziah → Shaul

1Chr 6:31 presents an even lengthier vertical genealogy:

Kohath → Izhar → Korah → Ebiasaph → Assir→ Tahath → Zephaniah → Azariah → Joel → Elkanah → Amasai → Mahath → Elkanah → Zuph → Toah → Eliel → Jeroham → Elkanah → Samuel → Joel → Heman the Singer

In all three genealogies Korah is listed in third position in the Kohathite phratry. Although some would attempt to locate Korah's origins outside of the tribe of Levi, and although these genealogies obviously attest to variation in the tradition, noticably with regard to the name of Korah's father and the horizontal vs. vertical treatment of his "sons," there is little reason to deny him levitical status.

There is significant evidence, however, that the status of the Kohathites was diminished in the later postexilic period. In 1 Chr 23:12–20 a genealogy of the Kohathites is once again presented, but now with Korah conspicuously absent (v 18; cf. 24:22).

This reduction of the Kohathites to oblivion is likely the subject of the polemic underlying the major story of Korah and his followers in Numbers 16. It is generally acknowledged that the narrative in

Numbers 16 is a composite of at least two stories: an Epic tradition (JE) concerning the civil/political conflict between Dathan and Abiram, in which they charge Moses with "making himself a prince" over the people (v 13); and a priestly tradition concerning the cultic/religious conflict between the Korahites and Aaron over the exclusive claims of Aaron to the priesthood (v 3). Some would further seek to distinguish between an early priestly narrative and a later priestly editing of the entire complex. What is clear, however, is that in this priestly narrative the Korahites have dared to challenge the exclusivity of the Aaronide claims to the priesthood and, as a result of a trial by ordeal, are consumed by the very fire which they desire to usurp (v 35). Although some have sought to place the origins of the story of Korah in the period of the early monarchy, this priestly narrative is certainly to be understood as attesting to the intense struggle for the control of temple prerogatives in the postexilic community. It is generally assumed that the Levites had full priestly authority in preexilic Israel, but that with Deuteronomy and Josiah's reform movement there ensued a tremendous power struggle which was eventually won by the Zadokite priests. The postexilic "settlement" may have broadened this to include some non-Zadokites, who were now subsumed, along with the Zadokites themselves, into a newly contrived "Aaronide" genealogy. Whether the Korahites were among former groups of levitical priestly groups who went into exile or whether they were a prominent levitical group which functioned in Palestine during the exile (so Budd *Numbers* WBC, 190) is unclear. What is clear, however, is that the Korahites were among the major losers in this power struggle. The genealogy in Exod 6:16–25 suggests that the tradition located the Korahites as the "cousins" of the Aaronides, i.e., they were very close to the center of power—but not close enough. The social struggle between the Korahites and the Aaronides concluded with the Aaronides consolidating their power and the Korahites reduced further and further to the periphery. In spite of the obviously contrived note in Num 26:11, the clear message of the priestly propaganda in Numbers 16 is that the Korahites were on the verge of social extinction, reduced to gatekeepers (1 Chr 9:19; 26:1, 19) and temple bakers (1 Chr 9:31). Any other Levites who would encroach upon Aaronide prerogatives would meet the same fate. They have the altar covering, hammered out of the 250 censers of Korah's followers, as a witness.

3. A member in the genealogy of Caleb, according to 1 Chr 2:43 (Caleb ((ρ)) Mesha ((ρ)) Hebron ((ρ)) Korah; but contrast 2:18–19). Given the number of geographical place names in the genealogies of 1 Chronicles 2, the name Korah might likewise be taken as the name of a city. Though the tradition clearly associates Caleb with the city of Hebron, it is not necessary to assume that Korah must have been in the same environs. In fact, the genealogies of 1 Chr 2:18–24 suggest that a genealogical relationship was thought to exist between Judah and Gilead. Given such ambiguity, it is possible that the note in 1 Chr 12:1–7 might be accurate. There the town of Korah is associated with the tribe of Benjamin. According to this text, it is from this town, as from the other Benjaminite towns of Gibeah, Anathoth, Gibeon, and Gederah, that several of Saul's kinfolk defected to David's ranks at Ziklag. However, this tradition has no attestation in the Deuteronomistic History, and may reflect a late and spurious tradition.

RODNEY R. HUTTON

KORE (PERSON) [Heb *qôrē*ʾ (קֹרֵא)]. Two individuals in the Hebrew Bible bear this name. The name Kore, "partridge" (possibly onomatopoeic from the cooing of the bird, or else to be translated, "caller, calling-bird," from the Heb root *qārā*ʾ, "to call"), probably belongs to the category of animal names used as nicknames (cf. *IPN*, 229–30; McCullough *IDB* 3: 661).

1. A Levite of the house of Korah, ancestor of the temple gatekeepers Meshelemiah (1 Chr 26:1) and Shallum (9:19). Although both Meshelemiah and Shallum are placed in the time of David (cf. 25:1; also cf. Meshelemiah, where it is argued that both names probably refer to the same person), another (?) Shallum (apparently the one mentioned in 9:17, as well as in Ezra 2:42 = Neh 7:45) is probably to be

dated to after the Babylonian Exile, over 300 years later (cf. also 1 Chr 9:1–2). One may note at this juncture the remarkable blending of at least four different epochs of Israelite and Judahite history to be found in 1 Chronicles 9: the wilderness period (vv 19–20), the time of Samuel (v 22), the time of David (vv 21–22), and the postexilic time of composition of the list (vv 2, 17). It should be noted in passing that the so-called "Chronicler," despite the title which biblical scholarship has commonly assigned to the author of this work, is evidently far more concerned with emphasizing the levitical origins of the various cultic functionaries of the postexilic period, than he is with chronological exactitude (cf. Braun *1 Chronicles* WBC 136–37).

2. A Levite, son of Imnah, keeper of the east gate in the days of King Hezekiah (2 Chr 31:14). Possibly he was named after the Davidic Kore (see above), also a Levite, whose son Shallum likewise was stationed at the east gate (1 Chr 9:17–19; but see above concerning v 17), a position of some prominence (Williamson *1 and 2 Chronicles* NCBC, 376). For an analogous duplication of levitic names in the 10th and the 8th centuries, see ABDI. Evidently, the 8th-century Kore was a man of great trust, for he was given charge not only of the freewill offerings presented to the temple (for the priests stationed in Jerusalem), but also the distribution of the priestly and levitical portions in the outlying "cities of the priests" (2 Chr 31:15; cf. 1 Chr 6:39–45—Eng 6:54–60; also Dillard *2 Chronicles* WBC, 251; and Myers *2 Chronicles* AB, 184). In this latter task, he was assisted by six officials, presumably all Levites as well (2 Chr 31:15–16), although the text is somewhat unclear (cf. Williamson *1 and 2 Chronicles* NCBC, 376–77). In any case, Kore son of Imnah is yet another example of a prominent and upright Levite from the period of the monarchy, by means of which the Chronicler is able to contrast levitical faithfulness (one of his favorite themes) with the lack of the same among the priests (cf., e.g., his sharp comment in 2 Chr 29:34, again referring to the days of Hezekiah).

WILLIAM H. BARNES

KOSHER. See MEAL CUSTOMS (JEWISH DIETARY LAWS).

KOZ (PERSON) [Heb *qôṣ* (קוֹץ)]. Listed among the descendants of Judah (1 Chr 4:8). Nothing is otherwise known of him. The abrupt appearance of the name in the genealogy suggests to some commentators that it has dropped out as a result of haplography and should be appended to the end of 1 Chr 4:7 (Curtis *Chronicles* ICC, 107; Williamson *Chronicles* NCBC, 59).

H. C. LO

KUE (PLACE) [Heb *qōweh* (קֹוֶה)*; qōwē‹* (קֹוֵא)]. Name of a Neo-Hittite kingdom which occupied a fertile lowland area in SE Turkey (classical Cilicia *campestris*) during the first half of the 1st millennium B.C.E. It was bordered by the Taurus mountains on the N, by the Mediterranean on the S, and by the Amanus Mountains in the E. Access was controlled by the Cilician Gates in the Taurus Mountains and by the Syro-Cilician Gates in the Amanus range. Kue (Akk *qu-we*) was inhabited by Luwian and Hurrian populations which sometimes called themselves Danunites, a word related to Adana, the name of a chief city. Kue has been subsumed under various names, including Kizzuwatna in the Hittite period (1650–1200) and Cilicia (Gk *Kilikia*—cf. *Ḫilakku*, the Akk name of an ethnic group in Kue) in the Greco-Roman period.

Although some older versions (e.g., KJV) do not render it as a place-name, Kue is now recognized as the place from which Solomon procured horses in 1 Kgs 10:28 (= 2 Chr 1:16). However, the extent to which 1 Kgs 10:28 may be used to reconstruct Solomon's trading activities is a matter of dispute. According to Y. Ikeda (1982), 1 Kgs 10:28 provides solid evidence that Solomon held a dominant position as a middleman who supplied horses from Kue and chariots from Egypt to a wide range of kingdoms. D. Schley (1987), in contrast, views the passage as poetic hyperbole from which little of historical value may be extracted.

Kue was part of the anti-Assyrian coalition at the Battle of Qarqar in 853, and Shalmaneser III (860–825) attempted to subdue Kue in 839, at which time it was ruled by Kate. Shalmaneser installed Kirri,

brother of Kate after two more campaigns in 834 and 833. Kue joined Arpad in a somewhat successful alliance against Adad-nirari III in 796, but Urikki of Kue paid tribute to Tiglath-pileser in 732. In 715 Sargon (722–705) helped Kue to regain territory lost to Midas of Phrygia, and by 709 it was clearly an Assyrian province governed by Ashur-sharra-usur. Although Sennacherib deported some of its people to Assyria after Kue's revolt (ca. 700), Assyrian sources suggest that his control, and that of Esarhaddon and Ashurbanipal, was intermittent and short-lived.

An important, but controversial, source for the history of Kue is the Luwian-Phoenician bilingual inscription found in 1946–47 at Karatepe, a hilltop site by the Ceyhan River in Turkey. The text commemorates the founding of the city of Azitawaddiya and the promotion of Azitawadda by Awarikus king of Adana and member of the Muksas dynasty. Whether Awarikus is to be identified with Urikki, the king of Kue contemporaneous with Tiglath-pileser and Sargon, is still debated. Also controversial are the proposed dates which have ranged from before 860 to after 705.

Neo-Babylonian records designate Neo-Hittite Kue as Khume, but its political status remains unclear during this period. Nebuchadrezzar claims to have conquered Cilicia around 592, but it is not certain that Kue/Khume was subsumed under Cilicia at that time. Cilicia, under various kings named Syennesis, had some independence during the Persian period. During the Greco-Roman period, however, the area once occupied by Kue became known almost exclusively as Cilicia, and only bare traces of its Neo-Hittite past remained. See also *CAH*^{2} 3/1: 372–441.

HECTOR AVALOS

KUNTILLET ʿAJRUD (M.R. 094954). The Arabic name, meaning "hill of the water-source," of a site located in N Sinai. Ruins of the site date to the 8th century B.C. (the time of the Israelite monarchy), and various remains suggest that it served as some sort of a religious center. Of particular significance are inscriptional references to "Yahweh of Samaria and his Asherah" and to "Yahweh of Teman," which provide important evidence of the complex nature of Israelite religion during the OT period (Meshel 1979; and relevant articles in *AIR*.

A. Location

Kuntillet ʿAjrûd is located approximately 50 km south of Kadesh-barnea and about 15 km W of Darb el-Ghazza, a road which since antiquity has run N–S, connecting Quseima and Kadesh-barnea to Elat and S Sinai. The isolated hill rises prominently from the broad valley of Wadi Quraiya (or "wadi of the small building"), which forms a natural W–E route. See Fig. KUN.01. The top of the hill is a long and narrow plateau, and the actual ruins are found at its W end. At the foot of the hill there is a concentration of shallow wells providing one of the few reliable sources of water in this arid and isolated area. These wells made this site an important crossroads in the past—a fact also recorded on old maps of the modern period.

The combination of water and crossroads undoubtedly contributed to the selection of the site for a small settlement.

B. Initial Exploration of the Site

The site has long been known to travelers. Edward Palmer, one of the first explorers of Sinai, visited the site in 1869. He arranged an exploratory dig at the site during which the first written find was discovered: the letter ʾ*alef* incised on a fragment, which Palmer mistook for a Greek *alpha.* Palmer erred greatly in dating the site, and identified it with the Roman "Gypsaria," which on the "Tabula Peutingeriana" appears between "Elusa" (Halutza) and "Aila" (Eilat).

In 1902 the surveyor H. Musil visited the site. He arrived after hearing a rumor about the discovery of an ancient inscription there. He described in colorful detail the violent confrontation with the local bedouin, who tried to stop him from ascending the hill (since they considered it to be a sacred place). Prof. Beno Rothenberg visited the site after the Six-Day War in 1967, and dated it correctly to the Israelite period. Dr. Ze'ev Meshel visited in 1970 and later directed three seasons of excavation at the site (October 1975–April 1976).

C. Recent Excavations

1. Structural and Pottery Remains. The site contains two structures: a main structure (A) spanning the width of the W end of the plateau; and a secondary structure (B) 10 meters to its E. The structures differ greatly from one another in the state of their preservation. See Fig. KUN.02.

a. The Western Structure. The walls of structure A are at points preserved to a height of 1.5 meters. The building itself extends over an area of approximately 15 × 25 meters. It is rectangular, with four corner rooms protruding outward (resembling "towers") and with indirect entry from a small eastern vestibule. The plan initially seems to resemble a small fortress, similar in appearance to the Israelite citadel-with-towers found at Kadesh-barnea, Arad, and ʿUza. Structure A differs, however, in a number of important respects: it lacks the casemate walls typical of these fortresses, and its remains are unusual for a fortress and suggest a different type of function altogether.

Structure A was entered through a small exterior court area (locus 15) surrounded by stone benches. The benches, floor, and walls were plastered with white plaster. Some of the pieces of plaster that were in the debris on the floor were adorned with colorful pictures of a figure sitting on a throne and various floral motifs. It seems that part of the inner walls of this exterior court area were colorfully adorned at a specific height above that which was preserved.

From the court area, one entered the main structure proper by first passing through a small gate room (locus 5), turning left into a narrow room divided into two wings, whose walls were surrounded by plastered stone benches. This "bench room" (locus 6) extends N–S across the entire width of the building and apparently was the most important part of the site. The plastered stone benches take up most of the area, with only a narrow passage remaining between them, suggesting that the main function of the room is to be associated with the benches, not the passageway. An additional function is suggested by the manner in which the wings of the bench room are connected to the two corner rooms at their respective ends (loci 7 and 13). These have no usual doorway but instead are connected to the bench room by very narrow "windows" whose sills are formed by the lateral benches themselves. By examining these benches it became clear that they had been constructed in a second phase, thus partially blocking the small openings that were present in the first phase of the building. Apparently these openings were merely structural features serving no other purposes, and the first phase was merely the stage of the building's construction.

The fragments of plaster that had dropped from the walls of the bench room included two Hebrew inscriptions written in Phoenician script. A part of a third inscription was found *in situ* about 1.5 m above the floor level on the N doorpost of the entrance leading to the main courtyard of structure A. This, along with other evidence discovered near other doorways (see below), possibly testifies to the sort of practice advocated in Deut 6:9—"And you shall write them upon the doorposts of your house, and on your gates."

In addition to these plaster inscriptions, most of the other significant finds were discovered in the bench room, in the corner rooms abutting its two wings, and in adjoining parts of the structure. These included

two large pithoi adorned with inscriptions and pictures (see 3.e below), and stone bowls of various sizes, four of which had the names of donors incised on their rims (see 3.c). In general, the pottery in this part of the structure was comprised essentially of small vessels such as flasks, lamps, juglets, and bowls, quite different from the pottery found in the other rooms of the structure (primarily pithoi and storage jars). The bulk of the pottery was found in the two corner rooms, which perhaps served as *favissa* depositories for vessels that initially had been displayed on the benches. The bench room's design and its remains (particularly the inscriptional remains—see below) suggest that here travelers could honor the Israelite god by offering various items to him.

The two long rooms to the S and W of the main courtyard served as storerooms for hoarding food supplies: in fact, the bases of the pithoi and large storage jars housed here were discovered still *in situ*, firmly embedded in the hard-earth floor and covered by the fragments of their own upper parts. Names, inscriptions, and letters of the alphabet were written on the shoulders of many of these larger vessels (see 3.a–b below). These vessels were stored so compactly that it is difficult to imagine how someone could have moved about to sort through them. The larger pithoi (1 meter in height and more than 0.5 meter in diameter) were concentrated mainly in the W storeroom, from one end to the other. At the E end of the S storeroom the builders took advantage of the natural depression in the bedrock to construct a type of cellar (locus 8). Among the items that had either fallen or been tossed into the cellar were a large woven sieve, whole pomegranates, fragments of wooden containers, and many tree branches that served as rafters. Next to the entrance of the S storeroom was found a large stone bowl bearing an inscription (see 3.c below), apparently dragged here from the bench room area. Among the debris around the entrance to the W storeroom were discovered fragments of another plaster inscription. One could guess that originally it, too, was written on the doorpost. (A picture drawn in red, black, and yellow was also discovered on one of the stones of the doorpost of the S storeroom.)

The main courtyard was essentially empty except for two "kitchens" (loci 51, 101) at the SW and SE corners near flights of stairs apparently leading to the roof. In each "kitchen" were found three ovens which, judging from their respective floor levels, were used consecutively, not simultaneously. It is difficult to determine how long each oven was in service, but it is safe to assume that the oven sequence corresponds to the total time-span the site was occupied.

Structure A is well preserved, making it possible to ascertain some interesting details about its construction. The walls were built of unhewn chalk cut from local deposits. At a height of about 1.2 m a middle layer of (mostly tamarisk) branches was placed lengthwise and crosswise, thereby strengthening the wall by forming an intermediate layer separating the lower course of stone from the upper one. This technique was obviously well known since it was used in the construction of the Jerusalem temple (1 Kgs 7:12), although at Kuntillet ʿAjrûd this technique was obviously applied on a more modest scale. A superior whitewashed plaster covered the walls, floors, and benches of the entry complex and the bench room, but all the other walls were covered in mud plaster mixed with straw. The ceilings were made of branches of local trees, most of which were found in the debris of the rooms. It seems that the entire structure was built with a single, preplanned design and a specific purpose already in mind. The dimensions and orientation of the structure were laid out with respect to the oblong surface of the plateau. The actual construction, however, was not perfect: the lines of the walls are not straight, the widths of the rooms are not uniform, and the two wings of the bench room are far from symmetrical.

b. The Eastern Structure. In contrast to structure A, structure B is poorly preserved, and its layout and design have not become clear. The white plaster that covered all its remaining parts and the many decorated plaster fragments found in its debris (particularly near doorways), however, suggests that the building was elegantly adorned with murals. It is possible that this was an anterior entrance to the main structure; it is also possible that this structure is an E wing to an entrance courtyard between the two structures. Although it seems unlikely, it is furthermore possible that the two structures were not contemporaneous and that the E structure slightly preceeded the W one.

In the N part of structure B was a long room that originally extended to the edge of the plateau (locus 159); its floor and walls were covered with white plaster. The entrance to the room was from the W; the

doorway was indicated by two pillasters projecting out from the line of the wall, around which were found fragments of decorated plaster. Some traces of walls from the S part of the structure also remained.

Because the site was occupied for a relatively brief time span, the large mass of pottery discovered there presents interesting analysis. If the site indeed can be dated to ca. 800 B.C.E., then the pottery corpus from Kuntillet ʿAjrûd could serve as an important comparative standard for identifying contemporaneous levels at other sites. Analysis of similar pottery forms suggest that four different areas could have been a source for most of the pottery types: the S coast, central Judah, the N kingdom of Israel (i.e., Ephraim), and Phoenicia. Surprisingly, the site yielded no "Negeb-type pottery" supposedly associated with the nomadic inhabitants of the area.

2. Textile Remains. Kuntillet ʿAjrûd is unique in that it yields textile remains from the period of the Israelite monarchy. About one hundred cloth fragments, almost all of linen (only seven of wool) were discovered among the ruins. A. Sheffer (1978) details the superior quality of the threads and the unique characteristics of the fabrics. It has been noted that, in violation of biblical law (Lev 19:9; Deut 22:9–11), some of these fabrics were made by combining wool and linen (on one piece red woolen threads were interwoven with blue linen ones.) Loom weights and wooden beams found at the site confirm the possibility that actual weaving was done there. In light of the preponderance of linen fabrics from the site, it is worth pointing out that according to the OT the "holy garments" of the Jerusalem priests were supposed to be woven of linen (Ezek 44:17–18). The Bible also indicates that weaving activities were often associated with cultic establishments (2 Kgs 23:17). These factors, in addition to the inscriptional remains, suggest that the site was inhabited by priests.

3. Epigraphic Remains. The most important finds attesting to the significance, uniqueness, and nature of the site are the Hebrew inscriptions and pictures. The inscriptions, some written in ancient Hebrew script and some written in Phoenician script, can be categorized as follows:

a. Letters incised on pottery prior to firing. On the shoulders of most of the pithoi recovered from (mainly the storerooms of) the site—and only on this type of vessel—are one or two letters. The most frequent letter is the *ʾalef,* while the letter *yod* is more scarce, and twice the combination *qop-reš* appears. Thus far we know about similar inscriptions only from the excavations of the City of David (Jerusalem); incisions of the letter *ṭet* were found there also on the shoulders of an identical type of pithoi. This strengthens the assumption that these letters are abbreviations indicating types of offerings and "tithes," a practice described a millennium later in the Mishna (*Maʿaser* Sheni 4:11) and Tosefta (*Maʿaser Sheni* 5:6). Thus it is possible that *qop-reš* indicates *qorbān* ("offering"), that *yod* indicates *maʿăśēr* ("tithe"), and that *ʾalef* indicates "first harvest," either in a temporal or superlative sense. In any case, the letters were incised prior to firing. Neutron activation examination of the clay of the pithoi proved that they were made in the vicinity of Jerusalem. This perhaps reinforces the suggestion that priests lived at the site and received supplies in the forms of these sacrifices and tithes.

b. Inscriptions incised on the pottery subsequent to firing. Among the seven such inscriptions written on the shoulders of storage jars are four reading *lśrʿr,* obviously to be read *leśar ʿîr,* " (belonging or were sent) to a city official" (i.e., an official in charge of the place). It is thought that at least part of the supply was consigned to him or registered at the site in his name.

c. Inscriptions incised on the rims of stone bowls. Among the four inscriptions of this type, the most complete one reads: *lʿbdyw bn ʿdnh brk hʾ lyhw,* " (was given) by Obadio son of Adnah; may he be blessed by YHW (H)." These stone bowls were apparently dedicated to the god of Israel by donors who sought his blessings.

d. Inscriptions written in ink on plaster walls. Fragments of three such graffiti inscriptions, written in Phoenician script but in the Hebrew language, were found in the bench room, while parts of another two, written in ancient Hebrew script, were found in the debris of the entrance to the W storeroom. Only one inscription was found *in situ* on the N doorpost of the opening leading from the bench room to the courtyard, but it was the most fragmentary and faded. Several phrases could be read on the second, two-line inscription:

[… *y*]*ʾrk (w).ym (y)m.wyšbʿw*[…]*tnw.l*[*y*]*hwh*[ ]*tymn.wl*[ ]*ʾšrt*[*h*]

[…]*hyṭ (y)b.yhwh.hty*[*mn.w*ʾ*šrth* …]

This is a blessing or prayer addressed to "Yahweh of Teman and his Asherah." The third inscription is obviously a piece of an ancient theophany describing the revelation of God in language echoing the OT:

…]/*wbzr (w)ḥ.*ʾ*l.br*[…

…]/*wyms (w)n.hr (y)m*/*wyd (w)k (w)n.gbn (wny)m*[…

…]*wšdš.*ʾ*ly*[…

…]*lbrk.b*ʿ*l.by (w)m mlḥ*[*mh*]

…]*lsm (.)*ʾ*l.by (w)m mlḥ*[*mh*]

It is noteworthy that Baal and God (Heb ʾ*ēl*) are mentioned here in poetic parallelism, in connection to a possible reference to a "day of war" *(ỹm milḥamâ).*

e. Inscriptions (and pictures) written on pottery. The main examplars of this type are two large pithoi decorated with inscriptions and pictures in red ink. They were found (broken), one in the bench room and the other at the E end of the adjoining courtyard. The large pithoi had been used as convenient surfaces for writing and drawing. It is reasonable to suppose that the pithoi had been moved here for that purpose from the storerooms, since on their respective shoulders were also incised the letters ʾ*alef* and *qop-reš*.

Among the inscriptions are four repetitions of the alphabet, with the letter *pe* preceding the letter *ayin* and not following it. There is also a list of personal names, as well as a text containing phrases echoed in the OT:

kl ʾ*šr yš*ʾ *(y)l m*ʾ *(y)š ḥ (w)nn h (w)*ʾ[ ]*wntn lh yhwh klbbh*

There are two blessings written on pottery which on the one hand resemble typical epistolary-greeting formulas, and on the other hand resemble the priestly benediction. One of these (see Fig. KUN.03) was written above two figures of the (Egyptian-in-origin) god Bes, and may be reconstructed as follows:

ʾ*mr* ʾ[*šy*]*w hm*[*l*]*k* ʾ*mr lyhl*[ ]*wlyw*ʿ*šh wl*[ ] *brkt (y)* ʾ*tkm lyhwh šmrn wl*ʾ*šrth.*

If this reconstruction is sound, it is possible that we have in ʾ*šyw hmlk* a transposition of the name *yw*ʾ*š,* Joash, referring to the king *(hmlk)* of Israel who reigned from Samaria (ca. 801–786 B.C.E.), perhaps providing an important synchronism for dating the site. The second blessing reads: ʾ*mr* ʾ*mryw* ʾ*mr l*ʾ*d (w)ny h[ ]l[ ]* ʾ*t (h) brktk lyhwh t (y)mn wl*ʾ*šrth ybrkk wyš mrk wyhy* ʿ*m* ʾ*d (w)ny* […]. These inscriptions, with their references to "Yahweh of Samaria (or of Teman) and his Asherah," have generated a great deal of scholarly discussion (see Meshel 1979: Dever 1984; and discussions in *AIR*). Not only do they shed light on the cultic and religious character of the site, but they also provide revealing glimpses into the history of Israelite religion.

4. Artistic Remains. The quantity and variety of pictorial and decorative art found at Kuntillet ʿAjrûd were unprecedented for an Israelite site. This art was drawn on the plaster of the walls, on doorposts, on pottery (primarily on the two large pithoi mentioned above), and also on one of the stones in the jamb of the central opening to the S storeroom.

The two pithoi depict various divine, human, and animal figures. On one of them, beside two representations of the god Bes, a female figure is portrayed seated and playing a lyre. See Fig. KUN.03. The familiar "tree of life flanked by two goats" motif is also found on this vessel, as well as pictures of a lion, a procession of animals, and a cow licking the tail of a suckling calf. On the other vessel are depicted five figures raising their hands in a gesture of prayer, and an archer raising a bow. Even though most of these artistic motifs are well known from the Syro-Phoenician world, the actual renderings themselves are here very crude and perhaps also reflect "Arab" N desert influence. Despite their lack of artistic proficiency, the Kuntillet ʿAjrûd artists were familiar with and influenced by the prevailing art styles of the time, and they appreciated the significance of duplicating those styles. In short, the pictures are an expression of "folk art" as opposed to professional "court art."

Just as the inscriptions on the pithoi were not all written by the same person on one specific occasion, so also the pictures seem to reflect various hands. While it is difficult to draw definitive conclusions about such things, it has been suggested that, according to style and line, three different artists can be identified, at least one of whom drew on both pithoi (Beck 1982).

The plaster art (in black, red, and yellow ink) differs in some respects from that drawn on the pithoi, primarily in being more decorative in character. From the E building (structure B) were recovered many fragments of decorative art: a running pattern (perhaps a frame) surrounded by two rows of lotus flowers and two rows of intertwined circles; a geometric checkerboard pattern with red and yellow squares; but also a picture of people standing atop a fortified wall. The fragments of plaster found near the exterior court of structure A (locus 15) were restored revealing a large red, black, and yellow picture of a figure sitting on a throne smelling a lotus flower. (A third picture of a figure sitting on a throne was also discovered on a pottery fragment.) Some fragments revealed that in several sections there were at least two layers of plaster one over the other.

There is no clear answer to whether or not the artist responsible for the decorative art on the plaster also drew the pictorial scenes on the pithoi; while the Syro-Phoenician artistic influence is common to both, the technical quality of the plaster art is superior to that of the pithoi art, and the respective subject matters tend to be different. Most of the artistic parallels are dated to the 9th–7th centuries, generally corroborating the conclusion that the site was occupied around the year 800 B.C.E.

D. Conclusion

The unusual finds (especially the inscriptions and pictures) testify to the uniqueness of the site. The subject matter of the inscriptions, the references to various deities, and the presence of dedicated vessels all suggest that Kuntillet ʿAjrûd was a religious center; however, the lack of things usually associated with ritual sacrifice (e.g., altars) and the architectural layout of the site indicate that the remains are not those of a temple. It appears that the site may have served as a "wayside shrine" that, due to its location, was associated with journeys of the Israelite kings to Elat and to Ezion-geber, and perhaps also with the travels of pilgrims to S Sinai. These were able to journey S along the Darb el-Ghazza from Kadesh-barnea, stopping at the place to make dedications to Israel's god in the bench room of the main building.

The strong N (Israelite, not Judean) influence in the remains seems to connect Kuntillet ʿAjrûd with the N kingdom of Israel or with one of the Judean kings closely aligned with the N kingdom of Israel. This N influence is evident in the reference to "Yahweh of Samaria," in the Phoenician-style writing, in the cosmopolitan style and motifs of the decorative and pictorial artwork, in the pottery types, and in the onomastic conventions (names ending in *-yau*, and not *-yahu*). The site, occupied for only a few years, was likely inhabited by a small group of priests dispatched from the N kingdom of Israel with an officer *(śr ʿr)* at their head. They were sustained by the various sacrifices and tithes that were sent as provisions primarily from Judah; in return, they rendered their cultic services to travelers.

The date of the site, determined by typological and paleographic analysis, and by the need to identify an historical period in which N Israelite influence over Judah was especially strong, points to the period after the death of Jehoshaphat of Judah (ca. 850 B.C.E.). The reigns of Jehoram, Ahaziah, and Athaliah (between 850 and 837 B.C.E.) seem distinct possibilities. However, the period of Joash king of Israel (ca. 801–786 B.C.E.), who captured Amaziah king of Judah, broke down the wall of Jerusalem, and seized the treasures of the Jerusalem temple and palace (2 Kgs 14:1–16 = 2 Chr 25:1–24) seems especially well suited. This would be reinforced if the reconstruction of *ʾšyw hmlk* on the top line of the Bes figurine inscription indeed is a reference to Joash. It may tentatively be suggested that Joash intended to gain direct access to the Red Sea, and that this was the reason for the war between the two kings. The victory of Joash is reflected in the construction of the buildings at Kuntillet ʿAjrûd, and accounts for the concurrent references to the "Yahweh of Samaria" and the "Yahweh of Teman"; i.e., Samaria's god (as well as its king) having dominion over the entire region through which one reached "Teman" (meaning "the far south").

KUSH (PLACE). From the early 12th Dynasty the name Kush applied to the territory lying S of Semna at the 2d cataract on the Nile river, and was often paired with *Wawat* (Lower Nubia) between the 1st and 2d cataracts (Posener 1958). The name was later extended as a term for Nubia in general. Both the region and its inhabitants are mentioned a number of times in the Bible; see CUSH (PERSON) and ETHIOPIA (PLACE).

A. Early History

The appearance of Kush in Egyptian texts is probably to be associated with the dominance of a people known as the C-group or *Medja* (Arkell 1961: 46–48; Emery 1965: 133–35). The threat of these barbarians to Egyptian interests in the S explains the efforts expended by Amenemhet I and Senwosret I (20th cent. B.C.) to reconquer *Wawat* (Trigger 1965: 94) and to secure the land between the two cataracts by means of fortresses (Reisner 1960; Emery 1965: 143–45). The tribes of Kush figure most prominently of all foreign peoples in the Execration Texts of the 12th and 13th Dynasties (Posener 1940; 1987), an indication of Egyptian inability to control the land S of the 2d cataract. Roughly contemporary with the Hyksos conquest of the lower Nile valley and delta, most of the Nubian forts erected by the Egyptians were destroyed, and Egyptian monuments either effaced or carried off by the Nubians to adorn their own towns. Thereafter, while the Hyksos ruled from Avaris, an amorphous kingdom is attested in the territory S of the 1st cataract, governed by a "ruler of Kush" and centered upon the site of Kerma, 35 miles N of Dongola (Säve-söderbergh 1956; Smith 1976: 80–83; Wenig, *LÄ* 3: 409–10). An erstwhile ally of Hyksos power in the delta, Kush was subjected to repeated attacks by the early kings of the 18th Dynasty, and under Thutmose I (ca. 1525–1514 B.C.) was finally brought under Egyptian control as far S as Hagar el-Merwa. While records of punitive campaigns appear sporadically throughout the New Kingdom, e.g., under Hatshepsut, Thutmose IV, Amenophis III, Akhenaten, Tutankhamun, and Rameses II, these were in the main "training" razzias, intended as much to "blood" the troops as to quell revolts.

B. Kush Under the Egyptian Empire

By the close of the reign of Thutmose III (ca. 1504–1451 B.C.) the political role of the Nubian chieftains had been terminated in favor of an administration modeled on that of Egypt. From the rank of a lowly fortress commandant, appointed *ad hoc* to run the new territorial acquisitions in the S, had developed the office of "King's son of the Southern Countries" (later "King's Son of Kush"), a viceroy responsible directly to the king and holding the cabinet rank of "king's scribe" (Habachi 1981: 65–110; *LÄ* 3: 630–40). From certainly the middle of the 18th Dynasty, the viceroy of Kush was placed in charge of the gold-producing regions of the S, with jurisdiction from the 3d nome of Upper Egypt *(Nekhen)* to the S limit of Egyptian control at *Karoy* (Habachi *LÄ* 3: 630). The viceroy's headquarters was usually located at Aniba, and its presence was indicated by the rock shrines across the river at Kasr Ibrim.

The viceroy enjoyed the services of two deputy governors, one for Kush and the other for Wawat; and the administration was divided into departments similar to those in Egypt: treasury, granary, livestock, mines, defense (cf. the "garrison of Kush"), etc. (Reisner 1960; Donadoni, in Endesfelder et al 1977). The countryside was organized in Egyptian fashion into towns and townships administered by mayors. The natural resources and farm produce of Kush loom large in the annual imposts of the Egyptian empire and include large amounts of gold, grain, cattle, incense, ebony, ivory, and slaves (Emery 1965: 184–85; Adams 1981).

Apart from the influence of bureaucratic models and the damaging effect of Egypt's insatiety, Kush under the empire felt the impact of Egyptian culture and religion as did no other part of the ancient world (O'Connor, *AESH* 260–64). This influence radiated from the large, land-owning temples constructed during the New Kingdom along the Nile, each dedicated to the worship of the royal genius, and each functioning as a focus for a colonial settlement (Säve-söderbergh 1941: 200–203). While native gods were not suppressed, they were overshadowed by the cult of Amun transplanted from Thebes to Debod, Wady es-Sebua, and (especially) Gebel Barkal. Egyptian colonists in moderate numbers were found in Kush, and their presence aided in the acculturation of the natives to Egyptian civilization, including burial

practices, a process all but complete by the end of the New Kingdom (O'Connor, *AESH* 263–65; Säve-söderbergh 1969). In addition to Egyptians, it became customary to exile captive Asiatics or recalcitrant Apiru to Kush (Habachi 1981: 185–96) while Nubians were called N to Egypt and her Asiatic empire to serve as domestics, settlers, and policemen (Klengel, in Endesfelder et al 1977).

Textual and archaeological evidence of Egyptian control of Kush ceases abruptly under Rameses XI (ca. 1106–1076 B.C.), and during the civil war involving the king and the last known functioning viceroy, Paynehsi. Thereafter, for three centuries settlements lay abandoned, trade lapsed, and between the first two cataracts population declined (Trigger 1965: 112–14).

C. 25th Dynasty (ca. 780–656 B.C.)

Kush, as the term is used in the OT ("Cush") and other textual sources of Iron II date, refers to the political and cultural entity which took shape in Napata (Gebel Barkal) in the early first millennium B.C., and contributed the 25th dynasty to Egyptian history (Leclant 1985). Although attested in the cemetery at Kurru (Dunham 1950) from the early 9th century B.C., the ruling family of the resuscitated Kushite state does not come into the light of history until the ruler Alara of the early 8th century B.C. (Arkell 1961: 116). Thereafter, the geopolitical thrust of Kushite history was for two centuries toward the N exactly coincident with the counterthrust of Assyria W and S toward the Nile. The hegemony of the Nubian ruler Kashta (mid-8th cent.) was acknowledged at Elephantine, as was that of his successor Piankhy (ca. 735–712 B.C.) at Thebes and later as far N as the Dakhleh oasis. Piankhy, through a successful military campaign as far N as Memphis, terminated the erstwhile attempt by Tefnakht, prince of Sais, to reunite Egypt by main force. His brother Shabako (712–698 B.C.) completed the task by invading Egypt (711 B.C.), killing Bocchoris (Bakhenranef), Tefnakht's son (= 24th Dyn.), and annexing the country to Kush (Redford 1985).

The 25th Dynasty replaced the quiescent foreign policy of the later Libyan dynasts with its own northward expansion. Kush intervened forcefully and unexpectedly at Eltekeh (701 B.C.), battling Sennacherib to a standstill; Shebitku (698–690 B.C.) broadcast his designs in Asia in his titulary (Redford 1985: 14, fig. 3). The Kawa inventory lists prove that Taharqa (690–664 B.C.) campaigned actively in western Asia during the first decade of his reign (Spalinger 1978), maintaining alliances with the Phoenician cities (Katzenstein 1973: 263–65). The awareness of the strength and fighting potential of the Kushites which appears suddenly in the Bible (Isa 18:1; Jer 46:9; Ezek 38:5, etc.) dates from these halcyon days of 25th Dynasty dominion.

Culturally the 25th Dynasty of indigenous Nubian origin, with a heavy overlay of acquired Egyptian traits. Although subject in the past to debate (Arkell 1961: 114–15; Emery 1965: 208), the royal family probably sprang from the line of local chieftains long since converted to the worship of Amun of Napata. The old-fashioned piety and fanatical puritanism displayed by the ruling family, characteristic of proselytes, explains the contempt with which they regarded the Egyptians of their time. While many aspects of Napatan culture (e.g., burial practices; Lloyd, *AESH* 269) continue to show native derivation, the kings aped the pharaohs by carving triumphal texts in the Egyptian language and script and by adorning their temples with reliefs in Egyptian style. In art, the 25th Dynasty enjoyed the inspiration of surviving New Kingdom monuments in the S (Wenig 1978: 56, 63), and rapidly became the exponent of the new "archaizing" style (Redford 1986: 328–31).

Egypt under the Kushites experienced a political and cultural revival. Control over the Thebaid was secured, in mimicry of the 23rd Dynasty, by the appointment of a Kushite princess to the office of Divine Worshipper of Amun at Thebes, and Kushites or local sympathizers to municipal and priestly offices in that city (Leclant 1954; 1961; Habachi 1981: 247–57). No major change was effected in the political system in Lower and Middle Egypt, the "Libyan" dynasts being allowed to retain their patrimonies (Yoyotte 1961). Their relatives, however, were transplanted to Kush in the temple service of local gods. Thebes underwent a building boom during the regime of the 25th Dynasty (Leclant 1965), and temples were generously endowed. The army was greatly favored, thriving under royal patronage.

D. Withdrawal and Decline

In spite of his spirited involvement in W Asian affairs, Taharqa found it strategically impossible to prevent the Assyrians from massing in S Palestine. After a successful defense of the delta against Esarhaddon in 674 B.C., Taharqa was defeated by the Assyrians in 671 and forced to flee S. The country was again invaded in 666 and 663 B.C. (Spalinger 1974a; 1974b). From safe havens in Napata and Thebes, both Taharqa and his successor Tanwetaman attempted to regain lost ground (Burstein 1984), but were quickly ejected by the Assyrians. Lacking any popular support in Middle Egypt or the delta, the 25th Dynasty could only stand by and watch as the descendants of Bocchoris, whom Shabako had put to death, eased out the Assyrians and reunited Egypt from Sais in the N.

The history of Kush after 663 B.C. is a melancholy tale of successive defeats and ultimate isolation in the S. Psamtik (Psammetichus) I, founder of the 26th Dynasty, wrested Thebes from Kush in 656 B.C. (Caminos 1964) and planted a frontier garrison at Elephantine, now transformed once again into the effectual point of demarcation between Egypt and Kush. Necho II (610–595 B.C.) dispatched a punitive expedition against Kush, while the great invasion of Psamtik II in 593 B.C. completely defeated the Kushite forces and resulted in the destruction of Napata (Sauneron and Yoyotte 1952; Habachi 1981: 259–69). It is perhaps as a consequence of this defeat that Kushite slaves found their way into Asia (cf. Jer 38:7). Subsequently the monuments of the 25th Dynasty in Egypt were desecrated and their memory anathematized. The descendants of the 25th Dynasty, after the destruction of Napata, came increasingly to favor a S location (Meroe) as their capital, although the necropoleis at Napata were not immediately given up (Arkell 1961: 144–73). Increasingly cut off in their S fastness, the kings of Kush presided over a declining culture, graphically reflected in the progressive degeneration of those things ultimately borrowed from Egypt, i.e., script, art, and architecture.

Among classical authors and in the Bible, recollection of Kush (RSV "Cush," "Ethiopia") and the 25th Dynasty is garbled. The name "Kush" is seldom found in classical authors (who preferred the slightly pejorative "Aethiopia"), although it has survived in Near Eastern and African traditions. See also ETHIOPIA (PLACE). Taharqa is remembered as a conqueror (Strabo 15.1.6), but dated too early (2 Kgs 19:9; Avaux 1973); Shabako and Shebitku are remembered erroneously as tribal eponyms (Astour 1965). The defection of a mercenary garrison from Elephantine to Kush lived on in tradition (Hdt. 2.30), but was wrongly dated. The strong impression Kush of the 25th Dynasty had made fostered the anachronistic appearance of Kushites in much earlier history. For example, Joab in the 10th cent. B.C. is given a Kushite runner (2 Sam 18:21–23—cf. their reputation as swift runners under Taharqa; Moussa 1981), and a dubious Kushite "invasion" by an otherwise unknown Zerah is conjured up for the early 9th century B.C. (2 Chr 14:9–13). It is uncertain whether the marriage of Moses to a "Cushite woman" (Num 12:1) derives from a tradition of Bronze Age date, or is a late anachronism (Shinan 1978); certainly Judaic apologia of Ptolemaic times dwell heavily on a fanciful campaign of Moses against Ethiopia (Rajak 1978), possibly constructed solely on the basis of the passage in Numbers (Collins, *OTP* 2: 895, n. 45).

The presence of Egyptian monuments of ostensible antiquity on the Sudanese Nile and the "Egyptian" appearance of Meroitic culture gave rise in some circles to the late Hellenistic belief that Egyptian civilization had come from Kush. In the polemical romance literature of the Persian and Ptolemaic periods, Kush figures as the refuge whither the defeated pharaoh flees and whence he emerges to expel the foreigners from Egypt (Redford 1986: 276–96).

KUSHAIAH (PERSON) [Heb *qûšāyāhû* (קוּשָׁיָהוּ)]. Var. KISHI. A Levite, a descendant of Merari and father of Ethan (1 Chr 15:17). Kushaiah should probably be identified with Kishi of 1 Chr 6:29—Eng6:44. The LXX supports identifying Kushaiah with Kishi, reading *kisaiou* in 1 Chr 15:17 and *kisai* in 1 Chr 6:29—Eng6:44. The same person may be mentioned in 2 Chr 29:12, which speaks of Kish the son of Abdi. The origin of the name Kushaiah is unknown; Noth (*IPN*, 32) suggested that it was an imperative form but was unable to isolate the root word.
TOM WAYNE WILLETT

L

L. The abbreviation used in NT source criticism for the solely Lukan material in the Synoptic Gospels. See SYNOPTIC PROBLEM.

LAADAH (PERSON) [Heb *laʿdâ* (לַעְדָּה)]. An individual of the tribe of Judah, from the line of Shelah (1 Chr 4:21). He was the son of Er, though not the Er who was the firstborn of Judah. He is called the father of Mareshah. Mareshah in this case might denote a son or a city which has been identified as Tell Sandahannah (M.R. 140111) in the Shephelah.
DAVID CHANNING SMITH

LABAN (PERSON) [Heb *lābān* (לָבָן)]. Name of the son of Bethuel (Gen 28:5). In Gen 29:5 he is called "the son of Nahor"; however, this expression should be understood in the sense of "grandson" or "descendant." According to the genealogy given in the book of Genesis, Terah was the father of Abraham (Abram), Nahor, and Haran (Gen 11:27). Nahor, through his wife Milcah, was the father of eight children (Gen 22:20–22). His eighth son, Bethuel, was the father of Rebekah (Gen 22:23) and of Laban (Gen 25:20). Laban was the father of Leah and Rachel (Gen 29:16); Leah and Rachel later became Jacob's wives. He also had several sons (Gen 30:35; 31:1) who probably were born after Jacob joined Laban's family through his marriage to Leah and Rachel. Noth has said that this genealogy was artificially created in order to show the kinship between the Israelites and the Arameans (Noth *HPT*, 217).

Laban lived in the "city of Nahor" (Gen 24:10), which in several places is identified with Haran (Gen 27:43; 29:4). The same area is also identified as Paddan-aram (28:2, 5). He is called an Aramean (25:20; 28:5; 31:20, 24). Jacob is also called an Aramean in Deut 26:5. This designation may express affinity between the early Israelites and the Aramean tribes.

Laban first appears in the stories of Abraham. After the death of Sarah (Gen 23:1–20), Abraham tried to find a wife for his son Isaac. Abraham sent his servant Eliezer, a Damascene slave (Gen 15:2–3), to go to Aram-naharaim (Mesopotamia) to find a wife for his son (Gen 24:1–9). Eliezer went to the city of Nahor (Gen 24:10) and went to the house of Bethuel to obtain his daughter Rebekah as a wife for Isaac. Laban met Eliezer, invited him to come to his house, and provided for the needs of his animals (Gen 24:28–32). Laban is an active participant in the transaction that led Rebekah to go with Eliezer to the land of Canaan. The picture of Laban portrayed on this occasion is that of a man who acted out of self interest and ambitious desires (Gen 24:30, 53).

Laban appears next in the Jacob cycle. When Jacob fled from his father's house to escape the wrath of his brother Esau (Gen 27:41–45), he went to the house of Laban, his uncle. Jacob lived with and worked for Laban twenty years as a herdsman (Gen 31:38, 41). For seven of these years Jacob worked to obtain Rachel as his wife, and for another seven he worked with the same purpose because Laban had deceived Jacob on his wedding night and had given him Leah, his oldest daughter. Jacob worked another six years caring for Laban's herd. Recent archaeological discoveries have contributed much information to the understanding of the Jacob-Laban narratives. Scholars have seen in the relationship between Jacob and Laban some parallels with the adoption and marriage customs practiced in northern Mesopotamia as recorded in the Nuzi tablets, but this view has been challenged by Van Seters (1969). Morrison (1983: 156) has said that the agreement between Jacob and Laban, sealed by these marriages, bears "a strong resemblance to Old Babylonian herding contracts." The basic element of this contract was Jacob's promise to work as a herdsman for Laban in return for his two wives and certain types of livestock.

After having lived with Laban twenty years, Jacob became a very rich man. Laban and his sons "did not regard him with favor as before" (Gen 31:2). For this reason Jacob fled with his wives, his sons, and his flocks to return to the land of Canaan. When Laban heard that Jacob had fled and had apparently stolen

his household gods (Teraphim, Gen 31:19), he went after Jacob and met him at Gilead, in Transjordan (Gen 31:25). Scholars have debated whether possession of these household gods indicated possession of inheritance rights as indicated in some Nuzi texts (Greenberg 1962). At that time God appeared to Laban in a dream (Gen 31:24) admonishing him not to harm Jacob. When Laban met Jacob they entered into a covenant. According to Noth (*HPT*, 92), this covenant probably represents an early boundary agreement between Israelites and Arameans which settled border disputes over territory claimed in Transjordan by both groups (Gen 31:52). The covenant was sealed by an oath when Laban called on the God of Nahor and Jacob called on the God of Abraham, the gods of their fathers (Gen 31:53) as their witnesses to the covenant (Alt 1968: 23–24). A monument celebrating the event was erected. Laban called it in Aramaic Jegar-sahadutha (*yĕgar śahădûtā*ʾ), and Jacob called it in Hebrew Galeed (*galʿēd*). Both words mean "heap of witness."

LABAN (PLACE) [Heb *lābān* (לָבָן)]. One of the Exodus encampments of the Israelites, mentioned in only a very general way in Deut 1:1 along with Hazeroth and Dizahab, suggesting that it be located somewhere in the Sinai. It may be the same as the Libnah listed in Num 33:20–21 between Rimmon-perez and Rissah, which is the sixth Israelite encampment after leaving the wilderness of Sinai. However, in Deuteronomy, Laban is listed before Hazeroth, while in Numbers, Hazeroth precedes Libnah; this is not a serious difficulty because the organizing principles of the two lists are not clear. It may also be that they are two different stations. If the equation is accepted, a possible location is in the wadi el-Beidha, which like Laban means "whiteness" (*GP*, 214; M.R. 122925). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

LACCUNUS (PERSON) [Gk *Lakkounos* (Λακκουνος)]. One of the sons of Addi who returned with Ezra (1 Esdr 9:31). He was one of the Israelites who had foreign wives and had to put them away with their children in accordance with Ezra's reform. The name does not appear in the parallel list in the book of Ezra (cf. 10:30).

LACE. See DRESS AND ORNAMENTATION.

LACEDAEMONIANS. The Lacedaemonians were inhabitants of the Greek Pelopponese. Lacedaemonia, later called Sparta, was originally the name of a city-state settled during the Dorian invasion (ca. 1000 B.C.E.). Sparta supplanted Lacedaemonia as the capital of the SE Pelopponese and the region was then known as Laconia. After the Spartans conquered the Messenians to their west in the 7th century, the combined territory was subsequently known as Lacedaemonia. The name "Lacedaemonians" is found only once in the LXX (2 Macc 5:9), and the name "Sparta" is likewise referred to once (1 Macc 14:16); however, "Spartans" occurs nine times in 1 Maccabees 12–15.

There are several factors that seem to indicate that the Jews of Jerusalem cultivated political contacts with the Lacedaemonians. Friendly relations between Jerusalem and Sparta existed from the time of the high priesthood of Onias I (320–290 B.C.E.). Surprisingly, the Jews claimed that the Lacedaemonians were common descendants from Abraham (1 Macc 12:21). Jason, the high priest, sought refuge among the Jews of Sparta after his failure to occupy Jerusalem (2 Macc 5:9; and Jos. *Ant* 12. 5.1.238; and 15.3.1.). A letter from Jonathan to the Spartans and their reply in 146 B.C.E. may suggest that the

Maccabeans sought to reestablish relations with the Lacedaemonians (1 Macc 12:6–18; and Jos. *Ant* 13:5.8; and 12.4.10). A brief letter from the Spartan authorities to Simon, the high priest and Jonathon's successor, appears in 1 Macc 14:20–22. Finally, the letter sent to the nations requesting the recipients to abstain from further hostilities against the Jews specifically names Sparta (1 Macc 15:23; and Jos. *Ant* 14.8.5). The Maccabean Jewish political agenda was motivated in part by the fact that Jewish settlements existed in the Pelopponese from the 2d century B.C.E. and partially because of the positive political and philosophical benefits of having contacts with mainland Greek culture as opposed to Syrian Hellenism.
SCOTT T. CARROLL

LACHISH (PLACE) [Heb *lākîš* (לָכִישׁ)]. A central biblical city in the Shephelah. Its king participated in the coalition of the S kings against Joshua and the Israelites, and it became the object of one of Israel's sieges (Josh 10). Rehoboam fortified the city after the division of the kingdom (2 Chr 11:9), and it was later the scene of the assassination of Amaziah (2 Kgs 14:19). When Sennacherib attacked Judah, it was while he was besieging Lachish that he sent the Rabshakeh to Hezekiah to try to intimidate him into surrender (2 Kgs 18:14–17; 19:8). Sennacherib later commemorated his conquest of Lachish by paneling the walls of one of the rooms of his palace in Nineveh with scenes of the siege. The city is mentioned in Jer 34:7 as one of two (with Azekah) cities in Judah still to hold out against the armies of Nebuchadnezzar.

A. Site and Identification

The ancient city is represented by a major mound, Tell ed-Duweir, now called Tel Lachish (M.R. 135108). The site (including the slopes) covers an area of ca. 30 acres. Water was obtained from wells, one of which was uncovered at the NE corner of the site. Lachish is situated near Nahal Lachish (Wadi Ghafr), along which extended a main route from the coastal plain to the Hebron hills.

In 1878 Conder suggested the identification of ancient Lachish with Tell el-Hesi. This identification was later supported by the discovery there of a cuneiform letter apparently sent from Lachish and dated to the el-Amarna period. In 1929 Albright proposed the identification of Lachish with Tell el-Duweir. He based his suggestion on Eusebius (*Onomast.* 120.20), who states that Lachish was a village located on the 7th mile, along the road from Eleutheropolis (Beth-Guvrin) to Gaza. All archaeological data recovered from Tel Lachish support Albright's suggestion, which is generally accepted today. However, the identification is based solely on circumstantial evidence, hence the dissenting views (see Ahlström 1980 and response by Davies 1982).

B. History of Excavations

1. Wellcome-Marston Expedition. Large-scale excavations were initiated in 1932 by a British expedition directed by J. L. Starkey, ably aided by L. Harding and O. Tufnell. The expedition was financed by Sir Henry Wellcome, and later by him and Sir Charles Marston. The excavations came to an end in 1938, following Starkey's murder by bandits. Starkey published only brief preliminary excavation

reports (Starkey 1933; 1934; 1935; 1936; 1937a; 1937b; Inge 1938), and Tufnell later completed the publication work (Tufnell 1953; Tufnell, Inge, and Harding 1940; Tufnell et al. 1958).

The British excavations were carried out both on the site and in the surrounding areas. The NW corner of the site was excavated to prepare a location to dump the soil from the excavations on the summit. The shoot constructed at this point and the huge dump indicate to the present-day visitor the large scale of the digging carried out here. The Levels II–I city gates, outer revetment, Level I Residency and Solar Shrine, Great Shaft, Judean palace-fort, and the Fosse Temple at the bottom of the NW corner are the most important remains uncovered on the mound proper. In addition, a sectional trench was cut at the NE corner and remains of the earlier periods were uncovered at the NE slope. In 1935, the "Lachish letters" were recovered in the city gate—undoubtedly Starkey's most important discovery. Large areas were cleared outside the site, uncovering numerous tombs from different periods, as well as Bronze Age settlements on the hills to the W and N of the site. Starkey and his associates were trained by Flinders Petrie, and followed his methods. Considering its time, it was an excellent excavation, and hardly any of Starkey's stratigraphic observations and conclusions (with the exception of the Assyrian siege ramp) were changed in the course of the renewed excavations.

2. Aharoni's Excavations. Excavations limited in scope and scale were carried out by Y. Aharoni in the Solar Shrine area in 1966 and 1968 (Aharoni 1975). Aharoni was at that time excavating at Arad, and believed that the ground plan of the Judean shrine uncovered at Arad resembled that of the Solar Shrine. This theory prompted the excavation at Lachish. Various remains of Levels VI to I were uncovered beneath the Solar Shrine, the most important of them the Level V Cult Room.

3. Renewed Excavations. In 1973, systematic excavations were renewed at Lachish aiming at a long-term study of the site and its material culture (Ussishkin 1978; 1983). The excavations are directed by D. Ussishkin and have largely continued adjacent to Starkey's excavated areas on the mound. The expedition pays particular attention to excavation methodology and combines the baulk/debris-layer method (known as the Wheeler-Kenyon method) and the locus-to-architecture method (known as the horizontal method).

The main excavation field is Area, a long, narrow section cutting through the upper edge of the mound on its W side. See Fig. LAC.01. The plan is to reach virgin soil; the work, however, progresses slowly, and so far, excavations have reached the LB strata. Other excavation fields include Area P—the Judean palace-fort and monumental Bronze Age structures beneath its N end; Area D near the SE corner of the palace-fort; Area G—the Judean city-gates; and Area R—a sectional trench at the SW corner of the site where the Assyrian army forced its way into the city in 701 B.C. A comprehensive reconstruction program of the Judean city-gate is also being carried out. In addition, Y. Dagan has conducted a comprehensive surface survey of the surrounding region.

In order to maintain continuity from one excavation to the next, the renewed excavations have used the British system in dividing into city levels and its enumeration system for Levels VI–I. However, for the stratigraphy beneath Level VI, the strata must be renumbered since it is impossible to accommodate all the MB and LB strata within Starkey's Levels VIII and VII. The renumbering will be completed as soon as the relevant strata are uncovered and studied in Area S, which serves as the key excavation area for determining the site's stratigraphy. So far, with the excavation and study of the stratum underlying Level VI in area S, it has been labeled "Level VII." Temporarily, all strata in Area P beneath Level VI have been labeled P-1 to P-5.

C. Summary of Excavations

1. Neolithic, Chalcolithic, and Early Bronze. Prehistoric flint implements were recovered in the surrounding area. A group of flint implements recovered on the mound (Rosen 1988–89) probably indicate the existence of a Pottery Neolithic site in one of the surrounding valleys.

Ghassulian pottery fragments recovered on the site probably indicate that the mound was already settled during the Chalcolithic/Ghassulian period. Remains from the end of the Chalcolithic and the beginning of the EB were recovered by the British on the NE slope of the mound and at the NW settlement extending on the ridge NW of the mound. The people settled in caves, artificially enlarged and transformed into

comfortable dwellings, which contained sunken hearths and lined storage pits. A dolmen found on the NW ridge probably relates to that settlement.

We may assume that during EB II–III the mound was extensively settled, but very little is known at present about it. Remains from this period were found in Starkey's NE section, in Area D at the center of the site, and in tombs. Much EB pottery, including numerous fragments of KHIRBET KERAK WARE, was recovered from the debris the early defenders used to build the counter-ramp in 701 B.C. (see below).

Chronological Table (Dates B.C.)

Periods and Dates	Lachish Levels	Special Data
Pottery Neolithic		Site in vicinity
Chalcolithic-EB IVA (3500–2200)		Settlement on mound
EB IVB-C (2200–2000)		Area 1500; cemetery 2000; NW settlement
MB I (2000–1800)	?	
MB II–III (1800–1550);	Starkey's L. VIII [P-5, P-4]	

… ca. 1550; destruction by fire …

LB I (1550–1400)		Fosse Temple I
LB IIA (1400–1300)	Starkey's L. VII	Fosse Temple II
LB IIB (1300–1200)	Level VII [P-1]	Fosse Temple III

… ca. 1200; destruction by fire …

Iron Age IA-B (1200–1130)	Level VI	

… ca. 1150–1130; Destruction by fire …

Iron Age IB (1130–1000)	Gap in settlement	
Iron Age IC (1000–930)	Level V	United Monarchy

… ca. 925; destruction by fire (?) …

Iron Age IIA-c (930–586)	Level IV	Divided Monarchy
	Level III	

… 701; destruction by fire …

	Gap in settlement	
	Level II	

… 588/586; destruction by fire …

Babylonian-Hellenistic (586–31)	Level I	

2. Early Bronze IV

During this period (also labeled MB I or EB–MB Intermediate Period), the mound was apparently abandoned, and settlement seems to have shifted to surrounding ridges. Caves in Area 1500, and part of the NW settlement located on the ridge to the W of the mound, which included a number of domestic buildings, were uncovered by the British. Notably, a group of small copper ingots was also found there. A large burial ground (Cemetery 2000) extended along the slope of the ridge to the N of the settlement, on which 120 rock-cut tombs were uncovered, few of them intact. Many of the tombs were too small to contain more than a single tightly flexed body, and nearly all traces of human remains have disappeared.

3. Middle Bronze Age. Relatively little is known about the MB city. In fact, all the remains so far excavated date to MB II–III (=MB IIB–C), and nothing is known about the settlement in MB I. The excavated remains include the fortifications, the palace, a cult place, Starkey's Level VIII in the NE section, and tombs.

A glacis was erected around the city, becoming the core of the present impressive shape of the site with its steep slopes and angled corners. The glacis was studied by the British near the NW corner. It was composed of nearly horizontal layers of fill capped by a lime-plastered sloping surface. Significantly, a

freestanding city wall, topping the glacis along the upper edge of the site, was not found at this point. A fosse was cut in the rock along the bottom of the glacis at least along the W side of the mound.

The center of the site was crowned by a huge palace. Its NW wing was uncovered in Area P (Level P-4); most of the edifice extends beneath the later Judean palace-fort and its courtyard. The palace is characterized by massive brick walls, and it is built above an earlier edifice of a similar nature (Level P-5). A number of huge stone slabs incorporated in the palace's walls and floors probably originate in the earlier edifice. The palace was destroyed by a severe fire which marks the end of the MB city. Following the destruction, the palace was reoccupied, and some rooms were used for industrial purposes (Level P-3).

Remains of a cult place were uncovered in Area D, near the SW corner of the Judean palace-fort. The structure was mostly destroyed, but votive pottery and concentrations of animal bones were recovered. Tombs of that period were excavated by the British, noticeable among them Tomb 1502, which contained a dagger bearing an inscription in Canaanite alphabetic script.

4. Late Bronze Age. Immediately following the destruction of the MB city the settlement apparently dwindled and deteriorated, and only later did it gradually develop and regain its importance, culminating in the final Canaanite city of Level VI. Lachish is mentioned in Papyrus Hermitage 1116A dated to the 19th or 20th year of Amenhotep II (1427–1402 B.C.), which is the earliest reference to the city in an external source. The papyrus records presentations by Egyptian officials of grain and beer to envoys of various Canaanite cities, including Lachish (Weinstein 1981: 13). A number of cuneiform letters found in el-Amarna and dating to the 14th century B.C. were sent from Lachish. Another cuniform letter from that period, sent from an Egyptian official probably residing at Lachish to his superior, was found at Tell el-Hesi. Apparently, as testified by these letters, during the el-Amarna period Lachish was one of the most important city-states in southern Canaan.

Significantly, Lachish may have been unfortified throughout the LB Age. It seems that the MB fortifications were no longer in use, and a temple was thus erected in the disused fosse (see below). Remains of buildings along the edge of the site assigned to Levels VII and VI, dated to the 13th to 12th centuries B.C., were uncovered in Starkey's sectional trench in the NE corner and in Area S. Those buildings prove that a proper city wall had not been erected during that period, but it is possible that the buildings along the edge of the mound were in fact connected to one another and formed a fortified belt. However, during the 14th century B.C., the entire excavated area up to the edge of the mound in Area S formed an open, undeveloped field; hence, at least during the el-Amarna period Lachish was not fortified either by a city wall or a belt of buildings.

Relatively little is known about the settlement on the summit between the end of the MB and Level VII. Some remains were uncovered in the NE section (Starkey's Level VII), in Area P (Levels P-3 and P-2), and beneath Level VII in Area S.

Some time after the destruction of the MB city a small sanctuary was founded in the disused fosse near the NW corner of the site (Tufnell, Inge, and Harding 1940). It was later rebuilt twice, its three phases labeled by the British as Fosse Temples I to III. The original temple was a modest structure; it formed a rectangle oriented along a N-S axis, measuring ca. 10 by 5 m with subsidiary rooms on the W and N. An altar in the form of a bench with three projections adjoined the S wall of the shrine. Many of the finds were uncovered in *favissae* surrounding the building. The finds from Fosse Temple I include an imported Mycenaean kylix and beautiful "bichrome ware" vessels. Ca. 1400 B.C. the original sanctuary was replaced by Fosse Temple II. The position of the building was maintained, but the new structure was much larger in size and a new chamber was added on the S side. A number of benches for placing offerings were constructed along the walls of the main hall.

The remains of Level VII domestic structures in Area A (and possibly Level P-1 in Area P) and Fosse Temple III represent the 13th-century city (Ussishkin 1985). It was destroyed by fire. Fosse Temple III resembled the previous one, but had an enlarged altar and an additional room on the S side; many rich finds were uncovered beneath its destruction debris. They include a group of carved ivories, faience vessels, and Egyptian scarabs and jewelry.

Level VI represents the last, prosperous Canaanite city probably built shortly after the destruction of Level VII. Level VI shows a cultural continuity from Level VII, but the city was rebuilt along entirely different lines: in Area P the Level VII domestic structures were replaced by a public building; the fosse temple was not rebuilt, and a new temple was built in the acropolis, possibly as part of the royal compound.

Level VI shows strong affinities with Egypt during the reign of Rameses III (1182–1151 B.C.—low chronology of Wente and Van Siclen). The Egyptian presence is primarily indicated by a number of bowl fragments inscribed in hieratic script. Goldwasser (1982; 1984) recently restudied these bowls in conjunction with the hieratic bowls from Tel Sera‘. The bowls constitute the documentation of the *šmw* (harvest tax) paid to an Egyptian religious institution, probably associated with a local temple (such as the Level VI temple). According to Goldwasser, the recording of the harvest tax on votive bowls reflects the economic exploitation of S Canaan by the Egyptian authorities via the religious establishment. This would imply that Lachish was under direct Egyptian control, together with S Canaan. The strong connections with Egypt are also reflected in the architecture of the acropolis temple, in the bronze object bearing a cartouche of Rameses III found in the city gate area (see below), and in two anthropoid clay coffins, one bearing a pseudo-hieroglyphic inscription, found in a tomb near the mound.

The main complex of the acropolis temple consists of an antechamber, the main hall, and the cella, as one ascends the slope. The entrances to the three units are built along a straight axis, oriented W–E, passing through the center of the main complex. See Fig. LAC.02. The main hall is rectangular, measuring ca. 16 by 13 m. Two massive columns bases found in the center of the main hall indicate that the roof, spanned by cedar of Lebanon beams (Clamer and Ussishkin 1977: 73), was supported by two columns. A monumental staircase made of stone slabs led the way to the cella. Three octagonal columns found here apparently flanked two niches built along the wall to the left of the staircase. Numerous fragments of painted plaster indicate that parts of the walls in the hall were decorated. The finds are few since the rich equipment of the temple seems to have been vandalized and robbed prior to when the temple was set on fire. Of special interest is a gold plaque portraying a nude Canaanite goddess standing on a horse (Clamer 1980). This plaque, and a graffito depicting a standing god (?), apparently indicate that this was a Canaanite (rather than Egyptian) sanctuary.

The layout of the acropolis temple (like that of the Level VI temple at Beth-shan) originates in Egypt. Its plan resembles shrines in el-Amarna and in the workmen’s camp at Deir el-Medina (Bruyère 1948; 1952). The best analogy is Chapel G at Deir el-Medineh, which although smaller in size, consists of an antechamber, a main hall with two central columns and cella, with the entrances aligned along a central axis (Bruyère 1952: 21–27, Pls. I, V–VI). Many other elements in the temple, such as the octagonal columns, the staircase, and the painted plaster, and many of the finds, also originate in Egypt. Finally, it seems that the temple, having three units and entrances along a single, straight axis, was built according to a plan which later served as a prototype for Solomon’s temple in Jerusalem. Significantly, however, unlike the acropolis temple, Solomon’s temple was oriented from E–W, with its entrance facing E. The two massive columns in the main hall of the acropolis temple can illustrate the biblical account of the Philistine temple of Dagon in Gaze which was pulled down by Samson (Judg 16:23–30).

No Philistine painted pottery—neither monochrome (the so-called “locally made Mycenaean IIIC:1b”) nor bichrome pottery—was found in any of the excavations, except for a few sherds in a cave on the N slope which apparently remained open following the destruction of Level VI. This fact seems to have far-reaching implications. Tel Lachish lies only a short distance from both the coastal plain and from two significant Philistine centers—Tel Miqne and Tel Zafit (identified with ancient Ekron and Gath, respectively). Philistine bichrome pottery, however, was found at sites further inland from Tel Lachish, for example at Tel Beth-shemesh, Tel Eton, and Tell Beit Mirsim. Considering the geographical position and the size and prosperity of the Level VI city, it is difficult to imagine that nearby Philistine cities could have coexisted with Lachish without some Philistine pottery reaching the latter. Hence it appears that Lachish was not settled at the time that painted Philistine pottery was produced in the nearby region, and

that this pottery dates in the main to the period following the destruction of Level VI, i.e., to the last third of the 12th century B.C., or even later (see below).

The Level VI city was destroyed by fire. The destruction was complete and the population liquidated or driven out. Following the catastrophe, the site was abandoned until the 10th century B.C.

A cache of bronze objects, which included a broken object bearing a cartouche of Rameses III, was found in a probe cut beneath the Judean city gate. The cache was sealed beneath the destruction debris of Level VI, and hence this destruction could have occurred either during the later part of the reign of Rameses III (1182–1151 B.C.—low chronology of Wente and Van Siclen) or later. It seems possible that the sudden downfall of Lachish coincided with the Egyptian loss of control over S Canaan ca. 1130 B.C. Without Egyptian protection, Lachish became easy prey for attack.

Evidence for the sudden destruction was found in Area S. The Level VI public edifice seems to have been turned to living quarters for refugees prior to its destruction. Human remains sealed beneath the destruction debris included bones of an adult, two children and an infant, apparently trapped when the catastrophe occurred.

With the absence of inscriptions, the identity of the conquering enemy remains a matter of speculation. One suggestion (Tufnell 1953: 52) is that the Level VI city was destroyed by the Sea Peoples. In that case the complete destruction and subsequent abandonment of the site could be compared to the fate of Alalakh and Ugarit, whose final destructions are attributed to the invading Sea Peoples. The founding of Philistine Ekron nearby and the diffusion of Philistine pottery in the region can easily be explained if it is assumed that they destroyed Canaanite Lachish. As a corollary to such a reconstruction, the invasion of the Sea Peoples was a prime factor in the collapse of Egyptian authority and military control over S Canaan, which left unfortified cities such as Lachish completely vulnerable.

The second possibility, argued by Albright (1937: 23–24; 1939: 20–22), is that the Level VI city was destroyed by the Israelites, as described in Josh 10:31–32. The biblical description fits the archaeological data: a large Canaanite city destroyed by fire; absence of fortifications, enabling the conquest of the city in a swift attack; and complete desertion of the razed city explained by the annihilation of the populace. On the other hand, the motive for the destruction remains obscure, since the Israelites did not settle here, nor in the surrounding region, until a much later date.

Consequently, the adoption or rejection of this possibility depends largely on whether or not the biblical source is accepted as having a sound historical basis. Acceptance of this viewpoint, however, leads to two corollaries: (1) A cardinal event in the biblical tradition of the Israelite conquest is thus dated to the middle of the 12th century B.C. or even later; and (2) Canaanite Hazor was destroyed in the 13th century, and no later than 1230 B.C. If it is assumed that Hazor was also conquered by the Israelites in accordance with Josh 11:10–11, the biblical description of a swift campaign by Joshua's forces is then incompatible with the archaeological evidence for the destruction of two major Canaanite cities which were separated by about a century.

Seven or eight brief inscriptions written in Canaanite alphabetic script were recovered at Lachish (see most recent summary by Puech 1986–87), thus making it the cardinal site in Canaan proper for the study of this script. The earliest inscription, engraved on a bronze dagger blade found in a MB tomb, contains four signs. It is best read vertically as *trnz*, possibly a name. An important inscription is painted on the shoulder of a ewer found in Fosse Temple II. The best reading to date is that of Cross (1954: 19–21): "Mattan. An offering to my lady ʾElat.[w] A two-line fragmentary inscription was recently found in Level VI in Area S (Ussishkin 1983: 155–57, fig. 25). The two lines are read in boustraphedon fashion by Cross (1984) and Puech (1986–87).

5. Iron Age. a. Level V. Following a long period of abandonment a new settlement was established. Remains of small domestic buildings were uncovered in different parts of the site. The settlement was not fortified, but building remains uncovered in Area S indicate the possibility that the settlement was protected by a belt of houses located along the upper periphery.

A cult room was uncovered by Aharoni (1975) in the Solar Shrine area. The cultic equipment included a stone altar, four pottery incense burners, and a number of pottery chalices. Aharoni also identified cultic

remains in the open area beside the room, including a stone stele and *favissae*. The cult room was destroyed by an intense fire, and remains of the Level V destruction could also be discerned in Area S.

The construction and destruction dates of Level V cannot be fixed with certainty as long as the dating of the red-slipped, irregularly burnished pottery which characterizes this city level remains problematic. It seems that Level V dates to the period of the United Monarchy, and its destruction is usually ascribed to Shishak's campaign in ca. 925 B.C.

b. Level IV. Level IV marks the construction of a large fortified city, making Lachish the strongest and most important city in Judah after Jerusalem. The construction of Level IV cannot be dated on the basis of archaeological data. It seems that the decision to turn Lachish into a fortified city followed new strategic needs of Judah arising as a result of the division of the United Monarchy. If that is so, the foundation of Level IV should be ascribed to one of the earlier kings of Judah, possibly Rehoboam (928–911 B.C.), Asa (908–867 B.C.), or Jehoshaphat (870–846 B.C.).

Lachish is mentioned in 2 Chr 11:5–12, 23 as one of the cities fortified by Rehoboam. This reference has recently been explained in four different ways. First, it was suggested that the entire list dates to the reign of Hezekiah Na›aman 1986) or Josiah (Fritz 1981). Second, it was suggested by Aharoni (1975: 41) and Yadin (1980: 21–22) that Level IV should be ascribed to Rehoboam. Third, Ussishkin indicates that the Level IV city represents an exceptionally strong Judean fort; it is difficult to associate it with Rehoboam's list in which Lachish is named among fifteen fortified towns, most of which are of secondary importance. The archaeological data agrees with the dating of Level IV to Rehoboam's reign, irrespective of the period from which the text may derive. Fourth, it was suggested by Tufnell (1953: 53–54) and by Ussishkin (1978: 93) that Palace A should be ascribed to Rehoboam. This suggestion was based on the stratigraphic assumption that Palace A (i.e., Podium A) was a monumental structure antedating the construction of Palace B in Level IV. Hence the conclusion that Palace A was an isolated fortress built at a later phase of Level V, and that it should be identified with Rehoboam's fortifications. It now appears that Palace A was an integral part of Palace B (see below).

Lachish was surrounded by a massive fortification system. The sole city gate was on the SW side. An ascending roadway led from the bottom of the site to an outer city gate, constructed as a bastion projecting from the line of the slope. Behind the outer gate the passage led through a courtyard to an inner gate, a large, six-chambered gatehouse. An outer revetment surrounded the site halfway down the slope; it supported a glacis which reached the bottom of the main city wall extending along the upper periphery of the site. The outer revetment apparently functioned as an outer obstacle preventing attackers from reaching the main wall, and except for a few places it was not manned in a time of siege.

The center of the city was crowned by the palace-fort (Palace B), obviously the seat of the Judean governor. The edifice was built on a raised foundation podium, and is all that remains after the superstructure was totally destroyed in antiquity. The foundation podium has two parts, labeled Podia A and B by the British. It is generally believed that Podium A represents an earlier edifice, Palace A, which was later incorporated into Palace B (whose present remains thus include Podia A and B). Some now believe that Podium A was an integral part of Palace B and that it is separated from Podium B and constructed in a different style for technical reasons.

Palace B had two annexed buildings—one on the N, which was probably a storehouse, and one on the S, which was either a storehouse or a stable (see below). The latter was labeled "government storehouse" by Starkey. A massive "enclosure wall" connected the SW corner of Palace B and the main city wall. The surface of the ground in this area sloped towards the city wall and was lime plastered.

The large, square "Great Shaft" hewn in the rock was uncovered by the British on the E side of the site. Since it is ca. 22.5 m deep, some have suggested that it is an unfinished water system, but it seems more likely that it was the quarry which supplied stones for the Level IV structures. A well ca. 44 m deep was uncovered near the outer revetment at the NE edge of the site, and probably formed the main water source of the city.

No domestic structures dating to the earlier phase of Level IV were uncovered. A house dated to the later phase of this level was uncovered in Area S, indicating that as time passed people started to settle in the garrison city.

2 Kgs 14:19 and 2 Chr 25:27 reveal that when a rebellion broke out in Jerusalem against Amaziah (798–769 B.C.), he fled to Lachish and was killed there by the rebels. Apparently when Amaziah saw that Jerusalem was lost to the rebels he fled to the next most important fortified city in Judah.

All the monumental structures (except the city walls), as well as the domestic building in Area S, were rebuilt in Level III, indicating their destruction at the end of Level IV. However, no remains of a willful destruction were discerned. M. Kochavi raised the possibility (oral information) that the destruction of Level IV resulted from an earthquake, e.g., the earthquake which occurred ca. 760 B.C., during the reign of Uzziah (Amos 1:1; Zech 14:5).

c. Level III. Level III is marked by the rebuilding of the city gate, the palace-fort complex, and the enclosure wall. See Fig. LAC.03. More people apparently settled at Lachish and a large number of domestic buildings have been uncovered in the area S of the palace fort and the enclosure wall. Various structures flanked the roadway leading from the city gate to the palace-fort.

Most impressive is the enlarged palace-fort complex. Podea A and B of the former Palace B, were extended by the addition of Podium C, which served as the foundation for the construction of the new edifice, Palace C. It is the largest structure so far known in ancient Israel, measuring ca. 76 by 36 m. The superstructure did not survive except some sections of flooring. The entrance was through a monumental staircase. The palace-fort and the two annexed buildings opened into a large paved courtyard surrounded by a stone fence which was added on the E side.

The S annexed building is of special interest. The Level IV "government storehouse" contained two rectangular units, each divided into three subunits. In Level III the structure ("Building 1034") was rebuilt and enlarged and had four such units. The building resembles the "stable compounds" in Megiddo (Lamon and Shipton 1939: 32–47), and thus also the "storehouse" at Tel Beer-sheba (Herzog 1973: 23–30). The Megiddo buildings were identified at the time as stables for horses, but this suggestion was contested by Pritchard (1970), and later by Aharoni (1982) and Herzog (1973: 26–30), who interpreted the Tel Beer-sheba building as a storehouse. Herr (1988) suggested that these buildings served as marketplaces. In following the argumentation of Yadin (1976) and Holladay (1986), we believe that these buildings—and hence the S annexed building at Lachish as well—were stables for horses.

The above assumption leads to further conclusions. In following Lamon and Shipton (1939: 35), it seems that the Level III stables which opened into a large courtyard housed chariotry units, the spacious courtyard serving as training and parading ground for the chariots. On the basis of the Megiddo and Tel Beer-sheba structures, it can be estimated that each unit in the Lachish building could house about 25 horses, hence the conclusion that the Level IV Judean garrison included a unit of 50 cavalry horses, while the Level III garrison included a chariotry unit of 50 chariots and 100 horses. The assumed connection of the Level III city with chariots fits the lamentation of Micah (Mic 1:13), who associates Lachish with chariots, and to the portrayal in the Lachish reliefs (see below) of burning vehicles, probably chariots, being thrown by the defenders on the Assyrian attackers. The importance of the assumed Lachish chariot unit in the Judean army is apparent in view of the fact that the written sources hardly refer to cavalry and chariotry units in Judah, and their relative weakness during this period is implied from Isaiah (Isa 31:1) and from the speech of Rabshakeh (2 Kgs 18:23–24; Isa 36:8–9).

(1) The Assyrian Conquest. It is now generally agreed (Ussishkin 1977) that the Level III city was conquered and destroyed by Sennacherib king of Assyria in 701 B.C. In Judah, Sennacherib attacked Lachish before turning to Jerusalem. He established his headquarters at Lachish (2 Kgs 18:14, 17; Isa 36:2, 37:8; 2 Chr 32:9) and from there sent a task force to challenge Hezekiah in Jerusalem. This fact as well as the "Lachish reliefs" (see below) prove the special military importance of Lachish during that period. The destruction of the Level III city was complete, and its inhabitants were deported. The desolate site was probably included in that part of Judah which was turned over by Sennacherib to the Philistine kings.

Remains of the destruction by fire were discerned in all Level III structures. Large amounts of pottery vessels were sealed beneath the debris. This well-dated assemblage forms a basis for dating the pottery of Judah in that period (Aharoni and Aharoni 1976; Zimhoni fc.).

The main Assyrian attack was carried out in the SW corner of the city, and the archaeological discoveries in this area enable us to reconstruct the battle which took place (Ussishkin fc.). Deep valleys surrounded Lachish on all sides except for the SW corner, where a topographical saddle connected the site with the neighboring hillock. The fortifications were especially strong at this point, the outer revetment merging with the main city wall, together forming a massive tower. Still, the SW corner was the most vulnerable and most logical point of Lachish to assault. It seems that the site of the Assyrian camp can be restored with much certainty on the hillock to the SW, opposite the SW corner of the site, where the modern village is now situated. However, no remains of the assumed camp could be found there.

A huge siege ramp was laid by the Assyrians at the southwest corner, this being the oldest siege ramp and the only Assyrian one which is known today. See Fig. LAC.04. Unfortunately, a large part of it was removed unknowingly by the British expedition. The siege ramp was 70–75 m wide and 50–60 m long along its central axis, and its top reached the outer revetment wall. It was made of boulders probably collected in the surrounding fields and heaped against the slope of the mound. It is estimated that between 13,000 and 19,000 tons of stone were dumped here. The stones of the upper layer of the ramp were found stuck together by hard mortar to create a compact surface. The upper edge of the ramp was crowned with an earth platform which provided a level platform on which the siege machines could stand at the foot of the wall.

When the defenders saw the Assyrians laying a siege ramp, they laid a counter-ramp along the inside of the city wall, opposite the siege ramp. It was ca. 120 m long, and its apex rose ca. 3 m above the top of the city wall, thus creating a new defense line higher than the previous one. The counter-ramp is composed of layers of debris (taken from the earlier levels of the mound) and layers of limestone chips dumped in an orderly manner.

Once the fortification line along the top of the walls collapsed, the Assyrians raised the siege ramp above the outer revetment, a move which enabled them to attack the new defense line erected on top of the counter-ramp. The second stage of the siege ramp is also composed of boulders, many of which show signs of burning.

Remains of weapons, ammunition, and equipment were found in the excavation, mostly at the foot of the city wall. They include a bronze helmet crest, scales of armor, sling stones, many iron arrowheads (850 arrowheads were found near the city wall at the point of attack), and a number of bone carved arrowheads. A fragment of an iron chain (ca. 37 cm long) and 12 large perforated stones were found near the point of attack and apparently were used by the defenders to attack and unbalance the siege machines. Each of the perforated stones weighs 100–200 kg, and remains of burnt ropes were discovered in the holes of two of them. These stones hung on ropes and probably were dropped from the top of the wall on the siege machines, or were moved to and fro like a pendulum in an attempt to damage them.

A mass burial which possibly was associated with the Assyrian conquest was uncovered by Starkey in several of the caves on the W slope of the mound. Disarticulated skeletons were dumped in a disorderly manner. Strewn throughout the bone deposits was pottery that indicated a date after 701 B.C. for the mass burials. It was estimated that about 1500 individuals were buried here. A total of 695 skulls were brought to London and studied by Risdon (1939). They belonged to men, women, and children—obviously civilians. Curiously, the crania indicate these people bore a close racial resemblance to the population of Egypt at that time. Three of the skulls were trepanned; one man survived long enough after the operation for the bone to heal while the other two men died shortly after the surgical procedure.

(2) The "Lachish Reliefs." When Sennacherib constructed his royal palace at Nineveh (Kuyunjik), he commissioned a set of stone reliefs to commemorate the conquest of Lachish. The reliefs decorated the walls of a large room (No. XXXVI) which had a central position in a large ceremonial unit of the palace. The architectural position of the reliefs, their length, and detailed portrayals emphasize the special importance of this victory for Sennacherib. Layard excavated part of the palace between 1847 and 1851.

He uncovered Room XXXVI and brought most of the Lachish reliefs to the British Museum in London (Layard 1853a: Pls. 20–24; 1853b; Paterson 1915: Pls. 68–76; Ussishkin 1982: 67–118).

The Lachish reliefs covered all the walls of the rectangular room. The total length of the entire series was 26.85 m while the length of the presently preserved dado is ca. 18.85 m. From left to right the series depicted Assyrian horses and charioteers (this part is now missing), Assyrian infantry attacking the city, the besieged city (portrayed in the center of the series opposite the entrance to the room), Assyrian soldiers carrying booty and the deported Lachishites leaving their city, Judean captives, Sennacherib sitting on his throne facing Lachish, the royal tent and chariots, and the Assyrian camp.

The attacked city is shown in much detail. In the center is the city gate attacked by a siege machine, and to its right is the main siege ramp, on which six siege machines are deployed. A large structure, probably the palace-fort, is shown above the city gate. The city walls, manned by Judean warriors, are shown at both ends of the city. An analysis of the relief leads to the conclusion that the artist, although limited by the possibilities of the Assyrian schematic style, attempted to portray a realistic view of the city (Barnett 1958; Ussishkin 1980; 1982: 118–26). Lachish is shown as if viewed from a certain point located on the slope of the hillock SW of the mound. This point seems to be where Sennacherib sat on his throne, probably in front of the Assyrian camp, and commanded his army assailing the walls. Accordingly, I believe that the relief portrays Lachish as viewed by the Assyrian monarch from his command post, and in fact he is depicted in the relief sitting on his throne and facing the city. However, see ICONOGRAPHY.

(3) Royal Judean Storage Jars. Tel Lachish is a cardinal site for the study of the royal seal impressions for three reasons: (1) they were found in datable stratigraphic contexts; (2) some of the storage jars which carried them could be restored; and (3) at Lachish were recovered more stamped handles than in any other site. By 1983, 383 royal stamps and 54 "private" stamps from Lachish were counted (Ussishkin 1983: 163–64). Of the royal stamps, 85.9% were of the four-winged type, about two thirds of the latter bearing the city name Hebron.

All seal impressions were stamped on handles of storage jars of Type 484 according to Tufnell's classification (1953: 315–16; Pl. 95:484). See Fig. LAC.05. While some of these storage jars were stamped, many others were not stamped at all. One group of unstamped jars slightly differs from the typical ones, but is certainly related to them (Zimhoni fc.). A neutron activation analysis (Mommsen, Perlman, and Yellin 1984) indicated that the Type 484 storage jars were all made of similar clay from the region of the Shephelah, hence the conclusion that they were all produced in one center not far from Lachish. Lemaire's observation (1981) that only 22 seals, divided into six series, were used in stamping the jars, supports this conclusion.

Ten stamped royal jars, as well as numerous unstamped ones, could be restored, and allow the following conclusions. First, all kinds of jars—those bearing a four-winged symbol, those bearing a two-winged one, and those unstamped—were used concurrently. Second, all of them were found in Level III rooms sealed beneath the destruction debris (Lance 1971). Hence it is clear that they were produced during the reign of Hezekiah, shortly before 701 B.C. (Ussishkin 1977). This datum fits Na›aman's views (1979; 1986) that the royal storage jars were produced by the government of Judah as part of the preparations to meet the Assyrian invasion. Third, the measured capacity of the stamped jars is not uniform (between 39.75 and 51.80 liters), an indication that the stamps were not a royal guarantee of capacity. Fourth, there is no consistent pattern nor any uniform ruling for the application of stamps onto the four handles of each jar. Fifth, a "private stamp" was sometimes impressed together with a royal stamp on the same jar (Ussishkin 1976), supporting the conclusion that owners of the "private stamps" were either officials associated with the jars' production center, or potters at that center (Diringer 1949). Significantly, as noticed by Zimhoni (fc.), a large part of both the royal, and "private" impressions were carelessly applied and apparently were not meant to be read later. See STAMPS, ROYAL JAR HANDLE.

d. Level II. Following a period of abandonment, the settlement was renewed and refortified, probably during the reign of Josiah (639–609 B.C.). The Level II town was poorer and sparsely populated and its fortifications weaker than those of Level III.

A smaller city gate complex was built on the ruins of the former one. A rectangular courtyard separated the outer and inner gates, and a number of rooms opened into it. The "Lachish letters" (see below) uncovered in one of those rooms hint that the city's headquarters was located here. The outer revetment was apparently repaired and a new main city wall constructed of stone extended above the ruins of the previous one. The palace-fort was not rebuilt, and its ruins loomed in the center of the city.

A number of small houses, mostly of domestic character, were uncovered along the E side of the ruined palace-fort, in the Solar Shrine area, near the city gate, and in the SW corner of the site, but many other areas were found devoid of Level II remains.

Level II was destroyed by fire during the Babylonian conquest of Judah in 588/6 B.C. Jeremiah (34:7) mentions Lachish as one of the Judean strongholds attacked by Nebuchadnezzar. Large assemblages of pottery vessels were sealed beneath the destruction debris of the buildings, forming an indicative assemblage of the first decade of the 6th century B.C. (Aharoni and Aharoni 1976; Zimhoni fc.). Of special interest are storage jars whose handles are stamped by a rosette emblem; 23 of these stamped handles were found at Lachish.

e. Hebrew Inscriptions. While hardly any inscriptions were found in association with Level III (except for the royal seal impressions) a relatively large number of Hebrew ostraca, inscriptions on pottery vessels, bullae, Hebrew seals, and inscribed weights were found in Level II. Most important are the "Lachish letters" found sealed beneath the destruction debris in a room in the city gate complex (Torczyner et al. 1938; Lemaire 1977). These ostraca represent correspondence most of which were addressed to "my lord Yaush," an army commander at Lachish, shortly before the Babylonian destruction. They were sent by a subordinate stationed at some point where he could watch the signals from Azekah and Lachish. Recently Yadin (1984) suggested that the "Lachish letters" are in fact copies or drafts of letters sent from Lachish to the commander in Jerusalem. A few inscriptions on vessels were found in the Level II storerooms near the city gate (Ussishkin 1978: 81–88; Lemaire 1980); two of them define types of wine kept in the vessels. Two jar inscriptions from Lachish mention dates, "in the fourth" and "in the ninth"—probably regnal years of Zedekiah king of Judah. Finally, seventeen bullae stamped with Hebrew seal impressions still bearing traces of papyri and strings on the reverse side were found by Aharoni (1975) in a juglet in a Level II building.

6. Post-Iron Age. a. Level I. This level spans the Babylonian, Persian, and the beginning of the Hellenistic periods. The settlement was probably abandoned for a while following the Level II destruction. Judeans returning from the Babylonian exile settled here (Neh 11:30), and during the Persian period Lachish was rebuilt as a governmental center. The city gate and city wall were restored, and a palace (the Residency), a temple (the Solar Shrine), and a few large buildings were erected on the summit.

The Residency was constructed on the foundation podium of the Judean palace-fort, which was cleared of the debris of the Palace C superstructure. However, the new edifice was smaller than the previous one. The building contained a large, square court and two porticoes opened to it. Hence its plan combined that of an Assyrian open-court house and a N Syrian *bit-hilani*. The square column bases in the porticos are cut in Persian style. At the end of Level I the Residency was settled by squatters. The Solar Shrine, measuring ca. 27 by 17 m, was built NE of the Residency in similar style, and both were probably contemporary. Its entrance faced E, hence the name given by Starkey. A bronze lamp and a limestone altar are the most important finds from the shrine. Among the finds from Level I are imported Greek pottery and many small stone incense altars found in caves at the foot of the mound.

The settlement came to an end during the earlier part of the Hellenistic period. The settlement pattern shifted to Marissa, and then to Eleutheropolis (Beth-Govrin). The reason for this shift is not clear. The Roman road from Eleutheropolis to Gaza passed near Lachish (as stated by Eusebius), and a segment of the road was uncovered by Starkey; other segments were recently identified and surveyed by Y. Dagan (oral information).

A large number of coins from different periods were found on the surface of the tell, indicating that the summit was continuously cultivated. Some areas of the summit contained burials termed "medieval graves" by the British. They were usually devoid of any burial offerings, and their date is unknown. The

latest remains of the site are trenches, cartridges, and coins from Israel's War of Independence in 1948 A.D., when an Israeli unit was stationed on the tell.

DAVID USSISHKIN

LACHISH LETTERS. In the course of the six archaeological excavations conducted by the Wellcome-Mars-ton Archaeological Research Expedition at Tell ed-Duweir (ancient Lachish) between 1932 and 1938, twenty-one inscribed ostraca were found which, together with another ostracon discovered by Y. Aharoni in 1966 at the site of the city's so-called "Solar Shrine," perhaps comprise the single most significant corpus of Hebrew epigraphic material to have thus far come to light. All the ostraca appear to date to the last phase of Judahite occupation (Level 2), thus to the city destroyed in Nebuchadrezzar's conquest of Judah in 586 B.C.E. Their contribution to the study of ancient Hebrew—paleography and orthography, grammar and syntax—and its epistolographic tradition is surpassed only by their historical value as a witness to the situation prevailing in Judah during the final days of the Davidic State.

In the *editio princeps,* Torczyner (1938) labeled, albeit loosely, the eighteen ostraca recovered in 1935 just inside the city's outer-gate "letters." However, they and the ostraca of 1938 (nos. 19–21) and 1966 (no. 22) represent a heterogeneous collection. Nos. 10, 14, 15, and 21 are practically unreadable (Lemaire 1977: 139); while no. 20 is in fact an inscription on a jar, having been found together with other fragments of the same storage vessel just E of the palace-fortress (Lemaire 1977: 134–35). Since of the ostraca that remain, nos. 1, 11, 19, and 22 are lists of proper names, composed for administrative purposes, this leaves only nos. 2–6, 8–9, 12–13, and 16–18 that may with some confidence be identified as letters or parts thereof (Pardee 1982: 12). While several ostraca (nos. 2, 6–8, 18) originally came from the same pot and apparently were written by the same hand, the enormous quantity of jar fragments found with them, many blackened by fire (Torczyner 1938: 11), gives little endorsement to the search for a unitary explanatory context for these or a majority of the preserved ostraca (Pardee 1982: 77).

Among the ostraca discovered in 1935, nos. 1–15 and 18 belong to a single cache taken from the burnt deposit of a room adjoining the outer gate, plausibly identified as the guardroom. As such, it was a place where messages are likely to have been received by the commander of the fortress (Starkey 1938: 11–12). Indeed, where the relationship between sender and recipient can be determined, the letters belonging to this group appear to be addressed without exception from an inferior to a superior. Regrettably, the inferior is mentioned only once by name, in no. 3:1 identified as Hoshaiah; three times, however, in nos. 2:1, 3:2, and 6:1, the recipient is identified as Yaosh, who may, on the basis of allusions contained in the letters as well as the address "my lord," reasonably be identified as the commander of the fortress itself. Broadly speaking, the letters, where sufficiently preserved to permit a decision, are of the nature of military correspondence (Pardee 1982: 159), revealing Yaosh's wide-ranging involvement in, and concern for, administrative, political, and military issues of local and national importance.

A. Language

The language of the letters reflects throughout the popular Hebrew spoken in Judah in the early 6th century. Here we may call attention to the noncontraction of diphthongs, characteristic of the south, as well as to the use of shorter, popular grammatical speech forms, reflected in many portions of the MT's consonantal text. New to the Hebrew lexicon are several items found in the letters, such as the expression *ʿt kym*, "right now," (2:3) or *lnṣḥ*, "ever," (3:10); rare Hebrew words are also found, as *dlt* (4:3),

indicating some type of writing material, or *mśʾt* (4:10), used for "fire signal." Of interest are the occurrences of the formula of courtesy *my ʿbdk klb ky*, "Who is your servant (but) a dog that …," used by an inferior addressing Yaosh (2:3–4), and the oath formula *ḥyhwh*, "As Yahweh lives …" (3:9). While generally the orthography reflects preexilic practice in the use *matres lectionis*, at least one instance of an internal *mater lectionis* (viz. *hʿyrh*, 4:7), in a context where the reading is undisputed, indicates the onset of postexilic practice, found also sporadically in the Arad Ostraca.

The Lachish Letters, though characteristically allusive in their subject matter rather than discursive, provide, because of their length and relatively nonstereotypical language, an important source for the study of Hebrew grammar and syntax in the early sixth century B.C.E. In its use of long and elaborate syntactical structures, the language of the letters is in fact reminiscent of the Deuteronomist and especially the prose style of Jeremiah. This puts an additional burden upon the modern translator/interpreter. For a straightforward analysis is encumbered by the necessity of reconstructing a context for the letters' characteristically elliptical phraseology (a context presumed alike by the original sender and receiver) and by the limitations on analysis the ostraca's state of preservation imposes.

B. Epistolography

The Lachish Letters, though limited to communications from an inferior to a superior submitting reports or requesting directives, furnish valuable data on current epistolary style and practice. In addition to the variety of greeting formulas employed (e.g., "May Yahweh have my lord hear good news right now, right now …" 2:1–3), several formal features immediately stand out. The *praescriptio* consists of (1) an address ("to my lord"), with or without the name of the recipient, and lacking (except in one letter) the name of the sender, followed by the greeting (above); or (2) simply a greeting formula without an address. The body of the letter is then introduced either by the familiar transitional particle *wʿt*, "and now," or, unique to Lachish, the formula noted above, "Who is your servant (but) a dog that …" No closing formulas, such as emerge in the letters of the Bar Kokhba period, follow the body of the letter proper.

C. Historical Significance

The most important of the letters historically are nos. 3, 4, and 6. While none of the allusions or names contained in them, with the possible exception of no. 4, can be correlated precisely with biblical personages or events, the letters mirror to a remarkable degree the troubled atmosphere prevailing in Judah on the eve of its conquest, transparent in the biblical account of the prophet Jeremiah.

Letter no. 3, a letter of Hoshaiah to Yaosh and the longest Hebrew letter dating to the monarchy, appears to report in fact on just the sort of embassy to obtain Egyptian assistance alluded to in Ezek 17:15 and against which Jeremiah (37:7) railed so vehemently. "And to your servant it has been reported that the general of the army, Coniah, son of Elnathan, has gone down to enter Egypt, and he has sent to fetch from here Hodaviah, the son of Ahijah, and his men" (13–18). Could Coniah, son of Elnathan, mentioned here, be related to Elnathan, son of Achbor, sent by King Jehoiakim to Egypt to arrest the prophet Uriah (Jer 26:22)? The letter concludes with the tantalizing report that Hoshaiah is dispatching to Yaosh the letter of one Tobiah, the servant of the king, that came to a man by the name of Shallum through the mediation of an unnamed prophet, containing the message "Beware!" Unfortunately, it is impossible to specify the object of this laconic warning; and although the prophet employed to convey the letter may have been known both to Hoshaiah and Yaosh, every attempt to identify him with a biblical prophet must remain hypothetical. The impression conveyed by the letter generally of intense political maneuvering and factional disunity, nevertheless, accords well with what we know from the Bible.

The most intriguing of all the letters is no. 4, even if the interpretation of its enigmatic contents has been the subject of considerable dispute. At issue are, in particular, two statements made in the body of the letter which, on one interpretation, allude to the abandonment of Beth-harapid (4–6), an outpost of unknown location, and to the fall of Azekah, ten miles north of Lachish, mentioned in Jer 34:6–7 as one of two fortresses including Lachish left remaining to Judah before Jerusalem's fall: "And may (my lord) know that we are watching for the signals of Lachish according to all the signs which my lord gave. For we do not see Azekah" (10–13). If so, this letter must date to the final critical phase of the Babylonian campaign, shortly before the capture of Lachish itself. But on another, if less accepted reading, the letter

may simply allude to preparations for imminent invasion, i.e., the evacuation of small towns and the testing of a system of fire signals to warn of the enemy's advance (Pardee 1982: 95).

The interpretation of no. 6 is problematic as well, because at several key points in the letter the writing is almost totally effaced. But the unquestionable reference in lines 5–6 to the negative effect that certain statements being made are having on the situation makes probable an allusion to the circulation of letters from high-placed Judean officials that were demoralizing in the face of the Babylonian threat. This accords with what we know in the Bible both of Zedekiah's own vacillation in the rebellion and of the support Jeremiah received from influential members of Judah's nobility.

It can only be hoped that technical advances in the instrumentation used for epigraphic analysis will in the future enable scholars to refine their conclusions concerning these and other matters of interpretation, making possible a fuller appreciation of this important corpus of ancient Hebrew letters and documents.

The texts of selected Lachish letters are available with German translation and notes in *KAI,* 192–99. English translations include *ANET,* 322 (by W. F. Albright), and, with Hebrew text and notes, *TSSI* 1: 32–49.

ROBERT A. DI VITO

LADAN (PERSON) [Heb *la·dān* (לַעְדָּן)]. **1.** A descendant of Ephraim and therefore a descendant of Joshua, the hero of the Conquest (1 Chr 7:26). Ladan is the son of Tahan and father of Ammihud. The only other listing of the Ephraimite clan is in Num 26:35–36, and Ladan is not found there. However, some of the names prior to Ammihud are found in the Numbers passage.

2. A Gershonite Levite (1 Chr 23:7–8; 26:21). Gershon is elsewhere in the OT Gershom, indicating perhaps divergent authorship. Gershon, Kohath, and Merari were the sons of Levi. The first son of Gershon is otherwise Libni (1 Chr 6:2—Eng6:17; Exod 6:17; Num 3:21) but Ladan in 1 Chr 23:7–8 and 26:21. Ladan has three sons: Jehiel, Zetham, and Joel, according to 23:8. Libni (6:5—Eng 6:20) has one son, Jahath (cf. 23:10). This Jehiel is found also in 1 Chr 26:21–22 (spelled Jehieli) as a Gershonite whose sons Zetham and Joel were over the treasuries of Yahweh's temple. The phrase "these were the heads of the family of Ladan" (1 Chr 23:9) seems out of place and requires some textual emendations (Myers *1 Chronicles* AB, 158).

M. STEPHEN DAVIS

LADDER OF TYRE (PLACE) [Gk *klimax Tyrou* (κλιμαξ Τυρου)]. A distinctive geofeature which marked the N boundary of the Seleucid eparchy of Paralia over which Antiochus VI made Simon Maccabeus responsible (1 Macc 11:59; *Ant* 13.5.5. §146). Josephus, in locating Simon's territory, described the Ladder of Tyre as being 100 stadia N of Acre and the highest mountain in Galilee and Carmel (*JW* 2.10.2). This feature along the coast was also reportedly the northernmost boundary of the harvest of murex shells used in the production of purple dye (Totius Orbis Descriptio 29). The description which includes Carmel is problematic since Mt. Carmel, at 550 m, is higher than the ridges N of Acre which have a maximum elevation of 300 m. However, N of the plain of Acre there are several precipitous promontories which extend into the Mediterranean. These ridges prevented easy communication between Acre and Tyre along the coast. The climbing involved in traversing this route may have been the origin of the toponym "Ladder of Tyre." It has also been observed that when viewed collectively from the S, these ridges provide an image of rungs whereby one may ascend to Tyre. The promontories Ras Musheirefeh,

Ras en-Nakurah, and Ras el-ʿAbyadh separately are all possible candidates for this location. Simons (*GTTOT*, 416) assigns the toponym "Ladder of Tyre" as a collective name for the series of promontories S of Tyre that extend into the Mediterranean.
ROBERT W. SMITH

LADY, ELECT. See ELECT LADY.

LAEL (PERSON) [Heb *lāʾēl* (לָאֵל)]. According to Num 3:24, the father of Eliasaph, the leader of the Gershonite subdivision (father's house) of the tribe of Levi. Noth (*IPN*, 32, 153) proposed a translation of the name such as "belonging to God," or "God's special possession," and suggested that it expressed a close relation between God and the name bearer while attributing no particular aspect to that relation.
RICHARD D. WEIS

LAGASH. The name of an important Sumerian city-state from the 3d millennium of which two urban centers have been found and partially excavated: Tello (= Girsu) and el-Hiba (= Lagash). Tello was the first site to produce important vestiges of Sumerian civilization. In 1877, E. de Sarzec, French Vice-Consul in Bassorah, having learned that statues had been found by clandestine excavators, undertook excavations there. At the end of the first four seasons, he announced in 1881 the importance of his discoveries. Up until his death in 1900, he had led eleven excavations in all. G. Cros continued exploration from 1903 to 1909 (four excavations), then H. de Genouillac returned to the site three times from 1929 to 1931 and A. Parrot led two digs there from 1931 to 1933. These twenty excavations have brought to light rich and varied material (statues, steles, cylinder seals, tablets, etc.) that for a long time have been the base of our knowledge of Sumerian civilization. However, much is still unknown about the city and its architecture. Between the regular excavations, clandestine digs devastated the site and dumped onto the market thousands of objects and tablets whose origins were unknown. But this destructive pillaging is not the only thing responsible: research was often conducted without careful methods, without knowledge of the unbaked brick architecture and without consideration of stratigraphy. Thus it is more the objects and tablets that allow one to talk about Tello than the archaeology itself.

However, exploration recently undertaken at El-Hiba, if it is continued, will help in compensating for certain gaps in the archaeological knowledge. This site, the largest of the S tells with more than 500 hectares, is found about 20 km to the NE of Tello. It was excavated for the first time in 1887 by R. Koldewey, who found only a large necropolis there. In 1968 an American group engaged in a systematic study of the site, and thus far five excavations have been conducted under the direction of V. E. Crawford and D. P. Hansen, the first four in 1968–69, 1970–71, 1972–73, and 1975–76. The results have still been published only partially, but the research deals in particular with two sanctuaries from the Early Dynastic period that show the interest there will be to continue the exploration.

The work and the study of the tablets suggest that Lagash was a state composed of several urban centers; the capital was without doubt in El-Hiba itself, but Tello-Girsu during antiquity was certainly (if one refers to its extended area and the quality of the finds found by the French team) a city of equal importance, perhaps with a more religious vocation.

It is during the 3d millennium that Lagash played a large role. The site of Tello had been occupied since the Ubaid period, and material from Uruk and Jemdet Nasr have been found. It is, however, impossible to evaluate the role of the importance of the city during this long period. It is during the Early Dynastic III period that the inscriptions bring to light the active role played by certain of the *ensi* (i.e., rulers) of Lagash, some of whom are Urnanshe, Eannatum, Entemena and Urukagina. The famous Stele of the Vultures (now in the Louvre Museum) that was drawn up to commemorate the victory of Lagash over Umma, illustrate thus the territorial rivalries and the certainly tumultuous life of the cities of Sumer. The rich and varied material—statuettes, most often fragmentary reliefs, sometimes called New Year plaques; masses of sculpted armaments, like that of Mesilim; different arms and tools out of bronze; the very beautiful Entemena vase, in silver, on which a leontocephalous eagle linking animals was engraved four times; fragments of engraved shell; cylindrical seals; foundation figurines, etc.—come without doubt for

the most part from the temple consecrated to the principal god Ningirsu; the architecture of this temple is unfortunately practically unknown. At El-Hiba, however, the beginning of excavations at the Ibgal Temple of the goddess Inanna looks like a promising example of religious architecture; the last of the three levels seems to link the building to a series of oval or circular temples. At El-Hiba, the Ibgal of Inanna, of which the last phase was built by Eannatum, and the Bagara of Ningirsu are still very rare examples of the real importance of the city. The Old Akkadian period does not seem to have left marked traces, but at Lagash one finds evidence of Gudea and the beginning of the Neo-Sumerian renaissance after the dark age of Guti around 2150 B.C. The reconstruction of the temple of Ningirsu at Tello is known to us only through texts (cylinder A of Gudea); it clearly reveals important commercial trade relations because materials from the mountains of Amanus were brought to the site as well as from the gulf countries of Magan and Meluhha. But what shows at the same time, the real strength and originality of Lagash at this moment, is the collection of diorite statues of Gudea. See Fig. ART.14 in the article Art and Architecture—Mesopotamian Art and Architecture. The hydraulic works that have been unearthed on the eastern tell of Tello also clearly show the high degree of technology attained by the Sumerian civilization.

However, it is not Lagash but Ur that becomes the center of the empire and the focus of the Sumerian renaissance. With the Ur III period, Lagash is no longer an important center, but nevertheless, Tello and El-Hiba have provided architectural material that attests to a relative survival of the city during the course of the second and first millennia. See also *RLA* sub "Lagash."

TRANS. STEPHEN ROSOFF

LAHAD (PERSON) [Heb *lāhad* (לָהַד)]. Listed among the descendants of Judah (1 Chr 4:2). Nothing is otherwise known of him.

LAHAV (PLACE). See HALIF, TEL.

LAHMAM (PLACE) [Heb *laḥmām* (לַחְמָם)]. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:40), within the same district as Lachish. Although the MT reads *laḥmās*, the vast majority of manuscripts support reading a final *mem*, which is easily confused with *samek*, especially in the square script (Boling and Wright *Joshua* AB, 380). This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The ancient settlement is most probably to be located at Khirbet el-Lahm (Boling and Wright *Joshua* AB, 386), located approximately 4.5 km S of Beit Jibrin (M.R. 140108).

WADE R. KOTTER

LAHMI (PERSON) [Heb *laḥmî* (לַחְמִי)]. A Philistine, the brother of Goliath the Gittite, slain by Elhanan according to 1 Chr 20:5. The parallel passage in 2 Sam 21:19 depicts Elhanan as the slayer not of Goliath's brother but of Goliath himself, which would appear to contradict the information in 1 Samuel 17, in which David vanquishes Goliath. However, in spite of attempts to identify David and Elhanan and thereby relieve a tension in the biblical text (see GOLIATH), it is most often felt that the name of Goliath is secondary in 1 Sam 17:4 and 23. Thus the question is whether Elhanan slew Goliath or his brother, Lahmi. Where the MT of 2 Sam 21:19 refers to Elhanan as "the Bethlehemite" *bŏt hallaḥmî ʾēt*, 1 Chr 20:5 reads the object "Lahmi, the brother of" *ʾet-laḥmî ʾăhî*, in which the *laḥmî* element of

"Bethlehemite" has become an independent personal noun. In this case it appears most likely that 2 Sam 21:19 preserves the original version. Williamson (*Chronicles* NCBC, 142) cautions against automatically assuming that the Chronicler deliberately changed his source in order to relieve the tension between the deed ascribed to David in 1 Samuel 17 and the one ascribed to Elhanan in 2 Samuel 21 and raises the possibility that the Chronicler may have been attempting to make comprehensible a difficult *Vorlage*.
CARL S. EHRLICH

LAISH (PERSON) [Heb *layiš* (לַיִשׁ)]. Father of Palti, the husband of Michal, the daughter of Saul (1 Sam 25:44, 2 Sam 3:15 [ketib *lwš*]). Michal had been previously married to David, but after he fell into disfavor with Saul, the Israelite king gave his daughter to the son of Laish. When David assumed the kingship, Michal was returned to him, with Palti experiencing much grief. The name "Laish" means "lion," the use of animal names not being an uncommon practice in Israel. The person was named because of a particular trait of the animal that was valued (Noth *IPN,* 229–30). Laish came from Gallim, which was probably located in Benjamin, on a route on which the Assyrian army advanced to Jerusalem in the late 8th century B.C. (cf. Isa 10:30).
STEPHEN G. DEMPSTER

LAISH (PLACE) [Heb *layiš* (לַיִשׁ)]. Var. LESHEM. A city in the extreme N of Canaan (M.R. 211294) that at least a part of the Israelite tribe of Dan (cf. Mazar 1960) attacked and conquered and made their new home (Judges 18). Josh 19:47 mentions that the name of the site before the appearance of the Danites was Leshem (Heb *lešem*) instead of Laish. However, according to both accounts, the Danites renamed the town Dan after their ancestral heritage (Judg 18:29; Josh 19:47). Malamat (1970: 171) says simply that the Joshua account is "possibly corrupt," while Boling and Wright (*Joshua* 466) suggest that in Leshem the "final *m* may be enclitic." The LXX offers some differences from the MT account of Joshua, and in an amplified discussion states that Dan was unable to settle in their allotment and that the tribe of Judah conquered *Lachis* naming it *Lasendak* (LXX Josh 19:48). This reference tends to imply that the site was located in S Canaan. It is unclear if Judah then gave the town to Dan. Earlier extrabiblical historical accounts and archaeological excavations make clear that the city of Laish (and the later city of Dan) should be located in the far N of Canaan.

Laish is mentioned as one of the objects of the Egyptian curses in the Execration Texts (Posener 1940: E59) in a context along with Hazor; it is also mentioned in the royal archives at Mari, also in association with Hazor (Malamat 1970). The Mari text records the shipment of ca. 8.33 minas (ca. 4.5 kg) of tin to Laish (Malamat 1971). Additionally, the excavations have discovered an inscription whose reconstructed reading appears to be a dedication to the god who was at Dan. The inscription was written in Greek and Aramaic, and Biran suggests that it dates from the early 2d century B.C. (1981a: 145–47).

Laish is N of the Huleh basin, on a main branch road which passes from the Mediterranean inland to Damascus and Syria. Copious perennial springs surround the site and combine to become one of the tributaries of the Jordan river.

The excavations at Laish (see more detailed discussion in DAN [PLACE]) have provided indications of a significant (ca. 50 acres) EB II–III settlement (Biran 1987: 101–102), but the exposure has not been extensive enough to clarify the nature of the social organization. The MB city, however, is represented in both domestic (Biran *EAEHL* 1: 315–16) and monumental architecture, as well as tombs. The excavations have uncovered an impressively built MB tomb with a rich collection of wares, which Biran suggests was associated with one of the high ranking families of the city (1986: 173–79). The MB city was protected with a massive sloping earth rampart which had been laid against a stone core. On the SE corner of the fortification system was found an intact arched mudbrick city gate and tower complex (Biran 1981b). This gate and fortification system may have belonged to the city mentioned in both the Mari and Execration Texts. Furthermore, the reference to Dan in Gen 14:14, when Abraham pursued the four kings of Mesopotamia to rescue his nephew, Lot, may be an allusion to the city associated with this fortification system (Biran 1984: 19). (Obviously, the reference in Genesis is to "Laish"; the reference to "Dan" is an

anachronism, since the town did not receive that name until much later.) Surprisingly, the gate complex was apparently deliberately buried, probably because of foundational or structural defects (Biran 1984: 7–9).

While Laish was not the largest site in the area (cf. Hazor at over 700 dunams), it was still large (ca. 200 dunams), implying a sizable population. That the rulers of Laish were able to organize and command crews to construct the ramparts and gate complex, then bury the gate and perhaps construct another elsewhere, implies the presence of a strong, centralized ruling power. Such power might be that to which the Egyptians were reacting when they cited the city of Laish in their Execration Texts. The importation of a large quantity of tin from Mari also implies it had economic power, probably as a center of metallurgy and as a redistribution center for finished products. LB Laish is attested in Thutmose III's list of Canaanite cities (No. 31: *ANET,* 242), but evidence of his campaign at Laish has not been located in the excavations. One find, however, indicates contact with Egypt during this period: a red granite statuette of a seated man, inscribed with the name Nefertem. The style is indicative of the 19th Dyn. (ca. 14th century B.C.; Biran 1987: 105). The richness of LB Laish can be inferred from the Mycenaean tomb (387) with its ceramic repertoire of imported wares (Biran 1974: 34) which in turn "presupposes the existence of a large and wealthy community in the 14th–13th centuries B.C." (Biran 1980: 172–73). Some areas of stratified LB remains have come to light, and in one was found an exquisite ceramic plaque of a dancer playing a lute (Biran 1986: 168–73). It is unclear exactly what defenses the LB community had, since none have been located for this period—apparently they relied upon the old MB fortification ramparts (Biran 1969: 122–23; 1987: 104). Perhaps a weakened fortification system is part of what is reflected in the analysis by the spies in Judg 18:7, which describes the people of Laish as those who "dwelt in security, … quiet and unsuspecting." The phrase that the people of Laish lived "after the manner of the Sidonians" (Heb *kĕmišpat ṣidōnîm*) has been interpreted generally either to refer to commercial enterprises as the basis of the economy (cf. Moore *Judges* ICC: 390) or to a non-military and peaceful nature (cf. Boling *Judges* AB, 260, 263; Klein 1988: 156–57).

It was against this LB city that the Danites mustered their forces; the city apparently received no defensive assistance from their neighboring powers (Judg 18:7, 28). The text states that the Danites burned the town (v 27), but no evidence for a widespread destruction by fire on this transitional horizon has been found at the site. There is, however, evidence of a change as seen in the sudden appearance of numerous pits and the collar-rim storejar. Biran suggests that these features might indicate the appearance of the Danites (Biran 1987: 105–06).

DALE W. MANOR

LAISHAH (PLACE) [Heb *layšâ* (לַיְשָׁה)]. A site NE of Jerusalem (Isa 10:30). It is mentioned in a text in which an "enemy from the north" launches a surprise attack on Jerusalem along a byway which

runs E of the main road from Shechem to Jerusalem. The discussion as to whether Isa 10:27b–34 reflects a real event or is a visionary anticipation (Wildberger *Jesaja* BK [1–12], 425–29), may be based on a false alternative, since it is conceivable that both military and cultic recollections could have been combined (Christensen 1976: 395–97), and so together have influenced expectations of the future (Clements 1980: 118–19). The redactional structure of Isaiah 10 makes it likely that the Assyrians were the enemy in question (see vv 5–15, 33–34).

The identification of Laishah with el-ʿIsāwīje (M.R. 174134), which has been continuously suggested since it was first proposed by Dalman (1916: 53–54), is based on uncertain etymological considerations. Dalman thought that Laishah was Arabic misunderstood as el-ʿAyšā (i.e., feminine proper name plus definite article) and then confused with ʿIsa (Esau, Jesus). However, topographical and archaeological reasons exclude the almost inaccessible el-ʿIsāwīje. Other sites in the vicinity of Jerusalem are to be preferred, in particular probably (Donner 1968: 54) Kh. Rās et-Tawīl (M.R. 173138).

RÜDIGER LIWAK

LAKKUM (PLACE) [Heb *laqqûm* (לַקּוּם)]. A town in the allotment of Naphtali (Josh 19:33).

Lakkum appears in a list of border sites, and it is the last site mentioned in an apparent line along Wadi Fajjas toward the Jordan river. Most scholars identify Lakkum with Khirbet el-Mansurah (M.R. 202233), about 11 miles NW of Tiberias (see, for instance, Woudstra 1981: 291). W. S. LaSor (*ISBE* 3: 61), however, notes that "this location seems too far from the Jordan."

DAVID SALTER WILLIAMS

LAMB. The common sheep (*ovis aries*) has been domesticated in various subspecies for 8,000 years, beginning in western Asia. As one of the first animals to be domesticated, the sheep is also the most completely domesticated—indeed, hyperdomesticated—of all animals. Though several species of wild sheep survive, feral sheep—that is, escaped domesticated sheep living in the wild—are unknown. Domesticated sheep never truly escape, they merely stray, for sheep without a shepherd are incapable of surviving. Food, water, defense against predators, even reproduction—for all these, the sheep requires human intervention and assistance. And in this regard, the sheep is more "human" than any other animal. That is, culture has replaced nature in the sheep's life as it has in the life of humankind. Sheep need human care as humans need human care, and this isomorphism of need proved a powerful stimulus to the religious imagination first of Ancient Israel and later of Early Christianity.

A. The Lamb in the Mind of Ancient Israel

The literary imagination of Ancient Israel was not, in general, a fabulist imagination. The sentimental, didactic spirit of Aesop is Greek, not Israelite. With a very few exceptions, there are no talking animals in the OT, and certainly no animal protagonists, no animals with private lives or personalities. The one extremely striking exception to this rule is the 23d Psalm, in which the Psalmist speak as a sheep—"The Lord is my shepherd," etc.—and recounts the various ways in which his vulnerabilities are respected. Sheep will not drink from streams, only from pools; therefore, "By restful waters he leads me." They will not lower their heads into buckets or troughs; therefore, "My cup is overflowing." The animal husbandry in this psalm has often been discussed. Less often noted is the evidence it provides of the unique appeal of the sheep as a psychological surrogate for human weakness and innocent helplessness.

The equation of sheep with man is striking as well in the story of the binding of Isaac. Here, of course, the equation is not one of grown sheep and adult man but of lamb and child, the young of both species

being alike in their touching inability to tell friend from foe. "God will provide the lamb," Abraham says to Isaac (Gen 22:8), all the while expecting to slay his son. Isaac believes his father, trusting just as the lamb, anthropomorphized, seems to trust when it is led unresisting to the slaughterground.

The equation of lamb and child is made in another way at 2 Sam 12:3–4: "The poor man had nothing but a ewe lamb, one only, a small one he had bought. This he fed, and it grew up with him and his children, eating his bread, drinking from his cup, sleeping on his breast; it was like a daughter to him." Here, the prophet Nathan is comparing Uriah the Hittite's love for his wife Bathsheba to the love a poor man might feel for a cherished lamb. King David, who has abused Uriah by seducing Bathsheba, is overwhelmed by the parable—overwhelmed as he could not have been if, in the Israelite cultural context, quasiparental fondness for a lamb were outlandish or repulsive.

These examples, though suggestive, prove only that the lamb was available as a metaphor to the Ancient Israelite literary mind. They do not prove that it was heavily used. Ancient Israel was a pastoral nation; and most of the time, when the OT makes reference to a lamb, it is a real lamb that is intended.

This is notably true of the Passover lamb of Exodus 12. At Yahweh's instruction, the Israelites slay a lamb and splash its blood on their lintels so that Yahweh will "pass over" their houses when he passes through Egypt slaying the firstborn of the land. The lamb's blood is a signal here, not a symbol. And as for the relationship between Yahweh and the slain lamb, it is one of simple instrumentality. Indeed, Yahweh in these chapters of the OT is supremely unlamblike. The slaying of the firstborn of Egypt is the first of his great acts as the Divine Warrior, leading his people Israel to victory over Egypt. Two chapters later, after the crossing of the Red Sea, Moses exults (Exod 15:1–3): "Yahweh I sing: he has covered himself in glory,/ Horse and rider he has thrown into the sea … Yahweh is a warrior; Yahweh is his name."

In Yahweh's covenant with Israel, provision is made (Exodus 29; Numbers 28 and 29) for the sacrifice of lambs at various times, including the annual commemoration of Passover itself. Nowhere in the covenant, however, is the suggestion ever remotely made that Yahweh himself is or has any special relationship—much less anything approaching identification—with the sacrificial lamb (or with any other sacrificial animals). Yahweh, though "a God of tenderness and compassion, slow to wrath, rich in kindness and faithfulness" (Exod 34:6), remains a warrior. On the rare occasions when the OT uses animal imagery to speak of him, the imagery it chooses is appropriate to his central identity; thus, lion imagery in Isa 31:4; Jer 49:19; 50:44; Hos 5:14; Amos 1:2; Hos 11:10; 13:7ff. To this general statement there is just one highly circumscribed but still striking exception.

The exception is the work of the writer whom biblical scholarship calls "Deutero-Isaiah," the author of Isaiah 40–55. These chapters contain a much-discussed set of "Servant Songs," in which redemption and victory are promised to a suffering servant of Yahweh, a victim almost certainly to be identified with Israel. A crucial passage in one of these songs (Isa 53:6–7) reads:

> We had all gone astray like sheep,
> each taking his own way,
> and Yahweh burdened him
> with the sins of all of us.
> Harshly dealt with, he bore it humbly,
> he never opened his mouth
> like a lamb that is led to the slaughterhouse,
> like a sheep that is dumb before its shearers
> never opening its mouth.

The lamb in this passage is not to be identified with the paschal (Passover) lamb of Israel. The sufferer who is compared to the lamb is not necessarily to be identified with the Messiah. Neither the lamb nor the servant is by any means to be identified with Yahweh himself. The passage remains a pregnant one, however, because of the imaginative advance it makes in employing the lamb as a metaphor and a matrix for thought. More than just an innocent sufferer, the lamb here is a surrogate sufferer; not just a blameless victim, then, but also in some way a vicarious victim. The broad compatibility of this metaphor with the

victim-substitution stories of the binding of Isaac and the sparing of the firstborn of Israel is clear, but there is a difference. Here the center of sympathy is, remarkably, the lamb rather than Isaac unbound or the Sons of Israel unslain. The same emotional displacement occurs in the 23d Psalm, but there, "I" am a cherished sheep, while here, "he" is a slain lamb, a shorn sheep.

B. The Lamb of God in Early Christianity

Growth and development in any religious tradition typically proceed by the progressive expansion of once minor motifs and the corresponding neglect of once major ones. The expansion of the lamb motif is an extraordinary example of this process.

The New Testament—in fact, Christianity itself—is an interpretation of the death of Jesus in the light of the Hebrew scriptures. From the beginning, Christians have differed somewhat in their interpretations of that death; but the interpretation that, early and late, has attracted most adherents is that found in the Johannine literature; that is, in the Fourth Gospel, the letters of John, and the book of Revelation.

It is in this body of literature that we find expressed the theological understanding of the death of Jesus that was already embodied in Christian ritual at the time when Paul began his own reflection upon Jesus and upon Christian practice as he found it (cf. 1 Cor 5:7–8). In its final bold form, Johannine thought interprets the death of Jesus as a reenactment of God's redemption of Israel out of captivity in Egypt. But in this new redemption, (1) Israel is the entire human race, (2) Egypt is human sinfulness and oppression, and (3) the Redeemer (God) and the instrument of redemption (the Paschal Lamb) are mutually identified by being jointly identified with the person of Jesus Christ slain and risen.

The radical inversions of the Johannine soteriology provided a way for Jesus' disciples to understand the horror of his execution as a paradoxical accomplishment rather than as a simple defeat. But this was not the only reason for the success of this interpretation. At the start of the Christian era, Judaism, though old as a national religion, was relatively young as an international religion. The Johannine theology, as a reconceptualization of Jewish revelation, succeeded in part because it addressed two major conflicts affecting Judaism as lived and practiced in settings of permanent diaspora. If Paul was the Apostle to the gentiles and Luke the gentile Evangelist, John (or the Johannine School) served as the Evangelist of the Jewish Diaspora.

The Johannine inversions arose as an imaginative synthesis of scriptural references to the lamb with remembered facts about the life and, above all, the death of Jesus. In John 1:29–36, John the Baptist addresses Jesus as "the Lamb of God" in a passage written deliberately to link OT passages and motifs that, as we have noted, were originally separate: the Paschal Lamb and the lamblike Suffering Servant. Later in the Fourth Gospel, Jesus emphasizes that his life will be comprehensible only in his death, "when I am lifted up" (John 12:32). His crucifixion, at Passover, is described in a way that repeatedly draws attention to the season and underlines his identity as a new Passover victim; thus the Evangelist emphasizes his unprotesting, lamblike silence (19:9) and the fact that his bones, like those of the Paschal Lamb, are not broken (19:36).

The Fourth Gospel is also, among the four gospels, the one that goes furthest toward identifying Jesus with God: "In the beginning was the Word. The Word was with God, and the Word was God" (John 1:1); "The Father and I are one" (10:30); and similar statements. Students of the Johannine literature distinguish stages in this identification, but the direction is clear from the start. The sheep/man isomorphism that remained, for the most part, undeveloped in the OT is exploited in this part of the NT as the character of the messiah is expanded downward to identity with the sacrificial animal and upward to identity with God Himself.

It is in the book of Revelation, however, that the nearest approach is made and the fullest expression given to what we might call Christianity's mystical syllogism:

Jesus is the Lamb.
Jesus is God.
Therefore, the Lamb is God.

Twenty-nine of the thirty-four NT occurrences of "lamb" occur in this book, which is called "apocalypsis" or "revelation," not only and perhaps not principally because of what it reveals about the

course of events in (or beyond) the Roman Empire but because of what it reveals about the identity and character of God. The book of Revelation is the culminating theophany of the NT; and like the theophany on Mount Sinai, it follows, interprets, and memorializes a preceding drama of redemption.

By opening with John's letters to the seven churches of Asia Minor, the book of Revelation proclaims its own literary identity as a work addressed to the larger Mediterranean ecumene where the Jewish Diaspora and, dependent upon it, the new Christian Church resides. Immediately following this, in Revelation 4–5, comes the opening, and utterly decisive, portion of the theophany: God entrusts the Scroll of the Seven Seals—in effect, history itself—to the Lamb, and the Lamb himself is then worshipped as inseparable and practically indistinguishable from God: "In my vision, I heard the sound of an immense number of angels gathered round the throne and the animals and the elders; there were ten thousand times ten thousand of them and thousands upon thousands, shouting, 'The Lamb that was sacrificed is worthy to be given power, riches, wisdom, strength, honor, glory, and blessing.' Then I heard all the living things in creation—everything that lives in the air, and on the ground, and under the ground, and in the sea, crying, 'To the One who is sitting on the throne and to the Lamb, be all praise, honor, glory and power, for ever and ever.' And the four animals said, 'Amen'; and the elders prostrated themselves to worship" (Rev 5:11–14).

At one level, the book of Revelation is a triumphant, theophanic epilogue to the Johannine passion narrative. At another, it is a profoundly ironic conclusion to the Bible as a whole. For though the Lamb is honored as God, God is nonetheless inseparable henceforth from the Lamb—a sacrificed, slain lamb (Rev 5:6), to whom all history and humankind have now been entrusted. Though the preexilic prophets presented the Babylonian Captivity as the judgment and action of God rather than the defeat of God, Israel had to struggle to retain her faith in God's power as the centuries passed and no redemption comparable to the Exodus was forthcoming. Had God abandoned his Chosen People, or was he perhaps as helpless as they? The NT vision of the Lamb-God, truly triumphant but truly slain, is one kind of answer.

Taken as a vision of the end of time, the book of Revelation seems to pair with the book of Genesis as the end pairs with the beginning. But the central preoccupation of the Bible is not with temporal beginnings and endings. It is rather with histories of betrayal, revenge and oppression, on the one hand, and histories of covenant fidelity, forgiveness and liberation, on the other. If human history in general is an endless cycle of violence, one crime begetting another and another, how can the cycle ever be broken? It can be broken—the Johannine interpretation of the death of Jesus hints (if it does not quite propose)—if and only if the ultimately responsible party, God himself, pays the ultimate price in a sacrificial, atoning death.

Since all individual acts of violence are justified by reference to prior acts of violence, all are ultimately unsuccessful as they fail to return to the beginning of the chain. By the same token, once this return to the source of violence has been accomplished by an act of divine violence against God, no further, individual, human acts of retribution are necessary and therefore none are justified. The ultimate vengeance has already been exacted. It is thus that the Lamb of God "takes away the sin of the world" (John 1:19), thus that we are "washed in the blood of the Lamb" (Rev 7:14). The covenant of the blood of the Lamb promises victory to those who, like the Lamb, are unable to tell friend from foe.

And this covenant—the marriage of the Lamb to "the new Jerusalem, coming down from God out of heaven" (Rev 21:2)—is to embrace all humankind. When the covenant formula of Ezekiel is quoted a verse later—"They shall be his people, and he will be their God" (Rev 21:3; Ezek 37:27), language once restricted to Israel is used, quite pointedly, without such restriction. Diaspora Judaism faced an obvious inner tension on this point: its God claimed general jurisdiction over humankind but acknowledged a particular responsibility for Israel. That tension was to be addressed in various ways as the history of Jewish thought continued to unfold in overwhelmingly gentile settings. Johannine Christianity addressed the same tension by a radical broadening of the divine responsibility. In effect, after the Gospel According to John identifies a new redemptive event in the death and resurrection of Jesus, the book of Revelation writes a new covenant and builds a new ritual around it. (Cf. 1 Cor 5:7: "Christ, our Passover, has been sacrificed; therefore let us keep the feast.")

The process by which, on the one hand, Jesus was identified with the pre-existent God and, on the other, God Himself was reconceived as simultaneously a warrior and a victim, was largely but not entirely complete by the end of the NT period (for an example of its use in early proselytism, see Acts 8:26–40). Its further trajectory in the history of the early Church may be charted, in part, iconographically. By the 4th century, no motif, including that of the cross itself, is more prominent than that of the Lamb, and none is presented in more highly interpreted, content-laden ways. The Lamb is often seen holding the pennon of victory crooked in one of its forelegs. In the apse of Old St. Peter's in Rome, the Lamb stands before the empty cross. In the church of Sts. Cosmas and Damian, Rome, the Lamb is portrayed, after Revelation 22, on a mount from which flow streams of living water. These and other Lamb motifs appear again and again in 4th-century Spain, France, Germany, and Italy.

The Lamb motif has remained prominent into modern times in the popular piety of all branches of Christianity. The Eastern Orthodox church imprints the Lamb on its communion bread. The Roman Catholic church, at least until the Second Vatican Council, employed a sacramental called the "Agnus Dei," blessed wax in a lambskin packet. The popular hymnody of the Protestant churches cherishes the Lamb motif as no other ("Washed in the Blood of the Lamb" and many other hymns).

The same motif, however, has inspired stupendous Byzantine mosaics and such masterpieces of music as the opening antiphonal lament of J. S. Bach's "St. Matthew Passion" and the "Hallelujah Chorus" of Frederick Handel's "Messiah." If there is one adjective that one would not think of applying to that chorus, it is "ironic." And yet the notion of the God-Man, Redeemer-Victim, Warrior-Lamb is inescapably paradoxical and even ironic, with an irony that must surely have been appreciated by the artist who first put the victory pennon in the lamb's tiny foreleg and surely was appreciated by the author of the Fourth Gospel whose Jesus, the only deeply and repeatedly ironic voice in the entire Bible, was its creator.

JOHN R. MILES

LAMBDA. The eleventh letter of the Greek alphabet.

LAME, LAMENESS. Lameness may be defined as a compromised ability to walk or otherwise use limbs due to any of several pathological or other crippling conditions. Lameness may result from (1) trauma, as in healed breaks with malunion of the bone; (2) metabolic diseases; (3) nutritional diseases, such as rickets (vitamin D deficiency); (4) degenerative diseases, such as arthritis; (5) congenital defects of the skeleton, such as the dysplasias; and (6) infectious diseases, such as polio. In modern times "lameness" might include minor problems such as limping or periodic gimpiness. However, a study of the biblical examples of lameness indicate that severe crippling disability is meant by the various terms discussed here. This is made clear by several descriptions of lameness. The legs of the lame hung

uselessly (Prov 26:7, the Hebrew of which is difficult, perhaps meaning "drawn up," thus "unequal in length"). Lameness required the victim to ride animals instead of walking (2 Sam 19:26). Lameness so disabled victims that they lay around markets and city gates of Jerusalem begging and annoying travelers (2 Sam 5:6), often having to be carried by family members to strategic locations daily in order to beg for alms (Acts 3:1–3). One NT period lame man was unable to set himself in the waters of the pool of Bethesda at the moment of the healing surge even after attempts to do so for many years (John 5:3).

A. Lameness in the OT

The OT uses several words to denote lameness or a crippled condition. Most common is the Hebrew *pisēaḥ*, "lame" (for which the LXX translates *xōlos*). Also found is *nākēh*, "stricken, wounded"; *ḥoreb*, "withered"; and *ṣela‘*, "limping, stumbling." Also, three men of the name *Pāsēaḥ*, literally "Limper," are known in the Bible (1 Chr 4:12; Ezra 2:49 [= Neh 7:51]; Neh 3:6). However, it is difficult at best to establish any diagnostic inferences which may be associated with these terms. *Ḥoreb* (lit. "dried up") seems to mean "withered," or something similar, apparently used as a reference to shrunken, emaciated, or retracted muscles (Zech 11:17), but this term is rarely used in the Hebrew Bible with reference to physiology. *Nākēh* seems clearer in meaning but is very general, indicating only that the lame person has been smitten or afflicted in the limbs, etc. (2 Sam 4:4, 9:3; Ps 35:15). *Pisēaḥ*, "lame," is particularly unclear etymologically. Verbal forms of the root are used to describe lameness of traumatic origin in 2 Sam 4:4, but in 1 Kgs 18:26 apparently to describe a type of ritual dance (?) or ritual staggering (?) near the altar of Baal, but the sense of this verse is admittedly difficult. The Arabic cognate *fasaḫa* means "to be dislocated without breaking the bones." *Ṣela‘*, "limping," "staggering," is often used figuratively of downfall or calamity (Ps 38:18; Jer 20:10; Job 18:12). The etymology here is very uncertain also, but if related to the Hebrew verb *ṣāla‘*[1], it may originally have implied curvature, bent or bowed limbs. Clearly, it is difficult or impossible to reliably define any particular kind or cause of lameness, from a medical diagnostic point of view, of most of the Hebrew words which encompass the meaning "lameness" or "crippling."

Lameness occurs in several contexts in the OT. In levitical law, descendants of Aaron were unacceptable for the priesthood, but not impure, if they were lame or disfigured (Lev 21:16–18). Similarly sacrificial animals were also excluded as the burnt offering if lame (Deut 15:19–21), although they could still be used for certain personal offerings. Elsewhere, Mephibosheth, Jonathan's son, "fell and was [permanently] lame/crippled in both feet"—clearly lameness of traumatic etiology (2 Sam 4:4, 9:3, 19:27). In the OT as with the NT, most instances of lameness are mentioned paired together with blindness, revealing the impact of both conditions upon society and underscoring their severity. Both conditions made the victim dependent upon society, both were utterly incurable, both prevented the victim from being productive and self-sustaining. Thus the lame and the blind were an annoyance to visitors to Jerusalem probably because of their ceaseless begging for donations (2 Sam 5:6). The lame (and blind) were subjected to scorn and were outcasts of society (Jer 31:8). However, Job the Perfect was "eyes to the blind and feet to the lame" (Job 29:15), reflecting sympathetic and humanistic elements toward the disabled in late OT thought, a theme appearing also in the NT and Pseudepigrapha. Visionary pronouncements look to the day when even "the lame [being slow and stumbling] will be able to carry off loot [with the swiftness of a thief]," and that eventually "the lame will leap [with agileness] like a stag" (Isa 33:23, 35:6). In Jer 31:8 the lame will be included among the previously dispersed masses of returning Israel.

B. Lameness in the NT

In later Greek, *xōlos*, which indicates "lameness," or better, "crippling," is used of both legs (feet) and also arms (hands). In the NT the terminology of lame or crippling conditions is still more vague than that of the OT in terms of medical derivations and understanding, except where a particular verse may expatiate on a specific kind of lameness. In the NT, unlike the OT, the majority of instances of lameness occur within the context of miraculous healings of such permanently disabled victims. Reports of miraculous healings of the lame and blind at the hand of Jesus circulated periodically (Matt 11:5, 15:31, 21:14, etc.), and the Apostle Paul once healed a lame man as well (Acts 14:8). Jesus encouraged his

followers not to invite their influential friends to elaborate dinners, but rather beggars, the lame and crippled (Luke 14:12–13). The lame often sought healing influences from the pool of Bethesda, whose waters were believed to possess healing properties (John 5:3). Congenital crippling is twice clearly mentioned in the NT, where each victim was "lame from his mother's womb, who never had walked" (Acts 3:1–3, 14:8). The lame were carried daily by family members to the gate of the (second) temple, where they loitered or lay begging for donations from pious worshippers (Acts 3:1–3).

C. Lameness in the Pseudepigrapha

Generally, the character of lameness as presented above does not change in pseudepigraphic texts. *Second Ezra* 2:21 commands "do not ridicule a lame man, protect the maimed" (cf. also *4 Ezra* 2:21). In the extant fragments of the *Apocryphon of Ezekiel,* preserved in Clement of Alexandria, *Paedogogus* 1:9[a], God promises healing to the lame (*OTP* 1: 495), and in the eschatological portions of the *Sibylline Oracles* (8: 206), the oracle also promises swift racing to the lame (*OTP* 1: 423). The pairing of lameness with blindness is very apparent in the "Story of the Lame Man and the Blind Man" found in the *Apocryphon of Ezekiel* (*OTP* 1: 487).

D. The Archaeological Context of Lameness

Soft tissues with associated injury and disease which may result in lameness are usually not recovered with excavated skeletal remains. Except for some human remains from Egypt (i.e., mummies), only skeletal defects which resulted in lameness and crippling would be expected to survive in ancient burials. There are many examples. The archaeological survey of Nubia produced skeletons with a variety of conditions, especially improperly set and healed broken bones, which were probably a common cause of lameness and crippling (Smith and Wood-Jones 1910; El-Batrawi 1935). Simple osteoarthritis ("wear-and-tear" arthritis associated with age) also no doubt occasionally accounted for some instances of lameness. Infectious diseases also were responsible for some forms of lameness. Pharaoh Siptah, whose mummy is in the Cairo Museum, clearly was crippled probably as a result of polio (Harris and Wente 1980: 293–95 and Plates 8.25–26). The sculpture and art of the ancient Egyptians also provides evidence of various conditions which made their victims lame. A good example is stela A from the 18th Dyn. which depicts the lame priest Ruma with a disfigured lower leg, also typical of polio (Wells 1964: 269 and plate 44).

Occasionally, the presence of ancient human remains is unnecessary for the demonstration of crippling or lameness, and from Palestine there is one unusual example. While the skeleton of the famous Babata from the time of Bar Kokhba and the Second Revolt has never been identified, most of her personal belongings, including the largest single cache of personal documents ever found in Palestine, have been found in the famous Cave of Letters in Nahal Hever. See BAR KOKHBA (LETTERS). Among them were her sandals, of which one was normally fashioned, the other oddly misshaped to conform to the peculiar contours of her pathologically defective foot. Clearly the famous Babata had a crippling condition (Yadin 1963).

E. Conclusion

Apparently all the examples of "lameness" in the Bible actually refer to severe crippling disabilities and not to cases of minor limping. However, most of the examples of lameness are so vaguely described that accurate diagnosis of the cause is impossible and only the incurable and chronic nature of the crippling conditions are obvious.

LAMECH (PERSON) [Heb *lemek* (לֶמֶךְ); *lāmek* (לָמֶךְ)]. **1.** Son of Methushael, husband of Adah and Zillah, and father of Jabal, Jubal, Tubal-cain, and Naamah; a descendant of Cain (Gen 4:18–24). No clearly negative evaluation is given of this first reported case of polygamy, even though it is a deviation from the norm (Wenham *Genesis 1–15* WBC, 112). The Song of Lamech, addressed to his wives, describes Lamech's expectation of seventy-sevenfold vengeance against whomsoever would assault him, above and beyond the sevenfold vengeance to be taken against anyone who slays Cain (cf. Gen 4:15). The repetition of these sevens and Lamech's being the seventh in Adam's line makes it difficult to avoid the impression that the number is intended to convey the idea of completion (Cassuto 1961: 243; Sasson 1978: 173). With Lamech, his family, and his song, there is a completion of the Cainite line. The references to Cain in the names of the offspring and in the poem form both a literary inclusio and, in the case of the poem, supposedly a culmination of the murderous character trait of this line.

Studies have noted the emphasis upon metalworking associated with Cain's son, Tubal-Cain, and the Kenite background of the genealogy (Sawyer 1986: 159–64). They have associated the poem with a sword, to which songs were dedicated in ancient Mesopotamia and among nomads (Speiser *Genesis* AB, 37; Westermann 1984: 334–37). However, the association of poem with sword is not clear from the text. Gevirtz (1963:25) understood the song as a statement of great pride in murderous vengeance and a taunting mockery of subsequent retribution. He also observed a gradual disintegration of correspondences in the word pairs of each of the couplets in the poem. Thus the parallelism of the first couplet (Adah and Zillah / wives of Lamech; hear my voice / give ear to my speech) is the closest, while that of the third couplet (seven / seventy-seven; Cain / Lamech) is the least similar (cf. Stuart 1976: 97, 99). The "man" (*ʾîš*) and the "boy" (*yeled*) of the second couplet represent a single individual: a youth in his prime (Cassuto 1961: 242; Gevirtz 1963: 30–34; Wenham *Genesis 1–15* WBC, 114).

The root *l-m-k* does not exist in West Semitic. The Arabic *ylmk*, "strong man," has been compared (*HALAT* 2: 505), as has the Sumerian LUMGA, the title of the god Ea as patron of music (Landersdorfer 1916: 19; Gabriel 1959: 415; Westermann 1984: 329), and the Akkadian *lumakku*, the title of a priest of lower rank appearing in lexical texts (Cassuto 1961: 233). A few personal names with an *l-m-k* element are found in the 3d millennium B.C. (Gevirtz 1963: 26), and at Mari in the 2d millennium B.C. (Limet 1976: 161).

2. Son of Methuselah, when Methuselah was 187 years old (Gen 5:25–31). At 182 years of age, Lamech sired Noah. In the *Genesis Apocryphon* (1 QapGen cols. I–V), Lamech is portrayed as being concerned about the paternity of his son, Noah, until he is reassured by his wife, Bat-Enosh, and by Enoch (Fitzmyer 1966: 69–87). As with the Cainite Lamech of Genesis 4, the number seven here plays an important role: Lamech lives 777 years, and he is seventh from Enosh in the line of Seth (Jacob 1934: 166–67; Cassuto 1961: 243). While a common origin for both Lamechs has been posited, it is clear that the present text makes a stark distinction between the two: the descendant of Cain lusted for vengeance, the father of Noah hoped.

The normal genealogical formula describing the line of Seth in Genesis 5 is interrupted in the description of Lamech to note that Lamech verbalized this hope when naming his son Noah. He foretold that Noah would bring rest from the labor and toil of "our hands out of the ground which Yahweh has cursed" (v 29). It is not clear from the text that Lamech thereby expected his son either to be a "messianic" deliverer or that he would restore the world to an Edenic state. Source critics have usually understood v 29 to be a J gloss in an otherwise P genealogy (von Rad *Genesis* OTL, 72). In the context of Genesis 6–9, Noah indeed provides Lamech's posterity with "comfort" (Parunak 1975; *TWAT* 5: 366–84) by serving as the agent of humanity's deliverance from the flood by making a sacrifice that prompted Yahweh to promise never again to curse the land, and by instituting the practice of viticulture (Gen 8:20–22; cf. Skinner *Genesis* ICC, 133–34; Clines 1972–73; Wenham *Genesis 1–15* WBC, 128–29).

LAMED. The twelfth letter of the Hebrew alphabet.

LAMENTATIONS, BOOK OF. Lamentations consists of a series of five poems on the destruction of Jerusalem in 586 B.C. The poems do not narrate in order the events of the fall of the city, but through a variety of speakers they give vivid short pictures of the horrors of the siege and its aftermath, reflect on the causes of the calamity, and appeal for mercy to the God who brought about the ruin of his own city and temple. In later Jewish liturgical practice, Lamentations was associated with the 9th of Ab, when various destructions of the state, the city, and the temple are commemorated, and this practice may go back to earliest exilic times (see Jer 41:5; Zech 7:3–5; 8:19).

A. Contents and Plan of the Book

Neither narrative nor logical sequence is a dominant feature in contributing structure to Lamentations, where acrostics are of greater formal importance, and thus the poems are hard to outline and summarize without giving a false impression. Yet there are elements of plot and plan in the book.

Chapter one is a depiction of the anguish of Zion, the holy city, moving from an observer's point of view (vv 1–11) to the outcry of the city itself (vv 12–22). The principal themes of the book are announced in this first poem, including the paradox of the God who turns on his own city and temple, the elect people who are rejected, and the interplay of individual and community experience of suffering and reflection on its causes.

Chapter two is much like chapter one, but is occupied more with a statement of the cause of the city's destruction ("the Lord became an enemy," v 5), and does not make much use of the technique of personifying the city or community as a single suffering individual. Since God himself has been the destroyer, the city must "cry from the heart to the Lord!" (v 18).

Chapter three is marked as climactic within the book by its formal elaborateness. The speaker is an individual, so that this poem in its own way returns to a theme announced already in chapter one. However, the city here is not the bereaved mother, but an anonymous male ("I am the man who has been through trouble," v 1). Though opinions differ as to precisely how this figure is to be understood, it is clear that the poem impressively presents a spiritual progress: a sufferer achieves patient faith (vv 1–39)

and calls on his people to share his return to God (vv 40–41), ending in a prayer of the whole community for relief of suffering (vv 42–66).

Chapter four is a return to depiction of the horrors of the siege and the fall of the city, a series of vignettes without tight structure, ending in an imprecation against the Edomites (treacherous allies) and a blessing on Zion (vv 21–22). Coming after chapter three, it suggests that the heights of spiritual renewal envisioned in that chapter are as yet hopes and aspirations rather than present realities for the suffering people.

Chapter five is a fitting liturgical close to the book. It has many features in common with the communal laments which occur in the book of Psalms (44; 60; 74; 79; 80; 83; 89), and culminates, like them, in an appeal to God for help. Even so, the pronounced stress on the persistence of the present misery makes it much like the other four poems in the book.

B. The Name of the Book

The English title "Lamentations" goes back through the Latin (*threni*) and Greek (*threnoi*) to a Hebrew title, *qînôt*, meaning "laments," attested in the Babylonian Talmud (*b. Bat.* 14b) and elsewhere in early Rabbinic writings. In the Hebrew Bible, as commonly in Jewish tradition, the book is titled *ʾekah*, "How!", from its first word, a practice attested for other books of the Pentateuch (thus Heb *bĕrēšît*, "In the beginning" = Genesis, etc.) and the book of Proverbs (Heb *mišlê*, "The proverbs of …").

Often manuscripts of ancient Bible translations or printed editions add, after the initial "Lamentations," the words "of Jeremiah" or "of Jeremiah the prophet," expressing a very common tradition concerning the authorship of the work.

C. Place in the Canon

There is no attested ancient controversy over whether Lamentations should be included in the canon, but there is considerable difference as to its position, a matter related to traditions concerning authorship.

In the common Jewish threefold division of the scriptures, the book always is placed somewhere among the "Writings" (*Ketubim*), though its exact location within that group has varied. The Babylonian Talmud (*b. Bat.* 14b) knows of an order of the Writings that is approximately chronological, so that Lamentations is set after books supposed to be by Solomon and just before other supposedly exilic or postexilic books, Daniel and Esther. More commonly, Lamentations is classed as one of the five short books called the *Megillot*, the "Scrolls." Within that group it is placed either "chronologically" (thus Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther), or liturgically, following the order of the festivals with which each Scroll is associated in developed liturgical practice, beginning with Passover; in this latter case the order is Song of Songs (Passover), Ruth (Weeks; *Shabuoth*; Pentecost), Lamentations (the Ninth of Ab), Ecclesiastes (Sukkoth; Booths), and Esther (Purim).

The other, markedly different, ordering puts Lamentations after the book of Jeremiah, as though by that prophet (often another work associated with Jeremiah, Baruch, comes between the two). This positioning is found already in Septuagint manuscripts and is continued in the Latin Vulgate and generally in English Bibles. From Josephus' description of the canon (*AgAp* 1.8) it can be inferred that such an order was known to him, and presumably to other Jews of his time (1st century C.E.) as well.

D. Date

Although there is no evidence outside the book itself that permits us to date its composition, and though the rather nonspecific historical references within the book only dictate that it was written after the fall of Jerusalem in 586 B.C., the traditional and common-sense view remains the most plausible, that is, that Lamentations as a whole was completed not long after the siege and destruction of the city by the Babylonians. The horrors of the siege seem to be vividly present to the memory of the author or authors, and no turn of fortunes for the shattered people has occurred or is expected in the near future. Thus a date after 586 and well before 538, when Cyrus permitted the Jews to return from exile, is most likely, though Ackroyd (1973) justly emphasizes that our evidence for dating, especially chaps. 3–5, is extremely slender.

Scholars have attempted to date the composition of the five poems relative to one another, based on historical references or stylistic characteristics (see for example, Rudolph *Ruth-Hohe Lied-Klagelieder*

KAT), but the evidence at our disposal is probably insufficient to make any such attempt widely convincing.

E. Authorship

Although one very ancient tradition ascribes Lamentations to Jeremiah, practically unanimous modern critical opinion holds the book to be anonymous. Before examining the issue, it is in place to observe that the authorship is not decisively important for understanding these poems of lament, because their author, whoever he was, expresses the historical experience of a community more than the personal experiences or opinions of one individual, and, as emphasized by Lanahan (1974), assumes a variety of *personae,* or speaking voices.

Nothing in the Bible expressly attributes our canonical book of Lamentations to Jeremiah the prophet, but the seeds for such an ascription are present in the general tendency to ascribe originally anonymous works to prominent figures, such as Moses, David, Solomon, and in the statement that Jeremiah, a "weeping" prophet (Jer 8:23—Eng 9:1), who lived through the fall of Jerusalem, wrote a "lament" or "laments" (2 Chr 35:25) over Josiah. Perhaps it is from such origins that there grows the ascription found already in the LXX, at the head of the book: "… Jeremiah sat weeping and composed this lament over Jerusalem and said …" The LXX order of books associates it with Jeremiah. In various ways the Targum, the Syriac (Peshitta), and Vulgate make the same ascription to Jeremiah, as do the Babylonian Talmud (*B. Bat.* 15a) and other rabbinic works, which quote the book in the form: "Jeremiah says …"

As noted above, the Hebrew Bible itself does not place Lamentations with the book of Jeremiah, a tradition continued in some uncommon but ancient listings of the books of Scripture. This impressive evidence of the book's original anonymity is bolstered by critical examination of the content of the book, for while it is not impossible that Jeremiah could have written it, some of its ideas seem implausible or incongruous as coming from him. In the question of reliance on help from foreign powers, contrast Lam 4:17, which refers to the poignant longing of the people ("we") for aid from Egypt, with Jer 2:18 or 37:5–10, where the prophet denounces alliances and predicts their failure; on the destruction of the temple, compare Lam 1:10, with its reference to God's forbidding nations to enter the sanctuary, with Jer 7:14, where the prophet in God's name predicted this dire event; in Lam 4:20 King Zedekiah is "the breath of our nostrils, the anointed of Yahweh," on whom the common hopes of the people depended, while in Jer 37:17 the prophet clearly predicted his capture by the Babylonians. Could Jeremiah, active as a prophet through this whole tragic time, have lamented, "Her prophets find no vision from Yahweh"? (2:9). (Studies made to date of lexical and grammatical usage of the book are not conclusive as to authorship.) In the end it seems much easier to suppose that a series of anonymous compositions, whether by one poet or by several, came to be attributed to Jeremiah, early but erroneously, than to suppose that a genuine work by the prophet came to be separated from his name. Beyond this it has proved impossible to suggest a plausible alternate as author, or to determine whether only one person or several are involved. Similarly, recent examinations of the theological traditions on which the book draws, by Kraus (*Klagelieder* BKAT) and Gottwald (1962), leading to depictions of the author(s) as from among the priests or cult prophets of Jerusalem, are best regarded as to some degree plausible but not conclusive. More extreme, and less convincing, is the theory of Brunet (1968), according to which Lamentations is a kind of polemic against Jeremiah.

F. Place of Composition

Either Lamentations was written in Judah, the view that no doubt would be first to suggest itself to a reader, or it was written by a Jew in exile somewhere else who happened to know what was going on in Judah and was more interested in conditions there than in Babylon, Egypt, or wherever he was. One may argue about probabilities in this matter, but very little is at stake for the interpretation of the book.

G. Acrostic Form

All five poems in Lamentations are formally related in some way to the alphabet. This is least noticeable in chap. 5, which conforms to the alphabet only in having 22 lines, one for each letter in the Hebrew alphabet. (The attempt of Bergler [1977] to find a word acrostic in chap. 5 is strained and unconvincing.) In chaps. 1 and 2 each stanza has three lines, and the initial word of the first stanza begins

with the first letter of the alphabet (*ʾalep*), the second stanza begins with a word starting with the second letter (*bet*), and so on through the alphabet. Chapter 4 follows the same scheme but has two-line stanzas. The most elaborate acrostic is chap. 3, with three-line stanzas in which each line begins with the appropriate letter: three *ʾalep* lines, three *bet* lines, and so on.

It is likely that biblical alphabetic acrostics (aside from Lamentations 1–4, Psalms 9–10, 25, 34, 37, 111, 112, 119, 145, and Prov 31:10–31, which are complete or nearly complete acrostics) owe their origin ultimately to Mesopotamian acrostics, of which extant examples predate any datable biblical acrostics, though Akkadian acrostics are, of course, syllabic rather than alphabetic. The general idea of conforming poetic structure to the writing system or a meaningful sequence of the initial signs of poetic lines arose first in Mesopotamia.

The purpose of the acrostic form with relation to Lamentations is uncertain. It has been proposed, on the basis of observed use of acrostics in literature generally, that the acrostic is to aid the memory, or display artistic skill, or express the notion of completeness, as if to imply that everything from start to finish has been said, and each of these views is to some degree plausible. Aesthetically, it seems that the somewhat rigid bounds which the acrostic sets contribute a desirable limit to a subject matter that might otherwise run on and on. One might compare the function of sonnet form in Italian or English literature. An unintended effect of the acrostic form has been that it makes Lamentations a favorite starting point for modern scholarly investigation of Hebrew poetic form and diction, including metrical studies, since the fundamental question of where lines begin and end is largely settled by the acrostic pattern (Freedman 1972).

In the MT, the order of the letters in chaps. 2, 3, and 4 is different from the usual Hebrew order; here *pe* comes before *ʿayin* (as if, in an English acrostic, *p* were put before *o*). In a recently published Qumran manuscript of Lamentations this divergent order is found also in chap. 1, though it cannot be automatically assumed that this represents the original reading, the author's intention. The Greek of Proverbs 31 and Psalm 34 seems also to reflect this divergent order. A very early ostracon containing the alphabet, published by Kochavi (1977; cf. Demsky 1977), of about 1200 B.C.E., from a site in Judah, and abecedaries of about 800 B.C.E.—from Kuntillet ʿAjrud in the S Negev (see Meshel 1978) also have the order *pe-ʿayin*, and it has been supposed that in them and in Lamentations we have evidence of an authentic early Hebrew tradition of alphabetic order divergent from the Ugaritic and Phoenician order that became dominant. Naveh (1978), however, justly cautions that, at least in the earlier ostracon, the writing is unskilled in the extreme, and that in it there is another reversal of order, *ḥet-zayin*, which is simply a mistake by the schoolboy writer.

H. Meter, Parallelism, and Other Aspects of Poetics

The surprisingly large place in studies of Hebrew poetics occupied by Lamentations is in part due to its dominantly acrostic form, and to a peculiarity of meter first described by Budde (1882). Budde discovered in Lamentations chaps. 1–4 (5 is different) a poetic line of two unequal parts, the first one longer by at least one word. Moreover, Budde held that this unbalanced rhythm was specifically related to the lament, and named it *qinah* meter.

Budde himself recognized in Lamentations the presence of numerous lines diverging from this pattern, and others have argued for still more balanced lines in the book, but it remains true that the unbalanced line is dominant. On the other hand, it seems less certain that this rhythm was necessarily associated with laments in ancient Hebrew usage, for laments occur without this rhythm (e.g., 2 Sam 1:17–27) and the rhythm occurs outside of laments. Since Budde's time, of course, many attempts have been made to present more refined and accurate theories of Hebrew meter, involving counting of accents, or, most recently, syllables; although many of these discussions have involved Lamentations significantly, they are best studies in the larger context of Hebrew poetics as a whole; in broad outline, Budde's discovery remains valid. The more refined and minute study of Freedman (1972), based on counting of syllables, confirms that Budde was correct in isolating chaps. 1–4 (acrostic chapters as following distinctive metrical practices.

In addition to its distinctively metrical character, Lamentations, like other biblical Hebrew poetry, exhibits a pervasive parallelism between poetic units (cola or lines). Moreover, the word order in the sentences of Lamentations diverges markedly from patterns of order in prose (Hillers 1974). It is plausible to suppose that unusual word orders are employed for the sake of rhythm or parallelism, but this cannot yet be demonstrated.

Cross (1983) attempts to exploit a contrast of Lamentations, as written poetry, with earlier oral poetry, but such a contrast has proved most problematic even in branches of literature where oral and written composition can be directly observed, and in ancient Hebrew literature (and Near Eastern literature in general) there is even less by way of an observable basis for such a distinction.

Like other biblical writings, especially poetic compositions, Lamentations has been restudied with profit from the point of view of recently discovered Northwest Semitic writings, especially Ugaritic, with an effect on our views of text, language, and poetics. Such an approach is represented, in varying degrees, in Dahood (1978), McDaniel (1968a; 1968b), and Hillers (*Lamentations* AB).

I. Relation to Sumerian Laments

Gunkel (1929) attempted to relate Lamentations to the genre of funeral songs discussed earlier by Jahnow (1923), but since the five chapters of Lamentations all seem to be late and impure examples of the type, as he himself stated, this sort of form-critical approach has not proved especially decisive for understanding the book.

A more striking association of Lamentations with a specific literary tradition was proposed by the biblical scholar Kraus (*Klagelieder* BKAT), and from the Assyriological point of view especially by the Sumerologist S. N. Kramer (1969; *ANET,* 611–19). Lamentations is supposed to descend from an ultimately Sumerian tradition of laments over ruined cities and temples.

There are now five principal extant compositions belonging to the Sumerian literary genre "Lament over the ruined city and temple," including laments over Ur, Sumer and Ur, Nippur, Eridu, and Uruk, composed during the Isin-Larsa period (1950–1700 B.C.E.) and thereafter copied as part of the Old Babylonian scribal school curriculum. Several may presently be studied in translations by Kramer (1969; *ANET,* 611–19) and Green (1978; 1984), and editions and translations of others are forthcoming (see Gwaltney 1983). These earliest Sumerian city-laments are related to a general Mesopotamian literary and liturgical tradition of congregational laments that continues down to Seleucid times (see Kutscher 1975; Cohen 1981). Gwaltney (1983) sees in these "lineal descendants" of the older city-laments the link between the ultimately Sumerian tradition and the biblical book of Lamentations.

In assessing the relation of the early Sumerian laments to the biblical book, note that the recurrent historical situation which evokes these poems is extraordinarily close: a city, in the sense of a focus of a human and divine community, has been destroyed by enemies; paradoxically it has been allowed to perish by its own god(s), the result being a physical, social, and spiritual crisis. There are frequent and striking resemblances in details of expression between these compositions (and the related "Curse of Agade"; see Cooper 1983) and the biblical Lamentations. On the other hand, as stressed by McDaniel (1968a; 1968b), the great similarity of the subject matter would be expected inevitably to produce many resemblances in form even if there were no literary influence or connection involved. And the whole question cannot be discussed apart from a clear general conception of the relation between Mesopotamian and Israelite literature (Hillers *Lamentations,* AB; Tigay 1976), which is not presently available. In detail, note that the major Sumerian laments may contain a reversal of fortunes: the god turns his favor to the people again, the city flourishes as never before, and similar good things happen, as in the "lament" over Nippur, where the joyful part of the poem is about twice as long as the complaint; this element, of course, is entirely absent from the biblical book. In any case, however, it remains true that it is most instructive for the student of the biblical Lamentations to read them together with Sumerian laments, if only as a reminder of how much historical and religious experience Israel shared with other ancient Near Eastern communities.

J. Text

In the book of Lamentations the MT itself seems to be in a good state of preservation. The ancient versions offer little help in clearing up difficulties since they give a text not essentially different from the

traditional Hebrew text; this conclusion has emerged from prolonged and intensive study of the text of Lamentations, culminating in the recent works of Rudolph (1938), Albrektson (1963), and Gottlieb (1978). Some new insight into how this situation came about is provided by recent theoretical views on the history of the Hebrew text and versions, and new manuscript evidence.

According to one recent theory held in various forms by Barthèlemy (1963: 33, 138–60) and Cross (1964: 233), the Greek text of Lamentations belongs to the so-called *kaige* recension, a type of Greek text which has deliberately been brought into line with the emerging Masoretic text, the result being that it is of little use in correcting the Hebrew. (The Septuagint text has recently been re-edited by Ziegler [1976]). Among the Dead Sea scrolls so far published is one sizable manuscript containing portions of chap. 1 (4QLam[a]; see Cross 1983), with notable variants from the Masoretic text; perhaps in time this will yield a new view of the early textual history of the book, in the context of study of the Qumran biblical text as a whole. There are also several fragments of the canonical book (3QLam; 5QLama, 5QLamb) and two sectarian compositions (4Q179 = 4QapLam; 4Q501) which weave in significant bits of the text.

DELBERT R. HILLERS

LAMPSTAND [Heb *mĕnôrâ* (מְנוֹרָה)]. (In some English versions of the Bible the Hebrew *mĕnôrâ* is translated by the anachronistic word "candlestick.") Since lamps were the normal source of light other than daylight in the biblical world, one would expect stands to hold them to have been items of everyday usage. The furniture of a room described in 2 Kgs 4:10 includes a lampstand; and many examples of ceramic stands, at least some of which might be construed as lampstands, have been found in archaeological excavations. However, lampstands have rarely been found, archaeologically, in domestic contexts (Smith 1964: 9–11). Aside from the 2 Kings passage, all the biblical mentions of lampstands refer to golden objects used in sacred contexts.

Lampstands as receptacles for light-giving vessels were part of the sacred furniture in the central Israelite shrines or sanctuaries described in the Bible. The light given off by the lamps served to illuminate the interior of the sanctuary, and it also functioned as part of a set of ritual objects or acts, appealing to all the senses, that were part of the established priestly ritual (Haran 1978: 208–21). However, the lights or lamps were not the same as the stands on which they were placed. The nature of those stands varied during the long history of ancient Israel's cultic institutions.

A. Tabernacle Lampstand

The earliest of Israel's lampstand traditions belongs to pre-temple times, that is, to the tent or tabernacle associated with the premonarchic period. Of the forty-one occurrences of "lampstand" in the Hebrew Bible, more of them (26) deal with the tabernacle menorah or lampstand than with those of the subsequent Israelite shrines (either the Jerusalem temple built by Solomon and continuing, though with alterations over the centuries, until the destruction of Jerusalem; or the restored temple built in the early postexilic period and remodeled or rebuilt several times thereafter until the Roman destruction of Jerusalem in 70 C.E.).

The lampstand of the tabernacle (*miškān*) is mentioned in various places in the priestly writings of the Pentateuch, but the chief descriptive passages are found in the tabernacle texts of Exodus (Exod 25:31–40 and 37:17–24). Although the priestly texts in their final form are probably exilic or postexilic in date, biblical scholarship has established the greater antiquity of much of the priestly material, including traditions dealing with the tabernacle. Thorough study of the lampstand texts, from the perspectives of philosophy, archaeology, and art history, has established a basic reality for that biblical artifact that can be located in the Mosaic era, the end of the LB Age (see Meyers 1976: 182–84 and *passim*).

The Hebrew word for lampstand is ambiguous in what it represents in the priestly texts. Sometimes (e.g., Exod 26:35; 40:4; Num 8:2–3), it indicates a branched object, that is, a central shaft with three branches coming forth from each side. This arrangement produces seven receptacles for lamps: one on each of the six branches, and one on the central shaft. At other points the biblical references to the tabernacle lampstand (as in Exod 25:31–35; 37:17–21), refer only to the central shaft, which constitutes the actual stand for the lamps, with the branches thus being part of the symbolic shape of the appurtenance but not part of its functional aspect.

The latter instances make it clear that the seven lamps associated with the lampstand are not themselves to be construed as being physically part of the lampstand. They are discrete objects, and in at least two instances (Exod 27:20; Lev 24:2–3, and perhaps also Exod 25:37) a tradition of a single lamp rather than seven lamps can be discerned. In the case of both the seven lamps and the single one, these actual light sources were to be placed on the central shaft or stand and *not* on the end of the branches (see Lev 24:4). The idea of a seven-branched lampstand is the result of early post-biblical Jewish interpretations (in graphic and textual sources) of the Exodus texts, but it is not intrinsic to the biblical description itself.

The existence of apparently contradictory information about the number of lamps can be related to the conflation of two sanctuary traditions, the tent of meeting and the tabernacle. The single-lamp passages contain references to the tent of meeting, whereas the seven lamp texts are in the context of tabernacle data.

The biblical descriptions of the lampstand contain many technical terms that are very specific in their meaning and that help reconstruct the form of the object, the workmanship used in fashioning it, as well

as its symbolic value. Perhaps the key to understanding its fundamental form and identity is the pair of words, *yarēk wēqāneh*, that designate the central shaft, or lampstand proper. This pair, mistakenly translated "base and shaft" by the RSV, is actually a hendiadys denoting a cylindrical form that flares outward at its lower end, thereby forming a stable base. This feature makes it possible for the lampstand to be freestanding. There is no description of a tripodal or of a stepped base, one or the other of which appear in nearly all post-biblical descriptions or depictions of the lampstand.

Its basic cylindrical form, flaring at the bottom and possibly also at the top, places the lampstand typologically within the category of stands recovered in ceramic form in archaeological excavations in Palestine and appearing, in metal and stone form, in artistic renderings all over the ANE. Such stands were used to hold a variety of vessels, such as bowls, jars, incense dishes, offering platters, and, of course, lamps.

The other technical terms used to describe the whole lampstand are noteworthy for being part of the vocabulary of plant forms in ancient Israel. Moreover, the botanical aspects of the terminology relate to features of graphic renderings of plant forms especially as they appear in Egyptian art. The very term *qāneh*, representing "branch" and also appearing in the pair of words for the central shaft described above, is a generic word for "reed." It specifies the *arundo donax*, or Persian reed, a gigantic grass commonly found along the edges of bodies of water or water courses, the latter exemplified by the Nile. In nearly all other, nonpriestly biblical texts mentioning this reed, it has an Egyptian context and even symbolized Egypt (as in Isa 36:6 = 2 Kgs 18:21).

Another pair, *kaptōr wĕperah*, is best translated as a hendiadys: "floral capital" rather than RSV "capital and flower." It, too, is botanical in its vocabulary and Egyptian in its artistic orientation. These floral capitals, along with the somewhat enigmatic rounded bowls (*gĕbi ʿîm*) with almond-shaped inlay, were repeated three times on each branch and four times on the central shaft. This repetition functions as an artistic motif conveying permanence or continuity.

The presence of botanical terms, and the basic central shaft-plus-six-branches form, give the impression of a tree-shaped object. As such—and apart from its functional role as a holder of lamp(s)—the lampstand constitutes a conventional form appearing in depictions widespread in NE iconography (see Perrot 1937; Vincent 1924). This convention is derived from a stylized tree of life design and symbolizes such themes as the fertility of nature and the sustenance of life. The specific form of the branched lampstand of Exodus is closest to examples that are found at the end of the LB Age, or the age of Moses. See also TREE OF KNOWLEDGE AND TREE OF LIFE.

Since most ANE examples of the tree of life motif apparently represent the fertility-granting and life-giving powers of various deities, the presence of such a form in the aniconographic Israelite cult can perhaps be construed as the use of a powerful religious symbol to represent the presence of the unseen God of Israel. As a demythologized tree symbol, it served along with other aspects of the tabernacle, as God's residence, to assure God's availability to the Israelites or their priestly representatives.

The technology involved in shaping this complex appurtenance is not perfectly understood. The material, "pure gold," puts the lampstand in the category of furnishings for the interior of the tabernacle. It also points to a kind of metallurgy associated with Egyptian workmanship (Meyers 1976: 41–43). The fact that the lampstand was to be made all of one piece indicates the usage of sheet gold, or gold foil, which probably would have been shaped by a rubbing process (*miqšâ*) over a wooden form.

B. Lampstands of Solomon's Temple

The image of a single, branched lampstand, vivid from the tabernacle texts and from postbiblical Jewish art, should not obscure the fact that the temple built by Solomon in Jerusalem contained ten lampstands (1 Kgs 7:49 = 2 Chr 4:7). Furthermore, there is no indication that those objects were branched. The only detail of their shape is the mention of their "flowers." The Solomonic lampstands were probably the cylindrical stands with flaring bottoms and tops that are represented in the central shaft of the tabernacle stand. The lamps that rested on these stands in the Jerusalem temple were likely to have been the seven-spouted bowl lamps typically found in cultic contexts in archaeological strata of the Iron II period, the time of the Solomonic temple. Not only does the temple lampstand differ in number and decoration from

the one described in Exodus; it also involved a different technological tradition. The "pure gold" for the Solomonic stands is indicated by a term different from that used for the tabernacle lampstand. The term in Kings is related to the Tyrian workmanship of the Jerusalem temple.

Without the branches, and with ten stands being used, it is doubtful that the symbolic value of these lampstands was the same as for the single tabernacle one. Rather, the light-giving property of the lamps they held apparently was their most significant attribute. Arboreal symbolism in the Jerusalem temple was present in other forms: in the trees carved on the cedar panels (1 Kgs 6:15, 18, 29) and cypress door (1 Kgs 6:34–35), and perhaps also in a sacred grove in the temple precincts (cf. Ps 52:8).

The lampstands commissioned by Solomon are not mentioned again in the Hebrew Bible. A possible exception is Jer 52:17. However, since that passage lists "lampstands" in an inventory of minor cultic appurtenances or utensils, it is doubtful that the main sanctuary lampstands are meant. Thus it is difficult to know whether or not the original ten lampstands of gold survived until the Babylonian conquest of 587 B.C.E. They may have been replaced during one of the periodic refurbishings of the temple (Meyers 1981), or they may have been relinquished in an earlier Judean encounter with a foreign power.

C. Postexilic Lampstands

The temple was restored early in the postexilic period, in the late 6th century, under the guidance of the prophets Haggai and Zechariah and under the leadership of the governor Zerubbabel and the chief priest Joshua. But the Bible gives no indication that the reestablished temple contained one or more lampstands. Most of our information about the cultic furniture of the rebuilt temple comes from extrabiblical sources, such as Philo, Josephus, the Talmud, and graphic renderings (Meyers 1979). Such sources from late in the postexilic period, or even after the destruction of the rebuilt temple in 70 C.E., are more likely to reflect the last known temple lampstand, since the restored temple was itself rebuilt at least several times (cf. 1 Macc 1:21; 4:49), most grandly in its last existing form as the Herodian temple. Those sources preserve a single lampstand tradition.

The nature and number of lampstands at the beginning of the postbiblical period may, however, be informed by one prophetic passage, Zech 4:1–6 and 11–14, which predates the completion of the temple restoration project. Zechariah's vision includes a golden lampstand. The description of the stand, which has its own complex and to some extent fanciful terminology, clearly depicts a single lampstand and not ten of them. In that sense, it relies upon the pentateuchal traditions. Such a reliance is typical of many of the characteristics of the semi-autonomous community established in Judah in the late 6th century. Zechariah apparently envisioned the rebuilt temple with a lampstand just like the one presented in the tabernacle texts. But such an appurtenance would have been fabricated according to Persian period or late Iron Age styles and technologies rather than according to archaic LB or early Iron Age ones (see Meyers and Meyers, *Haggai, Zechariah 1–8* AB, 227–40).

Zechariah's lampstand has its idiosyncratic qualities. On a symbolic level, it seems to combine the importance of the tree-of-life form of the tabernacle tradition with the light-giving aspects of the temple stands. The former is represented in Zechariah's vision by the presence of two olive trees flanking the golden lampstand. And the latter is expressed in the prophet's explanation of the symbolic value of the seven seven-spouted lamps resting on the stand (for which no branches are mentioned): "These seven are the eyes of Yahweh which range through all the earth" (Zech 4:10b).

Whether or not Zechariah's vision was ever translated into reality cannot be established except in the fact that the single lampstand tradition resumes by the time of the Roman conquest of Jerusalem in 70 C.E. However, the idea of visionary and symbolic temple furnishings gets played out once more, and extravagantly, in Revelation (1:12, 13, 20; 2:1; 11:4). There, the golden lampstands are seven in number (except in 11:4). The sacred number seven is combined with the sacred furniture of the temple in the apocalyptic imagery of this NT book.

LANCE. See WEAPONS AND IMPLEMENTS OF WARFARE.

LAND. The frequent occurrence of various terms designating land, and the central role land plays in certain narratives, testify to the importance of this concept in the Bible. But while the concept is ubiquitous, the different units of the OT provide various ideological perspectives and theological nuances. Similarly, while the use of this term in the NT displays an awareness of the centrality of this concept, its meaning is further transformed through the motivations of its individual authors.

A. Old Testament

1. Terminology. In the vast majority of instances (RSV ca. 1620 times) "land" translates Hebrew *ʾereṣ*, a word that can also be rendered by "earth" (RSV ca. 660 times), "ground" (RSV 107 times), "country" (RSV 83 times) and by several less frequent terms (see EARTH for cognates and for a discussion of original meaning). In addition, "land" frequently translates *ʾădāmâ* (RSV ca. 105 times), also rendered "ground" (RSV 67 times), "earth" (RSV 37 times), "soil" (RSV 6 times), "country" (RSV 2 times), and occasionally, *śadeh* (usually rendered "field"). In spite of their frequent rendition by the same English "land," *ʾereṣ* and *ʾădāmâ* are seldom synonyms (never, according to Rost [1965: 77, 80], but Plöger [1967: 128] offers a few exceptions for Deut 4:38, 40; 11:8f.; 12:1; 26:2, 15).

"Land" is the usual translation of *ʾereṣ* when it refers to (a) a specific geographical region (e.g., "land of Ararat," 2 Kgs 19:37), or (b) the territory of a specific people (e.g., "land of the Kenites," Gen 15:19); while "earth" is the usual translation when *ʾereṣ* refers to the realm of human habitation (generally EARTH). The plural (*ʾĕrāṣôt*) is compatible with this usage, though relatively infrequent (ca. 70 times; e.g., Gen 41:54). In some instances, however, the translation of *ʾereṣ* as "earth" or "land" will depend on more complex exegetical decisions (e.g., Lev 25:23).

In the majority of instances of type b, the land in question is identified in some way as promised to, claimed, or possessed by Israel or a part of Israel (e.g., "land of Judah," Deut 34:2), although the explicit designation "land of Israel" is rare (see below). At other times, genitive combinations or adjectival phrases characterize the extent and quality of the land (e.g., "the whole land," Gen 13:9; "fatness of the land," Gen 27:28; "fertile" [lit. "good"] land, Judg 18:9). Often "land" locates a group of people (e.g., "elders of the land," Gen 50:7). On occasion, "land" can be personified (e.g., "captivity of the land," Judg 18:30; "the land rested," Josh 3:11; "the land mourns," Hos 4:3).

ʾădāmâ is primarily a nonpolitical term designating the agricultural land that sustains a sedentary population, in contrast to "wilderness" (*midbār*), while *ʾereṣ* includes the latter (Rost 1965: 77, 81). As such, *ʾădāmâ* is usually owned by a person (head of household) or group (e.g., "your/their land," Deut 7:13). God's ultimate ownership is assumed and expressed (Isa 14:2 [*ʾadmat YHWH*], cf. Hos 9:3; Josh 22:4 [*ʾereṣ ʾĕḥuzzatkem*]), and Israel owns it by virtue of his gift (Deut 26:15). The expression "land of Israel" (*ʾadmat yiśraʾēl*), however, is peculiar to Ezekiel (16 times), which Rost (1965: 78) takes to express the nonpolitical nature of that prophet's land expectations. While all agricultural land forms a collective unity—there is only one instance of the plural (*ʾădāmôt*, Ps 49:12—Eng 49:11); the reference in

numerous OT contexts is to the portion of Israel or subgroups of Israel. In this respect, *ʾădāmâ*, like *ʾereṣ*, is a key term sustaining the OT's land theology.

2. Israel's Land. a. Israel's Relationship to the Land. In the majority of contexts, "land" is identified as the land to which Israel has a claim (see "Theology," below). It is characterized as anticipated (e.g., "the whole land before you," Gen 13:9), as highly desirable and praiseworthy (Deut 8:7–10), as the "good land" (especially in Deuteronomy), and as a "land flowing with milk and honey" (e.g., Exod 3:17).

Parenthetically, the two common English designations "Promised Land" and "Holy Land," though correctly expressing central theological concerns (see "Theology," below), are not characteristic for the OT. The Hebrew language has no words for "promise, to promise"; where such occur in Eng translation (e.g., Deut 9:28, RSV), they usually render the common Hebrew verbs "to speak" or "to say." The term "Holy Land" (*ʾadmat haqqōdeš*) occurs only in Zech 2:16—Eng2:12, with reference to the eschatological future, and then in 2 Macc 1:7 (cf. Davies 1974: 29f.; Hanhart 1983: 128, 130). Its holiness, where expressed or implied, is not an inherent status, but totally dependent on God's decision to be present in or withdraw from it.

The most frequent designation of the land is also a reminder that it did not belong to Israel originally: "land of Canaan/the Canaanites" (JE, P, e.g., Gen. 12:5; 23:2; seldom in Deuteronomy [Deut 1:7; 11:30; 32:49]). Frequently this point is made in a formulaic listing of the original owners:

> I promise that I will bring you up out of the affliction of Egypt, to the land of the Canaanites, the Hittites, the Amorites, the Perizzites, the Hivites, and the Jebusites, a land flowing with milk and honey. (Exod 3:17)

This listing appears in the earliest Pentateuchal sources already, but finds its echoes elsewhere within and beyond the Pentateuch, up to the time of Ezra (9:1) and Nehemiah (9:8). In the majority of cases, the list contains six members, generally those of Exod 3:17 (above), with the Canaanites, Amorites, and Hittites vying for first position, and the Jebusites almost always at the end. However, the list never became a fixed formula; it ranges from three members (Exod 23:28) to ten (Gen 15:19f.), with variations in nations listed and in their order. Thus it is safe to assume that it is not merely repeated as a cliché, but gives evidence of ongoing reflection in Israel on the fact that nations other than Israel were the original owners of the land (see "Theology," below). Of course, this previous ownership can be expressed with reference to one nation only, above all, the Canaanites (e.g., Josh 17:16) but sometimes the Amorites (Num 21:31), though it appears that the latter are frequently limited as to residency (e.g., east of the Jordan, Josh 7:7; the hill country, Num 13:29; etc.).

This previous ownership and Israel's subsequent acquisition of the land, are appropriately expressed by a characteristic verbal vocabulary. God promises (*ʾāmar* [lit., "says"], *dābar* [lit., "speaks"; *Piʿel*]) or swears (*šābaʿ [Nipʿal]*) to bring Israel into the land (*bôʾ [Hipʿil]*), or to give the land to Israel (*nātan*). Israel is to go (go up, enter) into the land (*bôʾ, ʿālâ*), go over [the Jordan] into the land (*ʾābar*), possess the land (*yāraš*), receive the land as inheritance (*naḥălâ*), divide the land (*ḥālaq [Nipʿal]*), and dwell in the land (*yāšab*). Thus Israel receives a land not originally her own, by God's initiative and agency, but cooperates in its takeover. (Of course, there are many passages that simply assume Israel's eventual acquisition of the land and refer to the latter, in some way or other, as Israel's land, either by possessive adjectives [e.g., "your land," Deut 28:24], or by contextual implication.)

Israel's relationship to this land is further characterized by the nouns "inheritance" (*naḥălâ*), "possession" (*ʾăḥuzzâ*), and "rest" (*mĕnûḥâ*), together with their respective verbal stems. "Inheritance" designates the land as transferred to Israel by God without the right of sale (Wanke *THAT* 2: 56; cf. 1 Kings 21:3f.). The emphasis falls on God as the one who has authority to dispose of land belonging to him, and on Israel's inalienable right to retain such land as God confers.

As to the nature of the transfer, two interpretations have been proposed: (a) Scholars generally have derived *naḥălâ* from the realm of inheritance law; (therefore the Eng "inheritance"). (b) Forshey (1973), on the other hand, has plausibly argued for the origination of *naḥălâ* as a term of special land tenure granted by a feudal lord to a devoted servant as a fief. Since such a fief was hereditary, the term was eventually extended to include the meaning "inheritance" in later OT sources. He cautions, however, that

the root *nḥl* has very wide connotations, making it impossible to interpret it in terms of a single model (235). In either case, the giving of *naḥălâ* points to a very personal bond between God and Israel, rather than to an impersonal commercial, legal, or military transaction.

The transfer itself is described variously as made to the tribes of Israel with their subdivisions, or to Israel as a whole. Division of the *naḥălâ* among the tribes is found mainly in Numbers (e.g., 26:52–56), Joshua (e.g., 11:23; 13:7–8), and Ezekiel (e.g., 48:29). It is to take place by lot (e.g., Num 26:55; Josh 11:23; Ezek 45:1) each tribal unit receiving its "allotment" (*ḥeleq*; e.g., Josh 11:23). Only the Levites are excluded from this distribution; their inheritance consists of the tithe (e.g., Num 18:21–26; 26:62), certain cities (e.g., Num 35:2; Josh 14:4), their share in the sacrifices (e.g., Josh 13:14; Deut 18:1f.), and ultimately God and his service (e.g., Josh 13:33; 18:7; Deut 10:8f.; cf. Ezek 44:28). The apportioning of the *naḥălâ* to Israel as a whole is found mainly in Deuteronomy (e.g., 4:38; 12:9; 15:4). Occasionally, *naḥălâ* refers to the land holdings of individual Israelite household heads (e.g., Josh 4:9; 1 Kgs 21:3f.; Ruth 4:5, 10).

Less frequent is the designation of the land as God's *naḥălâ*, probably with reference to his claim to original ownership (e.g., 1 Sam 26:19; Jer 2:7; just as Israel, his people, is often called his *naḥălâ*, e.g., Deut 4:20; 32:8f.). Forshey (1973: 236f.) points out, further, that the reference to Israel as God's *naḥălâ*, largely exilic, may have been a theological means to link the people closely to Yahweh in spite of their removal from the land. He suggests the translation "possession" as appropriate for most instances.

Another term defining Israel's relationship to the land as acquired ownership is "possession" (*ʾăḥuzzâ*). Its verbal root "seize, grasp, take hold" suggests again that the land, now Israel's "possession," had once been in other hands. The land of Canaan was given by God to Israel as its possession (e.g., Lev 14:34; Deut 32:49). Like *naḥălâ*, it can refer to the land holding of Israel as a whole or of individual tribes, clans, and households. In most instances it refers to land and real estate that is handed down through the generations and should not be sold (e.g., Lev 25:10ff. *passim*; 27:22–24). Sometimes, however, it is extended to include property generally. Its closeness to "land" and "inheritance" is expressed in such construct phrases as "land of your possession" (RSV: "your land;" *ʾereṣ ʾăḥuzzatkem*; Josh 22:19), "inheritance of their possession" (*naḥălat ʾăḥuzzātām*; Num 35:2), and "the possession of our inheritance" (*ʾăḥuzzat naḥĕlātēnû*; Num 32:32). In spite of their closeness of connotation, however, *naḥălâ* and *ʾăḥuzzâ* are not fully synonymous; *ʾăḥuzzâ* is the more general, juridicially abstract concept designating possession of land (Horst 1961: 155).

The land is also the destination of Israel's wandering, and as such, its place of rest. Both the verbal expression "give rest" (*ňaḥ, [Hipʿil]*) and its nominal derivative "rest" (*mĕnûḥâ*) express this, particularly within Deuteronomic-Deuteronomistic theology. As a distinctive aspect of God's land promise, rest can be expected by Israel only upon crossing the Jordan and occupying the heartland of Canaan (Deut 12:9f.; 25:19; cf. 3:20, see below). There God grants rest to his people in stages, beginning with the conquest (Josh 1:13, 15; 14:15; 22:4; 23:1) and culminating in the era of David and Solomon (2 Sam 7:1, 11; 1 Kgs 5:4; 8:56). The essence of this rest is "tangible peace granted to a nation plagued by enemies and weary of wandering" (von Rad 1966b: 155). Just as the land can be called God's inheritance, the land (and particularly the temple) can also be called his rest (Ps 95:11; 2 Chr 6:41). That Israel's access to God's gift of rest is contingent on faithfulness and endangered by rebellion, is the warning of Ps 95:11.

While the concepts inheritance, possession, and rest emphasize the divine intention and authorization for Israel to possess this land and find rest in it, other texts maintain God's ultimate ownership of the land, and Israel's calling to live in it as "strangers and sojourners" (*gērîm wĕtôšābîm*) in the land/on the earth (Lev 25:23; cf. Josh 22:19; Pss 24:1; 39:13—Eng 39:12; 119:19; Jer 2:7; 16:18).

However, the eventually expected appellation of the land acquired by Israel as "land of Israel" (*ʾereṣ yišrāʾēl*) occurs only once in an older text (1 Sam 13:19, besides a few references to the N kingdom only), 3 times in Ezekiel (27:17; 40:2; 47:18; for *ʾadmat yišrāʾēl*, see above), and 5 times in Chronicles (1 Chr 13:2 [MT pl.]; 22:2; 2 Chr 2:17—Eng2:16; 30:25; 34:7). Wildberger (1956: 407, n. 15) sees this as a conscious, theologically motivated avoidance of a known term, while Ohler (1979: 58) ponders whether Israel was unable to perceive this "land" as a unity. The latter seems highly unlikely, however, in view of

Israel's focused land theology (see below). Israel's contingent hold on a land not originally hers may have been the theological motivation for the reserve in the use of "land of Israel," but we cannot be sure.

b. The Extent of Israel's Land. A perplexing question concerns the extent of Israel's land. Two comprehensive "maps" are respectively reflected in many passages:

1. Num 34:1–12 explicitly defines the "land of Canaan" as extending from the Brook of Egypt (*naḥlâ miṣrayim*) to the Entrance of Hamath (*lĕbô᾽ ḥĕmāt*), and from the Jordan/Dead Sea to the Mediterranean Sea. East Jordan is excluded. Many passages and events mark Israel's crossing of the Jordan as the beginning of the occupation (e.g., Deut 12:10; Josh 5:10–12). Numbers 32 and Joshua 22 offer a legitimation of the actual settlement of parts of East Jordan (called "unclean," in contrast to Canaan, "the LORD's land," Josh 22:19) by Israelite tribes.

2. Deut 11:24 offers much broader boundaries, including East and West Jordan, "from the River, the river Euphrates, to the western sea." In keeping with this picture, Deuteronomy 2 promises East Jordan, except the territories of Moab and Ammon, to Israel and sees the crossing of the Arnon as the beginning of Israel's holy war of conquest against the nations. The settlement of Israelite tribes in East Jordan apparently presents no problem (Deut 3:12–20; Josh 13:8–12).

Weinfeld (1983: 59–75, esp. 65f., leaning on B. Mazar and R. de Vaux) has plausibly argued that the first "map" (Num 34:1–12) represents Israel's older, pre-deutero- Ÿ nomic claim, patterned on the old Egyptian province of Canaan as it emerged after the battle of Kadesh (ca. 1285 B.C.). It is reflected, in addition to the texts mentioned, in Josh 13:4; Judg 3:3; 1 Kgs 8:65; 2 Kgs 14:25; Amos 6:14; and it also offered the blueprint for Ezekiel's vision (Ezek 47:16–20). The second "map" (Deut 11:24), in this schema, originated in the expansive era of the Davidic-Solomonic empire, was formulated in grand, utopian ancient Near Eastern royal terminology (river to river, sea to sea, etc.), and received its final crystallization by "the so-called Deuteronomic author or school" in the Josianic era. This perspective is reflected or presupposed, besides the passages listed, in Gen 15:18; Exod 23:31; Pss 72:8; 80:12—Eng 80:11; 89:26—Eng 89:25; Josh 1:4; Deut 1:7; Zech 9:10; and others.

The characterization of map 2 as Deuteronomic is not without problems, however. Diepold (1972: 29–41, 56–64) distinguishes between a land limitation to West Jordan in Deuteronomy, with occasional redactional additions taking the wider view (e.g., 11:24), and a perspective of the Deuteronomistic History (including most of Deuteronomy 1–3 and 34) that envisions the land to include East Jordan up to the Euphrates. Numerous literary-critical decisions underlie both hypotheses, and it seems doubtful whether we can reach clear territorial definitions for Israel's land beyond conclusions for a particular canonical document or a limited historical context and period.

It is significant that several, especially later, documents exhibit much less well-defined geographical conceptions of the land. Thus Jeremiah, with his prominent theology of land (Diepold 1972: 105–39, 155–76; Martens 1972; Brueggemann 1974; Epp-Tiessen 1981; Zimmerli 1985), reflected little on its extent, assuming it to be basically the West Jordan area where the people of God actually lived, while the Deuteronomistic additions to Jeremiah reflect the remnant area of Judah, together with the lost southern territories of the Shephelah, the hill country, and the Negeb (Diepold 1972: 54f., 70f.). In the postexilic era, limited terms like "Judah and Jerusalem" increasingly describe the land (e.g., Ezra 4:6). The very freedom with which the documents and their redactors vary in their perspectives indicates that the concept of Israel's land is held together by an inner core of identity (see "Theology," below) rather than by geographical or ideological definition.

For our geographical understanding of Israel's land in the OT generally, a multiple perspective must be maintained: its heartland was the West Jordan region "from Dan to Beersheba" (e.g., Judg 20:1), with the exclusion of more or less of the Mediterranean coastal plain. Based on the reality of settlement and political control, the East Jordan region, excluding Edom, Moab, and Ammon, was generally also included. Occasionally, perhaps inspired by the extent of David's kingdom, all the lands up to the Euphrates were included in visionary statements (e.g., Deut 1:6–8; 11:24; Josh 1:3–4).

3. Theology: The Land Theme in the OT. The land theme is so ubiquitous that it may have greater claim to be the central motif in the OT than any other, including "covenant" (cf. the theological surveys of

Wildberger 1956: 404–22; von Waldow 1974: 493–508; Davies 1974; and esp. Brueggemann 1977). It is nuanced differently in different books and compositional units, yet the tensions thus created are never such as to deflect altogether from a broad central narrative thrust pervading the canonical documents. An attempt will be made to sketch that narrative. Historical, form-critical, and traditio-historical matters will be considered from time to time.

a. The Pentateuch. The Pentateuchal narrative identifies the earth (*ʾereṣ*) as God's creation (Gen 1:1, 9f.), intended to be the source of all plant and animal life (1:11, 24), and as the habitat for human beings who are to administer it (1:28f.). Through his very name, the collective "Adam" (*ʾādām*), and the image of his formation "of dust from the ground" (*ʾădāmâ*), the human creature is closely linked to the soil (2:7). He is to experience it first in the garden graciously provided by God (2:8). To "till and keep" (lit. "to serve and watch over") this garden is to be his (after the creation of woman, their) task as God's steward(s), enjoying its produce within God-set limits (2:15–17). When humans claim the master role, "like God" (3:1–7), their task of filling the earth and caring for it is encumbered by a "heavy burden" (*ʿiṣṣābôn*, RSV: "pain" in 3:16, "toil" in 3:17); they are driven from the garden (3:22–24), but their task remains, and the earth (land) will continue to be the source of their livelihood (3:19, 23).

Abel and Cain continue this task as "keeper of sheep" and "tiller of the ground" (*ʿōbēd ʾădāmâ*). When Cain spills his brother's blood, however, he becomes "cursed from the ground," the latter no longer yielding "its strength" to him; paradigmatically for later "defilers" of the land, he becomes "a fugitive and a wanderer on the earth (*bāʾāreṣ*)," though not without God's protection (4:8–16). Sin continues to endanger human existence on the earth through the great Flood, God preserving only a remnant of animate life (6:5–7:24). God graciously confirms the human commission to fill and administer the earth (8:17; 9:1–2, 7), promising that he "will never again curse the ground (*hāʾădāmâ*) because of man" (8:21). A repeated human effort at establishing an autonomous identity ("a name") through entrenching themselves geographically by building "a city, and a tower with its top in the heavens" evokes the judgment of God who "scattered them abroad from there over the face of the earth (*hāʾāreṣ*)" (11:1–9).

In this manner, the two traditionally assumed literary sources J and P intertwine in the Primaeval History (Genesis 1–11) to present a theology in which land is God's gracious gift and task for humanity under the sovereign rule of God. These are constantly threatened by the human tendency to seek autonomous rule over the land, resulting in its loss and in a life of uprooted wandering, but it is precisely then that God's grace and protection become most palpable. Thus a dialectic results, between "landedness" as God's greatest gift and man's greatest temptation, and "landlessness" as God's judgment and yet the context for the highest experience of God's grace (Brueggemann 1977 *passim*). It is this paradox that governs much of the subsequent land motif in the OT.

Abraham is promised a great name, many descendants, and God's blessing, on the provision that he uproot himself from his Mesopotamian homeland to go "to the land that I will show you" (12:1–3). The unknown land sought by Abraham in faith is later identified as Canaan (12:6–7), and the promise of its possession is repeated to Abraham and his descendants throughout the Pentateuch (Gen 13:15; 15:7, 18; 17:8; 22:17; 26:3; 28:4, 13; 35:12; 48:4; 50:24; Exod 3:8; 6:4–8; 13:5; 32:13; 33:1; Num 10:29; 14:23; 32:11; Deut 6:18, 23; 8:1; 9:5, 28; 10:11; 11:8–9, 21; 26:3, 15; 28:11; 31:7, 20; 34:4; cf. Josh 1:6; 5:6; Judg 2:1). Nonetheless, Abraham, Isaac, and Jacob live in the land as sojourners (Gen 17:8; 23:4; 26:3; 28:4; 35:27; 36:7; 37:1; Exod 6:4), until the family of Jacob/Israel, overtly driven by famine, but on a deeper level, guided by God, leaves Canaan again to settle in Egypt. Only a burial plot, the field and cave of Machpelah, bought by Abraham to bury Sarah, becomes their permanent possession in Canaan, and therewith a proleptic sign of the fulfillment of God's promise (Genesis 23). In Egypt, Israel multiplies to become a great people in accordance with God's promise, in the fertile but foreign land of Goshen (Gen 47:5–6; Exodus 1).

According to A. Alt's widely accepted characterization of Patriarchal religion (Alt 1966b), the land promise originated in the faith of seminomadic groups that the God of the Father would grant them land, in a limited context and in their own lifetime. R. C. Clements (1967: 23–46), partly based on Cross (1962) and others, sees the historical kernel of the land promise in an ancient covenant in which the El-deity

(possibly El Shaddai) at Mamre, as owner of that territory, promises the land of the Kenites, Kenizzites, and Kadmonites to Abraham and his descendants. This promise was eventually extended to all of Judah and, through David, to all Israel and the whole land of Canaan. As such, it became the dominant theological theme of the Hexateuch, the expectation of immediate fulfillment having been advanced to the conquest under Joshua and to the Davidic-Solomonic era (Clements 1967: 57; von Rad 1966d: 83).

The book of Exodus introduces the Israelites as a numerous people enslaved in a foreign land (Exodus 1). Moses becomes God's chosen instrument to lead them out of Egypt toward the goal of the land promised to the Patriarchs (Exod 3:7–8; 6:2–8). The faithlessness and murmuring of the people prevents a direct entry into Canaan, however (Numbers 14; 26:63–65; 32:6–15; Deut 2:14–15), and results in forty years of wilderness wanderings with untold hardships, until the rebelling generation has died and a new generation stands at the Jordan, on the brink of entering the land. Moses is merely allowed to see it from afar (Deut 34:1–5). Yet this very time in the wilderness becomes a time of experiencing God's constant presence and preservation, including the conclusion of the covenant with God at Mt. Sinai and the receiving of the covenant laws he requires Israel to keep. Many of the latter regulate Israel's life in the promised land, which is also called God's own property (Lev 25:23). Among them are the laws governing the sabbath year (Exod 23:10–11; Lev 25:1–7), the jubilee year (Lev 25:8–55), and first fruits (*bikkûrîm*; Exod 23:16, 19; 34:22, 26; Lev 2:12;28:26; *rēʾšît*, Lev 23:10; Num 18:12; Deut 18:4; 26:10).

The law codes now embedded in the covenant narrative are of diverse historical origin but are gathered here as covenantal law of Moses to indicate that their authority ultimately derives from the will of God. G. von Rad (1966d, followed by W. D. Davies [1974: 15–35] and others) has pointed out that the themes of "promised land" and "Yahweh's land" may be derived from originally separate traditions. The former was introduced into the Pentateuch by the Yahwist (see above). The latter, at home in the cult and the legal materials, may go back to the Canaanite view that each land belongs to its own god (thus von Waldow 1974: 494), though von Rad (1966d: 88) prefers to think of an early, Yahwistic origin. (For the synthesis of R. C. Clements [1967: 27–28], see above.) Whatever its origin, the concept of Yahweh's ownerships of the land of Canaan has been integrated fully into the biblical faith that God rules/owns the whole world, including Canaan (e.g., Exod 19:5). An important theological consequence of the notion of Yahweh's ownership of this specific land has remained highly effective in the Old Testament's land theology, namely, the notion that the Israelites (and by extrapolation, all humans) are "strangers and sojourners" (*gērîm wĕtôšābîm*), or in modern terms, God's long-term guests on his land/earth (Lev 25:23; Ps 39:13—Eng 39:12; 1 Chr 29:15; cf. Heb 11:13; 1 Pet 2:11).

b. Deuteronomy. In the form of three farewell speeches of Moses (Deuteronomy 1–4; 5–28; 29–30) in the plains of Moab on the eve of crossing the Jordan into the promised land, Deuteronomy recasts the preceding narrative into its own distinctive theological mold, with the land at its center (Plöger 1967: 60–100; Diepold 1972: 76–104).

According to M. Noth *(NDH)* and many others after him, it seems likely that the first speech of Moses (Deuteronomy 1–4) was prefixed to an older version of Deuteronomy by the Deuteronomistic Historian and consequently reflects the perspectives of the Deuteronomistic History (see below). God is about to fulfill his oath sworn to the fathers by bringing Israel into the land to inherit it. While Israel is to participate actively by going into it to take possession of it, the success will depend totally on God. He will subdue the former owners of the land and give it to Israel as a gift. It is a good land, praiseworthy in most glowing terms (e.g., Deut 8:7–9). It is the tangible token of God's faithfulness, the concrete expression of the covenant relationship, and the goal of Israel's wanderings where the people will find rest (12:9). But the land, like the original garden of Eden, constitutes a task for Israel. Its careful administration according to covenant law (rehearsed in chaps. 12–26), in single-hearted love and devotion to God will sustain Israel's claim to its possession and its blessings (e.g., 6:4–15; 8:11–20; 11:26–32; 28). Any deviation from God's statutes, commandments, and ordinances, and in particular the sin of idolatry that characterized the previous owners, will swiftly bring down on Israel the covenant curses, the last and worst of which is a return to Egypt (28:68). Thus the land becomes the touchstone for life or death; it is given out of God's free grace, but retained by means of obedience.

In a few passages (e.g., Deut 6:17–18) it appears as if keeping the law is already a precondition for receiving the land, but P. Diepold is surely right in suggesting that Deuteronomy addresses a people already committed voluntarily to the Sinai covenant; this people is not called to initial commitment now, but to ethical earnestness. The actual keeping of the laws of Deuteronomy, however, makes sense only in the land (Diepold 1972: 90–102).

It is noteworthy that the Pentateuch/Torah ends at the Jordan, stopping short of the actual occupation of the land, especially since the "small historical credos" or summaries (von Rad 1966c; e.g., Deut 26:5b–9) always include the occupation. Scholars have accounted for this in three main ways:

1. Some refuse to recognize the "Pentateuch" as the legitimate delimitation, preferring to include the book of Joshua, featuring the conquest, into a "Hexateuch" (von Rad 1966a).

2. Others assume, with Noth (*HPT,* 16), that the conquest theme was eliminated from the older Pentateuchal sources in the Priestly redaction. It survived, however, through the incorporation of older conquest materials into the Deuteronomistic History.

3. Most recently, R. Rendtorff (1985: 162f.) has argued that the Deuteronomic-Deuteronomistic school prepared the (probably first) collection of Pentateuchal materials, as well as that of the subsequent books, initially "without any fundamental break."

Whatever the literary prehistory may have been, the present delimitation must surely be seen (with J. A. Sanders 1972: 25–53; cf. also Rendtorff 1985: 162f.), as a deliberate canonical decision by a community that had lost the land again, but was able to define its identity as a landless people in terms of a still unfulfilled greater promise that lay in the future. Thus the actual occupation of the land from the time of Joshua to the loss of the land in 722 and 587 B.C., was relegated to the status of "foretaste," with the ultimate fulfillment still ahead, in the (eschatological) future.

c. The Deuteronomistic History. The Deuteronomistic History (Joshua, Judges, Samuel, Kings) in its final overall redactional unity, constitutes an assessment of Israel's performance in the land and of God's inevitable response to it (Noth *NDH,* 89–99). The book of Joshua presents the occupation of the land as a swift and total subjection of the Canaanites in a holy war waged by Yahweh, who gives the land to Israel (chaps. 1–12). At his command, Joshua distributes the land to each tribe, clan, and family (chaps. 13–22).

According to the historical reconstruction of A. Alt (1966a) and M. Noth (*NHI,* 68–84), no such massive conquest took place. Instead, various seminomadic elements of the later "Israel" infiltrated the settled agricultural areas, acquiring peacefully (therefore the technical term *Landnahme*) the more sparsely populated areas in the course of their search for pasture.

This reconstruction has, in turn, been challenged by the "revolutionary" theory proposed, in different forms, by G. Mendenhall (1962: 66–87) and N. Gottwald (1979: 210–220). Both assume that the eventual control of the land by the "tribes of Yahweh" (Gottwald's term) was achieved through some form of takeover of the socially stratified Canaanite city states by the combined onslaught of disadvantaged elements in the population seeking the establishment of an egalitarian society, joining forces "with a nuclear group of invaders and/or infiltrators from the desert" (Gottwald 1979: 210). As no consensus in this matter has emerged, all discussion must necessarily proceed again and again from the canonical data.

In the book of Judges, allowance is made for unconquered Canaanite enclaves (1:19–35; 3:1–6). Israel's hold on the land is repeatedly threatened by enemies, as a direct result of the people's disloyalty to Yahweh. Repentance prompts Yahweh to raise a deliverer ("judge") who leads Israel in defeating the enemy in holy war and continues to "judge" Israel until the cycle repeats itself (e.g., Judg 3:7–11). In the Samson stories (chaps. 13–16), increasing pressure from the Philistines is felt, while Israel is in a state of lawlessness and decay (chaps. 17–21).

This sets the stage for the introduction of kingship, leading to the extensive empire of David and Solomon (2 Samuel 2–1 Kings 11), the division of that empire into the kingdoms of Israel and Judah (1 Kings 12), the eventual defeat of these, and the exiling of their populations by the Assyrians and Babylonians in 722 and 587 B.C., respectively. In his long and nuanced account, the final author of the Deuteronomistic History assesses Israel's faithfulness or unfaithfulness to Yahweh, applying especially the yardstick of David's loyalty to Yahweh to all subsequent kings. This results in the demonstration of

the inevitability of the loss of the land. Israel, led by all its kings from Jeroboam I on, had embarked on a course of apostasy (summarized in 2 Kings 17). While the indictment of Israel is generally for idolatry, the story of Ahab's criminal acquisition of Naboth's "inheritance" (*naḥălâ*; 1 Kings 21) makes clear that Canaanite perspectives constituted a significant threat to Yahwistic land laws and land theology. For Judah, periods of relative faithfulness, especially under Hezekiah (2 Kgs 18:1–8) and Josiah (2 Kgs 22:1–23:28), were outweighed by persistent unfaithfulness, peaking in the era of Manasseh (2 Kgs 21:1–18; 23:26–27). Yahweh could not but revoke the gift of the land and cast his people into exile and captivity, as formerly in Egypt. Some scholars find in the Deuteronomistic History intimations of hope for a future restoration (Brueggemann 1968; von Rad *ROTT:* 1.343, 346; Wolff 1966: 131–58), while others see in it a theodicy of Yahweh's final judgment (Noth *NDH,* 97–99).

d. Chronicles. Based largely on the Deuteronomistic History, Chronicles nevertheless yields a considerably different, much less central view of the land. The era of Joshua and the Judges is reflected only in certain genealogical references to names. There is no conquest; Joshua is mentioned briefly as living in the land (1 Chr 7:27). While the kings after David and Solomon are scrupulously assessed as to their faithfulness, the Chronicler does not survey by this means the vast panorama of Israel's covenant faithfulness in the land, as the Deuteronomic Historian does, but depicts instead the meticulous justice of God in the life of each king (*ROTT:* 1.348–50). That the Chronicler does not deny the cumulative impetus of a history of sin towards the loss of the land, and that he sees the restoration under Cyrus as the effect of God's grace to an Israel that had served its time in exile "until the land had enjoyed its sabbaths," is evidenced in his concluding words (2 Chr 36:15–23). Nevertheless, these themes seem marginal rather than central.

S. Japhet (1979: 205–218) has argued that the Chronicler intentionally presents a history of Israel which, in contrast to most OT sources, pictures a "people of Israel in the land of Israel, as a continuous and uninterrupted reality from Jacob/Israel on" (218). Japhet may be right respecting the Chronicler's assumptions, but considering the relatively few and obscure clues on which she builds her case, it is hard to accept the deliberate intentionality she attributes to the Chronicler in this respect.

e. The Literary Prophets to the End of the Exile. Although the literary prophets stand outside the flow of the large narrative complexes (Pentateuch, Deuteronomistic History, Chronicler's History), they provide distinctive supplementary perspectives. Land is of central theological importance to all of them. Furthermore, they are historically correlated with that narrative by their (editorially supplied) headings. The emergence of a powerful class of landowners oppressing and/or displacing the small peasant from his inherited portion (*naḥălâ*) is the common indictment by Amos (3:9–10; 5:11; 6:4–7; 8:4, 6), Isaiah (3:13–15; 5:9–10; 10:1–2) and Micah (2:1–4; 3:1–3; 7:2–3), following Elijah's condemnation of Ahab's violence against Naboth (see above). All presuppose an obligation to administer in God's land a justice that involves equitable distribution of the land and its fruits. For Amos and Micah, this responsibility is rooted in God's expulsion of the previous inhabitants and his gift of the land to Israel coming out of Egypt (Amos 2:9; 9:7; Mic 6:4–5). For Isaiah, Israel's responsibility emerges from a pristine state of righteousness of Jerusalem/Zion. Amos and Micah announce God's judgment in the form of land loss and exile (Amos 4:1–3; 5:27; 6:7; 7:11; 9:4, 9, 15; Mic 1:16; 2:4; 4:10; 5:2—Eng5:3), while Isaiah emphasizes the humiliation of Jerusalem (and Judah) through Assyrian military onslaught (1:7–9, 24–25; 3:18–26; 5:26–30; 7:20; 10:5–6; etc.).

Hosea and Jeremiah, steeped in the exodus tradition (Hos 2:17—Eng2:15; 11:1; 12:14—Eng12:14; 13:4; Jer 2:6; 7:22, 25; 31:32), extol an ideal time in the wilderness (Hos 2:16–17—Eng2:14–15; 9:10; 13:5; Jer 2:2, 6; cf. 31:2–3), and indict the people for unfaithfulness in the land (Hos 2:3–17—Eng2:1–15; 4:1–3, etc.). For Hosea, and for Jeremiah in his wake, this unfaithfulness takes the form of Canaanite or syncretistic fertility worship (Baalism) that seeks to ensure the fertility of the land through magical, often sexual, rites (Hos 2:7–15—Eng2:5–13; 4:14–15; 7:16; 9:10; 11:2; 13:1–2; Jer 2:4–8, 20–25; 3:1–5, 6–10; 5:7–8; 13:20–27). The theme of social justice plays a lesser role in Hosea (4:1–3; 10:12–13; 12:7–9—Eng12:6-8), but reemerges prominently in Jeremiah (2:34–35; 5:28; 6:13; 7:9; 21:12; 22:3, 13–17). Like Amos and Micah, both prophets announce God's judgment in the form of land devastation, loss, and exile

(Hos 8:13; 9:3, 6, 17; 10:6; 11:5; Jer 4:23–28; 5:14–17; 8:10; 9:10, 11–15—Eng9:11, 12–16; 10:18–22; 12:7–13; 13:24; 15:2, 14; 38:2; etc.).

The books of Amos, Micah, Hosea, and Jeremiah visualize a return of the people to the land (Amos 9:9–15; Hos 3:5; 11:11; Mic 4:6–7; 5:2–3—Eng5:3–4; 7:11, 14, 15–20; Jer 12:15; 16:14–15; 23:7–8; 29:10–14; 30:1–3, 10–11;31; 32:15 [for a full listing and discussion, see Martens 1972]), while Isaiah mainly projects the purification and exaltation of Jerusalem/Zion as the center of God's rule over the whole earth (2:2–4 = Mic 4:1–3; 4:2–6; 8:23–9:6—Eng 9:1–7; 10:20–27; 11:6–9; 12; 16:4–5; 17:12–14; 19:16–25; etc.).

A reminder is in order that we are sketching the picture offered by the canonical texts. The statement in the previous paragraph particularly takes into account many passages judged by various scholars to be secondary: the conclusion of Amos (9:11–15); Hos 2:18–25—Eng2:16–23; Isa 2:2–4; Micah 4–5; Jeremiah 30–33; and others. In the case of Isaiah, the canonical combination of the words of the Jerusalem prophet with later prophecies, primarily in chaps. 40–66, not only strengthens the emphasis on restoration, but fuses the theme of purification and exaltation of Jerusalem with that of return from exile by way of a new exodus (see below).

The whole range of prophetic motifs discussed so far is appropriated, shaped, and expanded in the book of Ezekiel. Taking up the Abrahamic promise (33:24; cf. 20:42), Israel's origins in foreign lands (16:3, 45), and her stay in Egypt (20; 23:3), while scarcely mentioning a conquest (cf. 20:28), the book highlights Israel's unfaithfulness through idolatry (6:1–7, 13; 8; 14:1–11; 16:15–22) as the basis for land loss and exile. It gives less attention to social injustice (but cf. 22:6–12). Characteristically for Ezekiel the land is "Israel's land"; both *ʾereṣ* and *ʾădāmâ* are used (with the same meaning, according to Zimmerli 1985: 255). It is described lovingly as "the most glorious of all lands" (20:6; cf. Jer 3:19; Dan 8:9; 11:16, 41, 45; Zimmerli 1985: 253). Yahweh's future, however, according to Ezekiel (and Jeremiah before him, cf. Jeremiah 29) lies with those who have taken up exile (11:15–16). They will be "revived" by Yahweh (37:1–14) and will return to the land (11:17–21; 20:40–44; 34:11–16; 37:15–28 [for a full listing and discussion, cf. Martens 1972]). In fact, Yahweh himself has taken leave of his house and his city to "emigrate" with the exiles (chaps. 8–11) and will return with them eventually to the temple (43:1–5) in a land restored according to the elaborate blueprint laid out in chaps. 47–48. The latter is a combination of a realistically reconstituted Israel with images of supramundane symbolism. Central to it is the equitable distribution of the land to all Israel, including the sojourners (47:13–23), according to a tribal pattern grouped around the sanctuary (48:1–29).

Deutero-Isaiah (Isaiah 40–55) also announces to the exiles in Babylon the dawning of a new age, patterned typologically on Israel's salvation history, from creation to the occupation of the land (Anderson 1962: 177–95). While the accent falls on the new exodus, the salient land motifs of the Pentateuch and Joshua, combined with the significance of Zion in Jerusalemite theology (cf. Isa 2:2–4), play an important role. A new Israel redeemed from Babylon (48:20–21) will be led by God through a wilderness, turned into a Garden of Eden (40:3–5; 41:17–20; 42:14–16; 43:14–21; 48:21; 51:3) into her own land (49:8–12). There Jerusalem/Zion will become the exalted center for the whole earth (49:14–18; 52:1–10), when the Lord takes up residence in it (52:8; cf. Ezek 43:1–5).

f. The Postexilic Era. With its translation into an eschatological future, as seen in Ezekiel and Deutero-Isaiah and adumbrated in earlier prophets (cf. Hos 2:18–25—Eng2:16–23; Isa 11:6–9), the OT's land theme has reached its ultimate narrative limit. There can be no expectation of its further extension once a redeemed people finds eschatological rest in the presence of God. This, together with the loss of sovereign control of the land by the Jews, accounts for the fact that "in the literature of the postexilic period there is an undeniable relocation of interest away from the land to the broadly human" (Davies 1974: 115; see pp. 110–15, he refers specifically to the books of Job, Proverbs, Ecclesiastes, Song of Songs, Esther, Jonah, and parts of Daniel).

This is only a partial picture, however. Their eschatological horizons did not preclude Ezekiel and Deutero-Isaiah from linking their prophecies to a concrete return to Palestine. Jeremiah had stated in totally non-eschatological terms that "houses and fields and vineyards shall again be bought in this land"

(32:15) after an exile of 70 years (25:11–12; 29:10). Consequently, the Edict of Cyrus (Ezra 1:2–4; 6:1–5) and the subsequent return and rebuilding of a Jewish presence around Jerusalem and the temple (Ezra, Nehemiah) could at least in part be considered as fulfilment of prophecy and as a sign of God's impending universal rule.

Hanson (1979: 209–211, and throughout) has made it plausible that sociological tensions between a dominant priestly party and a suppressed visionary party in postexilic Jerusalem increasingly drove the latter from a "realized eschatology" to apocalyptic, eschatological expectations.

Hanhart (1983: 128–30) distinguishes between an early and a late postexilic phase. The former (basically the Persian period) is marked by the joy over the newly received land after a penance of 70 years that had restored to the land the sabbath years withheld earlier (2 Chr 36:21–23). The latter (basically the Greek period) is marked by a renewed lament over the impending punishment of Jerusalem for her guilt newly incurred after the exile (Isa 27:9–11).

However one thinks of these analyses, they support the observation that the land-motif remained of highest importance in the postexilic era. This is further supported if we remember that the Priestly source of the Tetrateuch was completed in the postexilic era (as Davies also notes, 1974: 115), and that the canonization process that gave preeminence to the land-dominated Pentateuch/Torah also falls into this era.

One must ask, further, whether the postexilic shift of emphasis "from the land to the broadly human" (Davies, see above), to the extent that it is valid, really represents a shift away from the land. Where Israel's relationship to the nations (Jonah, if it is postexilic) is treated, or where existence in the diaspora is shown to be possible and even positive, as in Esther and Daniel, the land is still the reference point for Israel's identity. For late postexilic prophecy (Deutero-Zechariah; Isaiah 24–27), Hanhart (1983: 131–33) has pointed out the significance of a new fluidity between the meaning of *ʾereṣ* as "land" and "earth." God's judgment and salvation of the *ʾereṣ* (of Israel, in the remnant form of Judah/Jerusalem) becomes increasingly a sign of God's acts with *ʾereṣ* (the whole earth). As Hanhart (1983: 128) remarks, "Die geschichtliche Erfahrung der nach-exilischen Prophetie ist das leidende Land als Symbol der leidenden Erde, ihre eschatologische Schau ist das erlöste Land als Symbol der erlösten Erde."

This is further illustrated in Joel (assuming a postexilic date), where the locust plague befalls the land (of Israel), but extends (from 2:1 on) to the whole earth (Hanhart 1983: 137, n. 3).

B. New Testament

1. Terminology. In most instances (RSV 43 times), "land" renders Greek *gē,* the standard LXX equivalent of both *ʾereṣ* and *ʾădāmâ*. Gk *gē* can also mean "earth" (see EARTH), "country, region" and "soil, ground." As translations of *gē*, "land" occurs in the following usages: (a) "Land of Israel" (Matt 2:20f.); (b) "land + name" (Sodom and Gomorrah, Matt 10:15; 11:24; Judea, John 3:22; Chaldeans, Acts 7:4; Canaan, Acts 13:19; Egypt, Acts 13:17; Jude 5); (c) "land" in contrast to water/sea (Matt 14:24, 34; Mark 4:1; 6:47, 53; Luke 5:3, 11; 8:27; John 6:21; 21:8, 9; Acts 27:43f.; Heb 11:29; Rev 10:2, 5, 8); (d) "land" as territory, area (Matt 27:45 = Mark 15:33 = Luke 23:44 [possibly "earth"]; Luke 4:25; Acts 27:39); (e) "land" as "ground, soil" (Luke 14:35; Heb 6:7); and (f) "this land" (Acts 7:4); and (g) "land of promise" (Heb 11:9).

In seven further instances, "land" occurs in a quotation or paraphrase from the OT: Matt 2:6 ("land of Judah," Mic 5:1—Eng5:2); 4:15 ("land of Zebulun, land of Naphtali," Isa 8:23—Eng9:1); Acts 7:3 ("the land which I will show you," Gen 12:1); Acts 7:6 ("aliens in a land belonging to others," Gen 15:13), Acts 7:29 ("land of Midian," Exod 2:15), Acts 7:40 ("land of Egypt," Exod 32:1); and Heb 8:9 ("land of Egypt," Jer 31:32).

As translation of *agros*, "land" occurs three times in the combination "house(s) or/and … lands" (Matt 19:29; Mark 10:29f.). "Land" renders *chōra* in the phrases "the land of a rich man" (Luke 12:16) and "they were nearing land" (Acts 27:27), and *chōrion* in four instances treats land as an economic commodity (Acts 4:34; 5:3, 8; 28:7). Further, three occurrences of land in the RSV are supplied by the translators on the basis of the context (Luke 4:26; Acts 27:14; 2 Cor 10:16). In addition, *tēn gēn* in Matt 5:5, usually translated "earth," could possibly be rendered "land."

2. Theology. Apart from the introduction of OT land perspectives carried forward in quotations or allusions from the OT introduced for reasons other than their land theology, only four texts warrant any scrutiny for possible theological implications:

a. In Matt 2:20f. the angel of the Lord tells Joseph, "Take the child and his mother with you and go back to the land of Israel" (*eis gēn ʾIsraēl*; v 20), and Joseph complies immediately (v 21). Here we encounter twice the expression "land of Israel" (equivalent to Heb *ʾereṣ yiśrāʾēl*) so conspicuously avoided in the OT (see above). While no overt theological interpretation is offered, it seems certain that a parallelism between the journey of Israel's messiah and the earlier journey of Israel from Egypt to the promised land, now "Israel's land," is intended (cf. 2:15 and Hos 11:1). In that case, this naming of the land would appear to suggest a certain continuing validity of the OT's theological meaning of that land.

b. The third beatitude calls the meek happy, "for they shall inherit the earth/land" (*tēn gēn,* Matt 5:5). As all the beatitudes characterize citizenship in the kingdom of God, G. Strecker (1983: 193) may be right in considering the land to be spiritualized here (cf. Mark 10:14; Luke 22:28–30). On the other hand, a certain realism of land ownership could also be in view, although the extent of such kingdom-land (Israel? the earth?) remains undefined.

c. "Land" occurs six times in Stephen's speech in Acts 7 (vv 3, 4, 4, 6, 29, 40), where Stephen's Jewish hearers are reminded of their history of wandering between Mesopotamia and Egypt. While Stephen affirms the promise of the land to Abraham (vv 3, 17) and its divinely empowered conquest by Joshua (v 45), it is possible to see in his speech a certain negative slant against Judaism's claim to the land. Abraham did not experience the fulfillment of the land promise (v 5). Israel's time of closeness to God was the wilderness period (vv 44–45). Their stay in the land was marked by idolatry leading to exile, and the building of the Temple by Solomon seems an ill-considered, if not rebellious, act of confining the Lord of the universe (vv 47–51; Townsend 1972: 12).

d. Finally, the "land of promise" to Abraham is mentioned in Heb 11:9 (his "inheritance," v 8), but only for the purpose of reinterpretation. In keeping with the theology of Hebrews (see below), the writer emphasizes that Abraham and the other patriarchs were "strangers and exiles on the earth" (*ʾepi tēs gēs;* also "upon the land"), "seeking a homeland" (*patrida,* v 14), and "a better country, that is, a heavenly one" (v 16). Here the land realism of the OT is totally dissolved, not only for the NT era, but even retrospectively for Abraham.

These four texts, then, suggest both continuity and transformation in the NT's response to the OT's land theology. This observation will be confirmed by our study of certain less direct evidence (below). The paucity of theological material identifiable by the key word "land" raises the question whether that theme, so ubiquitous in the OT, has lost its significance in the NT, or whether it comes to expression in different ways. W. D. Davies, having pointed out the meager occurrence of specific references to the land in the Apocrypha, the Pseudepigrapha, and the Qumran scrolls (1974: 49), finds in an extensive investigation (1974: 49–158) that a "certainty of the ultimately indissoluble connection between Israel and the land was living and widespread in the world within which Christianity emerged" (1974: 157). Might the same not be true of emerging Christianity and its Scriptures? A full investigation would transcend the scope of this article; only a few directions can be indicated here in a sampling way. In doing so, we will focus on the canonical sources, rejecting (with Davies 1974: 336–44, Hengel 1971, Klassen 1984: 72–109, and others) the notion that the "historical" Jesus had zealotlike, violent insurrectionist (Brandon 1967) or less violent but nevertheless also revolutionary (Townsend 1972) aspirations to liberate the land from Roman rule.

On the side of the NT's continuity with the OT's land motifs, the following observations are pertinent:

a. The Gospels portray Jesus as a Jew linked genealogically (Matt 1:1–17, 20; Luke 3:23–37), but also geographically (Matt 2:1–6; Luke 2:4) to Israel generally and to the lineage and kingship of David in particular (e.g., Matt 9:27; cf. Rom 1:3). Despite the significance of other places (and Galilee as a whole; see below), Jerusalem retained a central importance in his ministry. He carried out his ministry within the approximate boundaries of OT "Israel," including Judah (Alt 1961), limiting his mission to the "house of Israel" (Matt 10:5–6; 15:24; Manson 1964), highlighting this limitation by occasional and conscious extensions of it to gentiles and/or gentile territory (e.g., Matt 8:5–13 = Luke 7:1–10; Mark 7:24–30 = Matt

15:21–28). The fact that the extension of his mission to the gentiles by the early Church seemed radical and tension-filled (Acts 10; 15) confirms the above characterization of the ministry of Jesus.

b. The Jesus of the Gospels also lived as a Jew with respect to the law, the synagogue and the Temple (e.g., Matt 5:17–18; Luke 2:49; 4:16; 6:6–7; 22:8). Again, his departures from Pharisaic-Rabbinic perspectives at some points, mainly (though not only) relating to the Sabbath (e.g., Mark 3:1–6 and parallels), merely highlights his extensive acceptance of the law with its close links to land and Temple. These departures are part of the tradition of reinterpretation in light of either their earlier and original, or their final, eschatological significance. In this faithfulness to the law, he was again followed by the early Church (Acts 2:46; 3:1; 5:42; 21:20; Gal 2:7–9), and by Jewish (Ebionite) Christians for a long time (Strecker 1983: 196–99). The reduction of legal obligations for gentiles took the form of a spirit-guided innovation (Acts 10; 15) which resulted in a theologico-geographical parallel existence of Jewish and gentile Christianity, rather than the abrogation of the OT and Jewish geographical-legal *realia* (Davies' term).

c. The extension of the gospel to the gentiles is in itself not a contravention of OT land theology, but can be seen as the development or fulfillment, even in geographical terms, of a variety of OT motifs, such as the Abrahamic blessing for the nations (Gen 12:3). God's concern for the nations as expressed in the prophetic "foreign nations oracles" (e.g., Amos 1:3–2:3), in the book of Jonah, and especially in the theme of the eschatological significance of God's work in and with Israel for all nations (e.g., Isa 2:2–4 = Mic 4:1–3; Isa 19:23–25; 49:6; 56:7).

d. Even the conscious and innovative extension, most evident in the missionary activity of Paul, retains Jerusalem as its starting point (Acts 1:8; 2; 8:1; 11:27) and, in a certain sense, its center (Acts 8:14; 9:26–30, cf. Gal 1:18–19; 15:1–35; 16:4). For himself, as a Jew, Paul retains the validity of the law and the Temple (Acts 21:17–26), albeit with some modifications, such as table-fellowship with the gentiles (Gal 2:11–14). Most significant is his apparent validation of the eschatological significance of the Jerusalem Temple in 2 Thess 2:4 (Davies 1974: 193f.).

On the other hand, new approaches to land and land-related motifs in the NT are patently clear. Three types of evidence can be distinguished: abrogation, symbolization, and transformation and extension. It goes without saying that the boundaries between these usages are often fluid.

a. Abrogation of the OT's land theology or aspects thereof, in explicit terms, is not frequent in the NT. It finds its clearest expression in Hebrews. Here, even the historical promise of land to Abraham, though acknowledged (11:8–16), is retroactively redirected to "a better country, that is, a heavenly one" (11:16, see above). Elsewhere, the land is excluded from the Abrahamic promise (6:13). While the fall of Jericho is mentioned (11:30), the occupation of the land is omitted. The saints are described as "strangers and exiles" (11:13), "wandering over deserts and mountains, and in dens and caves of the earth (or land?)" (11:38). Strangers and exiles does not mean here long-term guests in God's land (cf. Lev 25:23, see above), but geographically footloose wanderers toward eternity. Israel's covenant, law, cultus, and priesthood are shadows of their higher, heavenly parallels and must pass away (8:13). Christ is the heavenly high priest after the order of Melchizedek, who is "without father or mother or genealogy," being "king of Salem, that is king of peace," i.e., no longer the earthly city of Gen 14:18 (7:2–3). Christ the high priest, who died "outside the gate" (13:12) as a one-time sacrifice, officiates in a "heavenly sanctuary" (8:5), also called "Mt. Zion … the heavenly Jerusalem" (12:22), where he will give rest [the OT equivalent of the promised land, see above] to the saved (chaps. 2–3). In everything, the *realia* of the OT are bracketed out as ephemeral shadows of nongeographical, nonphysical eternal realities.

Possibly the rejection of the Temple in the speech of Stephen (Acts 7; see above) expresses a similar perspective.

We must also list here, however, the fact that the references to land promises and land theology, so ubiquitous in the OT, are mentioned sparingly, as already discussed.

There are aspects of the theology of Paul that may belong here, too. Davies (1974: 164–220) notes that Paul, as a Jew, must have been keenly aware of the *realia* of Judaism, and that it is therefore the more remarkable that he hardly refers to the land or to any theological significance of geography. Abraham is,

for him, the model of faith leading to righteousness. "Paul ignores completely the territorial aspect of the promise" (Davies 1974: 178). Davies sees this not only as absence of concern for the land, but as deliberate rejection. The land-related law, for Paul, is an interlude, now completed, between the universal promise to Abraham and its fulfillment in Jesus Christ (p. 179). Davies can speak of the "deterritorializing of the promise," which is now "located," not in a place but in the person of Jesus Christ (p. 179). While all this is undoubtedly true, we will need to return to Paul in our next two sections.

b. Symbolization. We are concerned here with NT uses of the OT's land motifs in such a way as to carry forward their meanings without their geographical realism. For the most part, the new meanings are anchored either in Jesus and his church, or in an eschatological, transcendent future. The common denominator for both is the (present and/or future) kingdom of God. In the context of Hebrews, we already noted the transformation of "land," "Mt. Zion," "inheritance," and "rest" into images of heavenly salvation. "Wilderness" (some translations: "lonely place") becomes the context of temptation (e.g., Matt 4:1–11 = Luke 4:1–13), but also of encounter with God (e.g., Luke 5:16). "Mountain" signifies manifestation of God (e.g., Mark 9:2–8 = Matt 17:1–8 = Luke 9:28–36), while "sea" symbolizes the unruly powers to be subjected to God's rule (e.g., Mark 4:35–41 = Matt 8:23–27 = Luke 8:22–25). "Temple" is, especially for Paul, the presence of God in the believer and the church (e.g., 1 Cor 3:16f.; but cf. our discussion of 2 Thess 2:4, above). "Jerusalem/Zion" comes to mean the eternal goal of the Christian's pilgrimage, the ultimate presence of God (Heb 11:10; 12:22; Rev 21:1–4).

In the gospel of John, the meaning of land motifs is repeatedly projected onto the person of Jesus. He, not Jacob's well, is the source of life-giving water (4:7–15). He, not the Pool of Bethesda, offers healing (5:2–9). He is the bread of life, the manna in the wilderness (6:31–35). His body is the Temple that will be destroyed and resurrected (2:18–21).

With less recourse to geographical terminology, Paul also focuses the land promises of the OT on Jesus, who is the entrance to the believers' inheritance (Gal 3:29–4:7), and in whom the promise to Abraham is fulfilled (Gal 3:15–18; Rom 4:16). While his "localization" of many of the OT's land-related *realia* (goal of promise, inheritance) "in Christ" can be seen as a rejection of the theological relevance of place, it is also true that the incarnate Christ himself represents a certain realism of geographical presence associated with the places of his ministry and the memories that attach to them. This realism of the incarnation then continues in the presence of the resurrected Christ in his body, the church, and its members, repeatedly referred to as "temple" by Paul (1 Cor 3:16–17; Davies 1974: 187).

Davies also recognizes this new realism in Christ, both geographical and transcendent, and finds in it the common denominator for the twofold emphasis to which his extensive investigation of land theology in the Pauline, Synoptic, Johannine (gospel) materials and of Jesus himself leads him: (1) "It is justifiable to speak of the *realia* [land, Jerusalem, Temple] of Judaism as being 'spiritualized' in the Christian dispensation" (Davies 1974: 366). (2) As Jesus had lived in a particular land, "the space and spaces which he occupied took on significance, so that the *realia* of Judaism continued as *realia* in Christianity" (366). The "reconciling principle," for Davies (367), is the person of Jesus Christ: "The New Testament finds holy space wherever Christ is or has been; it personalizes 'holy space' in Christ."

c. Transformation and Extension. In his conclusions just presented, and throughout his investigation, Davies partly acknowledges but largely deemphasizes or rejects a new theologico-geographical realism in the NT. This new "geography of faith" appears to the present writer to be the theologically most significant legacy of the OT's land themes in the NT (Janzen 1973). We noted above that Jesus' limitation of his mission to "Israel" suggests a certain intentionality in the geographical pattern of his ministry. There is a wealth of evidence in the gospels, in Acts, and in the Pauline writings that such an intentionality far exceeded the mere limitation of Jesus' own mission, and later expansion of it, into the gentile world. It appears that Jesus and the early Church, far from being aterritorial in theology, believed and lived out a new theologico-geographical realism. This consisted, in part, of the acceptance of earlier Israelite-Jewish *realia* (see above); in part, of the transformation of these, not only into symbolic meanings (see above), but into new geographical patterns and perspectives; and in part, of the creation of new geographical *realia* for faith.

The most prominent proposal in this direction is the so-called Lohmeyer-Lightfoot Theory (Lohmeyer 1936; Lightfoot 1937), which finds in Mark, and less prominently in Matthew, a geographical theology centering in Galilee as the new "holy land." There Jesus began his ministry, called his disciples, experienced the transfiguration. Galileans were his first followers, and became almost synonymous with "Christians." Jerusalem was the place of opposition and rejection. While the resurrection took place in Jerusalem, the parousia would come in Galilee (Mark 14:28; 16:7). There the church was founded. It was the land that dwelt in darkness, but saw a great light (Matt 4:15–16, cf. Isa 8:23–9:1—Eng9:1–2).

Davies (1974: 221–43) and G. Stemberger (1974: 409–38) reject this thesis as a "uniform pattern" (Stemberger 1974: 435), but Stemberger, has to admit "a certain emphasis on Galilee in the gospels" (435). "That Christ had chosen to exercise his ministry in Galilee, this fact underlined the paradox of the incarnation … It is precisely to the despised and lowly people that Christ comes" (436), Galilee being of low regard in that time. Whether or not the many ramifications of the Lohmeyer-Lightfoot theory can be substantiated or not, is less important than the now widely recognized fact that a new, Christian geographical realism is at work here, taking up the OT notion of the election of a geographical area, but no longer attaching such election to the land as understood in the OT.

For the gospel of Luke, H. Conzelmann (1961: 18–94) has demonstrated a remarkably rich and nuanced geographical symbolism as the carrier of that gospel's theological message. In contrast to Mark and Matthew, Jerusalem, rather than Galilee, is the goal and focus of Jesus' mission. His Galilean ministry serves the purpose of gathering witnesses (almost synonymous with "Galileans") who will travel with him to Jerusalem. They become witnesses by way of election. Jesus' natural relatives do not qualify as such. Rejected in his home town, Nazareth, Jesus chooses Capernaum, a town without sacred history, as the center of his activity, foreshadowing the movement of the gospel from Jews to Gentiles, presented later in the book of Acts.

In a long journey symbolizing his acceptance of his passion, Jesus reaches Jerusalem, where all prophets must die. He enters the city in a non-eschatological, nonpolitical act and cleanses the Temple, signifying the Church's claim to be the true Israel (Conzelmann 1961: 75). Contrary to the disciples' mistaken notion, however, Jerusalem is not the place of the parousia; the latter is still in the distant future. Instead, it is the place of the birth of the Church, from which witnesses will be led by the Spirit into all the world, a story told in Acts.

For the gospel of John, Nazareth, and in a sense, all Galilee, is the carrier of the *scandalon* of the incarnation. Over against Jesus' origin in Nazareth and Galilee, from where nothing good (1:46), and certainly no eschatological figure (7:41, 52), is expected, stands the evidence that he is from above (8:23). This is recognized by the Galileans, who receive him (1:43–51; 2:11; 4:45, 53–54), and to a lesser degree by the Samaritans (4:39–42). Meeks (1966: 165) points out that, on the other hand, "the journeys to Jerusalem in John, symbolize the coming of the redeemer to 'his own' and his rejection by them, while the emphasized movement from Judea to Galilee (especially 4:43–54) symbolizes the redeemer's acceptance by others, who thereby become truly 'children of God,' the real Israel." Once again, a new "sacred geography" has become the carrier of Christology.

It is less important whether the analyses of the theologico-geographical patterning of the gospels, sketched here in barest outline, can be substantiated in the forms presented. Nor are we concerned here with the precise relationship of the geographical data of the life of the "historical" Jesus to their theological interpretations in the different gospels. The important observation in our investigation of the NT's response to the OT's land theology consists of seeing considerable evidence for the significance of geography in the NT's theology. Regions, places, and journeys remain means capable of being drawn into God's service, i.e., of becoming "holy."

Instead of a static acceptance of the "holy land" and the "holy places" of the OT, the NT sees God as drawing geographical *realia,* old and new, into his service in connection with his new self-revelation in Jesus Christ. This divine employment of geography continues in the early Church, as presented in Acts. There it is the Spirit that effects the spread of the gospel from Jerusalem (in keeping with Lukan geographical theology) to "all Judea, Samaria, and to the ends of the earth" (Acts 1:8), in a divinely led

and empowered geographical strategy (see also Acts 13:1–4; 16:6–10; 19:21; Gal 2:1–2; Matt 28:28). New lands and places are chosen, thereby becoming "holy." A certain static land theology has been broken open in such a way as to designate all places on the map as potentially holy, contingent on God's election through the Spirit (cf. Exod 20:24).

It is in this sense also that John 4:23 must be understood. To worship God "in spirit and in truth" is not to negate the ongoing significance of place in favor of an interiorized or otherworldly faith. It means to recognize the potential of all lands and places—of the whole ecosystem—to be chosen by the transcendent God of the Bible to work signs of his election and presence.

LAND LAWS. See LAW, BIBLICAL AND ANE; also FAMILY.

LANGUAGES. This entry examines the various languages that are associated with the biblical text and the ANE and Mediterranean cultures of which the biblical writers were a part. It consists of 16 separate articles, the first of which provides a systematic survey and overview of the plethora of languages that constituted the ancient world of the Bible. There follow articles on Akkadian, Aramaic, Byblos Syllabic, Coptic, Egyptian, Ethiopic, Greek, Hebrew, Hittite, Hurrian, the languages of Iran, Latin, Phoenician, South Arabian, and Ugaritic.

INTRODUCTORY SURVEY

The many languages attested in the ANE records are most conveniently surveyed according to their classification into language families.

———

A. The Afroasiatic Language Family
  1. The Semitic Languages
    a. East Semitic
    b. West Semitic

(1) South Semitic
(2) Central Semitic
2. Egyptian
B. The Indo-European Language Family
1. Anatolian
2. Indo-Iranian (Aryan)
3. Hellenic
4. Phrygian
C. Hurrian and Urartian
1. Hurrian
2. Urartian
D. Other Languages
1. Sumerian
2. Elamite
3. Qutian
4. Hattic
5. Kassite
E. Undeciphered Languages and Scripts
1. Cretan and Cypriot Scripts
2. Byblian Hieroglyphs
3. Deir ʿAllā Clay Tablets
4. Meroitic

A. The Afroasiatic Language Family

For much of the ancient period the most widespread group of languages spoken in the Near East was the Semitic group, which will be described in detail below. The Semitic languages constitute one branch of a large language family now usually called Afroasiatic (or Afrasian; formerly Hamito-Semitic). The Afroasiatic family comprises six branches: (1) *Semitic* (see below, A.1); (2) *Egyptian* (see below, A.2); (3) *Berber:* several modern languages and dialects distributed across N Africa from Egypt to Mauritania, such as *Shilḥ, Tamazight, Kabyle,* and *Tuareg* (in which an early consonantal alphabet continues to be used); perhaps also an ancient language, often called *Numidian,* attested in alphabetic (consonantal) inscriptions from Libya, one of which is dated 139 B.C.E. (despite the existence of a few Numidian-Punic and Numidian-Latin bilinguals, the language remains virtually unintelligible); (4) *Cushitic:* a group of some 40 languages spoken by about 15 million people in east central Africa (Ethiopia, Somalia, Kenya), such as *Oromo, Somali, Afar-Saho, Sidamo, Agaw,* and *Beja;* no ancient representatives of this branch are attested; (5) *Omotic:* about 40 languages spoken by just over a million people, mostly in W Ethiopia; previously classified as, and still considered by some scholars to be, a western subbranch of Cushitic; no ancient Omotic languages received written form; and (6) *Chadic:* a large group containing at least 125 languages in several subgroups spoken in W Africa (Cameroun, Chad, Niger, Nigeria); the most important member is *Hausa,* spoken by about 25 million people in Nigeria, Niger, and elsewhere; none of the Chadic languages is attested before the modern period.

1. The Semitic Languages. Semitic, a relatively close-knit family of highly inflected languages, has the longest recorded history of any linguistic group, spanning the period from the mid-3d millennium B.C.E. with Akkadian and Eblaite to the present day with Arabic, Amharic, and Hebrew. See Fig. LAN.01.

The Proto-Semitic phonological repertoire may be reconstructed as having contained three vowels, *a, i, u,* which could occur short or long (*ā, ī, ū*), and 29 consonants (all still distinguished in Old South Arabian); the consonants may be arranged according to their probable phonetic features as follows (traditional symbols appear in parentheses; Faber 1985, 1989):

Reconstruction of Probable Phonological Features of the Proto-Semitic Consonants

manner		stops				affricates				fricatives			approximants		nasals
place	voiced	voiceless	emphatic		voiced	voiceless	emphatic		voiced	voiceless	emphatic		voiced		voiced
bilabial	*b*	*p*											*w*		*m*
interdental									ð	Θ	Θˀ (Ọ)				
dental	*d*	*t*	*tˀ (ṭ)*										*r*		*n*
alveolar central					*dz ɟ (z)*	*ts ɟ (s)*	*tsɟˀ (ṣ)*			*s (š)*					
alveolar lateral							*(t)ɬɟ*(ð)			*ɬ (ś)*			*l*		
palatal													*y*		
velar	*g*	*k*	*kˀ (q)*						*γ(ǵ)*	*x (ḫ)*					
pharyngeal									ʿ	*ḥ*					
glottal		ʾ								*h*					

Semitic morphology is strongly characterized, especially in its verbal forms, by what are termed discontinuous morphemes, which usually consist of three consonants; for example, the semantic field "to rule" is conveyed in Hebrew (and other Semitic languages) by the consonant sequence *m-l-k*; precise meaning and morphological information is conveyed by various modifications to this sequence, as in *timlōk*, "you (m.s.) will rule"; *himlîk*, "he caused to rule"; *melek*, "king"; *malkâ*, "queen"; *mĕlûkâ*, "kingship"; and *mamlākâ*, "kingdom."

Nouns in Proto-Semitic may be reconstructed as having three inflectional cases, each marked in the singular by one of the short vowels: e.g., nominative **baʿlum*, "lord," genitive **baʿlim*, and accusative **baʿlam*. The final *-m* on these forms (→ *-n* in Arabic) originally marked the form as free, or not bound to a following genitive element, as opposed to the bound, or construct, form, as in **baʿlu baytim*, "lord (nom.) of the house," or **baʿlu-kă̆*, "your (masc. sing.) lord (nom.)." The noun exhibits two genders, masculine and feminine, the latter usually marked by one of a set of allomorphs, the most common of which are *-at* and *-t*, as in **baʿlum*, "lord," and **baʿlatum*, "lady." There are three numbers, singular, dual, and plural. Plurals are marked either by external endings, probably proper only to adjectives at first, as in **šalimum*, "whole," masc. pl. nom. **šalimūna* (gen.-acc. *-īna*; → *-ūma/-īma* in some languages), fem. pl. nom. **šalimātum* (gen.-acc. *-ātim*), or by modification of the pattern, as in classical Ethiopic (Geʿez) *dabr*, "mountain," pl. *ʾadbār* (broken plurals; vestiges of this feature remain in languages that have otherwise generalized the external pl. markers, as in Hebrew *gibʿâ* < **gibʿatum*, "hill," pl. *gĕbāʿōt* < **gibaʿātum*).

The finite forms of the verb in early Semitic were undoubtedly very similar to the Akkadian preterite and durative forms, i.e., two conjugations inflected with prefixes (and suffixes in certain persons): a perfective form that functioned both as a past tense and as an injunctive (jussive), as in **yaqbir*, "he buried, may he bury" (m. pl. **yaqbirū*, "they buried, may they bury," 2fs **taqbirī*, "you buried, may you bury," etc.); and an imperfective form in which the middle consonant of the root was doubled, as in **yvqabbar*, "he buries, will bury" (m. pl. **yvqabbarū*, "they …"; 2fs **tvqabbarī*, "you …"). In addition, each verbal stem had associated with it an adjective (e.g., **qabir-*, "buried") that could be inflected by means of subject pronoun suffixes to form a predication, as in **qabir-a*, "he is/was buried"; **qabir-at*, "she …"; **qabir- (ā)kŭ*, "I …"; **qabir-tă̆*, "you (m.s.) …" Verbal roots also usually occurred in a number of stems characterized by internal changes, by prefixes (some of which became infixes in some languages), or by a combination of these features: e.g., **yišlam*, "he became whole," vs. **yušallim*, "he made whole"; **yaʿbur*, "he went across," vs. **yušaʿbir* (in some languages **yuhaʿbir*), "he took across." The number and actual shape of these verbal stems varies among the languages, and their precise reconstruction in the proto-language remains unclear.

Many schemes of classification have been proposed during the course of research on Semitic during the last century and more. In the following outline the attested Semitic branches and languages will be

presented essentially according to the genetic classification suggested by R. Hetzron (1976), with minor modifications.

a. East Semitic. This earliest-attested branch of Semitic includes only Akkadian and Eblaite. *Akkadian* was the language of the Semitic people of ancient Mesopotamia. Although it is not clear when the first speakers of Akkadian arrived in Mesopotamia, the earliest texts containing Akkadian material date from about 2600 B.C.E. Akkadian is written from left to right in the logo-syllabic cuneiform script borrowed from the unrelated Sumerian language (see below, D.1.). The long history of the language comprises a number of dialects: in the earliest period, ca. 2600–1950, the various regional dialects are collectively labeled *Old Akkadian;* thereafter, the *Assyrian* language in N Mesopotamia is differentiated from the *Babylonian* language in S Mesopotamia, and both Assyrian and Babylonian are further subdivided chronologically into Old (1950–1500), Middle (1500–1000), and Neo- (1000–625) phases; after the demise of Assyria and its language in ca. 625, Late Babylonian continues until the 1st century C.E., when the last Akkadian texts were written. See the separate entry on Akkadian (below).

Eblaite (also Eblaic) is the Semitic language of the Syrian city of Ebla, attested on cuneiform tablets dating to the 24th–23rd centuries B.C.E. Considered by some, especially when its discovery was first announced in the mid-1970s, to be an early dialect of NW Semitic, it now seems more likely that Eblaite is most closely related to Akkadian, since it shares a number of significant linguistic innovations with the latter. The difficulties of Eblaite orthographic practice, which often differs from its contemporary Mesopotamian counterpart, continue to make both readings and classification difficult, however.

b. West Semitic. A major linguistic innovation that sets the rest of the Semitic family apart from the Eastern branch is the development of the verbal adjective with a subject suffix pronoun, as in **qabir-a,* "he is/was buried," into an active, perfective verb form, often with a vowel change: **qabar-a*, "he (has) buried." This development is attested in all "West Semitic" languages, that is, all Semitic languages apart from Akkadian and Eblaite. The earlier perfective form **yaqbir* was usually retained in its injunctive sense, "let him bury"; in some languages it also continued as a past-tense form, though now in secondary constructions, such as the Hebrew consecutive form *way-yiqbōr*, "and he buried." "West Semitic" can be subdivided into South Semitic and Central Semitic languages.

(1) South Semitic. The South Semitic languages exhibit the innovative perfective form **qabara*. The suffixes denoting the first person singular and all second persons of this form in South Semitic have *-k-*, whereas in the Central Semitic languages (see (2) below) these suffixes have *-t-*: compare classical Ethiopic (Geʿez) *qabarku*, "I buried," *qabarka*, "you (m.s.) buried;" Mehri (Modern South Arabian) *qəbə́rk*, "I/you (m.s.) buried;" but Arabic *qabartu*, "I buried," *qabarta*, "you (m.s.) buried." In a more significant distinction, the South Semitic branch, unlike the Central, retains the early Semitic imperfective form, as in the following forms for "he buries": Geʿez *yeqabber*, Mehri *yəqáwbər* (< **yəqōbər*, in which the originally doubled middle **-bb-* has been simplified); but Arabic *yaqbiru*. South Semitic comprises two subbranches, the South Arabian and the Ethiopian.

(a) South Arabian. There are two groups of South Arabian languages, ancient and modern. The relatedness of the two groups has often been assumed, partly because they overlap to some extent geographically and partly for sounder linguistic reasons, such as shared items of vocabulary and, in some instances, of morphology. Recently, however, the classification of the ancient group as part of the South branch of Semitic, and thus as closely related (or even ancestral) to the modern group, has been called into question with the suggestion that it belongs rather to Central Semitic (Voigt 1987).

The Old (or Epigraphic) South Arabian languages, for which the collective term *Ṣayhadic* has recently been proposed (Beeston 1984), are the following: *Sabaean* (or Sabaic; 6th century B.C.E., perhaps earlier, to 6th century C.E.); *Minaean* (or Minaic; 4th–2d centuries B.C.E.); *Qatabanian* (Qatabanic; 5th or 4th century B.C.E. to 3d C.E.); *Ḥaḍramitic* (4th century B.C.E. to 3d C.E.). These languages are attested in several thousand inscriptions, most of which have been found in the area covered by today's Yemen, although a few inscriptions have also come to light elsewhere in Arabia and even in Egypt, in old trading colonies. The best represented of the languages by far is Sabean, the other languages each being attested by a relative handful of inscriptions. The majority of the inscriptions are monumental in character, written

boustrophedon in the earliest texts but consistently right to left thereafter, in a lapidary alphabetic script in which all 29 of the original Proto-Semitic consonants are distinctly represented. A few texts, however, are written in a cursive script that is not fully deciphered. The script is essentially consonantal in nature, although it is likely that *w* and *y* are used in some instances for *ū* and *ī*, respectively. Both the classification of these languages, which are usually regarded as part of South Semitic, and the nature of their relationship to the Modern South Arabian languages require further investigation. See the separate entry on South Arabian languages (below).

Modern South Arabian languages, currently spoken in Mahra province in Yemen and in Dhofar province in W Oman, probably share a common ancestor within the South Semitic branch. The languages are *Mehri,* with some 60,000 speakers of several dialects (including *Northern* or *Negd, Southern* or *Coastal;* note also the closely related *Ḥarsūsi,* and *Baṭḥari*); *Jibbāli* (formerly also referred to as Śḥeri or, incorrectly, as Šḫawri), with about 5,000 speakers (again, with several dialects, including that of the *Kūrya Mūrya* islands); *Soqoṭri,* with about 6,000 speakers on the islands of Soqoṭra, and *ʿAbd el-Kūri* (a subdialect); and *Hōbyōt,* with a small but indeterminate number of speakers. These languages are of considerable importance for the reconstruction of early Semitic, but have until recently not received the scholarly attention they deserve because of the uncertain reliability of the information about them; this situation began to improve greatly in recent years with the work of the late T. M. Johnstone. The languages have been known to Western scholarship only since the mid-19th century; they have no ancient forms, unless they may be considered direct descendants of one or more of the inscriptional Old South Arabian languages. As has been noted, however, the relationship between the ancient and modern groups is not clear. Two significant features argue for a close connection, at least with the Old South Arabian language Ḥaḍramitic: the form of the third person pronouns may be reconstructed for common Modern South Arabian as having begun with **š* in the masc. and **s* in the fem., a curious pairing otherwise found in Semitic only in Ḥaḍramitic; the Modern South Arabian languages share with Ḥaḍramitic the preposition *h-*, "to, for."

(b) Ethiopian. Although no Ethiopian Semitic is attested before the common era, it is likely that the ancestor of these languages, which was closely related to the ancestor of the Modern South Arabian languages (and perhaps of the Old South Arabian tongues as well; see above), arrived in the horn of E Africa from the Arabian peninsula early in the 1st millennium B.C.E. Ethiopian Semitic has two subbranches, a northern and a southern; all of the languages exhibit some degree of influence from the Cushite language family, but the influence is markedly greater in the southern branch.

Northern Ethiopian comprises two modern languages, *Tigre* and *Tigrinya* (spoken in the northern Ethiopian provinces of Eritrea and Tigre), and, of greater importance to biblical studies, *Geʿez* (classical Ethiopic), the literary language of the Ethiopian Christian church. Literary Geʿez was probably based on the spoken language of Aksum in N Ethiopia, shortly after the Christianization of the country in the 4th century. In addition to a few monumental inscriptions from the 4th century and earlier, Geʿez is represented by an extensive Christian literature, much of it composed between the 5th and 10th centuries; at that time the spoken language probably died out with the fall of the Aksum empire, but Geʿez continued to be used in a frozen literary form until recent times. Much of the literature is either translated from or based on models in other languages (especially Greek), but there is also a large corpus of material composed in Geʿez. The earliest inscriptions are written in the Old South Arabian monumental script; the latter was adapted to a manuscript form (written from left to right) and furnished with diacritics to represent all but one of the Geʿez vowels distinctly. Most Geʿez manuscripts that have been preserved date back only to the 14th century, although a few may be from as early as the 12th or even the 11th century. See the separate entry on Ethiopic (below).

South Ethiopic comprises some 20 languages in two main subbranches (each of which has further divisions), including *Amharic*, the national language of modern Ethiopia, attested as a written language (in the Geʿez script) since the 16th century C.E.; *Harari,* the language of the city of Harar; *Gafat,* which recently died out; *Chaha;* and others.

(2) Central Semitic. The Central branch of Semitic shares with South Semitic the form *qabara* as an active perfective verb. As noted above, it differs from South Semitic in marking the first person singular and all second persons of that form by suffixes with *-t-* (as in Arabic *qabarta* and Hebrew *qābartā*, "you (m.s.) buried") rather than by suffixes with *-k-*. More importantly, Central Semitic exhibits a new form for the imperfective verb, the middle radical of which is not doubled (vs. South, East, and Proto-Semitic), and in which singular forms end in *-u* while masc. pl. forms end in *-ūna*, as in Arabic *yaqbiru*, "he buries," and *yaqbirūna*, "they (m.) bury." The origin of this imperfective is probably to be sought in the old subordinate (subjunctive) form attested in Akkadian (**yaqbir-u*, "who buried"; Hamori 1973). In Hebrew with the loss of final short vowels, the Central Semitic distinction between perfective/jussive **yaqbir*, "let him bury," and imperfective **yaqbiru*, "he buries," was lost in most verbs, as in *yiqbōr,* with both meanings; some verb types preserve the distinction, however, such as *yāqûm* < **yaqūmu,* "he stands," vs. *yāqōm* < **yaqum*, "may he stand"; *yibneh* < **yabniyu*, "he builds," vs. *yíben* < **yabni (y),* "let him build"; the alternative plural form *yiqběrûn,* "they will bury," which is always imperfective (i.e., never used for jussive or consecutive past tense; Hoftijzer 1985), also reflects the Central Semitic plural *yaqbirūna.*

The internal classification of the Central Semitic languages is a much debated topic. The scheme presented here suggests a bipartite division of Central Semitic into an Arabian branch and a Syro-Palestinian branch, the latter essentially consisting of the languages traditionally referred to as "Northwest Semitic."

(a) Arabian. The Arabian branch of Central Semitic comprises classical Arabic along with its antecedent inscriptional dialects and its colloquial spoken descendants.

Pre-Islamic inscriptions that are written in alphabetic scripts derived from the Old South Arabian and that exhibit close linguistic affinities with later classical Arabic are termed *Old* (or *Early*) *North Arabic.* Several dialects are distinguished: *Thamūdic,* comprising some 1,000 graffiti found in W and central N Arabia (especially in Midian), from the 6th century B.C.E. to the 4th century C.E., and including *Taymanite*, an early sub-branch in a special script found around the oasis of Tayma; *Dedānite* and later *Liḥyānite* inscriptions from the oasis of al-ʿUlā, ancient Dedān (NW Arabia), from the 5th or 6th century B.C.E.; *Ṣafāʾitic,* attested in over 15,000 graffiti, found in the region E of Damascus as far as Dura Europos and S to the northernmost reaches of modern Saudi Arabia, and dating from the 1st century B.C.E. to the 3d century C.E.; *Ḥasaean* (or Ḥasāʾitic), thus far some 30 texts, mostly funerary inscriptions, from al-Ḥasā in NE Saudi Arabia near the Persian Gulf.

Classical *Arabic*, the literary language of Islam, originated in the poetic *koinē* of the pre-Islamic and early Islamic Arabs, with influence from the Qurʾān, which exhibits features of the dialect of Mecca spoken by Muḥammad. The classical period of this language was the 8th and 9th centuries C.E. during which time it was systematized and standardized by grammarians in the cities of Kufa and Basra. Modern standard literary Arabic essentially exhibits the classical grammar, with updated vocabulary. Throughout the history of literary Arabic, the grammar of which was more or less fixed, spoken dialects have naturally existed and developed over time. Today there are many spoken forms of Arabic, often mutually unintelligible; these dialects have not usually received written form. Instances of literary Arabic that exhibit the influence of the spoken dialects are termed Middle Arabic.

Arabic is written from right to left with an alphabet that was borrowed from the Aramaic script used by the Nabateans (Arabic speakers who wrote in Aramaic) and modified to include six additional consonantal phonemes; in the consonantal script ʾ, *w*, and *y* are normally used to represent the long vowels *ā, ū,* and *ī,* respectively. In the 8th century the use of diacritics to indicate vowels, doubling, and other features was borrowed from Syriac.

(b) Syro-Palestinian ("Northwest Semitic"). The languages in this branch all share at least two linguistic innovations vis-à-vis common Central Semitic. One is the change of initial **w* to *y,* as in **warada* > **yarada* (> Hebrew *yārad*), "he descended," and **warx* > **yarx* (> Hebrew *yeraḥ*), "month." A more significant innovation occurred in the morphology: for the large group of monosyllabic triradical nouns, that is, *qatl, qitl,* and *qutl* forms, plurals came to be formed regularly and obligatorily by both

inserting *a* between the second and third radicals and affixing the external plural markers (thus, *qatalūna, qitalātum,* and the like; cf. Hebrew *melek* < **malk*-, "king;" pl. *mĕlākîm* < **malakīma*).

(i) Early Dialects and Names, including "Amorite." The term *Amorite* is commonly used to refer to the large number of Semitic personal names attested in cuneiform sources from the late 3d and early 2d millennia B.C.E. that exhibit non-Akkadian, i.e., "West Semitic," features. The most recent collection lists over 6,000 such names (Gelb et al. 1980). Because some of the names exhibit typical NW Semitic features, such as the change of initial **w* to **y* (as in *ia-di-du-um*, "beloved," <√**wdd*, *ia-qa-rum*, "precious," <√**wqr*), the entire corpus of names is often labeled Northwest Semitic. But the corpus presents many severe practical difficulties from a linguistic point of view: it is negatively defined, simply as non-Akkadian Semitic; it spans the entire Near East and half a millennium; and it is not subject to normal linguistic tests for meaning, structure, and development, since names may lack any firm connection to the language spoken by their bearer. It is likely, therefore, that these names represent not a single language, or even necessarily a continuum of closely related dialects, but rather a diverse set of languages. It is a priori quite possibly, for example, that only some of the names reflect dialects that may be classified as Central Semitic, and only a subset of those as Northwest Semitic. (That some dialectal variations are exhibited by the names themselves has long been known.) Thus, since "Amorite" is not a linguistic unity, or even, perhaps, a linguistic entity, it is difficult to say anything meaningful about phonology, morphology, or classification that would obtain across the entire set of names.

Other early West Semitic names are attested in Egyptian sources, such as the Execration Texts (vases and statuettes inscribed with the names of foreign vassals, including Syro-Palestinian rulers, 20th–19th centuries B.C.E.), and lists of slaves' names (18th century). Among these names, many of which resemble many of those described above from cuneiform sources, are some with specifically NW Semitic features, such as initial **w* > *y* (e.g., *yq€ ʿmw*, probably for */yaqar-ʿammu/*, "ʿAmmu-is-precious," with *yaqar* < **waqar*). Syro-Palestinian place names also appear in Egyptian texts over a long span of time, and these also provide some information about the history of the Semitic dialects in that area.

Inscriptions from both Palestine and the Sinai in an early, pictographic alphabet are generally held to reflect an archaic form of NW Semitic. The inscriptions found in Palestine probably date to the 17th–13th centuries B.C.E.; the date of those found at Serābīṭ el-Khādem in the Sinai is uncertain (15th century?). While a few letter combinations can be read with some confidence, such as *lbʿlt,* "for the Lady," much of the interpretation of these inscriptions remains uncertain.

Late Bronze period Akkadian texts from sites in Syria and Palestine contain many non-Akkadian Semitic names and, occasionally, non-Akkadian Semitic common words and constructions, reflecting the scribes' native languages. The problems discussed above in connection with the earlier "Amorite" names also apply to these forms, especially to the names. For the common words, particularly when they appear as glosses, there is at least a linguistic context on which to base an interpretation. Again, however, it is difficult to differentiate the various languages and dialects that are undoubtedly reflected in these texts; some forms in texts found at el-Amarna in Egypt exhibit distinctly Canaanite features, for which see under (iii) below.

(ii) Ugaritic. The language of the ancient city of Ugarit (modern Ras Shamra), *Ugaritic* was written from left to right on clay tablets with an indigenous alphabetic cuneiform script. The total number of texts and fragments published to date is over 1,100, all of them written during the 14th and 13th centuries B.C.E., although some may be copies of earlier compositions. The largest group are the economic or administrative texts; other genres attested are literary texts (myths and epics), rituals, letters, and a few contracts. Because the Ugaritic alphabet did not normally indicate vowels (except with the glottal stop ʾ), much of the phonology and morphology of Ugaritic is only partly understood. Some evidence for the vocalization of Ugaritic is provided by over 300 non-Akkadian words that appear in Akkadian texts found at Ras Shamra that were written by local scribes; these forms display features of the scribes' native language.

The classification of Ugaritic as a NW Semitic language is generally accepted. Its position within NW Semitic, however, has been a matter of considerable debate; some scholars consider Ugaritic to be a

dialect of Canaanite, while others, noting that it does not participate in a number of Canaanite innovations (see (iii) below), argue that Ugaritic represents a separate branch of NW Semitic distinct from both Canaanite and Aramaic. See the separate entry on Ugaritic (below).

(iii) Canaanite. The Canaanite languages may be identified as those sharing the following innovations: the change of common NW Semitic **qattila* and **haqtila* to **qittila* and **hiqtila* in the perfects of the so-called "intensive" and causative conjugations, respectively (cf. Hebrew *Pi‹ēl* and *Hip‹îl*); the change of the first person sg. pronoun, originally **›anākŭ*, first to **›anōkŭ* with the unconditioned change of **ā* > **ō* (the "Canaanite shift") and then to **›anōkĭ* with dissimilation, and the concomitant (and more significant) change of **-tŭ* to **-tĭ* as the marker of the first person sg. in the suffix conjugation (i.e., **qabartŭ*(ρ) **qabartĭ* "I buried"; cf. Hebrew *qābartî*); and the generalization of the allomorph **-nŭ* for the first person plural, originally proper only to the independent pronoun and the suffix conjugation, now as the possessive suffix and the accusative suffix as well (i.e., as the suffix, respectively, on nouns and verbs, as in Hebrew *sûsēnû*, "our horse," and *šĕmārānû*, "he guarded us"). Apart from the Canaanite evidence in the Akkadian Amarna letters, the various Canaanite languages begin to be recorded in the first half of the 1st millennium B.C.E., all written from right to left in a 22-letter consonantal alphabet developed by the Phoenicians.

Among the Akkadian texts found at the site of el-Amarna (ancient Akhetaten) in Egypt were many letters from the mayors of the Egyptian king's vassal cities in Syria and Palestine. The language of the letters from some of these cities, such as Byblos, Gezer, Jerusalem, and Shechem, is a kind of creole in which the vocabulary is mostly Akkadian (with some local words and phrases) but the morphology and the syntax reflect the local NW Semitic dialects. In some instances the presence of one or more of the diagnostic innovations noted above identifies the underlying dialects as Canaanite: *ru-šu-nu /rōšu-nŭ/* "our head" (EA 264:18, provenance uncertain; cf. Hebrew *rō (›)š-ḗnû*, vs. Akkadian *rēš-ni*); *a-nu-ki /›anōkĭ/*, "I" (EA 287:66, 69, from Jerusalem; cf. Heb. *›ānōkî* vs. Akk. *anāku*) and *mu-še-er-ti*, "I sent" (with *-ti* for "I"; ibid.: 53); *ḫi-iḫ-bi-e [hiḫbi›e] < /hiḫbi›a/*, "he concealed" (EA 256:7, from Piḥilu/Pella; cf. Hebrew *hiḥbî›*).

Phoenician is the language of the Phoenician city-states of Byblos, Tyre, Sidon, and others, and of their surrounding areas and colonies. While the dialects of the various cities differed from one another to some degree, the Byblos dialect, the earliest attested, exhibits enough idiosyncrasies to be considered a branch of Phoenician separate from the others, which may be termed "Standard." Byblian texts are attested from the 10th century B.C.E., to the 1st century C.E.; Standard Phoenician inscriptions from Phoenicia proper, from Syria, and from the Mediterranean date from the 9th to 2d centuries B.C.E. The Phoenician dialect of the Tyrian colony at Carthage (Phoenician *qart ḥadašt,* "new city") and its colonies is *Punic*, attested from the 5th century B.C.E.; after the fall of Carthage in 146 B.C.E., inscriptions are referred to as Neo-Punic. The Phoenicians originated the 22-letter form of the linear alphabet later borrowed by speakers of other 1st-millennium languages, including Hebrew and Aramaic. See the separate entry on Phoenician (below).

Hebrew, by far the best-known Canaanite language, is first attested in epigraphic sources in the late 10th century B.C.E. Parts of the biblical text, however, particularly the older poetry, may stem from as early as the 12th century B.C.E.; the dialect (or dialects) represented by this early biblical material, which may be termed *Archaic Hebrew*, exhibits a number of distinctive features lost in most later Hebrew texts. The term *Classical Hebrew* may be used to denote biblical and epigraphic texts written from the beginning of the monarchy until the exile, while post-exilic texts, which show a number of linguistic developments, may be referred to as *Late Classical Hebrew*. The inscriptional remains give evidence of at least two main dialects of Hebrew during the biblical period, a S dialect, also called Judean, and a N dialect, also called Israelean. Dialectal distinctions were undoubtedly also present in biblical texts originally as well, but editorial harmonizing has tended to neutralize such distinctions, so that a relatively uniform language is reflected, probably the standard official Jerusalem dialect; nevertheless, some dialect variation remains, particularly in certain books, such as Job and Ecclesiastes.

Hebrew probably ceased to be a spoken language of daily life in most areas, replaced by Aramaic, a century or more before the turn of the era. The *Middle Hebrew* period, from the 2d century B.C.E. to the 5th C.E., comprises the Hebrew of texts found at Qumran, Samaritan Hebrew, and the Hebrew of the Mishna, each of which reflects a distinct dialect (or several dialects). Qumran Hebrew is a literary dialect, for the most part a deliberate attempt to reproduce the Late Classical language, though elements of the vernacular often appear. Mishnaic Hebrew, on the other hand, does not descend directly from classical Hebrew, at least not from the standard Jerusalem dialect of most of the Bible; rather, it is a written version of a vernacular language that probably reflects the continuation of a separate Hebrew dialect strain, with some connections to earlier northern Hebrew. In the *Medieval* period Hebrew continued as a written language, with writers drawing on both biblical and Mishnaic Hebrew to create a wide variety of literature. In the last century Hebrew was revived as a spoken language, and *Modern Hebrew* thrives today as the language of the state of Israel. See the separate entry on Hebrew (below).

Moabite is attested in one well-preserved 34-line inscription, promulgated by the Moabite king Mesha in the mid-9th century B.C.E., and in two small fragments (one of which is also by Mesha); there are also a number of seals from Moab that bear individual's names (ca. 9th–6th centuries). Although it exhibits a number of distinctive features, Moabite is considered by many scholars to be the language most similar to biblical Hebrew. The *Ammonite* language is known from fewer than a dozen inscriptions dating from the 9th to 6th centuries B.C.E., although there are also over a hundred seals bearing names that have been identified as Ammonite on paleographical or semantic grounds, or on the basis of their find-spots. *Edomite*, attested only in a very small number of ostraca and perhaps in names on a few seals (ca. 8th–6th centuries B.C.E.), is poorly known because of the meager corpus; it appears to be very closely related to Hebrew and Moabite. See also EPIGRAPHY, TRANSJORDANIAN.

(iv) Aramaic. All Aramaic dialects exhibit the following shared linguistic innovations, among others: the change of what was probably a vocalic **ṇ* to **r* in the words for "son," "daughter," and "two" (e.g., for "son": **bṇ* > **bir;* Testen 1985); the generalization of **-nă̄* as the suffix of the first person plural in all environments, in contradistinction to Canaanite **-nū̆* (see above); the rise of a new causative-reflexive conjugation, **hittaqtal* (vs. earlier Semitic ** (v)štaqtala);* and the loss of the passive *n*-stem (as in the Hebrew *Nip*ʿ*al*). All Aramaic dialects except for the modern spoken languages are written from right to left in the 22-letter alphabet borrowed from the Phoenicians, although there are many paleographical variants of the script among the forms of the language.

Old Aramaic, as the earliest phase of the language is known, is attested in a small number of inscriptions, some of them quite long, from the mid-9th century to the 6th century B.C.E., beginning with the bilingual Akkadian-Aramaic stele from Tell Fakhariya in N Syria. Most of these inscriptions exhibit one or more idiosyncratic linguistic features relative to the others, indicating dialectal diversity rather than the presence of any standard dialect.

Aramaic became an official language during the Persian Empire (6th–4th centuries B.C.E.), a development that both widened the use of the language and yielded a standard dialect, called *Official* or *Imperial Aramaic,* which is attested in a large number of texts on papyrus found in Egypt (some written in Egypt, some, e.g., in Persia) and Palestine; the *Biblical Aramaic* of the book of Ezra may also be placed here. After the breakup of the Persian empire, dialectal variation among Aramaic text groups became prominent once again.

The period from the 3d century B.C.E. to the 2d century C.E. has yielded a large number of Aramaic texts, which collectively may be labeled *Middle Aramaic;* inscriptional dialects of this period from Syria and Transjordan are *Nabatean, Palmyrene, Ḥatran,* and *Old Syriac* (the latter based on the dialect spoken in and around the city of Edessa). In Palestine a written dialect that has been termed *Standard Literary Aramaic* is attested in the Aramaic of the biblical book of Daniel, in the many texts in Aramaic from Qumran, and in the Aramaic of Targums Onqelos and Jonathan. Other Palestinian Aramaic texts of this period are the Bar Kokhba letters, tomb inscriptions, and words and phrases quoted in the Mishnah and the Christian New Testament. Scattered texts have also been found, e.g., in Egypt and as far afield as Afghanistan.

From the 3d century C.E. on we may distinguish three main branches of *Late Aramaic:* (1) *Late Western Aramaic* comprises *Galilean* (or *Jewish*) *Aramaic,* the language of the Palestinian Talmud, Midrashim, and Targums, as well as synagogue and funerary inscriptions; *Judean* or *Christian Palestinian Aramaic* (also called Syro-Palestinian or Palestinian Syriac); and *Samaritan Aramaic.* (2) *Late Eastern Aramaic* comprises *Babylonian Aramaic,* the language of the Babylonian Talmud; *Mandaic,* the language of the gnostic Mandaeans in S Babylonia; and the dialect of a substantial number of magical incantations on bowls, from the 4th–7th centuries C.E. (3) Literary *Syriac,* based on Old Syriac and exhibiting features found in both Western and Eastern Aramaic, is the language of a vast Christian literature from the 4th to 13th centuries C.E. An eastern (Nestorian) and a western (Jacobite) dialect are recognized. Syriac began to decline as a spoken language with the spread of Islam in the 7th century, and eventually it died out.

Modern Aramaic languages continue to be spoken in pockets of communities in various parts of the Near East and, as the result of relatively recent migrations, in countries like the Soviet Union, Sweden, and the United States. Four main branches of Neo-Aramaic dialects are known: *Western,* spoken only in three villages NE of Damascus (Christian Maʿlūla and Muslim Jubbʿadīn and Baḫʿa); *Central,* consisting of *Ṭuroyo* (several dialects) and *Mlaḥsō,* spoken in villages in SE Turkey; *Eastern* (also called *Neo-Syriac,* although there is no direct link with classical Syriac), a large group of often significantly divergent dialects spoken by several hundred thousand people, originally in and near Kurdistan but now widely scattered; and *Neo-Mandaic,* which is spoken by a small number of Mandaeans in Ahwāz in W Iran. See the separate entry on Aramaic (below).

(v) Other. The dialect of a long but fragmentary alphabetic inscription on plaster found at Deir ʿAlla in Jordan, dated to the mid-8th century B.C.E., has variously been labeled Canaanite and Aramaic by scholars. The reason for the debate is that the dialect exhibits features found in both of those language groups. It seems unlikely, however, that any of those features may be considered significant shared innovations; rather, there is no clear evidence in the Deir ʿAlla text for any of the diagnostic features listed above for Canaanite and for Aramaic. Thus, from the point of view of genetic linguistic classification, it is probably better to conclude that the Deir ʿAlla dialect is neither Canaanite nor Aramaic, but rather continues still another, independent branch of NW Semitic. It is likely that there were other dialects in the 1st millennium, thus far undiscovered, that were likewise unaffected by the innovations that characterize either Canaanite or Aramaic, spoken in communities away from the large Aramaic- and Canaanite-speaking centers. See also DEIR ʿALLA.

2. Egyptian. The second main branch (and the earliest-attested member) of the Afroasiatic language family—and history's second-earliest recorded language (after Sumerian; see D.1. below)—is *Egyptian,* the language of the inhabitants of ancient Egypt. Several chronological phases of the Egyptian language may be distinguished: *Old Egyptian,* in dynasties I–VIII (ca. 3100–2160); *Middle Egyptian* in dynasties IX–XVII (ca. 2160–1567); *New* (or *Late*) *Egyptian* in dynasties XVIII–XXX and later (ca. 1567 B.C.E.–394 C.E.); *Demotic,* the language of texts written in demotic script (see below), which overlaps New Egyptian in part, appearing from dynasty XXV to the late Roman period (ca. 715 B.C.E.–470 C.E.); and *Coptic,* from the 3d to 16th centuries C.E., possibly later. That there were also geographical variations of dialect in all of these periods is certain, but directly evidenced only for Coptic; for the earlier stages of the language only a standard dialect normally received written form. The Egyptians probably borrowed the idea of writing from the Sumerians, but the script devised by them was completely indigenous. The hieroglyphic script, in which the original pictographs remain fully recognizable, remained in use for monumental texts and on papyrus from the earliest period until after the turn of the era; hieratic, a cursive script attested from the Old Kingdom on in which the pictographs become stylized to the point where they are not recognizable, was used for writing more quickly with a reed pen; demotic script, which first appeared in the late 8th century B.C.E., was a still more cursive form of writing derived from hieratic. Coptic, the late stage of the Egyptian language spoken by the Christian Copts, was written with the Greek alphabet to which seven additional letters, derived from hieroglyphs, were added to represent sounds not found in Greek.

For the genetic relationship between Egyptian and Semitic, we may point to a number of morphological features, such as the independent pronoun *ıÙnk,* "I" (cf. Akkadian *anāku,* Hebrew *ʾānōkî*); the pronominal suffixes *-ıÙ,* "my;" *-k,* "your" (m. sg.), and *-n,* "our" (cf. Hebrew *-î/-ya, -kā, -nû,* respectively); the form called the Old Perfective, as in *snb. kwıÙ,* "I being healthy," which corresponds formally and semantically to the Akkadian predicative verbal adjective ("stative"), as in *šalm-āku,* "I am healthy." The remoteness of the Egyptian-Semitic relationship, on the other hand, may be illustrated by noting the extreme dearth of clear cognates between the vocabularies of the two language groups. See the separate entries on Egyptian language and writing and on Coptic (below).

B. The Indo-European Language Family

Of the many branches of this vast family (in chronological order of attestation: Anatolian, Indo-Iranian, Hellenic, Italic, Celtic, Germanic, Armenian, Tocharian, Balto-Slavic, Albanian; in addition there are several minor, unclassified languages), only a few are represented in ancient Near East documents.

1. Anatolian. The most prominent member of this branch is *Hittite,* the earliest Indo-European language attested. Though the term "Hittite" is current in modern scholarly usage, the language was called Nesite by its speakers; it is not to be confused with the autochthonous, unrelated Hattic language (see D.4. below). Hittite was the language of the Indo-Europeans who settled in central Anatolia, and it became the language of the Hittite kingdom. Some 25,000 texts span the 18th to 13th centuries B.C.E.; these include historical texts, laws and legal texts, letters mythological texts, rituals and cultic texts, hymns and prayers, omens, and economic documents. The vast majority of these texts, which were written on clay tablets with the logo-syllabic cuneiform system indigenous to Mesopotamia, were discovered at the site of Boğazköy, ancient Ḫattusas, capital of the Hittite empire. See the separate entry on Hittite (below).

Two other Anatolian Indo-European languages attested in the cuneiform texts found at Boğazköy are *Palaic* (from Palā in NW Anatolia; texts from ca. 1650–1400) and *Luwian* (or *Luvian;* from Luwiya, later Arzawa, in W Anatolia; ca. 1400–1200), in which a few rituals and other religious texts are written; Luwian texts outnumber those in Palaic, but the number of both pales in comparison to the large corpus of Hittite texts. A dialect of Luwian is also written with an indigenous hieroglyphic script appearing on Hittite empire seals beginning in the 15th century B.C.E. and especially on N Syrian monuments from the 10th to 8th centuries B.C.E. The longest text in this *Hieroglyphic Luwian* (formerly termed "Hieroglyphic Hittite") apears in an 8th-century bilingual inscription (with Phoenician) from Karatepe in Cilicia.

Also attested in the 1st millennium B.C.E. are several members of the Anatolian family written in alphabetic scripts. *Lydian,* the language of Lydia on the W coast of Asia Minor, is attested in some 100 inscriptions, mostly epitaphs from Sardis dating from the 5th (or perhaps the 6th) to 4th centuries; there are in addition two Lydian-Greek bilinguals and a longer Lydian-Aramaic bilingual. Lydian is written from right to left in a script derived from Greek. *Lycian,* the language of Lycia in SW Asia Minor, is preserved in about 100 coin legends and 150 epitaphs from the 5th and 4th centuries, many of the latter Lycian-Greek bilinguals; an important historical inscription in an archaic form of Lycian appears on a stele from Xanthos, and a trilingual Lycian-Greek-Aramaic text, a decree establishing a new cult, was found near the same site in A.D. 1973. The Lycian script is likewise derived from Greek, and while similar (though not identical) to the Lydian, it is written from left to right. Inscriptions from Caria in SW Asia Minor (between Lydia and Lycia), and several graffiti from Egypt and Nubia in the same script, have been labeled *Carian.* Like the Lydian and Lycian, the Carian script appears to be derived for the most part from Greek, although there are many deviations. The more than 100 inscriptions, nearly all of which are very brief (although one text is 14 lines long), date to the 7th or early 6th century B.C.E. The Carian language as known from names and from a few glosses in Greek texts remains very poorly understood but has recently been shown to belong to the Anatolian branch of Indo-European. For Phrygian, see B.4. below.

2. Indo-Iranian (Aryan). A number of Indo-Iranian and divine names (such as Indra and Varuna) appear in Hurrian (see C.1.) royal names and other Hurrian contexts from the mid-2d millennium B.C.E. In addition, a tractate dealing with horse training, written in Hittite by a Hurrian specialist, contains several Indo-Iranian technical terms, as do some forms, also concerning horses, found in Akkadian texts written

at the Hurrian site of Nuzi. A few of these terms found their way into some of the Semitic languages, as probably in *maryanni,* "charioteer," in Ugaritic. The historical and cultural implications of the presence of these Indo-Iranian forms in Hurro-Hittite contexts are debated. The Indic stock of this large branch (Sanskrit, Prakrit, and their descendants) had otherwise little impact on the linguistic landscape of the ANE.

Two Old Iranian languages are well attested. *Avestan* is an E variety of Iranian in which are written, in a script ultimately derived from Aramaic, sacred Zoroastrian texts, some of which (the Gāthā's) may go back to 600 B.C.E. *Old Persian,* a SW variety of Iranian appearing from the reign of Darius (522–486 B.C.E.) to that of Artaxerxes III (359–338), was one of the official languages the Achaemenid rulers of the Persian empire used for royal inscriptions; it is written in a reduced cuneiform script (only 42 signs: 36 syllabic, 5 word-signs, 1 word divider). Old Persian is the ancestor of the Middle Iranian languages, whose main representative is *Pahlavi,* the language of the Parthians (250 B.C. to 226 C.E.) and Sassanians (226–652 C.E.) and a large corpus of Zoroastrian texts. Other Old Iranian languages, such as *Median* (the language of the Medes), *Parthian,* and *Scythian,* remain sparsely attested and poorly understood. See the separate entry on the languages of Iran (below).

3. Hellenic. This branch of Indo-European contains only the various dialects of the *Greek* language. The earliest dialect attested, now usually termed Mycenaean Greek, was written on clay tablets in the syllabic script called Linear B (deciphered in 1952; for Linear A and other Cretan scripts, see E.2. below). The script contains 87 syllabic signs and a number of ideograms. Over 4,500 Linear B tablets, dating from the end of the 14th to the beginning of the 12th century B.C.E., have been discovered at Knossos in Crete, at Pylos, Tiryns, and Mycenae in the Peloponnese, and at Thebes, Eleusis, and Orchomenos in central Greece. Most of the texts are inventories of personnel, animals, rations, weapons, and the like.

The Homeric poems may have been written down as early as 800 B.C.E., while the earliest alphabetic Greek inscriptions attested thus far date to the late 8th century B.C.E. Linguists recognize a number of Greek dialects, the most prominent of which are Aeolic, Doric, and Ionic-Attic; the Attic branch of the latter, the dialect of Athens, yielded the *koinē* or "common" Greek of the Hellenistic period, and the Greek of the Christian New Testament. See the separate entry on Greek (below).

4. Phrygian. The language of ancient Phrygia, with its capital at Gordion in W central Asia Minor, is recorded in two groups of inscriptions. *Old Phrygian,* written in a native alphabet derived from the Greek, consists of over 90 inscriptions from the 8th to the 4th centuries B.C.E.; inscriptions may be written from left to right, from right to left, or boustrophedon. *New* or *Late Phrygian* appears in some 110 texts from the 2d and 3d centuries C.E., written in the Greek alphabet. Although it is an Indo-European language that was spoken in Asia Minor, Phrygian is not a member of the Anatolian branch (see B.1. above). Phrygian seems for now to constitute a separate branch, although the ancient Greeks and some modern linguists consider it to be related to *Thracian,* a poorly attested Indo-European language spoken in W Asia Minor and in the E Balkans, in a Thraco-Phrygian branch. Some also believe Phrygian and Thracian to be related to Armenian.

C. Hurrian and Urartian

Although these two extinct languages are not closely related, their common ancestry is now well established. The classification of Hurro-Urartian as a branch of one of the Caucasian language groups, especially the NE Caucasian languages, has been proposed but not proved. The Hurro-Urartian group contributed a number of loanwords to Hittite, Akkadian, and a very early stage of Old Armenian.

1. Hurrian. Texts in the language of the ancient Hurrians (biblical Horites) are attested from the 20th to the 12th centuries B.C.E. from several sites in N Syria and Anatolia, including Mari, Ugarit, Emar, and especially Ḫattusas (modern Boğazköy). Like most 2d-millennium languages, Hurrian was usually written in Mesopotamian-style syllabic cuneiform, although a few texts from Ugarit were also written in that city's indigenous alphabetic cuneiform script. The longest Hurrian text, which until recently was the source of most of our understanding of Hurrian grammar, is a 500-line letter sent by Tushratta, king of Mittanni, to the Egyptian pharaoh Amenophis III early in the 14th century. The majority of Hurrian texts are cultic in nature, although a few mythological and other literary texts, some omens, and a small number

of lexical texts are also attested. Despite many advances, not a few details of Hurrian grammar and vocabulary have remained obscure; a long bilingual Hurrian-Hittite literary text, recently discovered at Ḫattusas, is expected to elucidate some of the difficulties, however. See the separate entry on Hurrian (below).

2. Urartian. The language of the kingdom of Urarṭu (near Lake Van in E Turkey; cf. biblical Ararat), *Urartian* is attested in texts dating from the end of the 9th century to the beginning of the 6th century B.C.E. The majority of the texts—several hundred in number—are monumental royal inscriptions in stone (building inscriptions, dedications, and, rarely, annals), whereas only some 20 Urartian clay tablets, administrative in content, have been published. While most texts are written in Mesopotamian cuneiform, Urartian was also recorded in two hieroglyphic scripts, a local variety that remains poorly understood, and, at one site (Altintepe), the Anatolian variety used for Luwian (see B.1. above).

D. Other Languages

A number of languages of the ANE, some of them well documented, appear to be isolates, that is, languages with no known relatives. They are presented in this section in the chronological order of their appearance.

1. Sumerian. The first written language, Sumerian was the language of early inhabitants of S Mesopotamia. Sumerian texts are attested beginning in the Uruk IV period, ca. 3100 B.C.E. Although the writing of the earliest texts is almost entirely pictographic, so that the underlying language is not obvious, the use of a few signs for homonymous words, such as *gi*, "reed," for *gi*, "to return," assures us that the language of these texts is in fact Sumerian. Much of the earliest textual material, however, is extremely difficult to understand, since it exhibits many signs that did not survive into later periods. Further, for much of the early period, the scribes used the writing system to record not the exact pronunciation, morphology, and syntax of a text but rather the main items or catchwords, as a mnemonic device; thus, much of the structure of the language must be reconstructed from later texts written when the scribes were more often not native Sumerian speakers but rather Akkadian speakers who had learned Sumerian as a dead, literary language. The earliest writing was pictographic, inscribed in clay tablets, but it evolved over the centuries into cuneiform—wedge-shaped signs impressed into clay with a reed stylus. The Sumerian cuneiform system was eventually borrowed by speakers of Akkadian, Eblaite, Hurrian and Urartian, Hittite, and Elamite to write their languages.

Sumerian may be divided into several chronological phases: *Old Sumerian*, from the earliest period to about 2100, which includes texts from Lagash and other sites dating to the Early Dynastic III period (26th–24th centuries), texts from the Sargonic period (23d–22d centuries), and inscriptions of Gudea, ruler of Lagash in the late 22d century; *Neo-Sumerian*, ca. 2100–1900, which comprises the vast numbers of administrative and legal documents of the Ur III dynasty, and other texts; and *Late Sumerian*, from 1900 on. The date of the death of Sumerian as a spoken language is debated, but it was almost certainly a strictly literary language by the end of the Old Babylonian period (ca. 1900–1600); some scholars have argued that Sumerian had died out as a living language already by the Ur III period (ca. 2100–2000).

The most commonly attested dialect of Sumerian is called *eme-gir*$_{15}$, which may mean "princely language." Another dialect is the *eme-sal*, which may mean "thin language" (or "fine" or "high-pitched"), used in some literary texts when the speaker is a woman or a *gala* (lamentation) priest. Regional dialects undoubtedly also existed, but are not evidenced in the textual material.

A wide variety of Sumerian texts is attested. Economic texts, attested already in the earliest period, are by far the largest group, comprising perhaps some 90 percent of Sumerian documents. Both legal texts and royal inscriptions are recorded from the Early Dynastic period on. There are many genres of literary texts: myths, epics, proverbs, hymns, prayers, and incantations. The various series of lexical lists, the dictionary- and encyclopedia-style texts by which the Sumerian scholars organized their knowledge and taught their writing system, appear by 3000; later, Akkadian scribes used these series, to which they appended glosses in their own language, to learn Sumerian.

Sumerian is an agglutinative language, i.e., one that combines discrete morphemes more or less unaltered in chains to form words, as in *é dumu- (a)n (i)-ak-a*, literally "house son-his-of-in" for "in his

son's house." Sumerian also exhibits ergative constructions, in which the case of the subject of an intransitive verb is the same as that of the object of a transitive verb, as in the endingless *(-ø)* form *é,* "house," in the following examples: *lugal-e é-ø in-dù,* literally "king-by (= by the king) house was-built" for "the king built the house"; *é-ø ba-šub,* "the house collapsed."

2. Elamite. Elamite was the language of the early inhabitants of Elam, an area of SW Iran corresponding roughly to the modern province of Khuzistan. Scholars divide the attested history of the Elamite language into four periods. *Old Elamite,* beginning in the 23d century, comprises a very small number of texts, one of which is a document mentioning the Old Akkadian ruler Naram-Sin. *Middle Elamite* dates to the 13th–11th centuries, when Elam was a major political power in the Near East; with rare exception the many texts from this period, from the sites of Susa and Choga Zanbil (and others), are royal building and votive inscriptions on bricks (one of which is an Elamite-Akkadian bilingual), although a few royal historical texts also occur. After a gap of several centuries in which no Elamite texts are attested, *Neo-Elamite* texts begin to appear in the 8th century B.C.E. In addition to the genres found in the Middle Elamite corpus, Neo-Elamite also comprises several hundred administrative texts from Susa, over 30 letters, and a literary text containing omens. The Elamite language continued in use after the fall of the last indigenous Elamite dynasty about 640 B.C.E., and a few texts are also known from the period when Elam was under Babylonian rule in the 6th century. Under the Achaemenid dynasty, Elamite was an official language alongside Old Persian and Babylonian. *Achaemenid Elamite* is attested in over 3,000 administrative tablets from Persepolis, a few letters, and several dozen trilingual royal inscriptions; the latter, in Old Persian, Babylonian, and Elamite, provided the foundation for the decipherment of these languages during the last century. The longest and most important trilingual is the rock inscription of Darius I (522–486) at Behistun; the Elamite version is over 300 lines long. The last Elamite inscriptions date to the mid-4th century B.C.E.

Elamite inscriptions from the 23d century onward are written in the logo-syllabic cuneiform script borrowed from the Elamites' neighbors in Mesopotamia. Another writing system, an indigenous pictographic script called Proto-Elamite, was used in Elam during the 3d millennium on tablets from Susa, Tepe Yahya, and Tall-i Malyan (Anshan), among others. It is first attested on economic tablets found in archaeological strata dated to about 3000, and later on royal inscriptions from the Old Akkadian period (ca. 23d/22d century); in the latter period it sometimes appears on monuments that also bear cuneiform Akkadian inscriptions. Since the Proto-Elamite script remains essentially undeciphered, it is not certain that the language represented is in fact Elamite. A genetic connection between Elamite and the Dravidian language family in India has occasionally been suggested, but has not gained general acceptance.

3. Qutian. The language of the Quti (um) (Guti[um]) tribes of the central Zagros mountain region is referred to as Qutian. Since no texts written in Qutian have been found, virtually nothing is known about the language. It is attested only in a small number of entries in Mesopotamian synonym lists that cite foreign words, and in several dozen personal names in the Sumerian king list and a few other texts from the end of the 3d and beginning of the 2d millennia; it may also be the source of a few substratum vocabulary items in Sumerian.

4. Hattic. Hattic is the name given to the language of the pre-Indo-European (i.e., pre-Hittite-speaking) inhabitants of N central Anatolia in the 3d and early 2d millennia. Hattic was transmitted by its linguistic supplanters, the Hittites, as a religious language, the language of the local central Anatolian gods. Thus, Hattic texts, all of which come from Boğazköy, ancient Ḫattusas, span the same period of time as that covered by Hittite (18th–13th centuries), and are likewise written in Mesopotamian cuneiform. Other evidence for Hattic is found in proper names, both in Hittite texts and in the earlier Old Assyrian texts from the Anatolian trading colony at Kültepe (ancient Kanesh; 19th–18th centuries). All Hattic texts are of a religious character; they include rituals for temple foundations and consecrations, myths, incantations, prayers, festivals, songs, antiphonies, litanies, and invocations of deities. Hattic material often appears as recitations within Hittite texts, and in some instances, Hattic texts are provided with Hittite translations. Since such translations are frequently of dubious precision, and since copies of Hattic

texts are often full of errors, it seems likely that, at least by the period of the Hittite empire (from the 14th century), Hattic was learned by the Hittite scribes as a dead language; it is quite possible, however, that away from Ḫattusas (especially to the NE) Hattic continued to be spoken until a much later time.

Because of the fragmentary nature of most texts containing Hattic, and because of the uncertain reliability of the Hittite translations in the bilingual texts, our understanding of Hattic grammar and vocabulary remains very limited, although it is clear that Hattic had a strong influence on the grammar and vocabulary of the Indo-European Hittite and Palaic languages (less so on Luwian) that replaced it in central Anatolia. Attempts to classify Hattic as a member of one or another of the Caucasian language groups have been made, but in the poor state of our present knowledge of Hattic, such a genetic relationship is not demonstrable.

5. Kassite. The language of the Kassites, a people from the central Zagros mountains (modern Luristan), some of whose members established a dynasty that ruled Babylonia for over 400 years (16th–12th centuries), remains poorly documented and poorly understood. As is true of Qutian, there are neither texts nor complete sentences written entirely in Kassite. The most important sources for Kassite are a vocabulary text giving 16 divine names and 32 common nouns in Kassite with their Akkadian equivalents; a tablet from the library of Assurbanipal (7th century) that lists non-Akkadian royal and other personal names, some of them Kassite, with Akkadian equivalents; over a dozen Akkadian texts from the Kassite period involving horse breeding and containing a number of Kassite terms having to do with horses; and a few Kassite words found in other Akkadian lexical texts or as loanwords into Akkadian. In addition to these sources, many Kassite personal, geographical, and divine names appear in Mesopotamian texts, especially during the Kassite period, but also occasionally earlier in the Old Babylonian period and later into the 1st millennium.

E. Undeciphered Languages and Scripts

A number of scripts attested in the ANE and Mediterranean remain undeciphered, and the languages they represent are unknown. In other cases the script can be read but the language still escapes our understanding. Some of the more prominent of these challenges are reviewed briefly here in the likely chronological order of their first appearance.

1. Cretan and Cypriot Scripts. *Cretan Hieroglyphic,* the first writing to appear on the island of Crete, dates from the 20th to 17th centuries B.C.E. and has some 140 signs; inscriptions most often appear on stone seals, more rarely on clay. From this script, or one similar to it, there developed two cursive linear scripts that are normally inscribed on clay tablets. The later of these, *Linear B,* records Mycenaean Greek, as noted above (B.3.). The earlier script, referred to as *Linear A,* has some 80 syllabic signs as well as ideograms. Since many of the signs correspond to signs in Linear B, much of Linear A can be read with some confidence, but the small number of texts (only 200–300 tablets, the largest number from Haghia Triada, a palace in S Crete), their brevity, and the lack of bilinguals have led to much debate concerning both the interpretation of the texts in general and even the language they record; the language has been identified, among other suggestions, as a form of NW Semitic, as a dialect of Luwian (Anatolian Indo-European), and as Greek, but none of these identifications has gained wide acceptance. Linear A, which began to appear in the 18th century, continued in use until the end of Minoan civilization, about 1450 B.C.E.

A small number of texts found at sites on Crete and dating to the 6th to 3d centuries B.C.E. are written in Greek characters, but record a language, usually called *Eteocretan,* that has resisted interpretation, despite the existence of a few bilinguals with Greek translations. The relationship between Eteocretan and the language or languages represented by Cretan Hieroglyphic and Linear A also remains uncertain.

The *Phaistos Disk* is a round clay tablet 61/2 inches in diameter discovered during excavations at the palace of Phaistos in S Crete in 1908 and dated stratigraphically to the 17th century B.C.E. The disk is inscribed on both sides with a pictographic script that is not apparently related to other Cretan scripts. The number of individual pictographs used on the disk is 45, a fact that suggests a syllabic script. The most noteworthy aspect of the writing is that the signs were not incised or drawn into the clay, but rather made by impressing stamps, in history's first example of movable type. None of the numerous attempts at

deciphering the relatively short text has gained acceptance; the language of the inscription has thus also remained unknown.

Sites in Cyprus have yielded a small number of texts on clay dating from about 1500 to 1150 in a syllabic script (written from left to right), related to those used on Crete (particularly Linear A) and termed *Cypro-Minoan,* apparently an adaptation of the Cretan writing for the recording of an autochthonous Cypriot language, which remains undeciphered. The Cypro-Minoan script forms an intermediary link between the Cretan scripts and another, later *Cypriot* or *Eteo-Cypriot* syllabic script, usually written from right to left; while one such inscription dates to the 11th century and a few to the 8th, most are attested from the 6th to 1st centuries B.C.E. The majority of the texts written in this scrit record a dialect of Greek (sometimes, especially later, with bilinguals in standard Greek), but a few are in a still-undeciphered, probably indigenous language.

2. Byblian Hieroglyphs. A group of nine or ten texts was discovered in Byblos between 1928 and 1932. The texts stem from the Bronze Age, but a more precise dating has not been possible. The inscriptions, written on stone and bronze and ranging in length from 3 to 41 lines, are written in a hieroglyphic script apparently derived, ultimately, from the Egyptian. The number of distinct signs is variously thought to be from fewer than 65 to more than 100, but both extremes indicate that the script is largely syllabic in nature. The language is usually assumed to be Semitic, though not on any sound linguistic basis. An attempted decipherment has recently appeared (Mendenhall 1985), in which it is claimed that the inscriptions date to the late 3d millennium and reflect an archaic form of West Semitic; however, reviewers have not found the decipherment plausible. See the separate entry on Byblos Syllabic (below).

3. Deir ʿAlla Clay Tablets. Three inscribed rectangular clay tablets dating to about 1200 B.C.E. were discovered in 1964 at the site of Deir ʿAlla in Jordan. The number of characters attested in the three inscriptions is over 50, so that the script was most probably syllabic in nature. Some of the characters resemble the earlier Cretan Linear A script, but whether there is in fact a connection between the two remains unclear. The inscriptions and their language are as yet undeciphered.

4. Meroitic. Meroitic is a language recorded in inscriptions from the ancient kingdom of Meroë in lower Nubia from the 1st century B.C.E. to the 3d or 4th century C.E. The script exists in two varieties: a lapidary, in which the signs are hieroglyphs borrowed from Egyptian, and a cursive. The writing contains only 23 characters and is thus essentially alphabetic in nature. The phonetic values of the signs are known, so that the texts can be read, but certain interpretation of them has so far remained elusive, partly because of the absence of bilinguals and partly because the language represented by the inscriptions has not been successfully shown to be related to any other.

AKKADIAN

Akkadian was a Semitic language spoken and written in ancient Mesopotamia in the pre-Christian period. Abundant documents written in the various dialects of Akkadian have been recovered by archaeologists. The language is usually classified as East Semitic, in distinction to West Semitic languages such as Hebrew, Aramaic, Amorite, and Arabic. The name "Akkadian" derives from the city of Akkad, the seat of a Semitic-speaking dynasty in S Mesopotamia in the mid-3d millennium B.C.; occasionally, both in antiquity and in modern times, the language has also been called Assyrian or Babylonian, from its two major dialects.

———

A. Introduction

Akkadian is the oldest-known Semitic language, attested in texts spanning a period of over 2,600 years. The language was the vehicle of a highly developed and historically minded culture that made extensive use of writing; for this reason, and because documents written in it were generally inscribed on virtually indestructible clay tablets rather than on more perishable material such as papyrus, Akkadian textual documentation is the most extensive we possess for any ancient Semitic language, containing literary and religious works, lists of Akkadian and Sumerian words and grammatical forms and other learned compilations, and political, legal, economic, and personal records (for a full survey of Akkadian texts see *HKL* and Reiner 1978).

In the 3d millennium, speakers of Akkadian in Mesopotamia lived alongside the Sumerians, whose language is unrelated to Semitic or any other known language family. Sumerian is attested in texts from as early as ca. 3000 B.C., and it probably survived as a spoken language until ca. 1700 B.C. or later. The relationship between Sumerians and Akkadians has been compared to that between the ancient Romans and the peoples of medieval Europe: Sumerian culture, religion, scholarship, and language left a lasting impression on Akkadian language and culture (von Soden 1960). For example, the cuneiform writing system which had originally been used to write Sumerian was adapted to write Akkadian, and, with relatively minor modifications, it remained in use for over two and a half millennia. This system, originally comprising a larger number of signs, was reduced to some 600 signs by ca. 2000 B.C.; many of these were pictographic in origin, while others appear to have been conventional schematic representations of words. Inscribed with a stylus on clay tablets, the signs gradually acquired a

characteristically "cuneiform" ("wedge-shaped") appearance. The signs often have multiple values, with the context indicating which value is actually being used; they may represent either words ("king," "old," "come," etc.) or syllables used to write words phonetically (*ba, ab, bab,* etc.). The complexity of this writing system resulted in the restriction of its use to a professional scribal and scholarly class, but in their hands it became the instrument of a millennial tradition of learning and record-keeping. In the course of time, the same system was borrowed to write other languages such as Hurrian, Hittite, and Urartian.

The Akkadian language and culture were unknown or forgotten in classical and medieval times. Occasional isolated cuneiform texts were made known in Europe during the 17th and 18th centuries, but in substance the discovery, publication, and decipherment of Akkadian texts was the achievement of the mid and late 19th century. The major figures involved in this decipherment included the German G. F. Grotefend, the Irishman E. Hincks, and the Englishman H. C. Rawlinson. Building upon prior advances in the decipherment of Old Persian and beginning with trilingual Akkadian/Old Persian/Elamite texts (such as the Behistun Inscription), these and other scholars during the 1840s and 1850s determined that the Akkadian inscriptions represented a Semitic language related to Arabic and Hebrew, that the signs could have multiple values, and that they represented not simple consonants (as in Hebrew or Arabic script) but either syllables or complete words. Once an initial identification of sign values had been achieved, further interpretation of texts was aided both by sign lists and word lists found at Nineveh in the 1840s, and by the similarity of many Akkadian lexemes with those of Hebrew and Arabic. By the late 1850s a fairly accurate interpretation of historical texts was possible, and further research moved on to comprehensive lexicology and to the publication and interpretation of the continually increasing textual corpus of Akkadian. (On the history of decipherment, see Kramer 1963: 6–32.)

In the long history of its attestation, Akkadian naturally underwent changes, and it is customary to distinguish various dialectical forms of it, both in its homeland and in other linguistic areas to which the use of Akkadian spread. The following paragraphs will survey this evolution.

B. Third-Millennium Akkadian

The first stage in the history of the Akkadian language is the Old Akkadian period. The language is first attested in personal names found in texts of the Fara period, ca. 2600 B.C. (Biggs 1967), but from ca. 2350 to 1950 B.C. we find texts fully written in Old Akkadian (OAkk; Gelb 1957: 3). Within this span, the period producing the greatest number of extant texts is that of the dynasty of Sargon of Akkad (ca. 2350–2150 B.C.). Prior to this we have only occasional texts, and afterwards there was a temporary return to the use of Sumerian in official documents. With the exception of a few religious texts, these OAkk writings cannot be truly classified as "literary"; they consist mainly of historical and dedicatory inscriptions of royal and private persons and letters, as well as economic, administrative, and legal texts. The writing system had not yet been given the precision it would later have in the expression of Akkadian phonemes: initial homorganic voiced and voiceless stops were still not graphically distinguished from one another (e.g., the same sign is used to write the syllables *da, ta,* and *ṭa,* etc.), the later aleph sign representing the glottal stop in conjunction with a vowel was not yet in use, and consonant doubling and vowel length were not normally represented. For the linguistic historian and the comparative Semitist, the OAkk texts are important because they exemplify early phonological and morphological characteristics of the language that would later be lost, such as the presence of Semitic *ś* and ʿ (which would later be merged with other phonemes), the absence of later vowel contraction, and the use of a productive dual.

C. Early Second-Millennium Dialects

1. Old Babylonian. In 2d-millennium texts we find the first attested dialect differentiation between southern Akkadian (Babylonian) and northern Akkadian (Assyrian). Old Babylonian (OB), the earliest form taken by the southern dialect, is found in texts dating from ca. 1950 B.C. to the end of the dynasty of Hammurabi of Babylon, ca. 1530 B.C. The period of Hammurabi himself and his immediate predecessors and successors is especially important because it was associated with the establishment of a careful chancery style of writing Akkadian, an innovation that affected the writing of royal and private inscriptions, letters, and business and administrative documents. Here, syllabic writing was generally preferred to logographic, and a number of signs current in OAkk were dropped from active use:

preliminary measures were taken to distinguish initial voiced, voiceless, and emphatic stops; new means of representing the aleph were devised; and double consonants were normally represented graphically. Within OB itself, regional subdialectic traits are discernible in Mari, Elam, the Diyala area, and elsewhere. This was a time of great literary productivity: epics, hymns, and prayers were written in a somewhat more archaic form of OB (the so-called hymnic-epic dialect: von Soden 1931–33; Groneberg 1971) which was to remain an ideal literary standard throughout the remaining history of the language.

Because of its internal consistency and its later literary influence, OB is generally regarded as the classical stage of Akkadian; therefore, a brief description of its characteristics will indicate the principle characteristics of classical Akkadian. The *phonemic inventory* of Akkadian is reduced, by comparison with that of other Semitic languages such as classical Arabic. The vowels include long and short *a, e, i,* and *u;* consonants are ʾ (aleph), *b, d, g, ḫ, y, k, l, m, n, p, q, r, s, ṣ* (ṣade), *š* (*šin*), *t, ṭ* (*ṭet*), *w,* and *z.* Pronunciation of vowels is similar to that of vowels in Latin or German; that of consonants resembles English except for ʾ (glottal stop), *ḫ* (velar, like *ch* in German *ach*), *š* (= sh), and the velarized or "emphatic" consonants *q, ṣ,* and *ṭ.* Nominal and verbal roots are generally triconsonantal. Verbs are conjugated in four main stems: a basic stem, a stem with doubled second-root consonant (corresponding to Heb *Piʿel*, and denoting plurality or intensity), a causative stem with infix *š*, and a passive stem with infix *n*. Each of these stems, and other stems derived from them, may have the following forms: present or durative, preterite or punctual, perfect, atemporal stative, imperative, infinitive, and active and passive participle. In the noun, masculine and feminine are distinguished, the latter usually marked by a morpheme *-t.* The noun has singular, plural, and vestigial remains of an earlier, regularly used dual. There are three cases (nominative, genitive, and accusative) marked by different final vowels (or case endings: *-u, -i, -a*). Most case endings also include a final, nonfunctional *-m* ("mimation"), a feature which disappears in Akkadian after the OB period (Reiner 1966 and 1970; von Soden *GAG;* Riemschneider 1977: Caplice 1988).

2. Old Assyrian. Although Old Assyrian (OA) is contemporaneous with OB, the OA texts that have been discovered so far were written within a more restricted period (1950–1750 B.C.). Aside from a single incantation and a few royal inscriptions from the capital city Aššur, all OA texts are letters and business documents found at Kültepe and other Assyrian merchant colonies in W Anatolia. The writing system has a more restricted battery of signs than that used in the south, and is more archaic in its external form. The signs are also less informative: as in OAkk, initial homorganic voiced and voiceless stops are still represented by the same sign, and consonant doubling is not regularly indicated. The language is also more conservative than OB, particularly in resisting vocalic contraction. A persistent characteristic of Assyrian in all periods is the so-called Assyrian vowel harmony: short *a* in an open syllable is assimilated to the vowel of the following syllable: thus, the Assyrian equivalent of Babylonian *iṣbatu, ittaṣi,* would be *iṣbutu, ittiṣi.* It is noteworthy that Assyrian literary texts of all periods, whether copies of imported Babylonian texts or native Assyrian compositions (including the increasingly lengthy inscriptions of Assyrian kings), generally employ the Babylonian dialect, with occasional grammatical Assyrianisms (see Hecker 1968).

D. Late Second-Millennium Dialects

1. "Standard Babylonian." The Kassite domination of Babylonia that began after the downfall of the Hammurabi dynasty (ca. 1595 B.C.) disrupted literary and other scribal activities; consequently, the second half of the 2d millennium is generally not very well represented in direct textual remains. Nevertheless, this was clearly a period of great importance in the history of the Akkadian language and literature, involving a sifting of the OB literary inheritance. Some texts were discarded, presumably, at least in part, for theological reasons; others were reformulated in a new and standardized "canonical" form that henceforth remained normative as long as texts were written in Akkadian (von Soden 1953). These literary texts were couched in a form of Akkadian usually called "Standard Babylonian" (in German, *jungbabylonisch*), a specifically literary "dialect" loosely modeled on the OB literary language. The most noteworthy divergences of Standard Babylonian (SB) from OB are the loss of mimation in noun and pronoun and the reduction of case endings to *-u* for nominative and accusative singular, *-i* for genitive

singular, and *-ī* or *-ē* for all cases of plural. Though influenced in these and sometimes in other ways by the contemporary spoken language, which increasingly diverged from it, SB remained in essence the norm for almost all literary and religious works until the end of Akkadian literary production. Texts in SB, although sparse in number for the remainder of the 2d millennium, increase thereafter, particularly in the 8th and 7th centuries. The library assembled by Assurbanipal at Nineveh (ca. 625 B.C.), and excavated by Layard, Rassam, and others, is a particularly rich source of such literary texts.

2. Middle Babylonian/Assyrian and Peripheral Dialects. In contrast to the "Standard Babylonian," which was primarily a literary dialect, Middle Babylonian (MB) and Middle Assyrian (MA) represent spoken vernacular dialects of S and N Mesopotamia in the second half of the 2d millennium (ca. 1530–1000 B.C.). Middle Babylonian (Aro 1955 and 1957) is rather sparsely attested in day-to-day documents such as letters and contracts. Middle Assyrian (Mayer 1971) is somewhat better attested, in a law code (cf. *ANET*, 180–8), rituals, a series of harem decrees, letters, and some royal inscriptions. It was in this period that Akkadian came to be used as an international lingua franca in Egypt, Syria-Palestine, Anatolia, Iran, and N Mesopotamian Hurrian centers like Nuzi. Texts discovered at sites such as el-Amarna, Ugarit, Boghazköy, and Nuzi attest the so-called "peripheral dialects" of Akkadian, in which the Akkadian sources contain aspects of the respective local language of the scribes. Texts of this period, whether from Mesopotamia or the peripheral areas, are most strikingly distinguished from those of the preceding area by (1) consonantal shifts—for example, *š* before a dental or another sibilant becomes *l* (e.g., OB *ištən, ušziz* becomes MB/MA *ilten, ulziz*), (2) loss of mimation, and (3) toward the end of the millennium, loss of functionally distinct case endings. There are also some noteworthy differences between MA and MB: MA reflects (1) vowel harmony—for example, initial *wa-* becomes *u-*, and *š* before a labial becomes *s* (e.g. OB *wašbat* in MA becomes *usbat*), and (2) velarization or partial assimilation of infixed *t* to preceding *q* (Bab *iqtanarrab* = Ass *iqṭanarrab*).

E. First-Millennium Akkadian

1. Neo-Babylonian and Neo-Assyrian (ca. 1000–625 B.C.). Ending with the fall of the Assyrian kingdom, these dialects are attested mainly in letters and contracts, though Neo-Assyrian (NA) was also used in treaties and occasionally in literary and religious texts. Both dialects show the increasing influence of Aramaic, especially in the loss of case endings, the adoption of the Aram preposition *la*, "to, from," and replacement of *nīnu*, "we," by *anīnu* under influence of Aram *ʾanaḥnā*. Assyrian continued to be more resistant to change than Babylonian; thus, vowel contraction in final positions or in hollow verbs is resisted in the sequences *ia, iu, ua* (e.g., Bab *bikâ, annû, ikân* remain uncontracted in Ass *bikiā, anniu, ikūan*).

2. Late Babylonian (615 B.C.–1st century A.D.). This is the language of the Chaldean, Persian, and Seleucid-Arsacid periods. It is even more strongly influenced by Aramaic and is found in royal inscriptions, letters, and economic documents. The Greek language became used increasingly by the Babylonian upper class after the Macedonian conquest of Babylon (333 B.C.), and Akkadian documents become increasingly scarce, their use being limited mainly to the dwindling temple complexes that tried in vain to preserve and promote the old ways. The very last attested cuneiform documents date to ca. A.D. 50 and deal mostly with astrological subjects.

ARAMAIC

Aramaic is the best-attested and longest-attested member of the NW Semitic subfamily of languages (which also includes *inter alia* Hebrew, Phoenician, Ugaritic, Moabite, Ammonite, and Edomite). The relatively small proportion of the biblical text preserved in an Aramaic original (Dan 2:4–7:28; Ezra 4:8–68 and 7:12–26; Jeremiah 10:11; Gen 31:47 [two words] as well as isolated words and phrases in Christian Scriptures) belies the importance of this language for biblical studies and for religious studies in general, for Aramaic was the primary international language of literature and communication throughout the Near East from ca. 600 B.C.E. to ca. 700 C.E. and was the major spoken language of Palestine, Syria, and Mesopotamia in the formative periods of Christianity and rabbinic Judaism.

Jesus and his disciples, according to the stories in the Gospels, spoke Aramaic. Parts of the later books of the Hebrew Bible, as well as portions of the Gospels and Acts, are often thought to be translations from Aramaic originals, but even if not they are undoubtedly strongly "Aramaized" in their diction. Late biblical Hebrew and rabbinic Hebrew were heavily influenced by Aramaic in both grammar and vocabulary. Two of the major translation traditions of the Hebrew Bible—the Syriac Peshitta and the Jewish Targums—are in Aramaic, as are substantial portions of rabbinic literature, the entire literary corpus of Syriac Christianity, and that of the Mandaeans (a non-Christian gnostic sect of S Mesopotamia). After the Moslem conquest, Arabic gradually displaced Aramaic as the literary and colloquial language of the Near East. Isolated pockets of Modern Aramaic speech still remain to this day, and the study and use of classical Syriac as a learned, religious language has never stopped. Indeed, it has witnessed somewhat of a revival in recent decades (see *EJ* 3: 259–87).

———

A. The Periods and Sources of Aramaic

Aramaic is attested over a period of almost 3,000 years, during which time there occurred great changes of grammar, lexical stock, and usage. It has generally proved helpful for analysis to divide the several Aramaic dialects into periods, groups, and subgroups based both on chronology and geography. Although no universally accepted scheme of such classificatory phases exists, and new discoveries regularly alter our picture—especially for the sparsely attested older dialects—the general shape of the outline is clear. The following scheme represents that adopted by the major research project in the field—the Comprehensive Aramaic Lexicon—and incorporates discoveries through the mid-1980s.

1. Old Aramaic (to ca. 612 B.C.E.). This period witnessed the rise of the Arameans as a major force in ANE history, the adoption of their language as an international language of diplomacy in the latter days of the Neo-Assyrian Empire, and the dispersal of Aramaic-speaking peoples from Egypt to Lower Mesopotamia as a result of the Assyrian policies of deportation. The scattered and generally brief remains of inscriptions on imperishable materials preserved from these times are enough to demonstrate that an international standard dialect had not yet been developed. The extant texts may be grouped into several dialects:

a. Standard Syrian (or Western Old Aramaic). These inscriptions, of very limited chronological (mid-9th to end of 8th century B.C.E.) and geographic spread (within a radius of about 100 km centered on Aleppo) include:

BR-HDD: A brief dedication of a stela to Melqart (the god of Tyre) by BR-HDD, king of Aram.

Zakkur: A stela dedicated to the god Iluwer by Zakkur, king of Hamath. Its text is reminiscent of many of the Psalms of Thanksgiving.

Sefire: Three stelae containing the text of a treaty between Mati‘el, king of Arpad, and BR-G›YH, king of KTK, apparently the governor of one of the Neo-Assyrian Syrian provinces (perhaps Šamši-Ilu of Bit-Adini [Lemaire and Durand 1984]). This text is our best extrabiblical source for the West Semitic tradition of covenantal blessings and curses.

Nerab: Funeral stelae of two priests of the moon-god, Śehr.

BR-RKB: See Samalian, below.

b. Samalian. At modern Zinçirli, dynasts of the Neo-Hittite kingdom of Sam›al (also referred to by some scholars as Ya›udi) wrote their dedicatory inscriptions first in Phoenician (KLMW), then in a local, highly idiosyncratic Aramaic dialect (the so-called Hadad and PNMW inscriptions), and, finally, in standard, Syrian Old Aramaic (BR-RKB).

c. Fakhariyah. A bilingual, Neo-Assyrian and Aramaic inscription on a statue. The script and orthography of this inscription are of major importance for the history of the alphabet (Kaufman 1986).

d. Mesopotamian. Primarily consists of brief economic and legal texts and endorsements scratched on clay tablets (Fales 1986; Kaufman 1989). Not surprisingly, both the Fakhariyah and Mesopotamian dialects evidence a substantial amount of Akkadian influence.

e. Deir ‘Alla. This important but fragmentary text, painted on the plaster walls of a cultic installation, recounts a vision of "Balaam, son of Beor," the Transjordanian prophet known from Numbers 22–24. The fact that some scholars classify the language of this text as a Canaanite, rather than an Aramaic, dialect, illustrates that there is no demonstrable dividing line (or, in linguistic terms, a bundle of isoglosses) separating Canaanite and Aramaic at this time. See DEIR ‘ALLA (TEXTS).

2. Imperial Aramaic (or "Official Aramaic"; to ca. 200 B.C.E.). During this period Aramaic spread far beyond the borders of its native lands over the vast territories of the Neo-Babylonian and even larger Persian empires—from Upper Egypt to Asia Minor and eastward to the Indian subcontinent. Unfortunately, only a remnant of the undoubtedly once vast corpus of administrative documents, records, and letters that held these empires together has been preserved, for such texts were written in ink on perishable materials, in sharp contrast to the more durable cuneiform clay tablets of earlier W Asiatic cultures. (A single syllabic cuneiform Aramaic text, an incantation from Uruk, is known. Though from Hellenistic times, its archaizing language may be ascribed to this period.) Isolated monumental stone inscriptions have been found in the various peripheral regions (e.g., Sheik Fadl in Egypt, Teima in Arabia, Daskyleion in Asia Minor), but none, surprisingly enough, in the core regions of Syria and Mesopotamia.

The bulk of the finds, however, is from Egypt, where the dry climate led to the preservation of papyrus and leather along with the expected ostraca and stone inscriptions. The major Egyptian finds are (1) papyrus archives of the Jewish military garrison at Elephantine/Syene (including deeds of sale, marriage contracts, formal letters to the authorities in Jerusalem, and fragments of literary materials); (2) the correspondence of the Persian satrap of Egypt, Arsames; (3) a packet of letters sent to family members residing at Syene and Luxor, discovered at Hermopolis; and (4) Saqqarah: a late-7th-century papyrus letter from a Philistine king (perhaps of Ekron) asking help of pharaoh against the king of Babylon; and legal and economic records on papyri and ostraca from the 5th and 4th centuries.

The Aramaic "official" letters in the book of Ezra are almost certainly composed in Imperial Aramaic, for both their language and their epistolary style are appropriate to the period.

More fascinating for their historical context than their content are the fragmentary papyrus deeds of sale, dating from mid-4th-century Samaria, discovered in a cave of the Wadi Daliyeh, near Jericho, along with the skeletons of about 200 people who had apparently fled from the approaching Macedonian army. See DALIYEH, WADI ED- (M.R. 189155).

From a linguistic perspective, what characterizes this period above all is that it witnessed the development of a literary, standard form of both the language and its orthography—an ideal to be strived for, at least in literary texts and formal documents. The model for this standard appears to have been Babylonian Aramaic as spoken and written by educated Persians. This ideal, in the guise of Standard Literary Aramaic, was to last more than a thousand years.

3. Middle Aramaic (to ca. 250 C.E.). In the Hellenistic and Roman periods, Greek replaced Aramaic as the administrative language of the Near East, while in the various Aramaic-speaking regions the dialects began to develop independently of one another. Written Aramaic, however, as is the case with most written languages, by providing a somewhat artificial, cross-dialectal uniformity, continued to serve as a vehicle of communication within and among the various groups. For this purpose, the literary standard developed in the previous period, Standard Literary Aramaic, was used, but lexical and grammatical differences based on the language(s) and dialect(s) of the local population are always evident. It is helpful to divide the texts surviving from this period into two major categories: epigraphic and canonical.

a. Epigraphic. (1) Palmyrene: dedicatory and honorific inscriptions and a decree of duty tariffs from the independent Syrian desert oasis trading city of Tadmor/Palmyra (earliest: 33 B.C.E.). Many of the texts are Greek bilinguals.

(2) Nabatean: tomb and votive texts from the Arab kingdom of Petra (earliest: 170 B.C.E.). A hoard of legal papyri from the Bar Kokhba period was discovered in one of the Naḥal Ḥever caves.

(3) Hatran: dedicatory inscriptions from the important, 2d-century C.E. Parthian kingdom of Hatra. A smaller, similar group was found at nearby Assur.

(4) Other: isolated inscriptions from Syria (especially Dura-Europos), Asia Minor, Armenia, Georgia, Media, Parthia, Persia, and Babylonia. Archival materials from the Judean desert are also to be placed here.

b. Canonical. (1) Daniel. The Aramaic portions of this biblical book (in contrast to the material in Ezra) clearly belong to this dialect rather than to Imperial Aramaic.

(2) Jewish Literary Aramaic. (a) Qumran. Among the Dead Sea Scrolls, much (if not most) of the nonsectarian, parabiblical material is in Aramaic. This includes the *Genesis Apocryphon,* the *Targum of Job,* the books of *Enoch,* and the *Testament of Levi.*

(b) Targum Onkelos/Jonathan. Although the only reliable mss stem ultimately from the Babylonian academies, the consonantal texts of Targum Onkelos to the Torah and Jonathan to the Prophets apparently originated in Palestine in this period.

(c) Legal Formulas. Preserved in rabbinic literature are texts and formulas of an authentic Aramaic tradition.

(3) Middle Iranian Ideograms. After a brief flirtation with cuneiform for their monumental inscriptions ("Old Persian"), the Persians adopted the Aramaic script for writing their language; and,

perhaps under the cuneiform model, in both Parthian and Pehlevi, Aramaic ideograms were used to indicate some Persian lexical units.

(4) Demotic Material. Also, apparently, from the earliest part of this period is the Aramaic material preserved in the demotic script on papyrus Amherst 63, which includes several hymns in a mixed Canaanite/Aramaic dialect and, in relatively good Aramaic, the lengthy story of the conflict between the two royal Assyrian brothers Asshurbanipal and Shamashshumukin. The decipherment of this material has been a slow process, but it is already clear that many unexpected features appear in the Aramaic of this text. Since Standard Literary Aramaic is very much a function of orthographic tradition, the occurrence here of such unexpected forms should not be a great surprise.

4. Late Aramaic (to ca. 1200 C.E.). The bulk of our evidence for Aramaic comes from the vast literature and occasional inscriptions of this period. During the early centuries of this period Aramaic dialects were still widely spoken. During the second half of this period, however, Arabic had already displaced Aramaic as the spoken language of much of the population. Consequently, many of our texts were composed and/or transmitted by persons whose Aramaic dialect was only a learned language. Although the dialects of this period were previously divided into two branches (Eastern and Western), it now seems best to think rather of three: Palestinian, Syrian, and Babylonian.

a. Palestinian. (1) **Jewish.** (a) Inscriptions (mostly from synagogues); (b) Targumic: the dialect of the Palestinian Targums (Neofiti, Genizah fragments, and the Fragment Targum); (c) Galilean: the dialect of the Talmud and midrashim of Palestine (so-called "Yerushalmi").

(2) Christian. Christian Palestinian Aramaic is attested in a small group of inscriptions, bible translations, and liturgical lectionaries from the Judean region written in Syriac script.

(3) Samaritan. Two different translations of the Torah, liturgical poetry, and some literary/exegetical works are preserved from this group. The reading tradition of the modern Samaritan priests is a valuable linguistic source here, as it is for their Hebrew tradition.

b. Syrian. (1) Syriac. The liturgical language of Eastern Christianity is by far the best documented Aramaic dialect. A vast and varied literature in two (Eastern/Nestorian, Western/Jacobite) dialects and orthographies has been preserved, as well as small collections of epigraphic and archival materials. The orthography of Syriac is based on Standard Literary Aramaic, while its lexicon and grammar are primarily that of the city of Edessa.

(2) Late Jewish Literary Aramaic. This literary dialect, only recently recognized, served for the composition of Aramaic parabiblical and liturgical texts (the best known of them being Targum Pseudo-Jonathan, Targum Psalms, and the canonical Targum of Job) and in some cases (Tobit and perhaps others) for the translation into Aramaic of works whose presumed Hebrew or Aramaic original had been lost. Like other literary dialects, it borrows heavily from its forebears, in this case Biblical Aramaic, Jewish Literary Aramaic, Jewish Palestinian Aramaic, and Jewish Babylonian Aramaic. Like most rabbinic materials, the texts have suffered greatly in transmission and often give the impression of massive inconsistency. Recent studies have revealed, however, that this is a real, albeit literary dialect with its own grammar and lexicon, whose lexical affinities point to a close relationship with the Syriac-speaking region.

c. Babylonian. (1) Jewish. The spoken language of the Jews of Babylonia, preserved primarily in large parts of the Babylonian Talmud. Slightly different dialects are found on "magic bowls" (incantations written on pottery bowls) and in the halakic literature of the post-Talmudic Babylonian sages (*ga›onîm*). The written and oral traditions of the Jews of Yemen are particularly important sources for this material.

(2) Mandaic. The spoken and literary language of a non-Christian gnostic sect. The sect itself is generally thought to have Palestinian origins, but its language is totally at home in Mesopotamia.

5. Modern Aramaic (to the present day). These dialects can be divided into the same three geographic groups.

a. Western. Here Aramaic is still spoken only in the town of Ma'lula (ca. 30 miles NNE of Damascus) and surrounding villages. The vocabulary is heavily Arabized.

b. Syrian. Western Syrian (Turoyo) is the language of Jacobite Christians in the region of Tur-ʿAbdin in SE Turkey. This dialect is the descendant of something very like classical Syriac. Eastern Syrian is spoken in the Kurdistani regions of Iraq, Iran, Turkey, and Azerbaijan by Christians and, formerly, by Jews. Substantial communities of the former are now found in North America. The Jewish speakers have mostly settled in Israel. These dialects are widely spoken by their respective communities and have been studied extensively during the past century. It has become clear that they are not the descendants of any known literary Aramaic dialect.

c. Babylonian. Mandaic is still used, at least until recently, by some Mandaeans in southernmost Iraq and adjacent areas in Iran.

In addition, in recent years classical Syriac has undergone somewhat of a revival as a learned vehicle of communication for Syriac Christians, both in the Middle East and among immigrant communities in Europe and North America.

B. Linguistic Overview

The following summary presupposes a basic acquaintance with the structure of Aramaic's better known cognate language, Biblical Hebrew.

1. Old Aramaic. a. Phonology. In this period the Proto-Semitic phonemic inventory survives virtually unchanged, though some minor changes in articulation seem to be indicated. Since the linear consonantal alphabet used for Aramaic, borrowed from a Canaanite/Phoenician source, had only 22 graphemes, however, several of the characters had to be polyphonous: Thus

šin indicates: *š, ś,* and *t̲*.
samek (at Fakhariyah only) indicates both *s* and *t̲*.
zayin indicates *z* and *d̲*.
ṣade indicates *ṣ* and *ẓ*.
qop indicates *q* and *ḳ* (probably a velar spirant by this time).
ḥet indicates *ḥ* and *ḫ*.
ʿ*ayin* indicates ʿ and *ġ*.

That these consonantal phonemes still survived (rather than having merged with their graphic equivalent) is surmised largely on the basis of their independent histories in the subsequent dialects. In the case of *ḫ* and *ġ*, however, evidence for their existence is primarily extrapolated from the fact that they are still regularly distinguished in the demotic papyrus (see above). The result of these orthographic choices is (with the exception of *qop*) to give these texts an appearance very similar to that of Canaanite, a fact that has led some scholars to unwarranted claims of Canaanite influence in grammar, vocabulary, and style. The consonant *nun* is assimilated to a following consonant: ʾ*t*, "you."

b. Morphology. (1) Nouns. The most notable difference between Aramaic and the other NW Semitic dialects is the presence of the suffixed definite article *-ā (ʾ).* Probably in origin the same form as the Hebrew and Phoenician *ha-*, the suffixation of this deictic element gives Aramaic the appearance of having three noun states (absolute, construct, emphatic [or determined]) rather than two (absolute and construct) as in Hebrew. The morphology of noun affixes is set out paradigmatically in Table 1.

	absolute	construct	emphatic
m. sg.	*mlk*	*mlk*	*mlkʾ*
m. pl.	*mlkn (-īn)*	*mlky (-ay)*	*mlkyʾ (-ayyāʾ)*
f. sg.	*mlkh (-a[h])*	*mlkt (-at)*	*mlktʾ (-atāʾ)*
f. pl.	*mlkn (-ān)*	*mlkt (-āt)*	*mlktʾ (-atāʾ)*

Note, vis-à-vis Hebrew, the final *nun* as opposed to Hebrew *mem* in the m. pl. abs. and likewise the *nun* in the f. pl. abs. instead of the expected *taw*. Standard Old Aramaic does seem to use the *taw* f. pl. for attributive adjectives, however; thus *lḥyt*, "bad" (Sefire III:2).

It is in its noun morphology where the Samalian dialect differs most markedly from the other early Aramaic dialects. It uses no orthographically indicated definite article and has f. pl. in *-t*. Its most distinctive feature, however, is surely the absence of *nunation* on the plural accompanying the retention of

case distinction; thus *ʾlhw* is nominative, while *ʾlhy* is the oblique (accusative/genitive) form for "gods." The Deir ʿAlla plaster text yields no evidence of a definite article.

(2) Verbs. The three basic conjugations (stems) are the basic stem (*Peʿal: katab/yiktub*, etc.), factitive stem (*Paʿel: kattib*), and causative stem (*Hapʿel: haktib*). Passives are expressed by internal vowel modification of the active form (presumably using the vowel pattern *u-a* in the derived conjugations as in Hebrew; Middle Aramaic has a basic passive stem *Peʿīl* in the perfect—identical with the passive participle—but no evidence for such a form is found this early.) No certain *Nipʿal* is attested in normative Aramaic, though it does occur at Deir ʿAlla and, possibly, in Samalian. Reflexive/middle stems with a *taw* augment (*ʾtpʿl*), which will soon begin to replace the internal passives, are still rare in this period. At Fakhariyah, the reflexive of the basic stem still has infixed *taw*, as in Arabic and Ugaritic. Attested verb formatives are shown in Table 2.

Suffixing formatives:

	sing.	pl.
1c	*–t*	*–n*
2m	*–t*	*–tm*
3m		*–w*
3f	*–t*	

Prefixing/suffixing formatives:

1c	*ʾ–*	*n–*
2m	*t–*	*t– –n*
3m	*y–*	*y– –n*
3f	*t–*	*y– –n*

Additionally, a separate jussive form exists, differing morphologically (and orthographically) from the imperfect in its absence of nunation in the 3 m pl. and 2 m pl. (and, presumably, the 2 f. s, as in later Aramaic) and in final weak roots, where the imperfect ends in *-h* (presumably /ē/), the jussive in *-y* (probably, simply /ī/). The two forms are also distinct when they have pronominal suffixes, where (as in Hebrew) the imperfect inserts the so-called "energic" *nun* between the stem and the suffix, while the jussive does not. Samalian uses jussive-like forms for the imperfect as well (cf. Heb *yktbw*). In Fakhariyah, Mesopotamian, and Samalian, the 3d person jussive may take a *lamed* preformative instead of a *yod* (cf. the Akkadian precative), a form that was to be the ancestor of the later *l-/n-* preformative of the E Aramaic dialects. It is now clear that the so-called "imperfect consecutive" narrative tense was common to Old Syrian Aramaic and Hebrew. Its former designation "converted imperfect" is a misnomer. It is a remnant of the archaic prefixing preterite tense surviving from some earlier stage of the Semitic languages and still to be found in Old Aramaic (in the Zakkur inscription and at Deir ʿAlla, but not at Sam'al). It is one of many grammatical and lexical isoglosses in respect to which Hebrew groups with Aramaic rather than Phoenician.

In its nominal forms, too, Old Aramaic now appears to be much closer to Hebrew than previously thought. In Syrian Old Aramaic a distinct "infinitive absolute" is attested (cf. Sefire III:2 *hskr thskrhm*, "you shall certainly hand them over"). The infinitive absolute is formed without suffixes; in contrast, the "construct" infinitives (verbal nouns) of the derived stems have a feminine ending (*ḥzyh*, "to see": *lhmtty*, "to kill me"). Pronouns suffixed to these construct infinitives are morphologically like affixes to nouns rather than affixes to verbs. In the basic stem, Fakhariyah has infinitives with the *mem* preformative (known from later Aramaic), whereas the other dialects (again like Hebrew) have so far yielded only forms without the *mem*. On the other hand, at Fakhariyah the derived stem verbal noun seems to be without feminine ending. The *Peʿal* passive participle is *Peʿīl* (cf. Heb *Pāʿûl*).

c. Syntax. The various verbal forms are used in constructions virtually identical to constructions found in classical Hebrew prose, although the word order is, perhaps, a bit more free. Except for the Fakhariyah bilingual, the distinctive verb-final word order of formal Imperial Aramaic has not yet made its

appearance. Only in Fakhariyah and Mesopotamian do we encounter genitive constructions using the old determinative pronoun (later, the relative) *zy* (*ḏī* > *dī* > *d-*). Complex definite direct objects may be introduced by the particle *ʾyt* (*ʾiyāt* > *yt* in later Western Aramaic; cf. Hebrew *ʾet*). Verbal phrases subordinated to a main verb use the verbal noun if the relationship is telic, but otherwise the imperfect seems to be preferred. This gives rise to the distinctive double negative *lʾkhl lʾšlḥ*, "I shall not be able to send."

2. Imperial Aramaic. a. Phonology. The graphic representation of consonants begins to change noticeably, presumably as a result of phoneme mergers and the ensuing or concomitant introduction of the spirantization of stops (the "rafe" pronunciation of the *begad-kepat* consonants in Hebrew, a phenomenon surely due to Aramaic influence). Though in this period archaizing orthographies are common (particularly with *z* for historical *ḏ* and *q* for original *ḍ*), the language here starts to employ the consonantal inventory it will have in subsequent dialects. These mergers are: *ṯ* > *t*, *ḏ* > *d*, *ḍ* > *ʿ*, *ẓ* > *ṣ*, *ḫ* > *ḥ* (though in some dialects the reverse may have been the case), *ġ* > *ʿ*. The initial tendency for *ś* to merge with *s* probably can also be ascribed to this period, since it is common to all subsequent dialects. The other distinctively Aramaic phonological feature—the reduction of short vowels in open unstressed syllables—also seems to have had its start in this period, at least for *i/u* vowels.

A noteworthy feature of the formal language (the base of Standard Literary Aramaic) is frequent nasalization, a process whose orthographic manifestation is the dissimilation of long ("doubled") consonants into *nun* + consonant. In some of these forms—e.g., *ʾnt (h)*, "you"—the *nun* is etymologically correct but had been assimilated in Old Aramaic. In others (e.g., *mndʿ*, "knowledge"), it is strictly a phonetic phenomenon.

b. Morphology. The semi-demotic language of the personal letters evidences features that are later to appear in the formal language: weakening of the *HapʿEl* (*hktb/yhktb*) to *apʿEl* (*ʾktb/yktb*), and substitution of *nun* for *mem* on the plural pronominal suffixes. The later Western Aramaic features of *-n* on the 3 pl. perfect of IIIy verbs and *mem* preformative of derived stem infinitives are also found. Changes in the formal language include the simplification of the infinitive to a single form (*PeʿAl mktb*), the use of 3 m. pl. forms for 3 f. pl., and the first appearance of the determined plural ending *-ē*. This form appears first on gentilics and collectives, and later, in the Eastern dialects, will replace *-ayyā* as the normal ending of the masculine plural.

c. Syntax. Morphosyntactic developments characterizing Imperial Aramaic involve the restriction of some features of the language and the expansion of others. The use of internal passives is limited in favor of the *ʾt-* preformative stems (only *ʾetpeʿEl* and *ʾetpaʿAl* are attested in this period). Internal passives seem to have survived the longest in the causative conjugation. Biblical Aramaic word-initial *ht-* is probably a Hebraism.

The imperative/jussive contrast is sporadically neutralized. The participle, used only as a substantive in Old Aramaic, is employed as a present tense verb. In personal letters a compound tense develops which uses the participle with forms of the verb *hwy*, "to be"; this compound tense becomes common in the later dialects. The "imperfect consecutive" disappears as a narrative tense.

The distribution of particles undergoes considerable change. The particle *ʾyt* (later *yt*), which marks definite direct objects, is supplanted by the prefix *l-* affixed to the object. Use of *dy/zy* (later Aramaic *d-*) as a determined pronoun marking genitival constructions becomes widespread.

Word order remains generally unchanged in the demotic and archival materials. In the formal language of the official letters (and in Biblical Aramaic), however, verb final constructions become very common, probably due to the influence of Persian, an Indo-European language.

3. Later Dialects. a. Phonology. Short vowels in unstressed syllables are reduced and, in some cases, totally elided. The vocalization traditions indicate that in the period after the loss of final case vowels, stress was generally on the final syllable of the word, although the modern dialects (and some reading traditions) show a strong tendency toward penultimate stress (the phonological situation that had obtained prior to the loss of those vowels). Weakening of the laryngeal/pharyngeal consonants is characteristic

both of Palestinian dialects (Samaritan and some Galilean) and of Babylonian. In Syriac and Babylonian, final unstressed long vowels are elided, as are final liquids, nasals, and interdentals in Babylonian.

Characteristic of all Aramaic dialects, indeed of all Semitic languages, is variation of vowel quality in different environments of stress and syllable length, even though such changes are indicated only irregularly in the schemes of vowel pointing introduced in Late Aramaic. Typically, front and back vowels are raised in closed stressed syllables and lowered in closed unstressed syllables. In Western Syriac, all mid and low long vowels are raised; thus *ō* > *ū, ē* > *ī*, and *ā* > *ō.* In some dialects simplification of diphthongs is similarly conditioned; in others (notably Syriac), *ay* and *aw* are tenaciously preserved (almost certainly due to secondary restoration) in the reading traditions.

b. Morphology. In Hatran, Syriac (occasionally in Palmyrene), and Babylonian, *-ē* has become the normal m. pl. emphatic suffix.

The *Hap‹el* reflexive/passive *›ettap‹al* (< *›ethap‹al*) occurs in all later branches of Aramaic. After the demise of the internal passives, then, the following symmetrical pattern of stem formation is distinctive to Aramaic:

Basic: *kĕṯaḇ ›eṯkēteḇ*

Factitive: *katteḇ ›eṯkattaḇ*

Causative: *›aḵteḇ ›ettaḵtaḇ*

Though a substantial group of derived stems with the prefixes *š-* and *s-* occur, some borrowed from Akkadian, others, no doubt, survivals from an earlier stage of the language (e.g., *šaḵlel,* "to complete"; *ša‹beḏ*, "to enslave"), the *Šap‹el* is not a productive causative conjugation in Aramaic.

The infinitives of the derived stems continue to show substantial variation, e.g., for the *Hap‹el:*

SLA *›aḵtāḇā* (*›aḵtābū-* before suffixes)

Western *maḵtāḇā* (but *›aḵtāḇā* as a verbal noun)

Syriac *maktāḇū*

Babyl *›aḵtōbē* (also in proto-Eastern Neo-Aram.)

As the original participle (*kāṯeḇ*) becomes a tense, a new, nominal participle *kāṯōḇ* frequently appears.

In Babylonian, the precative preformative *l-* is the normal prefix of the preformative tense (sometimes *n-*), while in Classical Syriac *n-* (presumably simply a phonetic variant of *l-*) is used.

In Palestinian Jewish Targumic and Galilean the prefix of the 1 c.s. imperfect is *n-* (instead of *›-*).

c. Syntax. In Eastern Aramaic the system of nominal states is restructured so that the emphatic (old determined) form becomes the normal form of the noun. Thus *malkā* means "the king" or "a king." The old absolute is preserved in predicate nominatives and distributive constructions, as well as with numerals. The use of both the construct state and the bound form with pronominal suffixes becomes more and more limited over time. Palestinian Jewish Targumic tends to avoid the use of pronominal suffixes on verbs as well.

Internal passives, at first limited to the perfect, are finally replaced by the *›t-* stems.

In most dialects, participles have eventually become a full-fledged present, even displacing the imperfect as a general present-future. (The imperfect, then, is restricted to use as a modal form.) In Syrian and Babylonian the pronouns are joined enclitically to the participle as subject markers: *kāṯeḇ* + *›ănā* > *kāṯeḇnā.* (In Western Aramaic the pronouns preceded the participle; this is the origin of the present-future forms at Ma‹lula.)

Proto-Eastern Neo-Aramaic develops a new past tense from the passive participle that totally displaces the old perfect: *kĕtīb-lī,* "I wrote." Ultimately, the present-future system is reshaped as well: The present-future (old participle) entirely displaces the old imperfect, and new present tense forms are developed.

STEPHEN A. KAUFMAN

BYBLOS SYLLABIC INSCRIPTIONS

A group of inscriptions excavated by a French expedition to Byblos (modern Jebeil) between 1929 and 1932. The tiny corpus consists of three monumental inscriptions on stone (one of which is undeciphered, and probably in a different language or writing system than the others), and six stamped with a blunt chisel on copper plates or "spatulas." Two more inscriptions in a related but undecipherable system were discovered in further excavations in 1982. From the meager archaeological evidence available, and from internal evidence, the texts represent the dialect of Byblos (and presumably of the E Mediterranean coastal region) of the late phases of the EB Age, though the texts themselves may date as late as the Egyptian 12th Dynasty (the date assigned by the excavator M. Dunand), but certainly no later than ca. 1800 B.C. The texts were very well published in 1945 (Dunand). Though an attempt at decipherment was published in 1952 by E. Dhorme, it was not accepted since it made no attempt to identify the vowels and the syllabary included an entirely unacceptable number of variant signs for the same consonant. The content as read yielded no new information of any significance and consisted of vague ritual formulas mentioning mostly Egyptian deities. An attempt at linguistic analysis by Sobelmann (1961) was useless and did not attempt an actual reading of a single sign. In 1985 after decades of work on the texts, George E. Mendenhall published a decipherment and tentative translation of the texts, with a number of improved readings based on infrared photographs of the texts, as well as a grammatical analysis.

A. The Writing System

As Professor Dunand abundantly illustrated in his publication of the texts, the syllabary is clearly inspired by the Egyptian hieroglyphic system, and in fact it is the most important link known between the hieroglyphs and the Canaanite alphabet that scholars have sought since the 19th century, though not all of the syllabic signs can be thus explained. The texts yield 64 different signs, all except two of which designate a consonant (24 in all) plus a following vowel *a, i,* or *u.* See Fig. LAN.02. One sign has been read as a ligature that yields a closed syllable, and another sign seems to designate a vowelless, i.e., alphabetic, final *mim.* Because of the consonant + vowel nature of the syllabary, neither closed syllables nor doubled consonants can be indicated directly. As also in the Eblaite and the Mycenaean Linear B systems, there are numerous instances of "dead vowels." This occurs when a syllabic sign was used to indicate a consonant only, usually when a closed syllable was called for by the grammatical context. It is quite probable that this usage was later extended to drop the notation of vowels entirely, resulting in the much simpler Canaanite alphabetic system.

The signs in this syllabic system very probably were originally pictographic representations of common objects, and a number are identical to Egyptian hieroglyphs, indicating the close relationship. Yet already in this archaic writing system many of the signs had already become so stylized or abbreviated that the original pictograph is either entirely unrecognizable or can be presumed only from later alphabetic forms, especially the Proto-Sinaitic signary that is typologically much more archaic. The first consonant-vowel syllable in the name of the object represented became the phonetic value of the sign—the acrophonic principle.

Most of the signs of the later Canaanite, Proto-Sinaitic, and Eastern (i.e., pre-Islamic Arabic) alphabets derive either from the Byblos syllabic set or from some closely related source. It is especially intriguing and significant that the Canaanite and Eastern alphabets in several cases used different signs from the same series, since there were theoretically three signs for each consonant (*Ca, Ci, Cu*). For example, for the consonant */d/* the Canaanite alphabet used the syllabic sign for phonetic *du,* which represented a fish ("Old Coastal Semitic" [see below] *dugg* became Canaanite *dag*), in form a triangle (i.e., delta) with tail fins. The Eastern alphabets used the *da* sign, which actually represented a door leaf. The later loss of any connection between phonetic value and pictorial representation is indicated by the fact that the Canaanites gave the door *name (dalet/delta)* to the fish sign. Similarly, for the consonant */p/,* the Canaanite alphabet continued the use of a highly abbreviated form of the *pa* sign (of unknown meaning), while the Eastern alphabets used the *pu* sign, a circle that doubtless represented the mouth saying *pu.* Similarly, for *ṣade* the Canaanite alphabet used the *ṣa* sign, which perhaps represented a scimitar, while the Eastern alphabet used the *ṣi* sign, which represented a growing vegetative shoot (Heb *ṣīṣ*).

In view of the similar syllabic structure and the similarity of some signs, it is probable that the Minoan/Mycenean linear systems were dependent at least by stimulus diffusion upon the Byblos syllabic system.

B. The Language

The language itself is termed "Old Coastal Semitic" (OCS) to distinguish it from Canaanite and Ugaritic. The contrasts to Ugaritic in every way are so great that they cannot be placed in the same category. The language of these texts is very archaic and pristine, in the sense that there is very little in the language that can be derived from some earlier form, while a very large amount can be seen to be that from which later Arabic and Canaanite forms or meanings derived. Thus it furnishes the basis for understanding the process of language change and language blending that resulted in the Canaanite language of the MB and LB periods. This process of hybridization (or blending, or creolization—all three terms have been used to describe a very well-known process in historical linguistics) took place some time between 2000 and 1700 B.C. and resulted in a new language termed "Canaanite" that was not structurally a continuity of either language complex involved. The linguistic influence that brought an end to OCS in the urban populations of the E Mediterranean coastal region was certainly a complex of "inland dialects" from N and NE Syria, especially Amorite. This process was in turn the result of still poorly understood events that attended the destruction of the EB Age urban civilizations of the coastal region, and the influx of populations from inland Syria who, at least by the 18th century, had become politically dominant in the coastal regions, as the Amorites had also become in 19th-century Mesopotamia.

These enormous linguistic changes that resulted in the Ugaritic and other Canaanite dialects were the major reason why these texts were not deciphered decades ago. Everyone who worked on them assumed that the language would have to be much like Phoenician (Dhorme) or Ugaritic. In fact, Ugaritic was almost entirely irrelevant and useless to the decipherment process, but various Arabic sources were astonishingly productive of meaningful cognates. A sample of the vocabulary indicates that 52 percent of the lexical items have Arabic cognates, while only 13 percent are Common Semitic. Approximately 25 percent of the vocabulary can be classified as Common West Semitic (which now, of course, includes pre-Islamic Arabic, Ethiopic, and Classical Arabic), and 10 percent of the vocabulary have no identifiable external cognates, which is to be expected from such an archaic dialect.

Only 24 consonants are attested over against the 30 alphabetic signs (actually only 27 different consonants) of Ugaritic, and 29 in pre-Islamic Arabic. A major reason for the reduced number of signs is the sharply limited number of velarized consonants (so-called "emphatics"). Only the *ṣade* and the *qof* are present, and the elaboration of velarization is thus seen to be a later linguistic development yielding the *ṭeth, ẓa,* and *dad.* It is of course possible that the extremely small corpus by accident did not include words with some of these consonants, but no other writing system of the time includes specific signs for these missing consonants, as well as for the *ġayin* which also does not occur in these documents.

The "hollow verbs" (*mediae waw/yod*) of later Semitic dialects are purely triconsonantal, with the *w* written when preceded and followed by a vowel. It is often represented as zero in a syllable containing a

/u/ vowel, as in the *figura etymologica ḥa-wu-bu+ma ta-ḥū-ba+m* (probably reflecting a theoretical original **ta-aḥ-wu-ba+m*), "you are certainly guilty." Diphthongs are written as two syllables, as in *ba-yi-ta+hu,* "his house," but several roots that later yield diphthongs have a medial */he/* instead of *waw/yod,* as in *ya-tu-ha-ʿ[i]-hi-du,* "they have bound themselves by covenant," and the startling form *ra-ha-ʿa,* "he has done evil." This proves that the Hebrew roots listed as *rʿ* and *ršʿ* are the same root, derived from two very archaic dialects at a time when the contrast between */h/* and */s/* was still operative (as in the *s-* and *h-* causatives in Old South Arabic dialects).

The verbal system is very complex, as one would expect from such an archaic dialect, and its description needs further study. It is very probable that there is a tense contrast between the present-future form *ya-qa-ta-lu* and the preterite *ya-qa-ti-lu,* as in E Semitic and Ethiopic. There are a variety of verbal nouns, as in Arabic, and their translation is often very difficult, even when the root meaning is reasonably clear. There are causatives written with both the */s/* sign and with the */h/.*

C. The Contents

The stone inscriptions were in poor condition and very difficult to decipher, but what could be gained from them fits well with their probable function as building inscriptions or dedications. The copper inscriptions are all legal or political in nature, and this is to be expected because valuable copper was used for the preservation of written documents that were presumably very important to the persons involved.

The longest document (Text D) is something akin to a political constitution issued by the king, beginning with the phrase: *ha-wa-tū ḥu-ru-ba-ʿi-l (u),* "the words of Hur-Baal," exactly the introductory formula used by Hittite kings in their international suzerainty treaties at least half a millennium later. The document also contains in archaic and terse form most of the elements of the later treaty form (see COVENANT), including the curses and blessings, and a reference to the king's prior mighty acts.

Other documents include one certain (and another probable) marriage contract, in which the bride is designated by a passive participle *ru-ḥi-ma-tu,* "betrothed" (lit. "beloved"). The same word is used in Hos 1:6. The longer document seems to include a blessing formula, but more interestingly a threat against anyone who mistreats the *ra-ḥi-ma-ta* (cf. Judg 5:30), for which the only parallel known so far is found in the Jacob narrative at Gen 31:50.

One spatula records the elevation of a certain citizen to the status of *ra-ba-ṣu-ti,* "commissarship," and another records the solution of a legal dispute by an oracular response that stems from a deity named *ṭi-nu-ta,* doubtless the much later Carthaginian goddess Tanit. Aside from the inclusion of *ba-ʿil* in the royal name, the only other reference to a deity in the entire corpus is in the political constitution (Text D), where the punishment of a malefactor is to be carried out by his *li-ʾi-mu+hu,* which is taken to be his deified ancestor(s). This cultural feature that implies ancestor worship is also illustrated by the obelisk temple of Byblos, which includes steles of the *naos* type in which figures of the deceased were placed.

These texts have yielded an abundance of insights into the archaic language, thought patterns, and culture of the EB Age coastal region. Perhaps even more important is the demonstration of certain cultural and linguistic patterns or forms that were attested millennia later in radically different geographical and cultural contexts. In view of the fact that there is no evidence for any population in the Arabian peninsula in those regions contiguous to the highly populated Syro-Palestinian areas between the end of the Chalcolithic and the end of the LB ages, there can be little doubt that the Arabic complex of languages had its origins in the coastal regions of Lebanon and Palestine in the highly developed culture of the W Semitic EB Age. As is so often the case, the purest illustration of pristine language was preserved not in the place of origin but in what paleobotanists term "relict" areas, in this case the isolation of the Arabian desert and the fringe areas of the Fertile Crescent.

COPTIC LANGUAGE

The native language of Egypt as attested in manuscripts surviving from the 3d century C.E. onward, expressed in a writing system fundamentally different from that of the older Egyptian scripts. Coptic is the last phase in the long history of the Egyptian language, which gave way gradually to Arabic beginning in about the 11th century.

In addition to being the language of a region prominent throughout antiquity, Coptic is important to students of the Christian Bible in two principal respects. First, Coptic manuscripts preserve many noncanonical early Christian books that survive in no other language, or survive only imperfectly apart from Coptic. Such books are precious remains of the diverse literary tradition out of which the Bible was formed, providing valuable information about the intellectual and social milieu of early Christianity. Some of these books, most notably *The Gospel of Thomas*, *The Apocryphon of James*, and *The Dialogue of the Savior*, are essential sources for the study of Jesus' sayings. See also THOMAS, GOSPEL OF (NHC II, *2*); JAMES, APOCRYPHON OF (NHC I, *2*); and DIALOGUE OF THE SAVIOR (NHC III, *5*). Second, since the LXX and the NT were being translated into Coptic during the 3d century C.E., the Coptic version is based on Gk mss which are significantly older than the vast majority of extant witnesses. The Coptic evidence has yet to be applied systematically to the textual criticism of the Greek Bible.

A. Old Coptic

When Alexander the Great wrested control of Egypt from the Persians in 332 B.C.E., two standards of written Egyptian were current: Middle Egyptian, the classical stage of the language written in the hieroglyphic and hieratic scripts, and Demotic, a more recent development written in the demotic script. The three scripts in use were graphically related forms of a single complicated writing system. They were the tools of scribes and priests whose conservative professions perpetuated their use into the 5th century C.E. But the two linguistic stages expressed in these scripts were largely fossilized, left behind by the spoken language as it continued to evolve (Sethe 1925). Alexander's successors in Egypt established Greek as the country's primary administrative language and nurtured the spread of Hellenism and the growth of Alexandria into an international center of Hellenistic learning. A knowledge of Greek became a prerequisite for economic, social, and intellectual advancement. Greek remained the dominant language even after Egypt was conquered by the Romans in 30 B.C.E. Egyptian as spoken by the mass of peasants was a language without a written form.

Greek not only conveyed political and cultural prestige, but also it was written in an alphabetic script superior in any practical sense to the Egyptian writing system. It is not surprising that people soon began to experiment with using the Greek alphabet to transliterate Egyptian (Quaegebeur 1982). By the 2d century C.E., alphabets made up of mixtures of Greek and demotic characters were being used by some scribes to transliterate Egyptian magical and astrological texts. About a dozen such texts survive, dating from the first four centuries C.E. (Griffith 1901; Kasser 1980–81: 237–70; Satzinger 1984). Although these texts are grouped under the heading "Old Coptic," they are diverse linguistically, and it is doubtful that any of them were much more representative of the contemporary spoken language than were other Egyptian texts of the same period written in the hieroglyphic, hieratic, or demotic scripts. The Old Coptic texts seem to be products of the same scribal circles that were perpetuating Egypt's archaic literary tradition.

B. Standardization of the Coptic Alphabet and Birth of Coptic Literature

The Coptic alphabet is a standardized form of the Old Coptic scripts; it comprises the entire Greek alphabet and several letters derived from the demotic script. See Fig. LAN.03. But in contrast to its Old Coptic antecedents, the Coptic alphabet was used to represent the spoken language of the time, and thus it ushered in a new epoch in the history of Egyptian literature.

1. Probable Role of the Christian Mission. There is no direct evidence for when, where, and by whom the standardization of the Coptic alphabet was brought about. The oldest surviving Coptic manuscripts were copied in the 3d and 4th centuries C.E. They are mostly translations of books from the Bible, like an early 4th-century papyrus codex in the British Library that contains Deuteronomy, Jonah, Acts, and the beginning of *The Apocalypse of Elijah* (Layton 1987: 3–5). The evidence of such manuscripts suggests that the impetus to provide colloquial Egyptian with a new written form came from the Christian mission (Steindorff 1950; Kasser 1962). The first Egyptian Christians no doubt spoke Greek, and at some point the new religion won converts who spoke both Greek and Egyptian. Probably beginning in the later part of the 2d century, the Christian mission reached deeper into the population and embraced native Egyptians who knew little or no Greek. In order to win these converts, it was necessary to express the Christian message orally in Egyptian. To a religious movement increasingly dependent on an authoritative corpus of writings, the advantages of having written translations of the Holy Scriptures would have been obvious.

The rudiments of a new writing system were already available in the Old Coptic scripts. But the early Coptic translators' use of the new alphabet was far more sophisticated than any previous attempts, and the growing Church was an institution that could promote the use of the alphabet and maintain a standard. Nevertheless, the initial translation of the Bible was not necessarily the result of a centralized and carefully planned effort; rather, it seems that various translators, working independently, prepared a variety of translations using the new alphabetic writing system. Only later were those translations revised into a more or less standard version. Since the oldest Coptic literature also includes translations of gnostic and Manichaean books, the possibility cannot be ruled out entirely that the standardization of the alphabet was the work of some heterodox or even heretical religious group, against whom orthodox Christians entered into literary competition. But even if this was the case, the evidence of the surviving manuscripts leaves no doubt that Coptic literature reached its maturity in the care of the Christian Church and the allied monastic movement.

Early in the 4th century, a tradition of literacy in Coptic was established by the Pachomian monastic communities, and the few surviving works of Pachomius himself (d. 346) mark a rebirth of Egyptian literature (Orlandi 1986: 53–74). The large number of Coptic manuscripts that survive from the 4th century, as well as the variety they display in dialect and content, indicates both the vitality of the new literary movement and the diversity of those who participated in it. Much of this activity involved translating selected works from Greek. Biblical books, apocrypha, and patristic and hagiographic works always predominated. From the beginning, Coptic literature was almost exclusively religious and largely Christian. The first native author to utilize fully the rhetorical potential of Coptic was the monastic leader Shenoute, a skillful stylist and fiery orator whose numerous sermons and letters were composed during

the later decades of the 4th century and the first half of the 5th. After the Council of Chalcedon in 451, the increasingly isolated and nationalistic character of the Egyptian Monophysite church motivated a modest but steady flow of original Coptic literature, at least in part consciously opposed to pro-Chalcedonian literary activity in Greek.

2. Dialectology. The question of the genesis of the Coptic writing system is related to the problem of Coptic dialects. In so far as the new alphabet was a system of phonetic transcription, it facilitated the written representation of differences among varieties of the spoken language. At first sight, the manuscripts surviving from the first several centuries of the Coptic period display what may seem to be a chaotic assortment of orthographic, morphological, and syntactic variants. But the apparent chaos can be reduced significantly by a careful sorting of the manuscripts according to linguistic criteria, the resultant groups presumably representing dialects of Coptic. Precisely how many dialects are to be defined by such a procedure is a matter of dispute, depending on differences both of theory and of method. Locating the dialects geographically is also problematic, because more often than not the provenance of a given work or manuscript is uncertain. But since the habitable part of Egypt south of the Nile Delta is the relatively thin strip of land lining the river valley, it is reasonable to suppose that a linear arrangement of the dialects according to their degrees of similarity to one another will reflect their geographical distribution along this part of the Nile. Numerical evaluations of distinctive dialectal features make it possible to construct a serial ranking of this sort, and the dialect map that emerges generally corroborates the conclusions that can be drawn from other types of evidence (Worrell 1934: 63–143; Kahle 1954: 1: 193–290; Vergote 1961; Kasser 1980–81; Hintze 1984; Funk 1988).

So far as can be judged from their written expression, the difference between the variety of Coptic spoken in the Nile Delta and that spoken in the south probably was great enough to have impeded communication between speakers from those two regions, but not so great as to have disguised the fact that they were speaking the same language (compare dialects *B* and *L5* in Table 1). Presumably, the variation in the language spoken along the Nile between the two extremities was gradual enough to form a dialect continuum. It is likely that Coptic literature was born in a limited number of restricted locales along this continuum: in cities, where roughly uniform ways of speaking would have been recognized locally as "normal." These local norms of speech were expressed in writing with varying degrees of orthographic consistency. What can be recognized as "dialects" in the manuscripts are these norms of written Coptic, representing the speech norms of specific nodes on the Egyptian dialect continuum.

3. Numerous Early Dialects and the Status of Sahidic as a Standard. The number of dialects discernible in the earliest extant Coptic literature has increased steadily with the continual discovery and publication of previously unknown manuscripts. At present it is possible to distinguish more than a dozen dialects (Funk 1988). The extent to which these dialects are attested varies considerably, from isolated fragments to quantities of complete manuscripts. It is difficult to know whether the varying degrees of attestation are reflections of the relative literary productivity of the different dialects or simply accidents of preservation.

The vast majority of early Coptic manuscripts are written in the Sahidic dialect (sometimes called Thebaic in older scholarship; abbreviated *S*). The wide diffusion of this dialect is indicative of its status as a literary standard. *S* was well suited to the role of literary standard because of its dialectal neutrality: it shared many features with the other dialects, and relatively few of its features were peculiar to itself. Assuming that *S* was a local dialect at the beginning of the Coptic period, it would probably have been spoken in the area south of Oxyrhynchus (modern El Bahnasa) and roughly midway between the two extreme poles of the dialect continuum, hence perhaps around Hermopolis (modern El Ashmûnein). There are reasons, however, for assuming that *S* was already a widely used colloquial standard before the Coptic period. If so, probably it had ceased to coincide exactly with the local dialect from which it developed, and hence this parent dialect cannot necessarily be located on the basis of the Coptic evidence alone (Satzinger 1985). It also follows from this assumption that the initial center of the diffusion of *S* as a literary standard cannot be determined on purely linguistic grounds; in any case, soon there were multiple centers of its diffusion.

Most of the other Coptic dialects did not survive as literary vehicles beyond the 6th century. Nonetheless, there is relatively extensive attestation for enough of them to indicate that people in various cities took an active interest in the dissemination of Coptic literature in local varieties of the language. Oxyrhynchite (also called Middle Egyptian; abbreviated *M*) was the dialect of middle Egypt, around Oxyrhynchus. The southernmost dialect was Achmimic *(A)*, a standardization of the language as spoken around Panopolis (modern Akhmîm) or farther south. Locating *A* is complicated by the question of its relationship to the dialect of a peculiar manuscript of Proverbs that may date from as early as the 3d century C.E. (Kasser 1960; 1982: 67 n. 1). This manuscript displays an alphabet and an orthographic system quite different from the other Coptic dialects, and strikingly reminiscent of the Old Coptic scripts. But the language of the manuscript is indisputably a dialect of Coptic (known as dialect *P*), most similar to *A* but similar also to dialects north of *A* on the dialect continuum. The problem is raised (Nagel 1965) by linguistic parallels in later nonliterary texts found in situ that show that *P* was probably the dialect of Thebes (modern Luxor). If so, *A* would seem to have been centered still farther south, a possibility contradicted by evidence for locating it at Panopolis, or even at Thebes.

On the dialect continuum south of *S* but north of *A* and *P*, hence in the region around Lycopolis (modern Asyût), there were three dialects similar enough to one another that initially scholars grouped them under a single name: Subachmimic (also called Lycopolitan; the three dialects are distinguished as *L4*, *L5*, and *L6;* Funk 1985). Whereas *L5* and the other early dialects that coexisted with *S* were used for the most part to translate books of the Bible and a selection of noncanonical early Christian works, the two other Lycopolitan dialects were used extensively for translating gnostic *(L6)* and Manichaean *(L4)* works. It is possible that the disappearance of *L4* and *L6* as literary vehicles was due to the Church's organized suppression of the kind of literature with which they are associated, but probably the general disappearance of early dialects as literary vehicles reflected the dominance of *S* and the resultant development of a literary culture increasingly independent of the actual spoken language of any given region.

Faiyumic (sometimes called Bashmuric or Middle Egyptian in older scholarship; abbreviated *F*) was the dialect of the Faiyûm Oasis (around Arsinoe, modern El Faiyûm). Bohairic (sometimes called Memphitic, or simply Coptic, in older scholarship; abbreviated *B*) was the dialect of the Nile Delta, at least in its western part. Both of these dialects were used for early translations of the Bible, but unlike most of the other early dialects, they continued in use beyond the 6th century. Because the Egyptian climate is much less conducive to the preservation of manuscripts in the Nile Delta than in southern Egypt, early evidence for *B* is particularly scarce, especially from before the 8th century.

C. Death of Egyptian

Despite the remarkable growth of Coptic literature, Greek continued to be the primary language of Egypt's literary culture. It was not until Egypt was conquered by the Arabs in A.D. 641 that Greek slipped at last from its dominant status. Literary activity in Coptic continued unabated (Orlandi 1986: 75–81), and its use also for personal correspondence and business documents increased dramatically. But now the language of the rulers was Arabic, and their initial religious tolerance soon waned. By the end of the 8th century, Coptic was beginning to wither under persecution along with the religion that had given it its written expression. Two centuries later, literacy in Coptic was becoming a rarity. In the meantime, the Bohairic dialect had achieved a degree of standardization comparable to that of Sahidic. Partly through translations from the latter dialect, Bohairic and Faiyumic literature had begun to blossom. As Egyptian now began to die out, it was the Church in the narrowest sense that was the last bastion of Coptic literature. Bohairic, the dialect of the region that was home to the central authority of the Church, lived longest.

In an effort to preserve some knowledge of their dying language, a series of scholars, beginning in the 11th century, undertook to compile Arabic glossaries of Coptic words, accompanied by simple observations on Coptic grammar, written in Arabic. The unsophisticated grammatical tradition thus born in the Bohairic dialect lasted until the 14th century, but it soon served as no more than an aid to the proper translation of Coptic texts into Arabic (Mallon 1906–7; Samir 1986). After a written history of more than four thousand years the Egyptian language was dead, leaving Arabic as the language of Egypt, as it is today.

Egyptian Christianity, however, was not abolished, and Bohairic Coptic remained the official liturgical language of the Egyptian church. But although the priests continued to pronounce at least parts of their services in Coptic, gradually even in church Arabic became the primary tongue. Still, the Egyptian Christians' reverence for Coptic as the language of their religion meant that monastic scribes continued to copy and preserve Coptic manuscripts, now mostly with accompanying Arabic translations, and hence they made possible a significantly different survival of their ancestral language, a survival outside of Egypt.

D. Growth of Coptic Studies and Egyptology in Europe

The Vatican's collection of oriental manuscripts seems already to have included a small number of Coptic-Arabic bilinguals when the library was founded by Pope Nicholas V in the middle of the 15th century. These are the first Coptic manuscripts of which there is any certain record in Europe. It is likely that they were brought to Italy by the Coptic delegates to the Council of Florence in A.D. 1441 (Levi della

Vida 1939: 29–88; the oldest certain attestation of Coptic manuscripts in the Vatican collection dates from 1481). From this period onward there was frequent contact between the Roman and Coptic churches, and soon Coptic became a subject of interest to scholars studying oriental languages.

The first published accounts of Coptic appeared early in the 16th century (Postel 1538; Ambrogio 1539). At this time, a knowledge of Coptic amounted to little more than a knowledge of the Coptic alphabet. The first manuscript to be brought from Egypt to Europe containing a copy of one of the medieval Coptic-Arabic grammatical works written as the Egyptian language was dying did not arrive until 1591. Giovanni Battista Raimondi (d. 1614), director of the Typographia Medicea in Rome, dreamed of using this Coptic manuscript and others to rescue the Egyptian language from oblivion and to prepare a printed edition of the Coptic Bible, but his dreams came to nothing and the manuscripts he had assembled were neglected (Saltini 1860; Levi della Vida 1939: 263–68).

When the Italian pilgrim Pietro della Valle (1586–1652) returned to Rome from the Far East in 1626, his collection of oriental manuscripts included several Coptic-Arabic bilinguals that he had acquired in Egypt near the start of his journey a decade before. Two of his manuscripts were anthologies of several of the medieval Coptic-Arabic grammatical works, similar to the manuscript that had inspired Raimondi. Della Valle, too, having recognized at once the importance of such books for the recovery of the lost language of Egypt, entrusted the edition and translation of the more substantial grammatical manuscript to Tommaso Obicini, a specialist in Arabic. In preparation for the publication of Obicini's work, della Valle oversaw the production of a font of movable Coptic type at the printing press of the Sacra Congregatio de Propaganda Fide (Emmel 1987). But although Obicini made significant progress, he died in 1632 without having completed his work, and somehow his notes disappeared (not to be discovered until three hundred years later; van Lantschoot 1948).

In the meantime, the publication of della Valle's manuscript had been awaited with eagerness by an eminent patron of scholarship, Nicolas Claude Fabri de Peiresc (1580–1637), who had tried to arrange for the inclusion of Coptic among the languages of the great Polyglot Bible then in preparation in Paris (Gravit 1938). Although the study of Coptic progressed too slowly for this particular ambition to be realized, in 1643 it was one of Peiresc's protégés who finally published an edition of the Coptic grammatical manuscript in della Valle's collection (Kircher 1643). The editor was Athanasius Kircher (1602–1680), who thus laid the foundations on which the study of Egyptian would eventually grow into a scholarly discipline in Europe (Quatremère 1808: 45–109, 294–98).

The medieval grammars were soon surpassed by insights drawn from the study of increasingly large numbers of Coptic manuscripts brought out of Egypt. By the beginning of the 19th century, when the Rosetta Stone was first being studied, Coptic was well enough known that it could play a crucial role in the decipherment of texts written in the older Egyptian scripts. Toward the end of that century, the study of the entire history of Egyptian was put on a firm footing by Adolf Erman (1854–1937) and the "Berlin School" of Egyptology, where the fundamental importance of Coptic for the study of the earlier stages of Egyptian was fully recognized (Polotsky 1987: 14–15). In recent decades, the most fruitful work on Coptic has been a quest, pioneered by H. J. Polotsky, for a comprehensive synchronic description of its grammatical system (Polotsky 1971: 99–271, 341–438; 1968; 1970; 1985a; 1985b; 1988).

E. The Coptic Writing System

The Coptic alphabet is illustrated in Fig. LAN.03. The alphabet represented seven vowels (*a, e, ē, i, o, u, ō*), two of which (*i, u*) also had corresponding consonantal values, and fourteen distinct consonants (fifteen in Achmimic and Bohairic). It is not known exactly how Coptic was pronounced. The inventors of the Coptic writing system took over the Greek alphabet according to its classical values, and it may be supposed that pronouncing Coptic texts according to those values will yield a reasonable reconstruction of how Coptic sounded, at least about the time it was first given written expression. However, even after this pronunciation is modified on the basis of the internal evidence of Coptic manuscripts, it no doubt remains approximate at best.

The care with which the Coptic writing system was initially worked out is illustrated by one orthographic feature in particular. Coptic scribes did not usually leave space between words. It was a

peculiarity of Coptic that this way of writing often resulted in strings of consonants, the correct articulation of which may not have been immediately obvious. To alleviate this problem, a diacritical mark placed above the line of writing was used to mark syllables formed not with vowels but with syllabic consonants (like the syllabic n in the second syllable of "button"). For example, in Sahidic *hmpkōhtmpfčntf,* "superlinear strokes" placed over *hm, ht, m, pf, čn,* and *tf* indicate the syllabification *hm-pkō-ht-m-pf-čn-tf.*

F. Grammar

The extensive attestation of the Sahidic dialect, both chronologically and in content, as well as its dialectal neutrality, makes it the most appropriate starting point for learning Coptic. It is on Sahidic that the following brief description of some Coptic grammatical features is based. In the examples, dashes separate morphemes that combine into a prosodic unit, which is generally defined by a single accented syllable. Abbreviations for citing nonbiblical examples follow Crum (1939); OT references follow the numbering of the LXX (ed. Rahlfs).

1. Basic Sentence Types. Coptic displays at least four basic sentence types. The *tripartite sentence,* or *verbal sentence,* contains three basic elements, in a fixed order: a "conjugation base" encoding information such as tense; a subject (either a noun phrase or a pronoun); and a verb (infinitive).

(1) *a-p-noute ti na-u n-saoul*

PAST-the god give to-them OBJ-Saul

"God gave them Saul." (Acts 13:21)

(2) *a-f-ti na-u n-ou-oeik*

PAST-he-give to-them OBJ-a-bread

"He gave them bread." (John 6:31)

There are four "sentence conjugation bases," with distinct affirmative and negative forms (e.g., the negative of *a-* is *mpe-*): (1) *perfect* ("he gave, he has given"); (2) *"not yet"* (negative only, "he has not yet given"); (3) *aorist* ("he gives," by nature, or whenever certain circumstances obtain; not a present tense); (4) *future,* known as "Energetic Future" or, unhappily, "Third Future" ("he will give," but mostly used in constructions where it has modal meanings such as "he might give"). There is also a set of "clause conjugation bases," which are used in the same pattern (the "Tripartite Conjugation Pattern": base + subject + verb), but which form dependent clauses and are negatived by an additional morpheme (*tm-*): (1) *conjunctive* (various uses, most often in some sense continuative of a grammatical structure in a preceding clause); (2) *future conjunctive* ("… and he will give"); (3) *temporal* ("when he had given …"); (4) *"until"* ("… until he gives"); (5) *conditional* ("when/if he gives …"); (6) *protatic* ("if he gives …"; Shisha-Halevy 1974); and (7) *apodotic* ("… then he gives"; Shisha-Halevy 1973). The tripartite pattern occurs in exx. 1, 2, 13–15, 18–22, and 24.

The *bipartite sentence* (the "Bipartite Conjugation Pattern") contains two basic elements, in a fixed order: a subject (either a noun phrase or a pronoun), and one of four types of predicate. The predicate is either adverbial (mostly locative prepositional phrases; ex. 3), or an infinitive (exx. 4, 16–20), or a *stative* (exx. 6, 23, 25), or the verbal auxiliary *na-* (exx. 7, 8). The bipartite sentence serves as a present tense, as do the two remaining sentence types.

(3) *f-hm-p-jaeie*

he-in-the-wilderness

"He is in the wilderness." (Matt 24:26)

(4) *p-joeis sooun n-te-hiē n-n-dikaios*

the-lord know OBJ-the-way of the-righteous

"The Lord knows the way of the righteous." (Ps 1:6)

The stative (also called *qualitative*) is a verb form used only in the bipartite sentence; generally it has the meaning of a statal passive. In exx. 5 and 6 the infinitive *tajro* ("steady") is compared with the stative *tajrēu* ("in the state of having been *steadied*").

(5) *f-tajro m-p-hēt m-p-rōme*

it-steady OBJ-the heart of-the-man

"It steadies man's heart." (ShA 1 429)

(6) *pef-hēt tajrēu*

his-heart steadied

"His heart is steady." (Ps 111:8—Eng 112:8)

The verbal auxiliary *na-* ("going to"), followed by a verb (infinitive only, never stative), is used in the bipartite sentence to form the most common expression of the future.

(7) *f-na-ti nē-tn n-ke-paraklētos*

he-going to give to-you OBJ-another-counselor

"He will give you anohter Counselor." (John 14:16)

The bipartite sentence and the two remaining sentence types are negatived by a discontinuous morpheme.

(8) *n-f-na-ti an m-pef-ouoein*

NEG-it-going to-give NEG OBJ-its-light

"It will not give its light." (Mark 13:24)

The *nominal sentence* is constructed around a set of personal pronouns that serve as subjects in the pattern. For the first and second persons, these pronouns are proclitic forms of the independent personal pronouns; they precede the nominal predicate.

(9) *ntk-ou-šonte*

you-a-thornbush

"You are a thornbush." (ShMIF 23 42)

For the third person, the subject pronouns are a suppletive group, morphologically related to the definite article and the demonstratives; they follow the predicate.

(10) *na-snēu ne*

my-brothers they

"They are my brothers." (ShMIF 23 41)

The third-person type of nominal sentence serves, at least formally, as the nucleus of a more complex expanded type, in which the subject pronoun sometimes functions simply as a copula.

(11) *p-hēbs m-p-sōma pe p-bal*

the-lamp of-the-body it the-eye

"The eye is the lamp of the body." (Matt 6:22)

The fourth basic sentence type is defined by a small group of predicates, mostly expressive of qualities, that take a nominal or pronominal subject as a suffix.

(12) *nanou-paei*

be good-this

"This is good." (1 Tim 2:3)

2. Object Incorporation. The defining property of a syntactically transitive verb in Coptic is the ability of its infinitive to incorporate a direct object.

(13) *a-apa pesunthios nej-p-daimōnion ebol*

PAST-Apa Pesunthios cast-the-demon outward

"Apa Pesunthios cast out the demon." (Bap 114)

(14) *a-f-noj-ou* *ebol*

PAST-Apa Pesunthios outward

"He cast them out." (Mark 1:34)

If the direct object of a transitive verb is not incorporated, it is marked by a preposition (*n-* with nouns, *mmo-* with pronouns).

(15) *n-f-nouje* *ebol* *n-n-daimonion*

CONJUNCTIVE-he-cast outward OBJ-the-demons

"… and he will cast out the demons." (B Mar 239)

(16) *k-nouje* *mmo-ou* *ebol*

You-cast OBJ-them outward

"You are casting them out." (BMar)

Incorporation is the rule when the direct object is a noun without any article; such nouns are devoid of gender and number and generally have a nonreferential or generic meaning.

(17) *ti-nej-diamonion ebol*

I-cast-demon outward

"I cast out demons." ("I exorcise.") (Luke 13:32)

As a rule, incorporation occurs in the bipartite sentence only in the latter circumstance. But in the tripartite sentence, pronominal direct objects, too, are most often incorporated, and there is variation between incorporation and nonincorporation of the direct object when it is a noun with an article (definite or indefinite).

3. Sentence Conversion. A remarkable feature of Coptic grammar is the way in which a basic sentence can be *converted* (or *transposed*) by prefixes into: (1) *preterit* time; (2) an adverbial (*circumstantial*) clause; (3) a *relative* clause; or (4) a focalizing construction (called a "Second Tense," in contrast to an unconverted "first" tense). The preterit conversion serves primarily to provide background information relevant to a larger context. Ex. 18 is preceded immediately by the narrative statement, "We came to Miletus."

(18) *ne-a-paulos* *gar krine …* *ne-f-čepē* *gar …*

PRET-PAST-Paul for decide … PRET-he-hasten for …

"For Paul had decided …; for he was hastening …" (Acts 20:16)

The circumstantial conversion forms a subordinate clause with a wide variety of uses (the converter encoding something like "the circumstances being that …").

(19) *a-f-šaje* *e-f-smou* *e-p-noute*

PAST-he-speak CIRC-he-bless OBJ-the-god

"He spoke, blessing God." (Luke 1:64)

(20) *eti* *e-f-šaje* *a-p-alektōr* *moute*

still CIRC-he-speak PAST-the-cock crow

"While he was still speaking, the cock crowed." (Luke 22:60)

The relative conversion forms a clause that is subordinate to a preceding definite antecedent; as a rule, the antecedent is represented in the relative clause itself by a pronoun. Compare ex. 22 with ex. 21.

(21) *a-n-daimonion* *ei* *ebol* *hm-p-rōme*

PAST-the-demons come outward from-the-man

"The demons came out of the man." (Luke 8:33)

(22) *p-rōme* *ent-a n-daimonion* *ei* *ebol* *nhēt-f*

the-man REL-PAST-the demons come outward from-him

"the man from whom the demons had gone" (Luke 8:38)

The function of the second tense conversion is to focus on, or emphasize, an adverbial element in the sentence. Like the preterit conversion, the use of a second tense usually depends on a context larger than a single sentence. In the following example, the focus is on the prepositional phrase *e-p-satanas.* Compare the statement, "You belong to Satan," with ex. 23.

(23) *e-k-ēp* *e-p-satanas*

FOCUS-you-belong to-the-Satan

"It is to Satan that you belong." (ShMIF 23 40)

4. Cleft Sentence. The combination of a relative clause with a nominal sentence of the type illustrated in ex. 10 creates a cleft sentence in which a nominal or pronominal constituent is focalized. Compare the statement, "The Lord your God has chosen you," with ex. 24.

(24) *ntok pe ent-a-p-joeis* *pek-noute sotp-k*

you it REL-PAST-the-lord your god choose-you

"It is you that the Lord your God has choosen." (Deut 7:6)

5. Adjectival Modification. The Coptic lexicon contains very few words that can be classed as adjectives. Adjectival modification of a noun is achieved by syntactic means: a relative or circumstantial clause (depending on whether the noun is definitely determined or not);

(25) *hen-šaje* *e-u-šoueit*

some-words CIRC-they-vain

"vain words" (Eph 5:6)

or an indefinitely determined noun in a nominal sentence;

(26) *hen-epra* *ne* *neei-šaje*

some-vanity they these-words

"The words are vain." (ShC 73 206)

or the relational preposition *n-* with a nondetermined noun.

(27) *nek-šaje* *n-epra*

your-words RELATION-vanity

"your vain words" (ShMIF 23 42)

6. Other Features. The case-roles of the various participants in the action of a verb are marked either by position (syntactic subject, incorporated direct object) or by prepositions (exx. 1, 2, etc.). The passive in progress is expressed by the use of a nonreferential third-person-plural subject: "they are choosing him" = "he is being chosen." Interrogative sentences are formed by using interrogative pronouns or particles, without altering the word order of the basic sentence types. Imperative sentences are formed by using infinitives apart from conjugation, with object incorporation occurring as it does in the tripartite pattern.

G. Coptic Today

The study of Coptic remains an essential part of the discipline of Egyptology. But because the content of Coptic literature is primarily relevant to the history of Christianity, Coptology (also called Coptic Studies) has begun to emerge as a distinct discipline with close ties to Egyptology on the one hand and to biblical and Christian historical studies on the other. A movement to revive Coptic as a spoken language was begun by Egyptian Christians late in the 19th century; the Egyptian church now urges its adherents to learn a modified form of the Bohairic dialect, as yet with only qualified success.

H. Basic Reference Works

Comprehensive bibliographies of Coptic Studies are Kammerer 1950; Simon, Quecke, and du Bourguet 1949–76; and Biedenkopf-Ziehner 1972–80. T. Orlandi's *Coptic Bibliography* (Rome: Centro Italiano Microfiches), issued on microfiche, is updated biannually by printed supplements and entirely revised in annual editions.

The standard and indispensable dictionary of Coptic is Crum 1939. Of more specialized interest are Černý 1975; Westendorf 1965–77; and Vycichl 1983. Smith 1983 is convenient for beginners. There is as yet no dictionary of the large number of words borrowed by Coptic from Greek.

Overall, the best Coptic grammar is still Stern 1880, but fundamental advances have been made by Polotsky (especially 1944; 1960; 1962; 1988), all of whose works are essential. Possibly seminal is Shisha-Halevy 1986. Lambdin 1983 is helpful for beginners.

Students of the Coptic versions of the Bible must consult scattered editions of individual manuscripts, essential guides to which are Vaschalde 1919–33; Till 1959; Nagel 1983–84; Nagel 1984b; and Schmitz and Mink 1986. Lefort, Wilmet, and Draguet 1950–60 is a useful concordance to the Sahidic NT.

EGYPTIAN LANGUAGE AND WRITING

———

A. Linguistic Position
B. History
C. Writing
D. Phonology
E. Grammar

———

A. Linguistic Position

Egyptian is a member of the Afroasiatic language group, occupying one of the five or six main branches of this linguistic family (Semitic, Berber, Egyptian, Cushitic, Chadic, and possibly Omotic). Unlike the other branches, Egyptian is represented by a single language.

In most respects, Egyptian seems closest to the Asiatic (Semitic) languages—possibly only because our knowledge of the African languages is both poorer and from a much later historical era than either Egyptian or Semitic. Egyptian exhibits many common Afroasiatic features: (1) consonantal root structures; (2) masculine/feminine gender, with feminine marked by final *-t;* (3) plural in *-w* (m.) and *-wt* (f); (4) independent and suffixed pronouns: e.g., *jnk,* "I," *-j,* "my"; (5) stative (qualitative) form of the

verb: e.g., *ḥtp.kw,* "I am content"; and (6) lexical morphological features, such as nouns of instrument in *m-*, causative stem in *s-*, reflexive stem in *n-*.

Unlike African languages, Egyptian shares with Semitic a predominantly triconsonantal root structure (close to two thirds of all verb roots in one representative early text corpus) and an active dual (m. *-wj*, f *-tj*). The vocalic patterns of many of its nouns, where these can be reconstructed, are also similar to those of Semitic nouns: for example, an active participle with the pattern *ā-i*, as in **ḥātip,* "content," reflected in cuneiform *ḫa-ti-ip* (Osing 1976: 128).

Unlike Semitic, Egyptian has no known case system and no prefixed verbal conjugation. Several of its features are found in African but not Semitic languages: (1) an "indirect" genitival construction, with the adjectival form of the preposition *jn,* "to, for": e.g., *prw jnj sn.k,* "house of (belonging to) your brother"; the direct genitival construct is also common (*prw sn.k*); (2) roots with two to six radicals, many with full or partial reduplication: e.g., *sn,* "kiss, smell," *snsn,* "associate with"; *ṯḥn,* "shine," *ṯḥnḥn* "glitter"; and (3) passive forms with reduplicated final radical: e.g., *ḫmmj,* "unknown," from *ḫm,* "not know"; *nḥmm,* "will be taken," from *nḥm,* "take" (productive only in the oldest stage of Egyptian).

Egyptian has a vocabulary of about a hundred roots found also in Berber and Cushitic languages: for example, *gmj,* "find" = Berber *egmi,* "seek"; *nfr,* "perfect, good" = Bedja *nefir,* "pleasant." A few hieroglyphic phonograms reflect an earlier Semitic vocabulary that has been supplanted in historical times by native or non-Semitic words: for instance, Egyptian *ḏrt,* "hand" (related to the root *nḏr,* "grasp"), replacing earlier **jd* (preserved in the hieroglyph of a human hand, with the value *d*; also in the word *djw,* "five"); or Egyptian *jrt,* "eye" (possibly related to Cushitic and Chadic *il/iil* "eye"), replacing earlier **ʿ(j)n* (reflected in the hieroglyph of a human eye, used in writing the word *ʿn,* "beautiful").

B. History

Egyptian comprises two major historical phases (see section E below), each of which is represented by several distinct stages of development.

The language first appears in writing about 3300 B.C., in proper names, titles, and captions. Its first continuous text—essentially an expanded list of one individual's titles—dates from the end of Dynasty 3 (ca. 2750 B.C.) and marks the beginning of Old Egyptian, the earliest well-known stage of the language. Old Egyptian is preserved in tomb biographies, royal decrees, and an extensive series of religious (funerary) texts. It is roughly contemporary with the historical period of the Old Kingdom (OK) (Dyn. 3–6, ca. 2800–2300 B.C.).

Old Egyptian is closely related to the second major stage, that of Middle Egyptian. Also known as Classical Egyptian, this stage is represented in nearly every genre of Egyptian text: letters, accounts, stories, official and biographical inscriptions, and religious texts. As a living language, it spanned the period from the end of the OK approximately to the beginning of the New Kingdom (Dyn. 6–17, ca. 2300–1600 B.C.). Even when replaced in the popular, and later written, speech it remained the language of temple and official inscriptions throughout the history of pagan Egypt. In the New Kingdom (NK) (Dyn. 18–19, ca. 1600–1200 B.C.) and later, its grammar and vocabulary were heavily influenced by that of the contemporary language, but in most respects it retained the features of its classical stage of the Middle Kingdom (MK; Dyn. 12, ca. 2000–1800 B.C.).

The earlier historical phase represented by Old and Middle Egyptian differs significantly from that of the later, and final, phase of the language. Elements of this final phase are already visible in the colloquial speech (insofar as it was recorded) at the end of the MK, if not before. It first entered the written language as one of the reforms instituted by the "heretic" pharaoh Akhenaten, at the end of Dyn. 18 (ca. 1350 B.C.). Its earliest written stage, known as Late Egyptian, became the language of all but monumental inscriptions from the Ramesside to Saite periods (Dyn. 19–26, ca. 1300–650 B.C.).

For much of its 600-year history, Late Egyptian gives the impression of reflecting fairly closely the contemporary colloquial idiom. Under the pharaoh Psamtik (Psammetichus) I (ca. 650 B.C.), a new script was introduced, reflecting also newer grammatical features. This script and its stage of the language are known as Demotic ("popular"). True to its name, Demotic was at first used for commercial and other everyday documents, but under the Ptolemies (after 332 B.C.). it was expanded to religious and literary

genres as well. Demotic remained in use alongside the monumental language until the middle of the 5th century A.D.

With the advent of Christianity, the pagan associations of the older scripts prompted the adoption of a new writing system based on the Greek alphabet. Both the alphabet and the language written in it—the final stage of Egyptian—are known as Coptic (probably from Greek *aigyptios,* "Egyptian," itself a rendering of Egyptian *ḥwt-k€ -ptḥ,* a designation of ancient Memphis). The Coptic alphabet first appears in magical papyri from the end of the 1st century A.D., where it was added to the (vowelless) Demotic to ensure proper pronunciation of key words. It was adopted as a full-fledged writing system in the 3d century A.D., when it was used for Egyptian translations of the Bible and for other Christian texts.

Coptic was influenced by Greek not only in its alphabet but also in vocabulary. Some two thousand Greek words appear in Coptic, replacing or supplementing older native words. Coptic is also the first stage of Egyptian to show clear dialectical variants, mostly in morphology and phonology. Differences in dialect probably existed throughout Egyptian history—one text of Dyn. 19 (ca. 1200 B.C.) describes obscure phraseology as being "like the speech of a Delta man with a man from Aswan"—but they are concealed by both the standardized nature and the purely consonantal structure of earlier scripts. Some seven major and eight minor Coptic dialects have been identified. Of these, Saidic (from Arabic *al-ṣaʿīd,* "Southern Egypt") was the major ecclesiastical and literary dialect from the 4th to 10th centuries A.D. In the 10th century, Bohairic (from Arabic *al-buḥairah,* "Northern Egypt") was adopted as the official language of the Coptic Church, and it eventually supplanted the other dialects. Bohairic remains the liturgical language of the Church today, but Coptic disappeared as a spoken language probably by the 15th century A.D. Knowledge of Coptic, however, provided the key to the modern recovery of the earlier language, beginning with Jean-François Champollion's decipherment of the Rosetta Stone in the early 19th century.

C. Writing

Egyptian is written in one of four major scripts: hieroglyphic, hieratic, Demotic, and Coptic. With the exception of Coptic, all represent the consonantal rather than the full phonological structure of the spoken language, a feature that Egyptian shares with Semitic writing systems. The vocalized forms preserved in Coptic—and, to a lesser extent, in older cuneiform transcriptions—allow for partial reconstruction of earlier phonology: for example, Coptic *šmoun,* "eight" < **ḫamān ŭw,* which is reflected in cuneiform *ḫa-ma-an* (Osing 1976: 476).

Hieroglyphic is both the earliest and most widely attested script. It appears as early as the predynastic period (before 3200 B.C.) and remained in use until the 5th century A.D. Both the system and the orthography of its signs seem to have been first standardized at the beginning of the OK. Hieroglyphic writing consists essentially of two kinds of signs: ideograms, representing things, actions, or concepts; and phonograms, representing sounds. The simplest—and probably the first—ideograms are those that depict concrete things or actions, such as a scarab beetle ("beetle") or a pair of striding legs ("walk, move"). More abstract images are conveyed by an extended use of signs from this inventory, on the rebus principle: for example, the scarab beetle (*ḫprr,* "beetle") is used to write words with the root *ḫpr,* "develop."

Phonograms were developed on the same principle. These represent one or more consonantal sounds: for example, the sign for [p] (a reed stool) from **păj,* "stool" (Coptic *pai*), or that for [r] (a human mouth) from **răj,* "mouth" (Coptic *ro*), but also biliteral *pr* (a simple house plan) from **pār ŭw,* "house" (Coptic *pōr,* cuneiform *pa-ru* [Osing 1976: 477]).

In all, about five hundred signs were in common use in Classical Egyptian hieroglyphic. Words could be written ideographically (usually only for concrete things, such as *prw,* "house") or purely phonographically; but most often the two values were combined, as in HOUSE-PLAN (*pr*) plus MOUTH (*r*) plus WALKING-LEGS, for *pr (j),* "go forth." Ideograms are often placed at the end of words spelled with phonograms, as "determinatives" indicating the genus or kind of action to which the word refers (for instance, the walking-legs sign in the preceding example).

Hieroglyphic writing employs no marks of punctuation. Texts could be written left to right or right to left, either horizontally or in vertical columns. The signs usually face the direction from which the text is read. The Egyptians did not distinguish hieroglyphic writing from other representations of reality, such as statues or scenes in relief. Both were a *tjt,* "symbol," rather than an accurate representation of reality. Hieroglyphic signs were often carved with the same detail as other pictorial elements of a scene. Conversely, statues or relief representations were themselves a kind of hieroglyph, a phenomenon most often illustrated in the animal-headed Egyptian gods—as, for instance, in the beetle-headed human form representing *ḫprj,* "the Developing One" (a form of the sun-god). Hieroglyphic was generally employed on the same kinds of permanent media used for representations, usually carved or painted on stone or wood. It remained the preferred form for monumental inscriptions throughout Egyptian history. With rare exceptions, only the early phase of the language (Old-Middle/Classical Egyptian) is written in hieroglyphs.

A simpler form of the hieroglyphic signs was used for writing on less permanent media, such as papyri, with reed pen and ink. This, in turn, was probably (though not demonstrably) the origin of hieratic, a purely cursive form of hieroglyphic. For the most part, hieratic bears the same relationship to hieroglyphic that modern handwriting does to printing. Hieratic was written from right to left, usually in horizontal lines, in ink on materials such as papyri, ostraca, linen, and leather. Hieratic signs are attested almost as early as hieroglyphic. By the time of the MK (and probably earlier), hieratic was the standard script for letters, accounts, and literature; most of the great literary works of Classical Egyptian are preserved in hieratic. It was also the writing system that Egyptian scribes learned first. Both Old and Middle Egyptian are represented in hieratic, and Late Egyptian almost exclusively so.

By the 21st Dyn. (ca. 1000 B.C.), administrative hieratic had developed a hand significantly different from that of other hieratic documents. Called "abnormal hieratic," this script was in use until the Saite period (Dyn. 26, ca. 650 B.C.), when it was replaced by Demotic, which developed from it. Demotic writing is characterized by extremely brief signs and numerous ligatures. Though ultimately based on hieroglyphic, it bears no resemblance to the original signs. Demotic is also the sole script of the stage of the language with the same name. Hieratic, like hieroglyphic, remained in use alongside the newer writing, but it was reserved primarily for religious papyri written in the older (semi-Classical language. Like hieratic, Demotic was written from right to left, with pen and ink, primarily on perishable materials. Occasionally, however, it was used to inscribe official documents on stone—as in the decree of Ptolemy V Epiphanes (196 B.C.) on the Rosetta Stone, carved in both hieroglyphic and Demotic as well as Greek.

Although they were aware of the syllabic, and later alphabetic, scripts of Semitic languages, the Egyptians never reduced the inventory of their own signs to either a syllabary or an alphabet. Several times in its history Egyptian did develop a system for rendering the phonology of foreign names and loanwords with groups of signs, sometimes equivalent to monosyllabic Egyptian words: for example, *jj-š€ -pj-j€ -r'* (Dyn. 18, ca. 1500 B.C.) = Canaanite **yašūp-ʾil* (Albright 1934: 34). Hieroglyphic also seems to be the basis of the Proto-Sinaitic script, in which some thirty signs were used to form an alphabet for writing a non-Egyptian language. Although the language and precise date of Proto-Sinaitic are still uncertain, the alphabet itself seems to have been created acrophonically based on Semitic counterparts of the words represented by the Egyptian signs: for example, the hieroglyph of a man's head (Eg *tpj,* "head") for [r] (Semitic *ra'š,* "head"). The apparent similarity of this script to Proto-Canaanite suggests that it may be the origin of the principle of alphabetic writing (Giveon *LA* 4: 1156–59).

The Egyptian language itself was written alphabetically in its final stage. Coptic uses the 24 letters of the Greek alphabet, plus seven derived from Demotic, primarily for sounds not present in Greek (*š, f, h, ḫ, c* = [t^{y}], *g* = [k^{y}/t^{yh}], and a monogram for *ti*).

D. Phonology

Although Coptic is the first stage of Egyptian to record vowels as well as consonants, the vocalic inventory of earlier stages has been reconstructed with the help of Coptic and older cuneiform transcriptions. Egyptian seems to have shared the common Semitic vowels [a], [i], and [u]. Length was determined by morphology, with long vowels in open stressed syllables, short vowels in closed stressed

syllables, and indeterminate vowels elsewhere: e.g., **j ř̆ăk > erok*, "to you" (m.s.), **j ř̆aṯ n̆ > erōtn,* "to you" (pl.). Sometime between Dyn. 19 and 25 (ca. 1200–700 B.C.), the language underwent a general vowel-shift from the original system to that found in Coptic (*ă > ŏ, ĭ > ă, ŭ > ĕ;* and *ā > ō/ū, ī > ī/ē, ū > ē̄*).

The earliest stages of the language display 24 consonants, transcribed as follows: *æ, j* (or *ı̀Ù*), *ʿ, w, b, p, f, m, n, r, h, ḥ, ḫ, ḫ, z* (or *s*), *s* (or *ś*), *š, q* (or *ḳ*), *g, t, ṯ, d, ḏ.* In Coptic these have been reduced to 14 or 15 in most dialects: *b, p, f, m, n, r/l, h/ḥ, s, š, k, g* = [k^{y}], *t, c* = [t^{y}], with original *æ, ʿ,* and *j* occasionally reflected in doubled vowels (e.g., **ḥāʿ š > hōōs,* "herself"). Coptic descendants of *j* (where preserved) and *w* are phonologically equivalent to vocalic [ī] (/ei/) and [ū] (/ou/): e.g., *ouōbš* < **wābiḥ,* "white" (adjective), but *oubáš* < **w b̆áḥ,* "become white" (infinitive). This may have been true of *j* and *w* in earlier stages as well, since both are often omitted in writing (like vowels).

The gradual reduction of the original 24-consonant inventory to that of Coptic is visible historically. By Middle Egyptian, *z* is no longer phonologically distinct from *s*, and *ṯ* and *ḏ* show evidence of reduction to *t* and *d*, respectively, in some words. Late Egyptian reflects the beginnings of both the eventual loss of the voiced stops—*d > t, ḏ > ṯ, g > k;* Coptic *b* is probably a (voiceless?) labial spirant—and the reduction of the four spirants *h, ḥ, ḫ, ḫ* to one or two (*h* or *h/ḫ*, depending on dialect).

The original sound of many Egyptian consonants is uncertain. That transcribed as *æ* is generally thought to have been a glottal stop (*ʾalep*), but in Semitic loanwords in Old and Middle Egyptian it appears to correspond to Semitic [r]: for example, *kæmw*, later *kæmw*, "vineyard" = Semitic *karm.* In Coptic, however, its reflex is usually zero: e.g., **æāp ḏ > ōbt,* "bird," **wāæ ḏ > ouōt,* "fresh," as well as **kaæm w̆ > gōm.* The correspondence between *æ* and Semitic [r] may not indicate so much a value like [r] for *æ* as a dissimilarity between Semitic [r] and Egyptian /r/.

The consonant transliterated *r* corresponds to *r* or *l* in Semitic loanwords in Late Egyptian (e.g., *jbærjj* = Canaanite *ʾabir,* "stallion") and in Coptic reflexes of Egyptian words, where the distinction between *r* and *l* is partly dialectical (**rām ṯ̆,* "man" > Saidic *rōme,* Fayumic *lōmi*). Already in Old Egyptian, *r* seems to be regularly altered to € or *j* in syllable-final position (though this is not always reflected in writing): e.g., *ḏrt* (**ḏār ṯ̆*) > Coptic *tōre,* "hand," but *ḏæt.k* (**ḏărt ḳ̆*) > *tootk,* "your hand"; *ḥqr* (**ḥ q̆ăr*) > *hko,* "hunger," but *ḥqr.tj* (**ḥ q̆ărt ǰ*) > *hkoeit*, "hungry." The consonant [l] may have existed in dialects earlier than Coptic, but it is not represented phonemically in writing before Demotic (unless older /r/ = [l]?). Coptic *l* derives from earlier *n* (e.g., *las* < **nĭs,* "tongue" = Semitic *lis*) as well as from earlier *r*. Earlier scripts may represent [l] by the groups *æn* and (in Late Egyptian) *nr:* for example, *dng/dæg/dæng,* "dwarf" (= **dlg*?); *bnr* > Coptic *bol,* "out."

The consonants *z* and *s* are generally thought to represent the voiced/voiceless spirants [z] and [s], but *z* has also been analyzed as [ts]. Since [z], if present, would seem to have been the only voiced spirant (other than pharyngeal *ʿ*) in the original inventory, the phoneme *z* may instead have represented an original voiceless [th], later assimilated to [s] as in many colloquial Arabic dialects. The consonant *ḫ* is equivalent to *š* in the oldest stage (dialect?) of the language, but by Middle Egyptian it has become a distinct phoneme. Its value is generally assumed to have been similar to that of [ç] (*ch* in German *ich*), while *ḥ* represented [x] (*ch* in German *ach*). But the two may also have represented a consonantal pair distinguished by palatalization (*ḥ* = [x] vs. *ḫ* = [x^{y}]), or voiced/voiceless spirants *ḥ* = [gh] (Arabic *ghain*) and *ḫ* = [x].

The three original consonants *q, k,* and *g* are reduced in Coptic to the voiceless stop [k] or its palatalized counterpart *g* = [k^{y}], with *q* generally > Saidic *k, k* > *k* or *g,* and *g* > *g* or *k.* These correspondences suggest an original distinction *q* = [g] (later > [k] when the voiced stops were lost), *k* = [k], and *g* = [k^{y}]. The three are generally interpreted, however, as uvular [q] (Arabic *qaf*) and velar [k] and [g], respectively.

Similarly, the pairs *d/t* and *ḏ/ṯ* are thought to have represented the voiced/voiceless dental stops [d]/[t] and their palatalized counterparts [d^{y}]/[t^{y}]. But *d/t* have also been analyzed as the voiceless stops [ṭ]/[t],

with *ḏ/ṯ* their palatalized alternants [ȼ]/[c], where [ṯ] and [ȼ] are similar to Ethiopic [ṭ] and [ṭ^{y}], respectively. In words in which they have not coalesced with *d/t*, the pair *ḏ/ṯ* generally corresponds to Coptic *c* = [t^{y}], a palatalized counterpart of Coptic *t* (< *d/t*).

Finally, the Bohairic dialect of Coptic also uses aspiration as a phonological feature in the stops: *p* vs. *p* ^{h}, *t* vs. *t* ^{h}, *k* vs. *k* ^{h}, and *c* vs. *c* ^{h}, where the aspirated letters are represented by Greek *phi, theta,* and *chi*, and the Coptic letter *gima* (= Saidic [k ^{y}]). The extent to which this feature may have existed in earlier dialects or stages of the language is unknown, but its existence in Coptic suggests that it may also underlie some of the phonological alternants of the older scripts.

E. Grammar

The elements of Egyptian syntax can be grouped into four parts of speech: noun, adjective, adverb, and verb.

The noun category includes both nouns and pronouns. Gender is marked lexically (zero, *-w*, or *-j* for masculine; *-t* for feminine). Plural and dual number is indicated phonologically by *-w* and *-wj* for masculine, *-wt* and *-tj* for feminine: *sn,* "brother," *snw,* "brothers," *snwj,* "two brothers"; *snt,* "sister," *snwt,* "sisters," *sntj,* "two sisters." Syntactic usage is marked by position in the sentence or phrase rather than by case. Genitival relationships may be indicated by direct conjunction of two nouns (probably accompanied by changes in stress and phonology), or by suffix pronouns: e.g., *prw sn.j,* "house of my brother." Two nouns may also be linked by the "indirect" genitive (see section A above). The accusative (verbal object) is distinguished by position. Personal pronouns generally correspond to those found in Semitic languages: *jnk,* "I" (proclitic), *wj,* "I, me" (enclitic), *-j,* "my" (affixed).

Egyptian adjectives are for the most part noun equivalents and can be used independently as nouns. Those that modify a preceding noun agree with it in gender and (less regularly) number. Direct modification is a construction that disappeared gradually in the history of the language. By the advent of Coptic, most attributive adjectives had been replaced by a genitival or relative construction: e.g., *snt ꜥ€ t,* "big sister" = Coptic *nog n-sōne*, literally "big-one of sister."

The category of adverb includes primitive adverbs (*dj,* "here"), prepositional adverbs (*jmj,* "there," from *m,* "in"), and prepositional phrases (*m nwt tn,* "in this village"). Nouns and verbs can also function syntactically as adverbs.

The category of verb encompasses all verb forms, including those that function syntactically as nouns, adjectives, or adverbs. The earliest inventory includes five categories of inflection: (1) the suffix conjugation, in which morphological features, and pronominal subjects, are signaled by suffixes: *ꜥnḫ.s,* "she lives," *ꜥnḫ.n.s,* "she has lived"; (2) the stative (old perfective), corresponding in form to the Afroasiatic stative/qualitative: *ꜥnḫ.tj,* "she is alive"; (3) the imperative: *ꜥnḫ,* "live!"; (4) the attributive forms, including participles and relative forms: *ꜥnḫt,* " (she) who lives," *nwt ꜥnḫt.s jmj,* "village in which she lives"; and (5) the infinitival forms: *ꜥnḫ,* "to live." By the time of Coptic, these had been reduced to two productive forms—the infinitive and stative—for most verbs.

All four syntactic elements can function as sentence predicates. Nominal sentences, with the pattern *A B,* are statements of identity. Either element can be a noun or pronoun: *jnk sn.k,* "I (am) your brother"; *pen-son pe,* "He (is) our brother" (Gen 37:27). The bipartite pattern is often expanded by means of the enclitic pronoun *pw* > *pe* (3 m.s.): *snt.k pw spdt,* "Your sister (is) Sothis"; *pai pe pa-snof,* "This (is) my blood" (Matt 26:28).

Statements of quality are expressed by adjectival sentences, a variant of the bipartite nominal pattern in which the first element is an immutable (m.s.) adjective: *m€ ꜥ sj,* "She (is) correct." These are primarily a feature of Old to Late Egyptian. In Demotic they are replaced by a form of the adjective-verb; and in Coptic by a nominal-sentence construction in which the adjective is treated as an undefined noun: *ou-me te,* "It (is) correct" (literally, "a correct one"; John 5:32).

Sentences with adverbial predicates are essentially statements of location or state. These follow the pattern *A Adv: sn.k dj = pek-son tai,* "Your brother (is) here."

Verbal predicates express action. Strictly speaking, such sentences are those in which the word order is verb-subject-object-adverb and in which the verb itself is predicate: *qd sn.j prw.f m nwt tn,* "My brother

built his house in this village" (literally, "build brother–my house–his in village this"). Various forms of the verb, however, can also function as nominal, adjectival, or adverbial predicate in other, "nonverbal" sentences: *mrr.f jrr.f,* "When he likes, he acts" (literally, "That-he-likes [is] that-he-acts," an *A B* nominal sentence), *ḥ‹ sw,* "He is jubilant" (an adjectival sentence, in which *ḥ‹* is an active participle), *tek-sōne onh,* "Your sister is alive" (an adverbial sentence, in which *onh* is the stative form of *ōnh,* "live").

Historically, the Egyptian language shows two dominant, and related, trends. One of these is the gradual loss of the (pure) verbal sentence. Earlier verb forms are replaced by "pseudoverbal" constructions built largely on the adverbial-sentence pattern: *‹nḫ.s,* "She lives" > *st ḥr ‹nḫ = Coptic s-ōnh, literally "She (is) upon living"; ‹nḫt, " (she) who lives" > ntt ḥr ‹nḫ = Coptic et-ōnh, literally " (she) who (is) upon living."*

The second historical trend, coincident with the first, is the replacement of synthetic forms (marked by internal changes) to analytic ones (marked by the accretion of discrete morphemes): *‹nḫ.s,* "May she live" > Demotic *my-jr.s-‹nḫ* = Coptic *mares-ōnh,* literally "Let her-do living." This historical process affected not only verbs but other parts of speech as well: e.g., *sn.k,* "your brother" > *p€ jj.k sn* = Coptic *pek-son,* literally "the-your brother."

On the basis of these changes, the language can be divided into a synthetic phase, represented by Old/Middle Egyptian, and an analytic phase, visible in Late Egyptian through Coptic. Because all Egyptian scripts except Coptic do not fully reveal a word's morphology, the grammar of the analytic phase is more visible, and therefore better understood, than that of its synthetic ancestor. In Old and Middle Egyptian, the existence of inflected forms is deduced through morphological changes that may be visible in one or more—but not all—root classes. The attributive forms of the verb, for example, are known to have distinguished two synthetic forms (labeled "perfective" and "imperfective") because of the alternation of unmarked vs. geminated forms visible primarily in final-*j* roots: e.g., (f.s.) active participles *mst* and *msst,* from *msj,* "give birth."

The major questions still unanswered in the study of Egyptian grammar have to do with the number and meaning of inflected forms that were present in the suffix conjugation of Old and Middle Egyptian. The simplest written form of this verbal category, called the *sḏm.f* (based on the paradigm verb *sḏm,* "hear"), probably conceals at least four distinct forms in the earliest stage of the language. All four are visible in the irregular verb *jnj,* "fetch" (*jn.f, jnn.f, jnt.f,* and *jnw.f*), but most roots show only one, two, or three written forms: *sḏm.f,* "he hears" (root *sḏm*); *m€ .f* vs. *m€ € .f,* "he sees" (root *m€ €*); *msj.s* vs. *mss.s* vs. *msjw.s,* "she gives birth" (root *msj*). Of these, one form (*jnt.f* / *m€ .f* / *msj.s*) expresses the subjunctive (jussive, optative, etc.). The form in final *w,* with its paradigmatic counterparts (*jnw.f* / *m€ € .f* / *msjw.s*), seems to be a future tense, later replaced by the subjunctive and an analytic form.

The remaining two *sḏm.f* forms are distinguished primarily by the presence of gemination in some roots: *jn.f* / *m€ .f* / *msj.s* vs. *jnn.f* / m€ € .f / *mss.s.* By analogy with the attributive forms, these were originally thought to express a contrast between "perfective" (completed or single actions) and "imperfective" (incomplete or multiple actions), respectively. In the analytic verbal systems, however, there is a major syntactic distinction, reflected morphologically, between forms in which the focus of attention is on the verbal action itself ("First Tenses") and those in which it is directed to an adverbial adjunct ("Second Tenses"): e.g., Demotic *jw.f-hy r-ḥr.f* > Coptic *f-hi ehraf,* "It falls on him," vs. *jjr.f-hy r-ḥr.f* > Coptic *ef-hi ehraf,* "It is on him that it falls." The latter appears to be syntactically an adverbial-predicate construction in which a nominal (attributive) form of the verb functions as subject to the adverbial phrase: literally, "How/That it falls (is) on him." The same distinction has been proposed for the synthetic verb: e.g., *h€ .f ḥr.f,* "It descends on him," vs. *h€ € .f ḥr.f,* "It is on him that it descends."

There is a good deal of evidence in favor of this analysis, and the model of the analytic tenses has become widely accepted for the synthetic verbal system as well. More recently, however, questions have been raised as to the adequacy of the analytic model to explain all observable features of the synthetic forms (Englund and Frandsen 1987). The forms of the analytic verb distinguish primarily time (e.g., past, present, future) and syntactic function. In contrast, those of the synthetic verb seem to express primarily aspect (e.g., completed vs. incomplete) and mood (indicative, subjunctive). When and how the synthetic

verb developed the features visible in its analytic descendants are questions that have yet to be fully answered.

JAMES P. ALLEN

ETHIOPIC

The study of the Semitic Ethiopic dialects has become an important discipline in the Near Eastern field. As W. Leslau (1959) has noted, these dialects can be divided into two groups: North Ethiopic (abbreviated hereafter NE) and South Ethiopic (abbreviated hereafter SE). NE includes Geez, which is the oldest dialect, and two modern dialects, Tigré and Tigrinya. SE comprises Amharic, Argobba, Harari, Gafat, and Guragé. Guragé is a dialect cluster, and for typological reasons this cluster has been called "Gunnān-Guragé" by R. Hetzron (1977). All the Ethiopic dialects exhibit features which comparative linguists find worthy of note. A few of these features, which will be discussed below, include an important difference between the morphology of the basic verb types of NE and SE, the development of a direct object suffix in NE and SE, and the existence of a main verb marker forms in SE.

A. The *Qatala* and *Qattala* Verb Stems

Two of the basic verb types of Ethiopic have been described by T. Lambdin (1978) as follows:

G verbs—simple root + stem vowel pattern: G = Grundstamm (basic stem).

D verbs—root + doubling (D) of the second radical + stem vowel pattern.

The perfect tense of G verbs (often described by linguists as *qatala*) in NE is characterized by a single middle consonant, whereas in many of the SE dialects the perfect tense of G verbs has a doubled middle radical (described by linguists as *qattala*). The pattern of the G perfect in NE is found in other Semitic languages, but the SE pattern with a geminated middle radical is not attested elsewhere. For the purposes of comparative Semitic philology, it is important to determine whether the doubling which occurs in the SE G perfect is a Proto-Semitic phenomenon or merely a characteristic which can be explained by a development within SE itself.

This problem of gemination is depicted by the following table, which gives the G and D patterns of the perfect and imperfect tenses in Geez (a NE dialect) and Amharic (a SE dialect):

	Geez (NE)	Amharic (SE)

	G	D	G	D
Perfect	*qatala*	*qattala*	*qattala*	*qattala*
Imperfect	*yeqattel*	*yeqēttel*	*yeqatl*	*yeqattel*

In addition to the different NE and SE stem patterns for the G perfect, one can also see from the table that in the NE the G imperfect has a doubled middle radical (*ye* is a prefix), whereas in SE the same form has a single middle radical. It should be noted that in two NE dialects, Tigrinya and Tigré, the geminated middle radical of the G imperfect is simplified when subject suffixes are added. W. Leslau (1953) uses this phenomenon as one of his major arguments in favor of the secondary nature of the *yeqattel* form in Ethiopic. His suggestion that the form **yeqatl (u)* be reconstructed as the PE G imperfect is based on his view that **yeqatl (u)* can be derived from Proto-Semitic **yaqtulu* and on the fact that certain SE dialects have a *yeqatlu* imperfect form. However, it is possible that the *-u* of the SE imperfect form is related to the complicated problem of main verb markers, which will be discussed below and, therefore, should not be traced back to Proto-Semitic. H. Nyberg (1932), J. Polotsky (1949), and R. Hetzron (1972), on the other hand, have suggested that the NE *yeqattel* form is primary and that the loss of gemination in the SE G imperfect is related to the phonetic principle underlying the loss of gemination which occurs in the G imperfect of Tigrinya and Tigré as the result of adding suffixes. According to this view, the loss of gemination, originally associated only with the addition of suffixes, spread to all forms of the G imperfect in SE. However, the phenomenon of the loss of gemination in the G imperfect as the result of adding suffixes is probably restricted to Tigrinya and Tigré and, therefore, does not shed light on the development of SE *yeqatl.* Thus, it is necessary to seek an explanation which would account for both the loss of gemination in the SE G imperfect and the introduction of this characteristic in the G perfect. It is likely that the D perfect of Proto-SE changed from **qattala* to **qēttala,* as suggested by Polotsky (1938), since this form is actually attested in some of the SE dialects. As a result of this change, *ē* became the stem vowel of both the D perfect and imperfect as opposed to the G stem vowel *a.* It was at this point that an analogy may have occurred between the perfect and imperfect form of G and D verbs, affecting the form of the G imperfect:

D G

**qēttala*: **yeqēttel* :: **qatala*: **yeqatel*

The result of this analogy would have been the simplification of the geminated middle consonant of the G imperfect (*yeqatel*). At this early stage of SE, the G and D stems for the perfect and imperfect tenses could be symbolically described as follows: G (s s) and D (d d). However, evidence from the SE dialect Endegen, as described by W. Leslau (1976), suggests that a phonological process contributed to the collapse of the contrast G (s s) / D (d d). In this dialect, the G perfect normally has a simple middle radical (*qatala*), but there are, nevertheless, some G perfect forms with a geminated middle consonant. These verbs appear to be historically related to verbs whose last radical was *ʾ, *ʿ, or **ḥ.* These final radicals were evidently assimilated by the middle radical, resulting in the gemination of the middle radical. It is likely that a similar development occurred in the proto-stages of other SE dialects, but in these dialects, the perfect with a geminated middle radical was standardized for all root types.

B. The Direct Object Suffix

In Ethiopic, the pronominal object of a transitive verb is regularly expressed by a suffix attached directly to the verb. The forms of the direct object suffix in Geez (a NE dialect) are as follows: 1 c.s. *-ni,* 2 m.s. *-ka,* 2 f.s. *-ki,* 3 m.s. *-o/-hu,* 3 f.s. *-ā/-hā,* 1 c.pl. *-na,* 2 m.pl. *-kemu,* 2 f.pl. *-ken,* 3 m.pl. *-omu/-homu,* 3 f.pl. *-on/-hon.* Thus, in order to say, "They found me," one would attach the suffix *-ni* to *rakabu,* resulting in the form *rakabuni.* In SE, some of the forms of the direct object suffix differ considerably from the forms in Geez. This divergence is due primarily to the influence of two types of copulative elements which can be described as the *n* copula and the *t* copula. The *n* copula of SE is historically related to the Geez introductory particle *na-,* which is used to prepose and emphasize a pronominal element. Examples of this inflected particle are *naya* and *nayo,* meaning "as for me" and "as for him" respectively. The *t*

copula originated in sentences employing the third person pronoun *wet* as a neutralized copula, which was reduced to *t* because of its enclitic nature: **āna- *wet* > **āna- *t,* "It is I." Both the *n* and *t* copulas were inflected for all persons and numbers. In order to see the influence of the copula on the SE direct object suffix forms, one can cite some of the attested suffixal forms in two SE dialects, Amharic and Chaha. In Amharic, the *t* copula was influential. For example, the original form **-ā* of the 3 f.s. direct object suffix was replaced by the 3 f.s. ending *-āt* of the copula. The 3 m.s. direct object allomorph *-t,* which is used after subject suffixes ending in *-u,* is also related to the copula. Since there is evidence of a *t* copula in Old Amharic (Goldenberg 1976), it is reasonable to assume that the *t* of 3 f.s. *-āt* and the 3 m.s. *t* which is added to *-u* reflect the old *t* copula. In Chaha, it was the *n* copula which affected the forms of the direct object suffix, as can be seen from the following list: 2 m.s. *-nāka,* 2 f.s. *-nāxi,* 3 m.s. *-ne,* 3 f.s. *-nā,* 1 c.pl. *-nda,* 2 c.pl. *-nāku,* 3 c.pl. *-no.*

C. Main Verb Marker Forms in SE

One of the major differences between the verbal inflection of NE and SE is the introduction of main verb markers in SE. In the SE dialect Chaha, the perfect always ends in -m when it is in a positive main clause. In a subordinate or negative clause, the final *-m* of the perfect is omitted, as the following examples show:

(1) Main clause: *naqaram,* "he pulled out";
(2) Subordinate clause: *ya-naqara,* "he who pulled out";
(3) Negative clause: *an-naqara,* "he did not pull out."

It is well known that the morphological distinction between main and subordinate verbs exists in the Cushitic languages, and since SE has a Cushitic substratum, it is reasonable to assume that main verb marking, as a morphological category, was borrowed by SE from Cushitic (Hetzron 1972). However, it is difficult to establish the origin of the actual forms of the main verb markers as they exist in SE. R. Hetzron (1972) has stated that some of the SE dialects used the Proto-Semitic imperfect elements **-u* and **-na/-ni* for main verb markers. In order to support this theory, Hetzron compares the SE dialects which have imperfect forms ending in *-u* with Arabic which has the imperfect form *yaqtulu,* pl. *yaqtulūna.* Such a theory would necessitate the reconstruction of **yaqtulu* for Proto-Ethiopic, but since there is no trace whatever of such a form in the linguistically conservative northern dialects, including ancient Geez, and no certain evidence for such a form elsewhere in the southern languages, it seems methodologically implausible to reconstruct **yaqtulu* for Proto-Ethiopic.

It is possible that the copula was one of the sources of the main verb marker forms in SE. The use of this form of the copula as a main verb marker may have originated in the cleft sentence construction. For example, in Soddo the relative verb form (i.e., *ya* + subordinate perfect or subordinate relative imperfect) combined with the copula *(e)n* is used for a simple statement in which no relative meaning is involved. The following example of this construction is taken from W. Leslau (1968):

zi addiya ba ṭobbeyā mula yaššila-n, "this river was known all over Ethiopia"; lit. "this river in Ethiopia everywhere that was known it is."

Since this cleft sentence construction functions as a main sentence, it is possible that the copula *-n* which was attached to the verb was felt to be a main verb marker, and it should be noted that a final *-n* appears on some forms of Soddo main verbs. Another possible source for main verb markers is the form of the definite article as attached to the verb of a relative clause modifying a definite noun. The 3 f.s. and 1 c.s. perfect forms of Soddo verbs in relative clauses modifying an indefinite noun are as follows:

	Definite	Indefinite
3 f.s.	*yaqattalatti*	*yaqattalat*
1 c.s.	*yaqattalki*	*yaqattalkw*

The initial *ya-* of the above forms is the relative pronoun. According to Leslau (1968), the final *-i* of the definite forms is the article. A final *-i* also appears on the 3 f.s. and 1 c.s. forms of the Soddo main perfect, *qattalatti* and *qattalki,* respectively. The subordinate counterparts of these forms are 3 f.s. *qattalat* and 1

c.s. *qattalkw,* which are identical to the 3 f.s. and 1 c.s. forms of the perfect in a relative clause modifying an indefinite noun.

Finally, it should be noted that the main verb marker *-m,* mentioned above, may be related to the emphatic particle *-ma* of Geez and *-m* of Amharic. Thus, there are several possible sources within Ethiopic for the forms of the main verb markers. It is, therefore, unnecessary to look to Proto-Semitic for the origins of these forms.

H. LEE PERKINS

GREEK

The Greek language has played several roles in connection with the Bible of Jews and Christians. Apart from the fact that the Greeks and their language are mentioned in it, there occur first of all some Greek loanwords in the later books of the Masoretic Text (MT). Second, Greek is the language of one of the oldest versions of the OT, the Septuagint (LXX), which was probably antedated only by the earliest Aramaic Targums. It is, furthermore, the original language of some additional books in the LXX canon not included in the MT canon. See also CANON. Finally, it is Greek in which the NT has come down to us, parts of which (Pauline letters) are undoubtedly to be seen as original compositions. As the order of these different aspects reflects the increasing importance of Greek with regard to the Jewish people, it will be appropriate to subdivide this article in accordance with it.

A. Greek in the Hebrew-Aramaic Bible and in Palestine

Among the very first loanwords taken over from a foreign language is usually the name of that language and that of its speakers, although it often escapes notice that foreign names are to be considered as loans, too. The name of a foreign people may actually be (that is, within the foreign country itself) the name only of part of the nation as a whole, such as a well-known tribe or a still smaller subgroup. Further, it is also usual for such names to be completely adapted to the nature of the receptor language. These three general remarks apply also to the name by which Greece or the Greeks are known in the Hebrew Bible, *Yāwān,* who is mentioned by the author of Genesis in the Table of Nations (10:4–5; cf. 1 Chr 1:5–7); see

also JAVAN (PERSON) as one of Noah's grandsons together with his offspring, "… each with his language, by their families, in their nations" (Gen 10:4). The name *Yāwān,* the first Greek loanword known in Hebrew, is the name of the eponymous ancestor of all the Greeks, although he is the same as *Iōn,* the ancestor only of one of the Greek tribes, the Ionians, who are called *Iaones* by Homer (*Il.* 13.685). The name must have been taken over at a rather early date because it still contains the *w,* a sound which died out before the date of the earliest Ionic-Attic inscriptions and literary texts, and before the subsequent vowel-contraction could have taken place; that is, before **Iawon* had become *Iōn.*

In the OT, *Yāwān* is further mentioned by Ezekiel as one of the commercial partners of Phoenician Tyre (27:13), and the "sons of the Ionians" (Heb *bĕnê-hayyĕwānîm*) are reported by the prophet Joel to have bought Jewish slaves from the Phoenicians and the Philistines (4:6). Finally, Alexander the Great is called in Daniel "the king of *Yāwān"* (8:21). In the Assyrian language, Ionia is referred to as *māt Yaman.* The usurper *Yamani,* who ascended the throne of Ashdod and fled to Egypt in 711 B.C. before the advancing Sargon II, may have been a Greek who was given a familiar name (nickname) after his nationality. Greeks, whose actual presence in Palestine before the Exile can at least be assumed, were the mercenary soldiers of King Josiah who are mentioned several times as *Kittiyīm* in the Arad ostraca, and they may have been Greeks from *Kition* in Cyprus; in fact, the *Kittîm* figure as sons of *Yawan* in Gen 10:4. A Greek visitor to Palestine who is known by name is Antimenidas, an elder brother of the lyric poet Alcaeus. He fought in the Babylonian army and was probably involved in one of Nebuchadnezzar's campaigns against Ashkelon.

Two further Greek loanwords in the OT are names of coins, *ʾădarkōnîm* or "darics" and *darkĕmônîm* or "drachmae." Both words have in common that they were taken over in the genitive plural, *dareikōn* and *darchmōn,* as the genitive of price happens to be the case in which names of coins most often appear in bills and contracts. To these genitives was then added the Hebrew plural ending *-îm.* As the "daric" was a coin that was originally called after Darius I, its appearance in the history of King David half a millennium earlier is grossly anachronistic in 1 Chr 29:7, whereas its occurrence in Ezra 8:27 is unsurprising; the mention of "drachmae," however, in Neh 7:69–71 is also against the historical context. As the final redaction of all three books—Ezra, Nehemiah, and Chronicles—is dated to the first part of the Hellenistic period (350–300 B.C.), the use of these Greek words in Hebrew texts is easily explained by the fact that Greek was then the official language of Palestine as a province of the Macedonian Empire, the language of all legal and professional texts.

After Alexander's arrival in Palestine, a number of Greek towns were founded and colonized and some existing towns reorganized after the model of the polis, especially in the territory that was later called the DECAPOLIS (Ten-City League), which soon became a flourishing center of Hellenistic culture. It brought forth such a famous man as Menippus of Gadara (*fl.*275 B.C.), the Cynic author whose writings have been influential throughout antiquity and inspired Varro and Lucian. Instances of towns with Greek names are *Dion,* called after the holy city of the Macedonians at the N foot of Mt. Olympus; *Pella,* formerly Paḥel, but renamed after the Macedonians' royal residence; further *Skythopolis* (Beth-Shan); and somewhat later *Philadelphia,* called after Ptolemy II Philadelphus, the new name of Rabbah "of the children of ʿAmmon." The other parts of Palestine, Galilee, Samaria, Philistia, and Idumea (south of Judea) were also subject to a constantly increasing Hellenization, as is shown for Idumea, for instance, by the many tombs with Greek inscriptions at Marissa. Even the relatively small area inhabited by Jews—Jerusalem and the surrounding districts—could not resist this strong cultural influence, which was officially stimulated. Many priests belonged to the "Hellenistic" party. The high priests Jason (till 172 B.C.) and his successor Menelaus even adopted Greek names; so also did the somewhat earlier rabbi, Antigonus of Socho (ca. 200 B.C.), one of the "fathers" quoted in *Pirqê-Abôt* (1:3); his pupil Boethus; the Jewish envoys sent to Rome and Sparta; and their fathers, Numenius son of Antiochus and Antipater son of Jason (1 Macc 12:16). All of these persons, of course, had Hebrew names as well, but were better known by their Greek names.

The Maccabean uprising, therefore, was not so much directed against the Hellenistic culture as such, which, moreover, was then already over a hundred and sixty years old, but it was triggered off when

Antiochus IV went as far as endeavoring to Hellenize the Jerusalem temple and its cult. In this connection, it is a telling detail that the only Jew who predicts the downfall of this Hellenistic king, the author of the book of Daniel (7:25–27), does not refrain from using Greek words in the Aramaic text. When he tells about the musical instruments that Nebuchadnezzar's musicians are playing (3:5–7), four of the six instruments mentioned bear Greek names: *qaytĕrōs* (*kitharis*), *sabbĕkā'* (*sambykē*), *pĕsantērîn* (*psaltērion*), *sumpōnyāh* (*symphōnia*); it is true, however, that *kitharis* and *sambykē,* in their turn, may be very old loanwords in Greek as well. It seems a bit improbable to assume that these words were deliberately introduced here to lend an unfavorable color to the whole pagan pageant of the gold idol, because in that case the author would have taken care to use a Greek word for the idol itself.

It is not surprising, therefore, that according to some indications Jerusalem was the place where Jewish knowledge of the Greek language was concentrated, and where it was taught. According to the legendary *Letter of Aristeas,* which relates the story of the origin of the LXX, the translation was made for the library of King Ptolemy II (ca. 275 B.C.) by seventy-two Jewish priests who had been summoned to come to Alexandria from Jerusalem. Although this story is certainly etiological fiction pretending to be history, the presuppositions on which it rests cannot be too wild, and the most central presupposition is of course that Jerusalem priests knew Greek. See SEPTUAGINT.

A further indication is given by the postscript added to the LXX version of the book of Esther. It runs as follows: "In the 4th year of the reign of King Ptolemy and Cleopatra, Dositheus, who said that he was a priest and a Levite, and his son Ptolemaeus have brought the foregoing Purim letter, which they said was sent and had been translated by Lysimachus son of Ptolemaeus of the people of Jerusalem" (Esth 10:3[l]). If this refers to the first Ptolemy who married a Cleopatra, the king must be Ptolemy V, who started reigning in 204 B.C., but who married Cleopatra only in 194, so the 4th year of their joint rule would be around 190 B.C. Several Ptolemies after him, however, also had wives called Cleopatra, and a later date is therefore quite possible, such as 114 B.C. (Ptolemy VIII) or 77 B.C. (Ptolemy XII).

The Second Book of Maccabees, too, was sent as a festal letter to the "Jewish brethren in Egypt" by their brothers in Jerusalem and Judea, at least according to the letter prefixed to this book (1:1). This letter is dated to the 188th year of the Seleucids (124–123 B.C.), and it also mentions an earlier letter written in 143–142 B.C.

These three testimonies all point in the same direction; namely, that Jerusalem was a center of Jewish teaching and mastery of the Greek language, and that it functioned in maintaining contacts with the Greek-speaking Jews in the Diaspora, especially with those living in Egypt.

B. Greek in Egypt and as the Language of the LXX

Much more pronounced was the role which Greek played in Egypt in connection with the Jews. With the arrival of Alexander the Great (332 B.C.), Greek had of course become the official language of Egypt, but great numbers of Greeks had been in Egypt earlier than in Palestine. Apart from such incidental visits as the legendary sojourns of Helen and Menelaus (*Od.* 3.300) and of Pythagoras (D.L. 8.3), more regular contacts seem to have started with the settlement of merchants from Miletus and the subsequent foundation of their trading center in Naucratis on the W Canopic branch of the Nile (ca. 650 B.C.). Charaxus, brother of the poetess Sappho, is known to have been there on business. Around 560 B.C., the pharaoh Amasis (Ahmose) made this harbor the only place where Greeks were allowed to trade in Egypt, and it continued as such well into the Roman period. In addition to these merchants, many Ionian soldiers stayed in the country, serving as mercenaries in the army of the king of the 26th Dyn.: Greek armies and generals (Chabrias; King Agesilaus of Sparta) were also employed by the 29th and 30th Dyn.

The presence of a large number of Jews in Egypt before the Hellenistic period is likewise an established fact. The prophet Jeremiah was forced to settle there, together with many others who had remained in Palestine after the Exile (Jer 43:5–7). Possibly, however, the book of Deuteronomy, which reflects King Josiah's legal reform, implies that one of his predecessors (that is before 640 B.C.) had bought horses in Egypt and paid with Israelite slaves (17:16). The Aramaic papyri from Elephantine, too, show that a Jewish garrison was stationed there at the southernmost border of Egypt during the 5th century. And

finally, the *Letter of Aristeas* (12–14) makes mention of many Jewish prisoners of war who were taken to Egypt by Ptolemy I (323–283 B.C.).

When Alexandria, which had at first been founded only as a harbor for the Macedonian navy, was chosen instead of Memphis as the capital of Ptolemaic Egypt soon after 323 B.C., it rapidly expanded into a cosmopolis. It was natural for foreigners, such as Greeks and Jews, to concentrate there, although many of them also lived and worked in the country. Quite naturally, in order to communicate they made use of the official language of the new rulers rather than the vernacular Egyptian or Aramaic. The Elephantine papyri show that the Jews in Egypt in their daily life had given up Hebrew for Aramaic, the language of the Persian government, and no doubt they continued to use Aramaic for some time among themselves after Egypt had been liberated from Persian rule. The fact, however, that the Hebrew OT had to be translated into Greek shows that after some time many of them no longer understood Hebrew and Aramaic and could not make use of Aramaic Targums (if they ever had them in Egypt in this early period).

According to *Aristeas,* Ptolemy II motivated the creation of the LXX version with two arguments. First, he wanted the library at Alexandria to contain a copy of the Jewish law. This may reflect the historical reality of a specific juridical need: the king may have wished to enable his officials to consult that law code to which such large minorities in Egypt and Palestine—which then formed part of his kingdom—constantly referred.

Second, it is expressly stated that Ptolemy wanted to bestow a favor through it (the LXX) upon the freed Jewish slaves living in Egypt, on the Jews in the Diaspora, and on those yet to be born (*Aristeas* 38; Jos. *Ant* 12.48). This makes sense only if it reflects a reality in which many if not most Jews outside of Palestine could not (or could not sufficiently) read and understand the Hebrew Torah, but spoke and were well versed in Greek. In fact, Aristeas at the end of his letter relates how the completed Greek version was read in Alexandria to the assembled Jews, who approved of it and even asked for a copy (*Aristeas* 308; Jos. *Ant* 12.107–8).

C. Koine Greek

The language of the LXX is not the Ionian dialect of the merchants from Miletus who dwelt in Naucratis, nor that of the inscriptions which the Ionian soldiers of Psammetichus II (594–588) scratched in the legs of the colossal statue of Ramesses II when they got as far S as Abū-Simbel (*SIG* no. 1); rather, it is the language which Alexander's army half a century earlier had imported to Palestine, Egypt, and the whole Near East as far as the river Indus. It was the mainly Attic idiom which in that army served to bridge the dialectical differences between the Macedonians, Thessalians, Athenians, and other Greeks of whom it was composed, and it was for that reason called the *koinē dialektos* or "common dialect" in contradistinction to the local dialects such as Doric and Boeotian. Koine Greek did not arise, however, within the Macedonian army or owe its existence to Hellenism; rather, the preexistence of Koine Greek itself was one of the historical factors which made the phenomenon of Hellenism possible. This new function of Attic had not so much to do with the status it had acquired as a literary language as with the situation within the Delian Confederacy in which Athens played such a prominent role that it could impose its own dialect as some kind of lingua franca on the other members. As a common vehicle of communication, it functioned mainly in the mercantile sector and could also be used in mixed Greek expeditions of a military character, such as the Anabasis of which Xenophon reports. It soon started to replace the other dialects in their homelands, beginning with its nearest of kin, the Ionian dialect, but not without taking over a number of the other dialect's peculiarities—especially that of the Macedonians, whose dialect—though today considered Greek—was most aberrant and stood in the need of such a common dialect. Koine Greek was therefore adopted by the royal court and the army. In fact, the army with which Alexander crossed over into Asia could not have functioned well without Koine Greek, for more than half of the soldiers had been recruited outside of Macedonia proper and came from different parts of Greece.

When the Attic of the classical period adopted its new role, it did not remain unaltered; it began to show slight traces of what in linguistics is called a process of *creolization.* This means that in circumstances in

which a group of people who speak different dialects or languages has to adopt one of these as its common language, the language or dialect chosen is simplified to the extent that the categories (sounds, forms, word order) that have no equivalent or are not found in the replaced languages are abandoned.

This meant that Attic, when taken over by other Greeks, had to drop some of its phonological peculiarities. The clusters *-tt-* and *-rr-* shifted in favor of what the majority of dialects had, *-ss-* and *-rs-*, in such words as *thalassa, prassō,* and *arsēn, tharseō.* It gave up the peculiar declension of *leōs, neōs* for the regularly declined *laos, naos;* the curious second- and third-person aorist optatives in *-seias* and *-seie (n)* were replaced by the more normal in *-sais* and *-sai.* Since the language used by merchants, sailors, and soldiers could hardly be considered the literary or standard variety, the tendencies present in the substandard language go unchecked when it is adopted and spoken by foreigners. This, then, may account for such phenomena as the loss of the dual number (which was already a fact in some other dialects as well), the tendency to restrict the use of the optative to head clauses, the increasing use of plural verbs with neuter plural subjects, and the re-use or re-implication in the same sentence of a noun or pronoun that had already been used in the genitive absolute. A contribution stemming from the commercial sector is probably the standardization of the compound numerals between "ten" and "twenty": *hennea kai deka, henneakaideka,* and *henos deontes/-a eikosi* all became *deka-hennea* in accordance with *eikosi-hennea,* but *deka-heis* and *deka-dyo* did not endure; their successors *hendeka* and *dōdeka* are still used in Modern Greek.

Somewhat later (ca. 300 B.C.) was the persistent replacement of the third-person plural of the imperatives in *-ntōn* and *-sthōn* by those ending in *-tōsan* and *-sthōsan,* although these had already been used by Euripides and Thucydides (but not in official texts of treaties).

The vocabulary also changed, subject as it was to an inevitable evolution. It affected even such ordinary words as *hyei,* "it rains," and *naus,* "ship," which were gradually replaced by *brechei* and *ploion; naus* probably disappeared because it had such an irregular declension. Many new words were also made, especially in the governmental sphere: *achyropraktōr,* "collector of chaff (-tax)"; *archiphylakitēs,* "commandant of the police"; *sitologos,* "keeper of the public granary"; and *toparchēs,* "governor of a district," among others.

D. The LXX as Translation

It seems logical, and it is certainly probable, that the Pentateuch was the first section of the OT to be translated; and, in accordance with *Aristeas* 30 ("the books of the Law of the Jews together with a few others"), that it was translated en bloc (ca. 275 B.C.). Whether or not the "translation" may in reality have been a process of compilation and revision of earlier endeavors, the fact remains that the Greek of the Pentateuch is of far better quality than the Greek of the other translated books, which is always of a lesser quality and sometimes inferior (as is the Greek of Jeremiah 29–51). The language of the Pentateuch is to a certain extent uniform in that it contains specific renderings for some Hebrew words and phrases which are absent in the books translated later. In these there is not only much less uniformity, but within a number of books (1–4 Kingdoms, Jeremiah, Ezekiel), portions can be discerned which are the work of different translators using various methods and styles of translation. See also SEPTUAGINT.

As translations may range from literal to paraphrasing, it stands to reason that they betray the Hebrew original more or less according to the same scale. There are even parts of books in which Hebrew words have been allowed to stand transliterated (untranslated); for instance, in Jeremiah 29–51. The words *mābô› haššĕlîšî,* "the third entrance," at Jer 38:14 in the MT are represented by *oikian aselisi* at 45:14 in the LXX. Apparently the translator knew how to vocalize his model but not what to do with the word in the context. A very curious instance is the phrase *hōy Adōn,* "Alas, lord!" at 34:5, which was evidently considered as Greek in Hebrew letters, since it is matched by *heōs hądou* (41:5; B,S,A). In the first part, however, of Jeremiah LXX, which is a much better translation, the same phrase has been rendered by the correct *oimmoi Kyrie* at 22:18 (*oimmoi* is a frequent spelling in LXX mss for *oimoi*). Of course there are also cases of nontranslation which are quite justified, such as *hin* and *oiphi* in Num 15:4, these being transliterations of *hin* and *›êpâ,* because these measures had no exact equivalents in the Greek world.

Furthermore, there are translations which are too literal or stereotypical to make good sense. Ps 77:54 reads *oros hagiasmatos autou,* "the mountain of His sanctification," which perhaps renders *har-qodšô,* "His Holy mountain" (MT has here *gĕbûl-qodšô,* "His holy land"). Since *ʾānōkî* or *ʾănî,* "I," must sometimes in nominal sentences be translated by "I am," some books (Judges, 2–3-4 Kingdoms) wrongly translate *ʾānōkî* + verb by *egō eimi* + verb (Judg 6:18: *egō eimi kathēsomai*). The infinitive *lēʾmôr* can in most cases (that is, when the speaker is subject of the sentence) be rendered by *legōn,* "saying." Where this is not so, the LXX often has *legōn* in an ungrammatical way; e.g., Gen 22:20 (*anēngelē tǫ Abraam legontes,* "the message was brought to Abraham that …"; cf. Rev 11:1) and Gen 45:16 (*kai dieboēthē hē phōnē eis ton oikon Pharaō legontes*; cf. Rev 4:1), in which the participle has the wrong number and gender. Finally, throughout the LXX the Hebrew infinitive absolute is rendered by the un-Greek combination of participle with finite verb of the same stem; e.g., Exod 3:4 (*idōn eidon,* "I have *certainly* seen"; cf. Eph 5:5).

Apart from such Hebraistic translations, there is in *all* the translated books a much simpler and more monotonous word order than in nonbiblical Greek, and a style full of repetitions, through which the original Hebrew is still more or less visible.

All these phenomena together certainly distinguish the Greek used in the translation of the LXX and of many books of the Apocrypha from Greek as it was written by non-Jews. It does not, however, mean that this idiom is to be regarded as the written reflection of a special Jewish dialect of Greek, comparable to Yiddish (spoken) in Eastern Europe among German Jews) and Judeo-Spanish (used in Saloniki). The retaining of the Hebrew word order and of many Hebrew turns certainly stems from the desire to render the Torah as faithfully as possible. This is also proved by the translator Aquila, who went much further in this respect and apparently wanted to correct the LXX on a number of points. The best known instance is his rendition of the Heb accusative particle *ʾet* by *syn* with accusative (Gen 1:1), because elsewhere *ʾet* can indeed mean "with." At Isa 9:5 he translated *ʾăbî-ʿad,* "father of eternity," by *patēr eti* because *ʿad* means (1) "eternity" and (2) "still, yet." On the other hand, when Jewish authors do not translate but do compose their works in Greek (as did Philo of Alexandria and St. Paul) the occurrence of Semitisms is either zero or very incidental, and their word order is as varied as that used by native Greeks. Within the LXX canon itself, the nontranslations of 2–3-4 Maccabees are written in excellent idiomatic Greek. The Fourth Book of Maccabees, which was written toward the end of the 1st century A.D., even follows the Atticistic literary mode of imitating the Attic of the classical period and reintroducing old-fashioned grammar and vocabulary. Hence, the author of *4 Maccabees* has used *-tt-* again in such words as *glottan* (10:17, 21), but used *glossa* at 10:19, and used the optative in subordinate clauses (9:27; 19:1; 11:13).

All this does not of course rule out the possibility that some Jews had an accent when speaking Greek. Josephus himself confesses that he never succeeded in acquiring a correct pronunciation of Greek (*Ant* 20.263). And of course, in accordance with the extent to which the foreign language was mastered by a specific individual, that person may have used many, few or no Semitisms at all.

E. The Greek of the LXX

1. Phonology. The LXX mss do not reflect the orthography of the autographs but that of their own times (4th century A.D. or later). Only the Greco-Egyptian papyri of the Ptolemaic period can give an impression of the phonetic changes that were taking place when the LXX was being made. It appears then that *ei* and *i* were confused in the 3d century B.C., as were *oi* and *ō,* and that "iota adscript" was disappearing; there had been confusion between *ai* and *e* and between *oi* and *y* since the 2d century B.C. So the earliest mss of the LXX Pentateuch may have contained only the former group of confusions, and those of the later translated books may have had all of them. However, the further confusion of *ei-i* and *ē* in Bible mss dates back only to the 2d century A.D. and cannot, therefore, have figured in any LXX or NT autographs. In a single case, the mss tradition appears to be trustworthy as far as orthography goes. That is, where the mss have *-tt-* instead of *-ss-* in such later Atticistic works as *4 Maccabees* (and not only in the comparatives *kreittōn* and *elattōn,* which were more often exceptional in this respect).

2. Morphology. Here, the trustworthiness of the mss is much greater, as appears from the fact that they have transmitted phenomena that are practically restricted to the LXX in Greek literature, such as the

third-plural ending *-osan* for *-on* in second aorists, which in its turn was later generally replaced by *-an.* The LXX mss then bear witness to the following formal peculiarities:

a. Declension. First-declension nouns in *-ra* and fem. perf. participles in *-uia* have gen. sing. in *-ēs* and dat. sing. in *-ē* like *thalassa.* In the second declension, there are fluctuations between types (*ho*) *hippos* and (third declension) (*to*) *oros;* vocative of *theos* is *thee;* Attic second-declension *leōs, neōs* replaced by *laos, naos; nous, chous* are declined like *bous,* hence gen. sing. *noos* (even in *4 Macc* 1:35) and dat. sing. *noi; ostoun* and *osteon* occur both, but gen. sing. *osteou* and dat. sg. *osteǭ* are usually uncontracted. Third declension acc. sing. sometimes *-an,* and that of adjectives and personal names in *-ēs* is *-ēn;* acc. sing. masc. of *pas* sometimes *pan;* acc. pl. sometimes in *-es,* especially *tessares* (on the analogy of nom. and acc. *treis*) and in participles (2 Esdr 23:15 B; acc. pl. of type *basileus*: *-eas* and *-eis;* acc. pl. of *bous* and type *pitys*: *-as;* the adjective *plērēs* is often an indeclinable; the dual number has been given up in all declensions.

b. Reduplication. Under Hebrew influence, substantives are sometimes reduplicated, having a distributive value, e.g., Exod 8:10 (MT 8:14)—*kai synēgagon autous thimōnias-thimōnias,* "and they gathered them [the dead frogs] together in heaps" (cf. Mark 6:39–49 under Aramaic influence), or a generalizing value, e.g., Lev 17:3—*anthrōpos-anthrōpos tōn huiōn Israēl* "every man of the sons of Israel." Doubled adjectives have an intensive value, as in Isa 26:20—*mikron hoson-hoson,* "a very short time" (cf. Luke 5:3 D; Heb 10:37).

c. Numerals. *Deka-treis,* etc., and *treiskaidekatos,* etc., have replaced *treiskaideka* and *tritos kai dekatos;* only *hendeka* is found, not *deka-heis,* but *dōdeka* and *deka-dyo* occur side by side. Reduplicated numerals have a distributive value, e.g., Gen 7:2–3: *hepta-hepta* and *dyo-dyo,* "each time seven," "each time two" (cf. Mark 6:7); doubled numerals occurred, however, also in nonbiblical Greek: Soph *frg.* 201 *(Eris) mian-mian.*

d. Verbs. *Personal endings.* The dual number has completely disappeared. The endings of the second aorist *-on, -es,* etc., are often replaced by *-a, -as,* etc., the third person being in *-an* or in *-osan,* as in Gen 18:8: *ephagosan;* in the imperfect such replacements are rare, as in Judg 6:3 (B): *anebainan,* and Jer 5:26: *synelambanosan;* the ending *-san* is also found in imperfects of contracts—Job 1:4 (B*, S*): *epoiousan,* and Judg 11:5 (A): *epolemousan,* and in optatives—Deut 33:16: *elthoisan,* and Deut 1:44: *poiēsaisan;* and it has completely replaced the older endings of the third-person-plural imperatives, both active and medio-passive, as in Gen 1:14: *estōsan,* Lev 20:10: *thanatousthōsan,* and Gen 1:14: *genēthētōsan.* The third-person plural of the perfect in *-asi* could be replaced by *-an,* as in Deut 11:7 (B): *heōrakan.*

Tenses. Present-Imperfect: beginning merging of *-aō* and *-eō* in contracted verbs, as in 2 Macc 7:7 (A): *epērōtoun;* verbs in *-mi* are changed into verbs in *-ō*: *hista (n)ō, titheō, didoō.* Aorist: compounds of *-agō* may have regular aorists in *-ēa;* verbs in *-ainō* and *-airō* always have aorists in *-ana, -ara;* there is a preference for passive aorists without *-th-*, like *ekrybēn, epeskepēn.* Perfect-Pluperfect: *-n-* before *-metha, -menos,* etc., no longer changes into *-sy-;* as in Num 5:13: *memiammenē;* in the pluperfect the characteristic ending is *- (k)ei-* in all persons, and the augment is often absent. Augment: *boulomai, dynamai, theloμ,* and *mellō* have *ē-;* the temporal augment is often absent in verbs beginning with *aut (o)-, eu-,* and *oi-;* incidentally, verbs have two augments, as in Jer 47:7: *parakatetheto* (cf. Mark 3:5).

e. Hebrew Influence? In the field of Greek forms proper, hardly anything can be ascribed to Hebrew influence except for the reduplication of substantives. It is possible that the use of the expression *kol-zākār,* "all that is male," in some contexts together for persons and animals such as cattle and sheep, which happen to be referred to in Greek by neuter words (*probata, ktēnē*), induced the translators to choose the *neuter* adjective *pan arsenikon.* Due to the lexical meaning "male" of the whole expression, it was probably misunderstood at times as also having the masculine grammatical gender. This could easily happen in passages such as Gen 34:15, where *pan arsenikon* follows upon and refers to *pas arsēn* (34:14), and this may have led to the use of *pan* as acc. sing. masc., for instance, in Dan 11:37 (Theod): *epi pan theon.*

3. Syntax and Semantics. a. Substantives. *Number.* The singular may be generic in the somewhat restricted sense that it indicates all the representatives of the kind that happen to be present in the

situation, as in Exod 8:2—*kai anebibasthē ho batrachos kai ekalypsen tēn gēn Aigyptou,* "and the *frogs* came up [out of the Nile] and covered the land of Egypt"; in such cases, the accompanying verb is sometimes in the plural, as in Judg 15:10 (B)—*kai eipan anēr Iouda,* and (A)—*kai eipan autois pas anēr Iouda.*

Nominative. Used with the article as vocative, as in Aristophanes and Plato, but much more frequently due to Hebrew, e.g., 3 Kgdms 18:26—*epakouson hēmōn ho Baal.* The nom. can also be used at the head of a sentence to indicate the "topic," which is then followed by a "comment" clause containing a resumptive pronoun, as in Ps 102(103): 15—*anthrōpos, hōsei chortos hai hēmerai autou,* "man, like grass (are) his days." Contrary to Greek usage, appositions sometimes stand in the nom. case without congruity with the antecedent, as in Gen 11:29—"and the name of the wife of Nachor (was) Melcha, the daughter *of* Harran, the father (*patēr*) of Melcha and the father (*patēr*) of Jescha," with *patēr* used both times instead of *patros* (cf. Rev 1:5; 2:20).

Genitive. The genitive absolute indicates circumstances that are different from those of either the subject or the (in)direct object of the sentence. Very incidentally, however, the circumstances of subject or object are also referred to in Classical Greek by a gen. abs. (Plato *Resp.* 8.547b *biazomenōn … hōmologēsan*), but in Koine Greek this usage became quite normal; hence, Dan 8:1—"and I saw (*eidon*) … when I was in Susa (*emou ontos*)," and Tob 1:4 (B,A)—"when I was (*hote ēmēn*) in my country … when I was still young (*neōterou mou ontos*)."

Dative and accusative. Often used with verbs of the same stem or with verbs having a roughly equivalent meaning, in order to render the Hebrew absolute infinitives and cognate objects, as in Gen 2:17—*thanatǭ apothaneisthe*, "you will certainly die" (cf. Exod 19:12: *thanatǭ teleutēsei*), and Gen 27:33—*exestē … ekstasin megalēn* (cf. Judg 15:8—*epataxen … plēgēn megalēn*—and Luke 2:9).

Comparison of Adjectives. The comparative form has both the comparative and the superlative values: *meizōn* = "greater," "greatest," while the superlative form has only the "elative" value: *megistos* = "very great." Since *proteros* and *eschateros,* however, have fallen into disuse, *prōtos,* besides meaning "first," also means "earlier"; and *eschatos,* besides meaning "last," also means "later." Moreover, the positive degree can also function as comparative in accordance with Hebrew, which has no degrees of comparison, as in Gen 49:12—"his teeth are whiter (*leukoi*) than (*ē*) milk"; Exod 8:11—"the Lord is greater (*megas*) than (*para*) all the gods"; Ruth 4:15—"who is better (*agathē*) for you than (*hyper*) seven sons" (cf. Mark 9:43, 45, 47; Luke 13:2).

Pronouns. Personal. LXX Greek shows an overuse of personal pronouns (genitives after substantives, accusatives after verbs) which is due to the frequency of the Hebrew pronominal suffixes. *Possessives. Emos, sos,* etc., have been replaced generally by the genitives of the personal pronouns, except in the book of Proverbs. *Reflexives. Heautous,* etc., are also used for "ourselves" and "yourselves." Typical Hebrew is the use of "his soul" and "his bones" as reflexive pronouns.

Relatives. The former difference between the indispensable relative *hos, hē, ho* and the dispensable *hostis, hētis, hoti* is being given up. The use of the so-called "resumptive" personal pronouns and adverbs with relative pronouns is due to the fact that Hebrew has no relative pronoun but does have a relative conjunction (*ʾăšer*), as in Gen 1:11—*xylon … poioun karpon, hou to sperma autou en autǭ;* Gen 33:19—*agrou, hou estēsen ekei tēn skēnēn;* Deut 9:28—*tēn gēn, hothen exēgages hēmas ekeithen* (cf. Mark 7:25; Rev 3:8; 12:16).

Demonstratives. Fem. *hautē* may have neuter value like Hebrew fem. *zōt,* as in Judg 15:7 (B)—"if you do this" (*houtōs tautēn,* MT *kā-zōt*).

Definite Article. Used in the sing. to indicate (1) a representative of the whole kind, Amos 5:19—"as if a man fled from a lion (*tou leontos*) and a bear (*hē arkos*) met him … and a serpent (*ho ophis*) bit him"; (2) all representatives present of the kind, as in Exod 8:2—*kai anebibasthe ho batrachos kai ekalypsen ten gen Aigyptou.* Nouns followed by depending gentitives may lack the article because the Hebrew construct state never has it, as in Nah 1:1—*biblion horaseōs Naoum* (lit. "book of vision of Nahum"). The article *tou* with the infinitive, which was frequent in Thucydides, is used freely with final-consecutive or

explicative force (Ps 26(27):4), sometimes even with such verbs as *dynamai* (Ps 39(40):13) and *archomai* (2 Chr 3:1).

Indefinite Pronouns. "Nobody, no one" is *ou/mē ... pas* or *pas ... ou/mē* in accordance with Hebrew *lō ... kōl* or *kōl ... lō*.

b. Verbs. *General.* Frequently with prepositions instead of oblique cases only, in accordance with Hebrew, as in Judg 21:7—*omnuein en* (cf. Matt 5:34). Finite forms are often replaced by *eimi, ginomai,* or *hyparchō* with participle. This is also classical, but in the LXX more frequent under Hebrew influence, as in Gen 4:14—*esomai stenōn kai tremōn.* Some intransitive verbs are used also as causatives in the LXX, as in Judg 9:6 (A,B)—"and they made Abimelech king (*ebasileusan*)," and 4 Kgdms 17:21: "and he made them sin (*exhēmarten*)."

Middle and Passive. The tendency is to use in fut. and aor. either the middle or the passive form only; the passive forms may then have also the reflexive value. There is also a tendency to replace fut. middle deponents like *akousomai* by an active like *akousō.*

Tense. The fut. ind. is often used to express a command like the Hebrew jussive, as in Exod 8:1—*eiselthe pros Pharaō kai ereis autō,* "you will go before pharaoh and you will say to him …"

Moods. The optative tends to be restricted to the expression of wishes, the conjunctive taking its place in subordinate clauses, except in the Atticistic *4 Maccabees.* Participles are often used as finite verbs, e.g., Judg 13:19—"and Manoe and his wife were watching" (*blepontes* only). Participles and infinitives may be continued not by a coordinated part. or inf. but by a finite verb, e.g., Isa 14:17—*ho theis tēn oikoumenēn holēn erēmon kai tas poleis katheilen* (cf. Rev 1:5–6). Participles are often combined with finite verbs of the same stem to render the Hebrew infinitive absolute: Gen 22:17—*eulogōn eulogēsō se kai plēthynōn plēthynō to sperma sou.*

c. Prepositions. The tendency is to drop semantic distinctions when combinable with different cases, like *epi* with gen., dat., or acc. The preposition *apo* is used with gen. often instead of partitive gen. only; *para* and *hyper* with acc. express comparative value of positive degree; *eis* with acc. is confused with *en* plus dat.: Gen 37:17—"and he found them in (*eis*) Dothaim," and Exod 4:21—"which I gave into your hands" (*en tais chersin sou*); *en* with dat. is often circumstantial-instrumental, ousting *meta* and *syn:* Exod 6:1—*en gar cheiri krataią exapostelei autous.* New prepositions, mostly compounds and all with gen. case: *apanōthen, hypokatōthen, (ap-, kat-)enanti, (kat-)enōpion, opisō, katopisthen, kyklothen;* translated from Hebrew: *ana, apo, kata, pro* with *prosōpou* or *porsōpon* and followed by genitive.

d. Conjunctions, Particles. Direct questions are introduced by *ei*: Gen 17:17—*ei tǭ hekatontaetei genēsetai,* "will there be born (a child) to a hundred-year-old?"; *ei* also introduces negative, *ei mē* positive oaths: Gen 14:23—*ei ... lēmpsomai,* "that I shall certainly not accept"; in relative clauses *ean* is often equivalent to *an,* e.g., in Gen 2:19 and NT *passim.*

In the LXX there is a definite overuse of *kai,* "and," because Hebrew favors *wĕ-,* "and," above temporal, causal, final-consecutive, and other conjunctions, and because *kai* also renders the initial *wa-* of the OT narrative tense *wayyiqtōl.* Hence, *kai* is frequent, heading almost every sentence in Genesis. The frequency of *kai* is probably a Hebraism in Revelation.) The frequent Hebrew deictic word *hinnê* is rendered by *idou:* Amos 7:1, 4, 7, 8. Because Biblical Hebrew hardly ever uses a special construction for reported speech, the conjunction *hoti,* if it is used at all, is a *hoti recitativum* (i.e., introducing indirect discourse): Gen 12:13—*eipón oun hoti adelphē autou eimi,* "say then: 'I am his sister' " (the MT is different in that it has indirect speech in the choice of the pronoun and personal suffix: *ʾimrî-nāʾ ʾăḥōtîʾāt,* "say you are my sister"); very common therefore are concatenations of direct speech such as Exod 9:1—"And the Lord said to Moses: 'Go to pharaoh and say to him: "Thus speaks the Lord, the god of the Hebrews: 'let my people go so that they may serve Me' " ' ".

e. Word Order. It is in this field together with that of style that the underlying Hebrew exercises its influence most strongly. It is essentially a V S O (verb-subject-object) language, with deviations in contrastive clauses, and it is the frequency of this order in the LXX which strikes an experienced reader as un-Greek, not the order as such. Furthermore, the order in noun groups is absolutely fixed: dependent genitives, adjectives, and demonstratives always follow the substantive and in this order, which in

translation-Greek results in, e.g., Dan 4:5— (Theod) *pneuma theou hagion*—and Dan 3:28 (LXX)—*tēn polin sou tēn hagian* (cf. Rom 7:24—*ek tou sōmatos tou thanatou toutou* "from this body of death," where the demonstrative pron. is attributive to *sōmatos*).

f. Style. One of the most characteristic features of the Hebrew style is that it favors repetitions. Whereas a native Greek would probably have written at Gen 12:1 something like **ek tēs sēs gēs, syngeneias te kai patrikou oikou,* it is the typical Hebrew repetition of preposition, article, and personal suffix which is reproduced in the LXX: *exelthe ek tēs gēs sou kai ek tēs syngeneias sou kai ek tou oikou tou patros sou,* "He departed from his land, and from his kinfolk, and from the house of his father." Compare also the repetition of "all" in Gen 8:1—"and God remembered Noah and *all* the animals and *all* the cattle and *all* the birds and *all* the reptiles"—after these different categories have already been mentioned, each time preceded by "all," in 7:14, and the repetition of the degrees of relationship at Gen 11:31, which have already been demonstrated in 11:27–28. Even where such pieces may stem from different sources, a Greek compiler would have taken care to cancel things already mentioned. But repetition, be it by synonyms or another means, is even the structural principle of Hebrew poetry. There are three doublets in the two opening lines of Lamech's Song in Gen 4:23:

Ada and Sella, listen to my voice,
wives of Lamech, give ear to my words.

A further characteristic of Hebrew style is the mentioning of every stage of a series of successive actions. Hence in Gen 11:31, it is not said that "Terah led Abram out of Chaldea" but that "Terah *took* Abram … and led them out" (cf. the verb *lambanō* also in Mark 14:22 and Rev 10:9); frequent, too, are such sequences as "he spoke and said," "he called and said," and "it happened that" followed by the principal event (*kai egeneto* in various constructions).

It is this relative monotony in word order, the repetitive style, the mention of things that may be taken for granted, and also the marked frequency of nominal (verbless) sentences and phrases, which make the Greek of the translated LXX books so different from the nonbiblical Greek style and also from that of the nontranslations in the LXX canon like 2–3-4 Maccabees.

g. Vocabulary. It stands to reason that there were also changes in vocabulary, either because new words were coined and new senses were attributed to words already in use, or because specific words became more frequent than before while others fell into disuse. New words are *bdelygma* (to *bdelyssomai*) in Lev 5:2; *enōtizomai,* specially coined to match *akouō* in Lamech's Song in Gen 4:23; *thysiastērion* (to *thysia*) in Gen 8:20; *peritomē* (to *peritemno*) in Gen 17:13; and *sabbatizō* in Exod 16:30. New senses are carried by *kibōtos,* "ark" (of Noah), in Gen 6:14; *dēloi* in Num 27:21 or *dēlōsis* in Lev 8:18, meaning "the Urim"; *prostithēmi,* "to go on with" or "to do further," in Gen 4:2; and *hypsēla,* "offering heights," in 3 Kgdms 3:2.

More frequent through the Israelitic-Jewish context are *alsē,* "sacred groves," in Deut 7:5; *kibōtos,* "ark" (of testimony) in Exod 25:9(10); *ho Pantokratōr* in 2 Kgdms 5:10; *peritemnō* in Gen 17:10; and *skēnē tou martyriou* in Exod 27:21. Finally, some expressions have been rendered word for word into Greek, e.g., Gen 23:15—*ana meson emou kai sou ti an eiē touto?*—and 3 Kgdms 17:18—*ti emoi kai soi?* (cf. Mark 1:24 and John 2:4, but also Epictetus 1.22, 15—*ti moi kai autō?*).

F. Greek as the Language of the NT

In Palestine, only Jerusalem and some territory around it constituted a center of Jewish population, to which some districts in Galilee were later added. In its earliest years, the Hasmonean state might have done without Greek alongside Hebrew as an official language, but as soon as the boundaries were extended this meant that Hellenistic towns and territories were added to it, such as Philistia, Idumea, Samaria, and parts of Galilee, and that the use of Greek was an inevitable necessity. In fact, the Hasmonean princes soon started to adopt additional Greek names and to strike bilingual coinage. Their rule did not prove a break in Hellenism; Palestine was no less affected by Greek culture than the other countries in the Near East. It produced a number of Hellenistic scholars: Menippus and Meleager of Gadara; the philosophers Philodemus, also from Gadara, and Antiochus of Ashkelon (teacher to Cicero); and, from the latter town also, the grammarians Dorotheus and Ptolemy; and still others.

King Herod I was an enthusiastic promoter of Greek culture, and he embellished Jerusalem and many other towns with theatres, colonnades, and aqueducts in the Hellenistic style. In the 1st century A.D., the country was Hellenized to the extent that the usual way of communication between the different population groups can only have been Greek, and because Greek was at least understood by a wandering preacher like Jesus, who met with Decapolitans (Matt 4:25) and Diaspora Jews (John 12:20–21; cf. 7:35), and who had many Greek followers according to Josephus (*Ant* 18.63). It should not therefore come as a surprise that some of the NT authors were able to write excellent Greek. Paul, for example, probably went at a very young age from Tarsus to Jerusalem and learned Greek there; and James, supposedly Jesus' brother, could have learned the language. Because the NT, as we have it, was addressed to the Western Diaspora, which spoke Greek, it was written in that language, even the letter that went as far west as Rome. The Jews there also used Greek, as is shown by their inscriptions in the catacombs and by Theodotus, son of Vettenus, a Jew who returned from Italy (where his father, an archisynagogue, got his Latin name) and built a synagogue complex in Jerusalem of which the memorial inscription in Greek is still extant (*CIJ* no. 1404). In fact, even among the Jews in Palestine, Greek was a current idiom. The majority of the ossuaries (bone containers) found around Jerusalem are inscribed in Greek (the minority are inscribed in Hebrew-Aramaic), and the tomb of the so-called "Goliath family" contained coffins with both Greek and Hebrew inscriptions. See PALESTINIAN FUNERARY INSCRIPTIONS.

G. The Greek of the NT

The Greek of the NT shows the same diversity and differences in quality as the books making up the LXX canon. Original compositions like Paul's and James' letters and the Epistle to the Hebrews are in good Greek, relatively free of Semitisms; the Letter of Jude even overdoes the un-Hebraistic word order by placing as many adjectives, participles, and genitives as possible with the substantives. Writings which at least partly depend on an oral Aramaic tradition, such as the Gospels, show the influence of that language in the confusion of relative and final-consecutive clauses due to the ambiguous particle *di-*, which may head both. Finally, the mastery of Greek by the author of Revelation, which of all NT books is most strongly suspected to be a translation, must simply be classified as insufficient; the author uses participles as finite verbs and incongruent appositions in the nominative, and his word order and style as well as his overuse of *kai* betray a very strong Semitic influence. All the NT books, however, have Hebraisms in the quotations from either the LXX or other versions like Theodotion (Acts 7:34—*idōn eidon*—from Exod 3:7, and many more).

As compared with what must have been the phonology of the later LXX books, we must assume that the NT autographs showed about the same development in that all diphthongs had become monophthongs, and the difference between long and short vowels had been leveled. Almost all the morphological and syntactical peculiarities of LXX Greek are also to be found in the NT with very few exceptions, such as *pan* as acc. sg. masc. and *egō eimi* for *egō.* Some trends, however, have gone further, like the normalization and simplification of the verb system: the future of verbs in *-azō* and *-izō* is no longer (as in the LXX), in *-aō* and *-ieō,* but in *-asō* and *-isō;* future participles and infinitives are practically absent; aor. ind. and perf. inf. are beginning to merge, as is shown for instance by 1 John 1:1—*ho heōrakamen … ho etheasametha.* The demonstrative pronoun *hode, hēde, tode,* which was still current in the LXX, is falling into disuse in the NT.

In the field of vocabulary, the NT favors some specific terms, but without developing a separate "Christian language." More frequently used than elsewhere are such words as *baptizein, euangelion, euangelizesthai, aphesis, aphiein* ("to forgive"), *stauros,* and *Christos.* Neologisms are perhaps *aposynagōgos*—"expelled from the synagogue" (John 9:22), *kardiognōstēs*—"knower of hearts" (Acts 1:24), *moschopoiein*—"to make a golden calf" (Acts 7:41), and *phagos*—"glutton" (Matt 11:19). Christian loanwords from Hebrew are *amēn, hallēlouia,* and *hōsanna.*

H. Atticism

Like the latest books of the LXX canon, the whole NT was written in the period of beginning Atticism. Apart from such incidental cases as *-tt-* in *elatton* and *kreittonos* in Heb 7:7, both of which may have been permanent exceptions, it is only Acts which shows some Atticistic tendencies. It is here only that the old-

fashioned word *naun* is used (27:41) by the side of *ploion* (27:37, 39, 44), that optatives are found in dependent clauses (17:27; 27:12, 39), and that the obsolete future participles (8:27; 22:5; 24:11, 17) and future infinitives (11:28; 24:15; 27:10) are mainly present in the NT.

Only the author of Acts varies his style in accordance with the Greek stylistic ideal, which manifests itself in his use of alternating synonyms in one and the same context. In the story of Ananias and Sapphira (5:1–11) and its introduction (4:32–37), he uses three different words for "to sell": *pōleō* (4:34, 37), *piprask*ō (4:34; 5:4), and *apodidomai* (5:8); in the pericope of the apostles' imprisonment there are three words for "prison": *tērēsis dēmosia* (5:18), *phylakē* (5:19, 22), and *desmōterion* (5:21, 23). Compare in the story of the jailkeeper in Philippi the words *phylakē* (16:23, 24, 27) and *desmoterion* (16:26); the use of *naus* besides *ploion* may also be a case in point. He has two words for "many": *polloi* and *hikanoi,* two for "one another": *heautous* (28:29) and *allēlous* and the expression *allos pros allon* (2:12), two words for "other": *allos* and *heteros,* three for "to be": *eimi, ginomai,* and *hyparchō,* and there are some six for "the next day": *hē aurion, hē epaurion, hē hetera, hē epiousa, hē echomenē hemēra,* and *deuteraioi.* It is even thinkable that such a variant as *ēlthamen* (28:14) between *ēlthomen* (28:13) and *eisēlthomen* (28:16) goes back to the original and was deliberately chosen; compare also the shift from 1st declension sg. *Lystran* (14:6 and 16:1) to 2d declension pl. *Lystrois* (14:7 and 16:2). The variation between *Ierousalēm* and *Hierosolyma* has an extra dimension: the former is mainly used in contexts where in reality the conversation should be assumed to have been carried on in Aramaic (with some exceptions).

This stylistic tendency then may shed some light on the literary taste of both the author and Theophilus, his first addressee. Nevertheless, there are also Semitisms in Acts, such as the frequency of the periphrastic conjugation (1:10, 13, 14; 2:5, and elsewhere; on these, see Fitzmyer *Luke I–IX* AB).

A. Hebrew as a Language Name

The subject of this article has been commonly called Hebrew by its own community only during the last thousand years or so. The earliest biblical reference to the Hebrew language names it "the language of Canaan" (Isa 19:18), and aptly so, since Hebrew is the best attested and best known form of Canaanite. Elsewhere in the Bible (2 Kgs 18:26, 28 = Isa 26:13 = 2 Chr 32:18; Isa 36:11; Neh 13:24), the language is referred to as *yehûdît,* "Judahite" or "Jewish," in contrast to Aramaic, which by then had emerged as a medium of international trade and diplomacy. In the literature of later antiquity, the language is usually called "the holy tongue," with reference to the biblical corpus, and the "tongue of the sages," when referring to the language of the oral tradition—what is called rabbinic or mishnaic or tannaitic Hebrew. It is here that we come across the first explicit reference to divergent literary styles.

When the term *ʿibrî,* "Hebrew," appears in the Bible (e.g., Gen 39:14; 41:12; Exod 2:11; Jon 1:9), it does not refer to a language but rather to an ethnicity. It occurs almost always as a synonym of the more commonly encountered "sons of Israel" when the in-group came in contact with the out-group. Only with reference to the categorization of native-born versus foreign slaves does it appear as an in-group ethnic term (Exod 21:2; Deut 15:12). While the term "Hebrew" as a language reference appears in the Talmud, it very rarely refers to what we call Hebrew. In one citation, most opinions assert that this reference to "Hebrew" refers to some outland dialect of Aramaic (*b. Meg.* 18a; see Rashi's commentary *ad loc.*). Another possibility is that this specific reference is to the Georgian language, the term *ʿibrî,* "Hebrew," being used because of its similarity to the term the Greeks used for these people, the *Iberatoi.* In medieval Hebrew, such updating of biblical toponyms and ethnic labels on the basis of vague phonetic similarity was commonplace. The designation *Gomer* for Germany is an example.

The designation "Hebrew" appears in the Talmud in one other linguistic context, referring to the old Canaanite alphabet, which is called "Hebrew writing" as contrasted with "Assyrian writing" (*b. Meg.* 3a). The newer alphabetic style, at least in the shape of its letters, replaced the older one throughout the Near East during the early Persian Empire period, evolving into the "square character" and its cursive derivatives which are in use today. See HEBREW SCRIPTS.

Curiously enough, the term “Hebrew” as the in-group common reference to its language is a borrowing from Arabic, first introduced by Saadia Gaon (882–942 C.E.) in his grammatical writings (Skoss 1955). The new designation entered the Hebrew language only when Jews began to write their grammatical studies in their own language a few centuries later.

The entire extent of the Canaanite language area was a narrow belt along the E Mediterranean shoreline, stretching from N Syria southward to the Sinai. Phoenician is the usual designation for the Canaanite spoken north of Israel, although the Phoenician colonizers of North Africa called themselves Canaanites and named their new country, centering around Carthage, Canaan. See PHOENICIA, HISTORY OF.

Other than as the language of ancient Phoenician colonialism, Canaanite never assumed a major role in the ancient world. Rome defeated its archrival Carthage in the west, and in the Levant Aramaic, originally used east of the Phoenician hill country, gradually spread its domain. As the language of the Jews, Hebrew was the mother tongue of only Jerusalem and its environs at the beginning of the Common Era. In the northern domains of the expanded Hasmonean Kingdom of Judea a form of Aramaic was spoken, simply because the local population carried on the speech habits of their ancestors who were converted to Judaism during the reign of John Hyrcanus I. The Idumeans to the south, who had been converted at about the same time, continued to speak their ancestral Canaanite tongue.

Hebrew probably ceased to be a living language (in the sense of a community mother tongue) around the year 200 C.E. as the result of the Bar Kokhba disaster, when the population of Judea was decimated and the survivors fled northward to the Galilee.

Judging from the literary evidence, however, the survivors were not really aware of what was happening to them linguistically, for the Aramaic which they spoke as a family language was symbiotically linked to the Hebrew they continued to use for more formal purposes. Hebrew and the several varieties of Aramaic, quite distinct from each other as languages in every other way, now were treated as mere styles of one community language. These same speakers, nonetheless, always regarded the Syriac variety of Aramaic to be a separate language.

Hebrew qua Hebrew continued throughout the ages as the medium of intense literary activity and also as a spoken lingua franca. It was revived as a mother tongue late in the 19th and early in the 20th centuries.

GENE SCHRAMM

B. Linguistic Affiliation

1. Afroasiatic. The family of languages to which Hebrew belongs is grouped by linguists in a phylum called Afroasiatic. The geographical range of Afroasiatic covers northern and central Africa and western Asia. In time, Afroasiatic languages are attested from the 3d millennium B.C.E. (although some languages of the phylum must have existed for at least a millennium before this) until the present (on the classification of Afroasiatic, see Ruhlen 1987).

The Afroasiatic phylum has five or six members: Egyptian (later called Coptic, now extinct) and Berber in N Africa, the Chadic family (whose best-known member is Hausa) in sub-Saharan Africa, the Cushitic-Omotic family in the Horn of Africa, and the Semitic family, which includes Arabic and Hebrew. Many of the features of Semitic languages in general and of Hebrew in particular are best viewed in the larger context of Afroasiatic affiliation.

2. Semitic. Hebrew belongs to the family of Afroasiatic languages commonly referred to as Semitic languages. The major division of this family is between East Semitic and West Semitic (on the classification of Semitic languages, see the introductory survey at the beginning of this entry). East Semitic incorporates the group of dialects called Akkadian; West Semitic includes the Northwest Semitic languages, Arabic, and South Semitic.

3. Northwest Semitic. The Northwest Semitic languages comprise the Canaanite group and Aramaic. Evidence for early Northwest Semitic begins in the 3d millennium (if one admits some of the features of the language of Ebla) and continues to the end of the LB II period (around 1200 B.C.E.; see especially the article on Ugaritic below). Some of the distinctive features of Canaanite can be observed in these early Northwest Semitic samples, but the distinction between Canaanite and Aramaic remains difficult to

impose until the Iron II period. A recent survey concludes that the Iron Age languages of Syria-Palestine are best viewed as a continuum having Phoenician as one of its poles and Aramaic as the other (Garr 1985: 229). Hebrew is probably to be located near the center of this cline (Waltke and O'Connor 1990: 8–9 n. 20).

The Canaanite languages include Phoenician (which distinguishes the minority dialect of Byblos from the more widespread dialect of Tyre and Sidon), Hebrew (which distinguishes a northern dialect, probably centered in Samaria, from a southern, the dialect of Jerusalem and Judah), Ammonite, Moabite, and Edomite. The language of the Deir ʿAlla texts should perhaps also be included. See DEIR ʿALLA, TELL (TEXTS).

C. Early History of Hebrew

1. Prehistory. The upheavals which rearranged the political geography of Syria-Palestine during the transition from LB II to Iron I (that is, about 1400–1200 B.C.E.) produced corresponding changes in the linguistic map. It is probably during this period that Hebrew can be said to have emerged as a distinct language (although the continuity of many earlier Northwest Semitic features must not be ignored).

Some poetic passages of the Hebrew Bible (e.g., Exodus 15; Judges 5) have been dated to this early period on the basis of certain archaic features of their language, but no extrabiblical text identifiable as Hebrew survives from this period. (A very useful handbook of dated inscriptional texts is that compiled by Jaroš [1982]; texts 1–7 of this collection date from LB I to the end of LB II. The bibliography by Suder [1984] is incomplete and already passing out of date; the Chronological Index of Inscriptions [pp. 113–20] is nonetheless a helpful guide. The most important recent study of early alphabetic texts is by E. Puech [1986]; the interest of Puech's investigation is the development of the writing system rather than the language. Older handbooks include *KAI* 182–200; *TSSI* vol. 1.)

2. Iron Age Hebrew. The earliest written evidence of Hebrew comes from the archaeological period Iron IIB–C (800–586 B.C.E.). Hebrew must have existed as a spoken language earlier, and texts were undoubtedly composed in it; but none survives (beyond some archaic portions of the Hebrew Bible). Smelik (1987: 9) considers the archaeological record sufficient to warrant the conclusion that writing was not used widely in Israel until the 8th century, literacy being restricted before that time to the royal court and select officials.

During the Iron Age, Hebrew existed in at least two dialects: northern, or "Israelian" (a term coined by H. L. Ginsberg), and southern, or "Judahite." Evidence of the northern dialect is epigraphic and spotty; the southern dialect, by contrast, is abundantly attested in inscriptions and much of the text of the Hebrew Bible.

Israelian Hebrew is the language of the Samaria ostraca, administrative documents written on pottery fragments unearthed during excavation of the northern capital. See SAMARIA (PLACE). The ostraca fall into two groups, datable to 795–794 B.C.E. and 776 B.C.E., respectively (Jaroš 1982: 57). Their texts are brief and formulaic, offering a poor sample of the language. But their consistent use of the date formula *bšt (h)-* (followed by a number or numerals), "In (the) year x," shows that the language, at least with respect to this formulaic feature, follows the usage of Phoenician as opposed to Judahite, which employs the form *šnh* for "year" (see *DISO*, 312–13). Other inscriptions found in the region of the N kingdom may also give evidence of the language (see, e.g., *TSSI*, vol. 1, pp. 15–20).

J. W. Wesselius has recently (1987) asserted that the language of the Deir ʿAlla texts is Israelian Hebrew, and that the fragments of a story about Balaam written in ink on plaster found at the site constitute the first-known literary text in the language of the N kingdom. Morphological details of those texts make the argument linguistically problematic, and its acceptance must await the verdict of scholarly judgment.

With the deportation of the N kingdom in 722 B.C.E., Israelian Hebrew became a negligible dialect, and it eventually vanished altogether.

The dialect of Judah can be recognized in inscriptions from numerous sites. A seven-line inscription on a limestone tablet discovered at Gezer in 1908 is frequently called the "Gezer Calendar" because it appears to tally the months of the year according to agricultural activities conducted in successive

seasons. Although its language is often said to be Hebrew, it exhibits morphological features distinct from other samples of (Judahite) Hebrew, both epigraphic and biblical (see *KAI*, vol. 2, pp. 181–82; *TSSI* 1: 1–2 ["an archaic Hebrew dialect"]; Jaroš 1982 no.11 [pp. 37–38]).

The inscription on a privately owned scarab of uncertain provenance dates paleographically to the late 10th or early 9th century B.C.E. (Jaroš 1982 no. 13 [pp. 39–40]). The Yahwistic name of its owner, *zryhw,* is spelled in a manner characteristic of later Judahite and may warrant the linguistic classification of the two-word text as "Hebrew."

The corpus of extant Hebrew (the term will be used hereinafter for the dialect of Judah unless otherwise specified) expands considerably in the 8th century B.C.E. Inscribed seals, benedictions, and letters written in ink on pottery fragments (ostraca), and commemorative and funerary texts engraved in stone show the language in use in public and private contexts, in religious and more "secular" settings, at "official" and "unofficial" levels. Major texts include the SILOAM INSCRIPTION from Jerusalem, the tomb inscription from Khirbet el-Qom (see PALESTINIAN FUNERARY INSCRIPTIONS), letters from ARAD, and the LACHISH LETTERS.

The language of these nonbiblical Hebrew texts is not appreciably different from the stratum called Classical Hebrew found throughout the Primary History and in segments of the Major Prophets from the Hebrew Bible. The inscriptional record thus places beyond cavil the conclusion that the MT preserves significant samples of the language of Iron Age Judah in its successive phases. There are, however, indications that the phonological analysis represented in the Masoretic vocalization of the consonantal text is at many points a later adaptation of earlier speech traditions (see D.1. below).

Extrabiblical Hebrew offers an important control on attempts at relative and absolute dating of the linguistic strata of biblical books. The diachronic study of morphological and syntactic features permits limited statements about changes in the language over time (Adams and Adams 1977 is an example; Kutscher 1982 is a posthumously published attempt at a continuous history of Hebrew; see the further comments by Waltke and O'Connor [1990: 13–15]). The extent and significance of linguistic change as it affected Hebrew can be assessed variously; attention to change, however, need not divert the reader of biblical texts from the evident continuity of the language.

3. Persian and Hellenistic Periods. A broad distinction can be made between Classical Hebrew, by which is meant essentially the language of Judah before the Babylonian Exile (586 B.C.E.), and Late Biblical Hebrew (LBH), by which is meant essentially Hebrew of the Persian period (the term has gained currency since its use by Polzin 1976). The typology of LBH developed by Polzin has more recently been extended to a larger corpus of biblical texts by A. Hill (*WLSGF*, 77–89), tracing a body of characteristic features of LBH in the postexilic prophets. The coordination of relative with absolute dates ventured in Hill's study must remain tentative (as the author cautions [p. 84]), but such studies show the importance of diachronic arguments in the linguistic analysis of Hebrew.

Some of the distinctive features of LBH are attributable to the increased use of Aramaic by speakers of Hebrew after the Exile. There is evidence from the biblical text itself of concern to preserve the speech community of the "language of Judah" from the influence of Canaanite languages other than Hebrew (Neh 13:24; the "language of Ashdod" might have been Aramaic, but the peculiar designation suggests a Canaanite dialect). The statement in Neh 8:8 that the law of God was read "clearly" (Heb *mĕpôraš;* RSV marg. "with interpretation") has been taken to mean that in the postexilic period Classical Hebrew was no longer fully intelligible to the general populace.

Hebrew continued in use as a literary language in the Hellenistic period, and biblical books perhaps to be dated in this period show evidence of further linguistic change. The language of Qohelet has occasioned much study; the book's content contributes to the impression of Hellenistic influence (on the language, see Delsman 1982 and Fredericks 1988 [against late dating], but note the demurral of Schoors 1989). The Song of Songs is almost commonly set in the Hellenistic period, largely on the basis of linguistic arguments (see, e.g., Eissfeldt 1965: 490, 766). Esther is probably also a product of the Hellenistic age (Eissfeldt 1965: 510). The date of the Hebrew portions of Daniel has been a point of controversy; a date after 167 B.C.E. is generally held. See DANIEL, BOOK OF.

The book of Ecclesiasticus, or the Wisdom of Jesus the Son of Sirach (or Ben Sira), was composed in Hebrew about 180 B.C.E., but the Hebrew text was neglected for centuries and rediscovered only in modern times (Di Lella 1966; Skehan and Di Lella *Wisdom of Ben Sira* 51–61). A Greek translation produced by Ben Sira's grandson after 132 B.C.E. is included among the books of the Apocrypha.
PHILIP C. SCHMITZ

D. Structural Overview

1. Phonology. Properly speaking, this description deals primarily with the orthographic system, with educated guesses as to what the language may have sounded like at any one time in any given location.

The West Semitic alphabet in which Hebrew is written consists of twenty-two signs, representing six glides, two resonants, and fourteen obstruents. The glides are usually transcribed as /w/ for the rounded labial, /y/ for the unrounded palatal, and /ʾ, h, ḥ, ʿ/ for the glottals; the resonants are /r/ and /l/. Most authorities assume, on the basis of Greek and Latin letter transcriptions and comparative Semitic correspondences, that the broad sound values approximate those of Arabic. The obstruents are the two nasals /m/ and /n/, and thirteen orals, divided into the categories of labial, dental, palatal, and velar, intersected by the oppositions of stop:fricative and plain:emphatic.

Almost all authorities agree on the schematization of the sound values of the Tiberian Hebrew consonantal system shown in Table 1.

Table 1: The Obstruents

labial			dental				palatal			velar
p		t	ṭ	s	ṣ		š		k	q
b		d		z					g	
m		n								

The tradition of pronouncing Hebrew reflected in the Tiberian Masora divided the six plain stopped obstruents into twelve, with an additional stop:spirant opposition: /p:f, b:v, t:t̲, d:d̲, k:x/, and /g:g̲/. Originally, the realization of these six letters as either stops or spirants was predictable in terms of the immediate phonological environment: when following a vowel and not geminated, the spirant was sounded, while the stop was the default realization. But in time, with modifications occurring in the syllabic structure, the situation changed, and the consonantal inventory was increased marginally as a result.

The status of the sibilants is another area of disagreement, and for good reason, because there are many indications, in Hebrew as well as in other Semitic languages, of persistent instability in the silibant inventory. The Tiberian Masora distinguishes two consonants for the second-to-last letter of the alphabet: with a diacritic dot to the upper left, the letter is called *śin* and is transcribed as /ś/; with a diacritic dot to the right, it is called *šin* and is transcribed as /š/.

Together with the letter *samek,* there is no doubt that the three entities reflect a Proto-Semitic system of three separate phonemes. Whether or not the three were ever realized as separate phonemes in Hebrew is not as clear. The several traditions of liturgical pronunciation show different variations on the realization of these letters. In some instances, the three are merged into two sounds, in others into one. One Moroccan pronunciation tradition, for example, has *śin* and *šin* leveled as /š/ in opposition to *samek,* which is realized as /s/; the Samaritan tradition agrees with the Moroccan in this instance. One Lithuanian variety of Ashkenazic pronunciation levels all three to /s/. The classical payyetanic poet Qallir (6th century?) rhymes all three, although the precise realization is not to be recovered. No surviving liturgical tradition exhibits three separate sounds; nor is there any evidence that such a threefold realization ever existed in Hebrew. The prevalent traditions suggest that the Tiberians pronounced *śin* and *samek* both as /s/, as opposed to *šin,* which they sounded as /š/.

The letters transcribed with subdots (to include /q/, which is frequently transcribed as /q̣/), called emphatics, are usually considered to have been pharyngealized or velarized, on the order of the Arabic cognate sounds. Greek letter transcriptions, both from Hebrew to Greek and from Greek to Hebrew,

suggest that they differed from the plain counterparts in that aspiration was lacking as a coarticulatory feature, and this certainly agrees with the Arabic evidence.

The glottal glides are interpreted as the equivalents of the cognate Arabic sounds; there is certain evidence indicating that the merging of these four sounds took place independently in many areas at different times, resulting in either two or even one sound for the four letters.

The schematization of the full inventory of the Hebrew alphabet as modified by the Tiberian consonantal diacritics, counting *śin* and *samek* as homophonous graphemes, is shown in Table 2.

Table 2: The Twenty-two Letters and Their Sound Values

labial				dental					palatal			velar			glottal
p	f		t	t̲	ṭ	s	ṣ		š		k	x		ʾ	h
b	v		d	d̲		z					g	ḡ		ḥ	ʿ
m					n										
				r		l									
w									y						

The vocalic system of the Tiberians can be interpreted in conflicting ways. Nine essential vowel diacritics exist, most of which are named in accordance with the manner of their articulation. The term *ḥîreq*, for example, meaning "cleft," is the name of the diacritic representing the high front vowel /i/; *šûreq,* meaning "whistle," designates the high back rounded vowel /u/; *pataḥ*, meaning "open," is the name of the low (or open) vowel /a/.

There is considerable disagreement whether or not the two vowel signs *šûreq* and *qibbuṣ* represent contrastive long and short varieties of /u/, and this question is tied into the overall issue of constrastive vowel length for Tiberian Hebrew. Vocalic length for Hebrew is not mentioned at all until the 13th-century grammar of Radaq, and it is quite certain that he was describing a morphophonemic feature. But later interpretations of Radaq's description, possibly influenced by features of Latin and Arabic, ascribed phonemic vowel length to the Tiberian system, in spite of contradictory evidence from the medieval tradition of metrics. Furthermore, no Jewish pronunciation tradition shows any evidence of phonemic vowel length.

In this connection, the status of the four Tiberian *šĕwâ* signs is to be considered as well. The Tiberians themselves describe the sounds represented by these symbols in a way that suggests very strongly that they were open transitions rather than true vowels. With these considerations, therefore, the probability is very great that the Tiberian vowel system was a seven-fold one, schematized in Table 3.

Table 3: The Tiberian Vowels

Front						Back
i						u
	e				o	
		ɛ		ə		
			a			

Besides the diacritics added to indicate consonantal modification and those introduced to represent the vocalic inventory, another set of diacritics were devised to represent in portmanteau fashion the features of stress and intonation. Two such systems exist, one specific to the three books of Psalms, Proverbs, and Job, and the other for the remaining twenty-one books of the Jewish canon. These *ṭĕʿāmîm* or "accents" evolved in time to serve as cantillation symbols in the performance tradition, although the musical values for the former subsystem have been completely lost.

2. Grammatical Features. Features of the Hebrew language include both agreement and switch concord of grammatical gender and number within the phrase and within the clause. Two grammatical genders, typically labeled "masculine" and "feminine," exist. There are three grammatical numbers, a singular referring to one of a kind and a plural referring to two or more, plus a marginal dual category referring to two and only two of a kind. The dual is restricted in its occurrence to a very short list of nouns

of measure, although a similarly formed plural suffix denoting bilateral symmetry also exists for nouns referring to paired body parts.

Gender and number are signaled in both the nominal and verbal systems. Noun phrases typically exhibit total agreement of gender and number, with the head noun governing the attributive and demonstrative adjectives. The numerical phrase, however, exhibits the relatively rare feature of switch concord, in which the gender assignment of the head noun and the numerical qualifier have opposite genders.

In the clause, the subject governs the verb, which agrees with it at least in part. When the subject is a binomial and follows the verb, the verb frequently agrees with only the first term of the binomial; when the verb follows the subject, the agreement is complete. Examples of both types may be found in the opening verses of Exodus 15 and Judges 5. In the former citation, the verb agrees with the initial noun "Moses" and is masculine singular; in the latter, it is feminine singular, agreeing with "Deborah." The second verb in each sequence is masculine plural, governed by the plurality inherent in the binomial expression. The gender of the plural verb exhibits yet another feature, namely the neutrality of the "masculine" gender, a neutrality held to be universal for all languages in which a binary gender system is linked to sex. Thus, while the two genders are labeled "masculine" and "feminine," the "masculine" is in reality an unassigned category.

The finite verbal system shows both prefixed and suffixed personal paradigms. For the last century and more, many authorities have viewed the content of the finite verb to be aspectual rather than tense, denoting actions as finished or ongoing rather than in past or present-future time. The native grammatical tradition, however, drawing on Arabic grammatical theory and models since the early Middle Ages, always described the verb system in terms of tense. More recent linguistic analyses would tend to favor the medieval assessment. Of particular interest, especially in biblical literature and medieval belletristic texts, is the apparent flip-flop of prefixing (present-future) and suffixing (past) forms in coordinated verb phrases, referred to as the *waw*-conversive or *waw*-consecutive phenomenon. In reality, what happens is an optional but very frequent sequence of tense situation which results in the neutralization of tense reference in coordinated verbs. This neutralization of time reference is extended in poetry as well to juxtaposed clauses without explicit coordination.

3. Parts of Speech. The Hebrew language distinguishes the following word classes and subclasses in a formal manner.

a. Nominals. Nominals are all words that may occur as the subject of a clause and include the principal subclasses of pronouns, proper nouns, and substantives. Personal pronouns, interrogatives, and demonstratives are partially analyzable and are defined by lists. Personal names, also partially analyzable, are characterized by gender assignment and absence of pluralization or dependency. Substantives are subdivided into nouns of variable gender and nouns of assigned gender.

b. Verbals. Verbals comprise those items that may occur as the heads of predicate phrases, include the existentials, adjectives and verbs per se.

The existentials comprise a short list of expressions denoting existence or being and constitute a rudimentary present tense system for biblical style and the basis of derivation for a full present tense system for later Hebrew. Adjectives are primarily participles, which is to say verbal in their derivation, although there are several adjectival categories that are derived from nouns. Adjectives thus differ from nouns of variable gender (words like "king" and "queen," "horse" and "mare") syntactically.

The finite verbal system consists of two indicative sets, a direct command imperative limited to the second persons, and a parallel but partial indirect command, the jussive/cohortative system. One of the indicative paradigms is formed by personal prefixes and gender/number suffixes added to a stem; the other is formed by a fused set of personal and gender/number suffixes associated with a second verb stem. The imperative is formed by gender/number suffixes attached to a stem marginally different from the prefixed indicative verb, while the jussive/cohortative is formed by the addition of personal prefixes as well as gender/number suffixes.

Nonfinite forms of the verb include verbal adverbs (the "absolute" infinitives of traditional grammars) and the true ("construct") infinitive.

c. Enumeratives. The enumeratives include an adjective for the word "one," a defective noun of symmetry for the word "two," substantives for the higher items, including "hundred," "thousand," and "myriad," and true numerals for the items between "three" and the multiples of ten. Switch concord occurs as the distinctive syntactic feature in numerical phrases between "three" and "nineteen."

d. Particles. The term particle is the traditional designation for all residual classes that are neither analyzable nor derivable. This includes the categories of coordinating conjunctions, adverbials, subordinators, and relativizers. The conjunctions and relativizers are defined only by list.

e. Adverbials. Other than those adverbs that are derived within the verbal system, this category includes a short list of unanalyzable forms, quantifiers like "also" and "even," and temporals such as "then" and "now."

4. Morphological Typology. For the past millennium, grammatical and lexicographical tradition has described all verbs and most nouns as being derived from stems that in turn are formed by the interdigitation of a consonantal root expressing lexical content and a vocalic pattern, with an optional augment, expressing grammatical content. This typology bears a superficial resemblance to the structures "begin-began-begun," familiar from English. A residue of the nominals and the rest of the word classes are not analyzable in this manner but are contiguous linear entities. This typology has been held for all of the Semitic languages until recently; the newer opposing view has favored the notion that the derivation of words proceeds from a linear contiguous root modified by affixation and apophony, i.e., a regular substitution of sounds that inherently signals change in grammatical meaning (Kuryłowicz 1964).

E. Hebrew Literature

Literary activity in the Hebrew language has been going on without significant interruption for a period of more than three thousand years, producing a rich and variegated corpus of material that has very few peers in terms of its contribution to world civilization.

It should come as no surprise that during its long history the Hebrew language has undergone many changes. When we categorize the recorded differences of grammatical usage within the framework of a literary chronology, the familiar divisions of biblical, Tannaitic, medieval, and modern literary periods emerge, most frequently considered to be discrete entities with clear boundaries. Grammars have been written accounting for biblical and Tannaitic Hebrew and, most recently, for the modern language as well, sometimes giving the impression that the literatures of these different eras have little to do with each other and that the grammatical differences typical of each period are consistent and distinctive enough to warrant separate grammatical treatment. Without denying the partial validity of these observations at all, one might suggest that the conventional conclusions appear to be somewhat off target.

The language of the biblical Hebrew corpus, which is virtually all that has been preserved from the first thousand years of literary activity, is first of all not a standardized language. It is actually specious to think in terms of biblical Hebrew as anything other than a literary reference without making serious qualifications. True enough, a standard of language has emerged from within the biblical corpus, but this standard is partially the product of the medieval grammarians and partly that of the poets, chroniclers, critics, commentators, and others who determined literary usage and style only much later on in history. And this standard, to be sure, is based only on the most frequently occurring morphological and syntactic constructions found in biblical prose narrative text, with some admixture of Tannaitic norms.

The standardized distillate that has come to be known as biblical Hebrew has had an enormous impact on later literary Hebrew, since the literary corpus with which it has been confused has never ceased to be primary in its own influence on later generations. But if there is really an older corpus of Hebrew literature that embodies a normative language of sorts, it is that of Jewish liturgy. The collections of prayer, embodied in the *Siddur* (order of prayer) and the *Maḥzor* (cycle of prayer), originated during the period of the Second Commonwealth and are largely attributed to Ezra the Scribe, the men of the Great Synagogue, and their successors. Liturgy first appears in crystallized form much later on in the Gaonic age—from the time of the completion of the Babylonian Talmud until the high Middle Ages, roughly the period between 600 and 1100 C.E.

The *Siddur* has been the primary textbook of elementary education throughout the Jewish world for centuries. Containing as it does large segments of biblical as well as Mishnaic material together with the prayers and blessings themselves, it combines religious instruction with an introduction to the language and its literature. The Jewish child received his training from a text that was largely composed in a standardized language but that also included other, nonstandardized styles.

Literacy in Hebrew, prior to the period of generalized secular public eduction, was the norm for the male in Jewish communities almost without exception. In addition to the daily, Sabbath, and festival prayers, the Jewish boy studied the Pentateuch and the Prophets and, in this connection, learned to read and utilize the works of the principal commentators. Once the essentials had been acquired, studies in the Mishnah were added, followed shortly by intensive reading of the essential tractates of the Babylonian Talmud, again with the principal commentaries. This much was the basic curriculum. Advanced students then went on to study the codes of law, generally to receive rabbinic ordination. The Babylonian Talmud is written principally in a late form of eastern Aramaic, a language quite different from Hebrew, although still genetically related to it. Yet students did not study Aramaic as another language; nor did they even study Hebrew in a formal way. They learned these languages as they learned and mastered the literature. So thorough was the linguistic internalization that if any consciousness came to the surface, a text was identified as Aramaic or Hebrew not because of the overt linguistic signs but because of identification with the source corpus. The language symbiosis first encountered in the 3d century thus continued on even in other areas and other speech communities.

It would be too much to claim that only the grammarians were fully aware of the not so subtle differences between Hebrew and Aramaic or between one variety of Hebrew and another. It is quite likely, however, that the grammarians were the only ones who really cared and paid attention to things of that sort. Consider how often the ordinary user of English or any other language thinks that the language he or she speaks and hears in conversation is really grammatically the same as the one heard on the TV news programs or read in the morning newspaper.

This is not a trivial point to make. If the medieval Jewish poet wrote a masterpiece in a language he did not speak, he was the peer of his Moslem counterpart who also wrote his masterpiece in an Arabic he did not speak. And many a medieval Jew was equally as much at ease in literary Hebrew as in literary Arabic. To belabor this a bit more, it is no exaggeration to say that the language of choice in the literature of medieval Spain, whether Hebrew, Arabic, or a Romance tongue, was dictated by the literary genre and not by the speech community to which the author belonged. Epics were composed in Gallego, troubador ballads in Catalan, and chronicles in Aragonese. Castillian, it appears, was reserved for the most prosaic and least artistic purposes for a very long period of time.

In the medieval Jewish community, genre likewise imposed its dictates. Chronicles were written in loose imitation of the biblical prose narratives, poetry in a stricter biblical style, and legal literature in a style reminiscent sometimes of straight Mishnaic usage, and at other times in the Babylonian Talmudic mixture of Aramaic and Hebrew. Philosophical treatises were composed in Arabic until necessity imposed the switch to Hebrew late in the 12th century.

The age of the Bible comprises the first thousand years of Hebrew literary history. Jewish tradition attributes the earliest texts of the Bible to Moses, and biblical critical scholarship will agree with this, at least in part. Most critics are in agreement that the latest biblical texts come from the age of the Hasmonean dynasty, a little more than halfway through the period of the Second Commonwealth. The Bible makes mention of other books that we know of by name only. A handful of inscriptions from the First Temple period are known to us through archaeological digs, and more recently the Hebrew text of the apocryphal Ecclesiasticus was twice discovered. But except for the liturgical material ascribed by the Talmud to Ezra and the men of the Great Synagogue, the contents of the Hebrew Bible remain the legacy of this long period of time.

The Bible itself comes down in several stages and processes. The Pentateuch was possibly a canonical text by the time the First Temple was destroyed, and the books of the Prophets may have achieved official recognition during the Persian period. We simply do not know for sure. The works composing the

Hagiographa, the third and last division of the Bible according to Jewish tradition, were not formally admitted to the canon until some twenty years after the destruction of the Second Temple. Certain elements of the Hagiographa, including the psalms that had been incorporated into the temple liturgy, had already received at least de facto recognition as canonical texts. But it was the Sanhedrin at Yahweh in the year 90 C.E. that put the final stamp of approval to Ruth and Esther, for example, and excluded Ecclesiasticus and Judith from the Scriptures.

At about the same time that Ben Sira composed Ecclesiasticus in excellent imitation of classical biblical style (that is, about 180 B.C.E.), a newer literature began to emerge. This was the literature of what has come to be known as Tannaitic Hebrew, named after the masters of the Mishnah, its principal classical text, although the earliest midrashic works were not only older but more numerous.

This newer literature was originally an oral one. Just when it was committed to writing is not really certain. Mishnaic material was redacted by Rabbi Akiba just prior to the Bar Kokhba disaster, and a second redaction took place at the hands of Rabbi Meir a generation or so later. The final text of "Our Mishnah," as it is referred to, is the work of Rabbi Judah the Prince at some time between 200 and 225 C.E. But the Mishnah may not have been committed to writing until its text became the focus of the Jerusalem and Babylonian Talmuds, which means the period between the years 400 and 500 C.E., or even somewhat later.

Tannaitic literature is quite different from biblical literature. Some morphological and syntactic constructions of high frequency in the corpus of the Bible hardly occur in the Mishnah, and there are structures typical of tannaitic literature that are rare or lacking in the Bible. But these differences, upon close examination, turn out to be far more trivial than startling, because the underlying grammatical processes are quite the same. Thus, the important difference is more stylistic than grammatical.

One example will suffice for the moment. There are two relative pronouns in the language, a longer form and a shorter prefixed one. In biblical text, the longer form is the one more frequently encountered. The shorter form occurs both in the earliest and latest contributions to the corpus, but appears only in poetic text. In the Mishnah, the situation is reversed. The short form is the norm, almost to the exclusion of the longer one, and the poetic overtones have completely disappeared.

Tannaitic style is characterized by a terseness that is surprising to those brought up in biblical literature. Clauses are very frequently juxtaposed without intervening conjunctions, and "little" grammatical function words tend to undergo ellipsis, producing an effect that may be viewed impressionistically as telegraphic. The aphorisms of the popular Mishnaic tractate *Pirqe ʾAbot* (*Chapters of the Fathers*) resemble the book of Proverbs in content alone. Otherwise, they are entirely different in style, being prosaic rather than poetic, and lacking the cadences, the phonological play, and tightness of encoding so typical of biblical Wisdom Literature.

Tannaitic prose narratives (the genre of the Aggadah) tend to be more dramatic than their biblical counterparts and startlingly different. The same terseness is there, but they are illuminated by the juxtaposition of biblical quotes embedded in the narrative fabric—one important reason why it is impossible to appreciate tannaitic literature without a thorough grounding in the Bible. The reverse is also very true. Tannaitic reworking of biblical material is so innovative that the reader is constantly faced with astonishing new ways of interpreting the older body of literature. A marvelous tannaitic statement, for example, takes the superscription of Psalm 92 to mean that the Sabbath Day personified was coauthor of the poem together with Adam!

The Tannaitic Age is also the period of early liturgical compilation. Some of the daily and sabbath prayers are quoted at least in part in the Talmud, and the last chapter of the Mishnaic tractate *Pesaḥim* is essentially a detailed outline of the Haggadah of Passover, still in use today. Mystical treatises and mystical poems begin to appear during this period, and a recently discovered handbook on magic reveals a less lofty kind of spirituality, providing instruction on how to win a horse race or upstage one's rival in love, all in good imitation of Mishnaic style (Margalioth 1966). This is also the period of the recently discovered Dead Sea Scrolls (on the language of which see Qimron 1986).

This period of late antiquity, just prior to the emergence of Islam, evidences a revolution in poetic style. Some of the early mystical poems produced at this time and later incorporated into the liturgy show the earliest evidence of experimentation with end-of-line rhyme incorporated within a metrical matrix of strict word count. By the early or mid 6th century, rhyme is already highly conventionalized, as demonstrated by the compositions of Elazar ha-Qallir and his purported teacher Yannai, who inaugurated a brand new style and school of esoteric and highly innovative poetry that dominated the literary scene for some five centuries. A second literary revolution was launched by Saadia Gaon in the late 9th and early 10th centuries. An Egyptian by birth, coming from an obscure community in the Fayyum oasis, Saadia propelled himself into the middle of a battle for supremacy waged between the rabbis of Baghdad and Jerusalem and ended up as the controversial but masterful Gaon of Sura, the first and perhaps only non-Babylonian known to have held this prestigious office. Saadia was a superb Arabist, as is apparent from his literary output, and he loved Arabic poetry. He found the older Qallirian style of Hebrew versification to be tiresome, for that school of poetry had by now outlived its creativity through sheer longevity.

Saadia was a master not only of Arabic literature but of Arabic grammarianship as well. He wrote, in Arabic, the first grammatical description of Hebrew, which included the earliest known grammatical statements comparing Hebrew, Arabic, and Aramaic. He produced, as well, the first dictionary of the Hebrew language—and a rhyming dictionary at that—for the benefit of his contemporary poets who lacked, in his estimation, the imaginativeness and good taste required for successful metrical composition. Saadia wrote, also in Arabic, some of the earliest commentaries on the Bible and the earliest commentary to the Mishnah. He translated the entire Bible into Arabic, a translation long used by oriental communities. In addition, Saadia produced some Hebrew poetry, considered by some to be quite good in quality though never reaching the majestic heights of his literary heirs.

Along with the standard curriculum in Jewish Law, Saadia taught metrics. Among his more talented students was a certain Dunash ibn Labrat who came to Baghdad from his native Morocco and, upon completion of his studies, returned to the West and settled in Spain. Joining the Jewish community of Cordova, the capital of the Omayyad caliphate in Andalusia, he attached himself to the court of Ḥisdai ibn Shaprut, a grandee and leader of the Jewish community, ultimately to become Hishdai's principal protégé. Dunash was certainly not the first person to write Hebrew poetry in Spain, but he was to become the first poet of the new Spanish school, which, in turn, dominated the literary scene for the next five centuries.

The Golden Age in Spain was an age of classical revival. Where the Qallirian style was highly idiosyncratic, neither biblical nor mishnaic nor anything else really, the poets of Spain, following Saadia's metrical preferences as taught to them by Dunash, adhered very closely to biblical style. Their poetry had the added features of rhyme—inherited essentially from the Qallirians but modified according to Saadianic conventions—and of meter, borrowed from the Arabic and adapted, again via Saadia, to suit Hebrew syllabic structure.

From Andalusia, the neoclassical style spread, first northward to Christian Spain and the Provence, and then to Italy, N France, England, and Germany. The Spanish school was far more creative and flexible than the older Qallirian school had been. Influences from the poetic styles of the non-Jewish environment are apparent in the girdle songs written in imitation of the colloquial Arabic style, troubador ballads in the Provençal model, and sonnets of the Petrarchian school that begin to appear in Hebrew a full generation before Petrarch himself. In addition to the metrical compositions, both secular and liturgical, there arose a new literature of the romance, a Hebrew translational link in a literary chain that began in India, advanced to Persia and then the Arab world, and wound up in the picaresque novel of Romance Spain.

Throughout all of this time, we see chronicles and books of family pedigree, mystical tracts, the ever-growing legal literature, the biblical and Talmudic commentaries, and the supercommentaries. Not much of it was to be passed down to modern times directly. Communities declined and simply disappeared; others suffered persecution and destruction or banishment. Books were burned. Quite understandably, there were priorities, and these dictated, on the whole, that only that material of first-rank community importance—whatever was legal and religious in significance rather than secular or frivolous—be preserved.

The chance discovery of an obscure Cairo synagogue by a pair of English lady tourists a century ago, however, released a flood of documents of immeasurable importance. The contents of the Cairo Geniza constitute one of the most remarkable documentary finds in recent history, far larger and far more significant than the more famous Dead Sea discoveries. Many of its documents, now scattered in libraries from Leningrad to San Francisco, have been published; many more remain waiting for scholars trained and motivated to carry on.

As Christian Europe approached its Renaissance, the Jewish world turned increasingly inward. Although secular literary activity continued, it steadily decreased in both quantity and quality and, by the 18th century, came virtually to a standstill. The French Revolution, which inaugurated the period of modern Jewish history, had little immediate and direct influence on Hebrew literary activity. But by the end of the 19th century, a new literary revival, centered in Russia and spreading from there to Ottoman Palestine, was on the upswing.

This literary revival coincided with but was not limited to the rise of political Zionism. Nor is it to be completely equated with the parallel and contemporary revival of Hebrew as a colloquial mother tongue, with which it is often confused. The revival of spoken Hebrew is most commonly associated with the figure of Eliezer Ben Yehudah, who certainly undertook to speak nothing but Hebrew upon settling in Jerusalem. But although Hebrew did in fact become the language of his family and of some of his friends and neighbors, the rebirth of the colloquial had other origins, more mundane and more pragmatic in scope.

For centuries, Hebrew had been used as a spoken language, as a lingua franca for Jews who chanced to come together but possessed no common mother tongue. By the middle of the 19th century, before the rise of Zionism, the Jews of Jerusalem, crowded into the smallest quarter of the Old City, constituted a majority of that town's population. Predominantly Sephardic in origin, they possessed as a community no common language. Some spoke Ladino, the descendant of preexilic Spanish, others Persian, and others one or another form of colloquial Arabic.

Of necessity, Hebrew was the language of the marketplace. Had the population been essentially Ashkenazic, perhaps Yiddish would have served instead. The prevailing demography, however, dictated not only Hebrew to be the language of the community, but also Hebrew as pronounced in the Sephardic manner. Hebrew thus remained the language of the marketplace in Jerusalem and the other principal towns, like Hebron, Tiberias, Zefat, and Jaffa. Its colloquial revival succeeded because Hebrew became the exclusive language of the nursery in the early Zionist settlements. While these early settlers—the parents—struggled with a language they knew perhaps bookishly well, their offspring acquired this new Hebrew fluently from the cradle.

The desire to establish Hebrew as the national language did not go unchallenged. Yiddish was a serious contender, but the Zionist dream won out with the aid of socialist experimentation. The language struggle was over by 1925, the year in which the Hebrew University was inaugurated.

Modern Hebrew literature began with a short period of intense experimentation in the belletristic use of a language that had not been artistically exercised for some time. The initial efforts do not measure up to the quality of material produced in the parallel Yiddish literary movement, but an updated standard literary language rapidly emerged, and writers were publishing in every genre imaginable. The success of the modern Hebrew literary revival was recently crowned by the recognition implicit in naming the late S. Y. Agnon to the fellowship of Nobel laureates.

Linguists are not surprised, and may even be delighted, to observe that Hebrew has since taken on a new life of its own. Originally based on a literary standard slightly modified by usage in the old *yĕšîbôt,* the colloquial has undergone a complete transformation. A rich literature is once again being produced by writers who speak Hebrew as their mother tongue but write in a language quite as different as any literary language when compared with its colloquial analogue.

F. Hebrew Language Scholarship

The history and evolution of the biblical text is not all that there is to tell. Hebrew was originally written in an alphabet of twenty-two letters that essentially represented only consonants. The vowels of Hebrew

were not systematically represented in writing, since they were only sporadically hinted at by the ambivalent use of the letters cognate to English "w" and "y." Dialectal differences certainly existed; these are mentioned both in the Bible and in the Talmud. We have no way of knowing what the language sounded like; we are limited to formulating educated guesses as to the phonetic properties of the consonants, the vowels, and the other features (including the prosodies). In the course of time, the language underwent change, as do all languages. Changes in the consonantism and the vowel system continued, even after the language ceased to be the mother tongue of a Jewish community. These occurred in spite of the fact that the public reading of the biblical text was rigorously bound by a strict oral tradition.

There existed a class of professional memorizers, some who specialized in the biblical text, called Qara᾽im, "readers," and others who specialized in the legal traditions, called Tanna᾽im, "repeaters." The recitation tradition was supposed to be rigorous and unchanging, but the Talmud provides information indicating that some "readers" were less skilled than others and rendered spurious readings (*B. Bat.* 30a). More important to our purposes, the tradition of oral recitation proliferated into traditions that tended to diverge as do language dialects, and indeed must have diverged according to the natural development of different liturgical dialects in various parts of the Jewish world. To the best of our knowledge, by the end of the 8th century C.E., there were three principal dialect areas. In the Mediterranean basin, Hebrew was pronounced with a five-vowel system. Further to the east, in Baghdad, Hebrew was a six-vowel language. The final product of biblical redaction, that which we call the Tiberian Masoretic text, is based on a seven-vowel dialect (Schramm 1964).

It is commonly and erroneously believed that the Masoretes, who produced the definitive biblical text, applied the vowel signs, accents, and other diacritics in their redaction according to their understanding of the text. While they certainly had an exegetical tradition on which to rely, the results of their labors indicate that they operated in a very different way. Certainly, the text that they produced is full of difficult readings, some of which would have been certainly replaced by simpler equivalents, if this were indeed the way they worked. That they employed a very different method of operation is to be seen in many ways.

The Tiberian annotational apparatus includes many comments, expressed in various specific ways, that all translate into the modern editorial term *sic.* Other comments present alternative renderings. In all instances, these readings point not to an intellectual choice between variants but to an effort at preserving a received tradition. Their intention was not to create a text based on a standardized language but rather to preserve and transmit a performance standard. The only intellectual decision they made was to record as faithfully as possible the pronunciation tradition that they considered to be the most prestigious (Ben-Asher 1879).

The biblical corpus has always been viewed as consisting of two separate coequal domains, namely the manuscript (written) tradition and the performance (oral) tradition. In copying a Torah scroll, the scribe was bound to copy his text as a virtual facsimile of all other authorized Torah scrolls, with leeway to do little more than reduce or enlarge the page size of the parchment leaves. Everything else had to be true and exact and scaled to the template. The copyist faithfully began each line with the same first word, ended each line with the exact last word, and included the same number of lines and the same blank spaces which indicated the pericopes. An oversized letter was reproduced as oversized, a minuscule was copied as a minuscule. Upside-down letters, backward letters, and flawed letters—all were faithfully reproduced as seen. Even the mysterious dots that appear here and there over letters were copied. A Torah scroll that failed to be a faithful replica of its authentic prototype was unfit for use and had to be duly corrected.

The performance tradition was equally demanding. The synagogue functionary, the reader who was appointed to cantillate the biblical text, had to pronounce the consonants, vowels, stresses, and junctures in the manner that he learned from his teacher. Any error in performance was corrected immediately before the lection could be resumed. But since the text was "read," only the oral tradition was to be committed to memory, and the reader was required to follow along the manuscript with a pointer. The

rote memorization of the performance tradition by the professional reader was as sacrosanct in its domain as was the scribal fidelity to the written tradition.

The task of the Masoretes in producing their redaction was not a mindless one. Without having the benefit of any explicit phonological theory, they analyzed the sound system of the liturgical tradition they ultimately chose and invented graphic symbols to represent the sounds together with an apparatus of marginal notes to call attention to all sorts of oddities and significant statistical occurrences. They also left a sophisticated literature to accompany their redaction in the form of commentary (Ben-Asher 1879). It is clear from this literature that what they accomplished was in every way an old school linguistic phonemic analysis.

The Tiberian Masoretes were not alone in their endeavors. Parallel efforts were under way in Baghdad, where a slightly different liturgical tradition served as the base. The Tiberians, however, were far more rigorous in their method, and this is why their text became quickly and almost universally the text of preference in all of the communities throughout the Diaspora. As adopted by different communities, however, the new orthography was pronounced in accordance with the native performance tradition. The Tiberian orthography, true to its liturgical base, was not representative of the actual pronunciation in the communities to which it spread.

There is a question as to what motivated the production of a Masoretic text to begin with. It is not really reasonable to believe that these labors were undertaken because the professional readers were dying out, as is assumed by some. Professional readers exist to this very day. Their training is far less arduous, but that is becaue they can rely on the printed MT, a visual aid their spiritual ancestors bequeathed to them. Moreover, they can enjoy the benefits of today's technology, which provides the cantillation model via tape recordings.

Far more reasonable is the possibility that the activity of the Masoretes was provoked by the religious controversies of their day. The obvious causal factor is Karaism, a sect in the spiritual paradigm of the Sadducees who were in authority a thousand years earlier. The Karaites (a later designation, but etymologically the same as the term used to designate the professional "readers") rejected the validity of the Oral Law and the rabbinic establishment whose authority was based on the Talmud. Karaite jurisprudence was a fundamentalist one, returning to the biblical text alone as the source of all law, supplemented only by explicit rules for permissible exegesis. The need for a definitive biblical text, with complete representation of all the meaningful phonological segments, was an urgent one for both sides in this religious schism. Indeed there are those scholars who believe the Masoretes were themselves Karaites.

While this may have been the case (although the evidence is far from conclusive), there would have been no Masoretic Text at all save for this sectarian split. The initial grammarians who rose in the wake of the Masoretes were in all likelihood Karaite as well, as were the very first authors of the commentaries. Rabbanite scholars, spiritual heirs to the Pharisees, fought fire with fire and proceeded to write their own grammars and commentaries very soon thereafter.

In their methodology, the Masoretes were indebted to the Syrian Christian scholars who performed a similar task in their community and to the Moslems who provided an orthographic vocalism for the Quran. What the Masoretes accomplished, however, was far beyond that which was produced by their teachers.

This same religious schism produced the first Hebrew grammatical studies and dictionaries. And here, too, there is an indebtedness to the world of Islam. Just as the early Islamicized Persians needed grammars of Arabic and dictionaries for their nascent religious needs, the Karaites, having rejected the entire body of oral tradition, needed grammars and dictionaries for the parsing and understanding of biblical text.

They produced the earliest grammatical works, which were written in Arabic and based on the grammatical model provided for Arabic. To take the place of rabbanite midrash, the Karaites produced the first biblical commentaries, a genre similarly borrowed from Islam and also written in Arabic. The rabbanites entered the polemic fray very quickly, under the leadership of Saadia Gaon, whose grammatical works received widespread attention (Skoss 1955).

R. Shlomo Yiṣḥaqi—better known by his acronym Rashi—who lived in the French Rhineland a century later, cites Saadia as well as the Karaite scholar Yefet ben Ali very frequently in his biblical commentary, the earliest to be written in Hebrew. It is not known whether Rashi knew Arabic or whether he had the benefit of Hebrew translations, but within another century other Jewish scholars were writing grammars and producing dictionaries in Hebrew. Foremost of these was R. David Qimḥi (1160–1235 C.E.), known by his acronym Radaq, whose *Mikhlol* (*Compendium*) was one of the most sophisticated grammars yet produced and whose lexicon *Sefer ha-Shorashim* (Book of Roots) remained the standard dictionary for a very long time.

Radaq's most significant contribution was a brilliant statement of the Hebrew vowel system that ironically was soon completely misinterpreted. He was the first grammarian to write about long and short vowels in Hebrew. From his discussion and especially from the examples he cites, it is evident that he is thinking in terms of what we today call morphophonemic length, not phonetic or phonemic length. While the metrical conventions he knew exceedingly well recognized long and short syllables for Hebrew versification, the short syllables were *šĕwâ* syllables, not syllables containing vowels. All vowels, except for certain instances of the high back rounded vowel u, when this vowel was treated as a *šĕwâ,* were metrically equal. For Radaq, a short vowel was one that was reducible to *šĕwâ* upon the operation of the several morphological processes. The identical vowel in another environment that was not reducible to *šĕwâ* was what he considered to be a long vowel.

What may have transformed Radaq's contribution into a serious misunderstanding was the result of two factors. The first was the translation of the *Mikhlol* into Latin, in which language phonemic vowel length was real. The second was the introduction of Arabic studies into Christian Europe. Arabic, unlike Hebrew, has phonemic vowel length. Somehow, and this view has unfortunately persisted to our very day, Arabic came to be regarded as the model of what a Semitic language ought to be. It was therefore natural to believe that Hebrew had to have a vowel structure very much like that of Arabic.

More recently, biblical studies in European scholarly circles have stimulated additional grammatical and lexicographic productivity. Foremost is the name of Gesenius, whose works in both areas have undergone several editions, including the most recent editions by other scholars who have recognized their indebtedness to Gesenius by making his name the generic equivalent of biblical Hebrew grammars and dictionaries. (The grammars: in German, GK, GKB; in English, GKC. The lexicons: in German, GesB; in English,BDB. Recent study of Hebrew is surveyed by Waldman [1989]).

Grammatical consideration of Tannaitic Hebrew has come into its own only recently with the publication of a reference grammar first in Hebrew and later in an English translation (Segal 1927). Studies in modern Hebrew are primarily, but not exclusively, the product of Israeli scholars, many of whom worked under the aegis of the Vaad ha-Lashon (the Language Council) in the days of the British Mandate, and of the National Language Academy since the independence of Israel.

GENE M. SCHRAMM

HITTITE

The language generally known today as "Hittite" was actually referred to by its speakers as "Nesite," after the city of Kaneš/Neša (modern Kültepe, near Kayseri in central Turkey). Early researchers naturally, but prematurely, assigned the appellation "Hittite" to the language of the Hittite state, but the ancients themselves applied this term to the indigenous tongue of central Anatolia, which was gradually supplanted by Indo-European languages during the early 2d millennium B.C. Since this fact became known only after much had already been written about "Hittite," the designation has been retained for the Indo-European idiom, while the earlier language in Anatolia is now called "Hattic" (Güterbock 1959).

Hittite is the earliest attested member of the Indo-European language family, documented by cuneiform tablets written during the 17th through the 13th centuries B.C. Hittite is also the best known representative of the Anatolian branch of Indo-European, which also includes Palaic and Luwian from the 2d millennium, as well as Lydian and Lycian of the Classical period. It is now known that the "Hieroglyphic Hittite" employed in Syria and SE Anatolia in the early 1st millennium is actually a dialect of the older Luwian. Finally, while certainly an Indo-European language spoken in Anatolia, Phrygian entered this area later and is not closely related to these tongues. The poorly understood Carian and Etruscan languages are no longer generally assigned to the Indo-European family (Kammenhuber 1969: 134–61; Oettinger 1978).

Some controversy exists over the relationship of the Anatolian group to the other Indo-European languages. Most authorities hold that Anatolian is a branch on a equal footing with all other subfamilies, such as Indo-Iranian or Germanic (Kammenhuber 1961). Adherents of the "Indo-Hittite hypothesis," however, stress that a number of grammatical features set Anatolian apart from the remainder of the family; these features include the extremely simple morphology of the verb and the absence of a feminine gender from the nominal inflection. This situation might be explained by postulating the separation of Anatolian from the language group at a very early time, leaving the common ancestor of the other tongues a significant period of independent development before additional divergence occurred (Cowgill 1975). That is, Anatolian is perhaps an "aunt" rather than a "sister" of the other branches of Indo-European. The matter remains for the moment unresolved.

The bulk of the Hittite material, an estimated 25,000 tablets and fragments, has been recovered from the ruins of a single city, the Hittite capital Ḫattuša. Today, this is the site of the Turkish village of Boğazköy (Boğazkale), located approximately 100 miles E of Ankara. A few texts have also been found at Maşat Höyük in Turkey (Alp 1980), at Ras Shamra/Ugarit and Meskene/Emar in Syria (Laroche 1980), and at other scattered locations.

Two Hittite letters were among the tablets discovered in 1887 at Tell el-Amarna in Egypt (Knudtzon 1902), and explorations conducted by E. Chantre at Boğazköy in 1893–1894 produced a number of fragments in this language, but philological research into Hittite began in earnest only after the excavations of H. Winkler and Th. Makridi at the Hittite capital from 1906 through 1912 (Bittel 1970: 7–10). In 1915 the decipherment of Hittite was announced (Hrozný 1915), and as a result of the efforts of

such pioneers as B. Hrozný, E. Forrer, F. Sommer, J. Friedrich, A. Goetze, E. Sturtevant, and H. Ehelolf, great progress was soon made in publishing the textual material, recovering the basic grammar of Hittite, translating important groups of texts, and analyzing the language from the perspective of Indo-European linguistics. Today, it is possible to understand most Hittite texts, although some uncertainties, chiefly lexical and phonological, remain.

Initial study of the Hittite documents was made easier by the scribal practice of indicating many words by an Akkadian or Sumerian writing ("ideogram"), rather than by spelling them phonetically in Hittite. Since the Mesopotamian languages were already well understood, it was often possible to discern the basic content of a text before Hittite had been fully deciphered. A negative consequence of this scribal habit, however, is that we still remain uncertain about a number of very common Hittite words, such as those for "son" and "horse," for which ideograms were consistently employed. While the graphic representation of Hittite abounds with "Sumerograms" and "Akkadograms," the language itself was little influenced by these Mesopotamian idioms. On the other hand, the Hittite lexicon was greatly enriched by borrowings from Hattic (chiefly in the area of political institutions), from Hurrian (particularly in the religious sphere), and from the closely related Luwian.

The tablets found at Boğazköy were originally written to serve the needs of the government of the Hittite kings in all its aspects, religious and secular. Therefore, texts of greatly varied genre were produced (Güterbock 1964; Laroche 1971), although most ephemeral economic documents were inscribed on wood, which perished long ago (Otten 1955: 79–80). Attested are royal and bureaucratic correspondence, as well as administrative documents such as land grants and instructions for officials. The Hittite kings issued a law code and contracted treaties with vassals and equals. They extolled their manly deeds in annals and justified their conduct before the gods in prayers. Other religious texts recovered include programs for the ceremonies of the state cult and rituals for life crises such as birth and death. Additional rituals were intended to counteract sorcery, disease, or other misfortune. Records of divination make up another large group of texts. Finally, scholarly material employed in scribal education presents translations of foreign literature, as well as such portions of the Mesopotamian scribal curriculum as lexical texts and astrological handbooks (Beckman 1983). Much of this scholarly material is bilingual (Akkadian-Hittite) or trilingual (Sumerian-Akkadian-Hittite) in form. In addition, a significant number of the Boğazköy texts were composed in whole or in part in foreign languages—in Akkadian, Hattic, Hurrian, Luwian, or Palaic (Forrer 1919).

The Indo-European migrations into Anatolia probably took place during the second half of the 3d millennium B.C., but opinion is divided as to just when speakers of Hittite arrived, as well as to the direction from which they came. In any case, the appearance of Hittite personal names and loanwords of Hittite origin in Akkadian documents of the Assyrian trading colonies demonstrates their presence by the 19th century B.C. (Macqueen 1986: 26–35). It is significant that the variety of cuneiform script employed in Hittite texts differs entirely from that used by the Assyrian merchants. The cuneiform of the Boğazköy texts resembles most closely the systems of early 2d millennium N Syria, from which it was probably imported by the Hittite kings of the 17th century who campaigned successfully in this area (Laroche 1978: 739–48). It seems that speakers of Anatolian had been illiterate before this time.

The tablets composing the Hittite archives were to a large extent broken and scattered about Ḫattuša in antiquity, as a result not only of the destruction which brought the Hittite period to an end, but also because of the rebuilding efforts of later inhabitants of the site (Otten 1955: 71–74). This state of affairs, combined with the absence of a native chronological system in the cuneiform records, forced scholars initially to date texts entirely on the basis of an interpretation of their contents. Since Hittite rulers shared a rather small number of throne names, and many texts contain no proper nouns at all, this situation was unsatisfactory.

However, in 1952 a fragmentary tablet displaying peculiarities of script and presentation of text was discovered in an archaeologically certain Old Hittite level at Boğazköy (Otten 1953). This key has allowed scholars to identify other pieces sharing these formal characteristics as products of the earliest period of Hittite literacy. In turn, the distinctive textual features of Old Hittite texts—grammar,

orthography, lexicon—may be abstracted from this corpus. Finally, this process makes it possible to recognize later manuscripts of earlier compositions, since scribes seldom modernized completely the material which they recopied. Thus bodies of texts belonging to the Old Hittite (17th and 16th centuries), Middle Hittite (15th century), and New Hittite (14th and 13th centuries) periods of the language have been established (Neu and Rüster 1973; Košak 1980). Although significant differences of opinion persist among Hittitologists concerning details (Heinhold-Krahmer et al. 1979), it is along such lines that much of the most important recent research in Hittite has been carried out.

HURRIAN

Hurrian is the name of the language spoken and written by the ancient Hurrians. The earliest Hurrian text dates to the first half of the 20th century B.C.E. (late Akkad or Ur III period); inscribed on a limestone tablet held by a bronze lion, it records a temple foundation by Tish-atal of Urkish. Among the thousands of Akkadian (Old Babylonian) texts from Mari, dating to the 18th century, were also found seven Hurrian texts; most of these are cultic in nature, although one is a fragment of a royal letter. The

longest Hurrian text is a letter of nearly 500 lines sent by Tushratta, king of Mittanni, to the Egyptian pharaoh Amenophis III in the first half of the 14th century; the letter is the only Hurrian text in the famous archive of cuneiform texts found at el-Amarna in Egypt (see further below). The largest number of Hurrian texts have been found among the clay tablets excavated at Boğazköy, ancient Hattusas, the capital of the Hittite empire; the majority of these texts, which date to the 14th–13th centuries B.C.E., are rituals, although there are some omens and a few mythological texts. The Syrian seaport of Ugarit, where texts in Sumerian, Akkadian, Hittite, Egyptian, and the local Ugaritic language have been unearthed, has also yielded a significant number of Hurrian texts from the same period as those found at Boğazköy. Some 40 of the Ugarit texts, like Hurrian texts from other sites, are written in the same logo-syllabic cuneiform script as the Mesopotamian languages (Sumerian and Akkadian) and Hittite; of these, 30 cultic texts and one letter are written entirely in Hurrian, but there are also a short Hurrian-Akkadian bilingual literary text, a Sumerian-Hurrian bilingual lexical text, and several exemplars of a Sumerian-Akkadian-Hurrian-Ugaritic vocabulary. Besides the syllabic cuneiform texts, however, Ugarit has yielded a few Hurrian texts written in the indigenous alphabetic cuneiform. Excavations during the 1970s at the site of Emar on the Euphrates also produced a few Hurrian divination texts written in Mesopotamian cuneiform and dating to the 14th–13th centuries. In addition to the texts listed here that are actually written in Hurrian, the phonology, morphology, syntax, and vocabulary of Hurrian are also present to varying degrees as substrate influences in the grammar of the Akkadian texts written by scribes in the latter half of the 2d millennium at sites such as Alalakh, Emar, Hattusas, Nuzi, and Ugarit, and in the el-Amarna letters of the Mittannian king Tushratta. Hurrian personal names also abound in texts from sites across N Mesopotamia and Syria as well as Anatolia through much of the 2d millennium B.C.E.

Despite the relatively large number of texts found, Hurrian vocabulary and grammar, and therefore Hurrian texts, have remained imperfectly understood. This circumstance has been the result of two factors. One difficulty is that Hurrian has as its only certain linguistic relative Urartian, the language of Urarṭu around Lake Van (E Turkey), attested in the 9th–6th centuries B.C.E. (There have also been attempts to classify Hurrian and Urartian as a branch of the Caucasian languages; the connection, if valid, is very remote.) While comparison with Urartian can help to clarify some Hurrian features, Urartian is not a direct descendant of Hurrian and is itself not fully understood. The linguistic isolation of Hurrian and Urartian means that researchers cannot look to similar related languages to explicate features of grammar. In such cases, a sufficiently long bilingual text is usually needed to serve as a key to the language. Until recently much of the reconstruction of the grammar of Hurrian was accomplished on the basis of the very long Hurrian letter of Tushratta found at el-Amarna in Egypt (see above). Because that text deals with many of the same diplomatic issues that concern the Akkadian texts in the el-Amarna corpus, a close reading of frequently occurring parallel Akkadian and Hurrian phrases has enabled scholars to ascertain many of the features of Hurrian morphology and syntax, though many uncertainties have persisted. In the 1983 and 1985 excavations at Boğazköy/Hattusas, however, a multitablet bilingual Hurrian-Hittite literary text dating to about 1400 B.C.E. was discovered (Otten and Rüster 1991); comparison of the Hurrian text with its well-understood Hittite translation promises to clarify many points of Hurrian grammar and to add considerably to our knowledge of the Hurrian lexicon.

LANGUAGES OF ANCIENT IRAN

The ancient empires of the Iranian-speaking Medes and Achaemenids (559–330 B.C.) and, following the interregnum of Alexander and the Seleucids, the empires of the Parthians (247 B.C.–A.D. 227), and Sassanians (227–651 A.D.), all of which spanned the entire Near East at one time or another, played a major role in the political, intellectual, and religious history of the ANE, and thus in Judaism, Christianity, and the gnostic religions of the Mandaeans and Manichaeism. This role was continued to a lesser degree by Iranian dynasties after Islamization in the middle of the 7th century A.D. Jewish, Christian, and Mandaean communities have remained in these areas since antiquity.

The Iranian languages belong to the Indo-Iranian (Aryan) branch of Indo-European languages (see Schmitt 1987). Originating in central Asia, speakers of Iranian began to spread from about 1000 B.C. throughout the southern parts of Eurasia from China to Europe, and eventually entered the Iranian plateau and Afghanistan (Grantovskij 1970; Ghirshman 1977; Burrow 1973; Mayrhofer 1974). Today, Iranian languages are concentrated in Iran and Afghanistan, but are also found in the Caucasus, central Asia, W China, on the Arab side of the Persian Gulf, and in Iraq, Syria, and Turkey (Geiger and Kuhn 1895–1904; Schmitt 1989; Spuler, 1958; Rastorgueva 1975; Abaev et al. 1979–82; Oranskij 1977). The most numerous non-Iranian languages are Turkic, and these have permeated central Asia and large areas of Afghanistan and Iran (some 20 percent of the Iranian population).

———

A. Old Iranian

The court language (often called Old Persian) of the Achaemenid dynasty is represented by a rather limited corpus of inscriptions and is based on the local language of the SW Iranian province of Parsa (Greek *persis,* "Persia," modern Fars; Kent 1953; Brandenstein and Mayrhofer 1964). Avestan (probably a calque on Greek *epistēmē,* "received knowledge"), the sacred language of the Zoroastrians was originally spoken perhaps in NE Iran or central Asia and is represented by a much more extensive corpus of texts, ranging from the Gathas of Zarathustra (of uncertain date, but possibly 1000 B.C.) to texts composed by priests during late-Achaemenid and possibly later times. The oldest preserved mss date from the 13th century A.D. (Jackson 1892; Reichelt 1909; Beekes 1988). Median, spoken in central Iran and the language of the predecessors of the Achaemenids (see Mayrhofer 1968), and other Old Iranian languages such as Scythian in S Russia and Old Parthian in E Iran, are known only by a small number of words and names scattered throughout the writings of other languages.

B. Middle Iranian Languages

Middle Iranian languages show a clear dialectal division into West Iranian, viz. Parthian and Middle Persian, and East Iranian, represented by the remainder. Parthian was the official language of the Parthians and was spoken in NE and probably also NW Iran. There are also extensive texts in Manichaean Parthian found in Chinese Turkistan which evidence the continuation of Parthian as one of the languages of the Manichaean Church in E Iran and central Asia until about the 10th century A.D. (Ghilain 1939; Heston 1976; Brunner 1977). Middle Persian, the official language of the Sassanians (227–651 A.D.) and thus also of their state religion, Zorastrianism, is also attested in various forms, the most extensive texts being written in so-called (Book-) Pahlavi. Most of these date from the 9th century A.D. but represent an earlier stage of the language. This language was also used by Christians. Middle Persian was one of the church languages of the Manichaeans in E Iran and central Asia, Mani (d. 277 A.D.) himself having composed a book in this language for Shapur I. The language continued to be used until the 11th century A.D. in both churches, as evidenced, for example, by the signatures of witnesses on a copperplate grant to the Syrian Church in S India (possibly 9th century A.D.) and by some local dynasties (Nyberg 1964, 1974; Heston 1976; Brunner 1977; MacKenzie 1971).

The eastern Middle Iranian languages, viz. Alanian, Khwarezmian (Henning 1955; Heston 1976), Sogdian (Gershevitch 1954), Saka (Emmerick 1968), and Skytho-Sarmatian and Bactrian (Humbach 1966), were spoken from S Russia to central Asia (including N Afghanistan), and in western China.

C. New Iranian Languages

(New) Persian emerged after Islamization as the dominant language of Persia. It was, and largely still is, the lingua franca in most of these areas, and it also was the adopted court language of the Mogul sultanate of Delhi in India (1526–1857 A.D.). It is spoken in a number of varieties, the three most important of which are Iranian Persian (Windfuhr 1979; Lazard 1963), Dari in Afghanistan, and Tajiki in Soviet Tajikistan. Together with other Perside dialects, these constitute the so-called "Southwest" Iranian dialects. The other West Iranian dialects include Kurdish in the W and NW, from the Soviet Caucasus, E Turkey, E Syria, and N Iraq to NW Iran, and scattered through much of Iran (MacKenzie 1961), and Baluchi in the east, stretching from the city of Merv in Soviet Turkmenistan to the Gulf into S Afghanistan and Pakistan (Elfenbein 1966).

East Iranian dialects include isolated Ossetic, the successor of Alanian, in the N Caucasus (Abaev 1964). The remainder are located in Afghanistan, the Hindukush, and the Pamirs, most importantly Pashto, the official language of Afghanistan besides Persian, which is found in SE Afghanistan and in neighboring regions of Pakistan (Morgenstierne 1927; Penzl 1955).

D. Diachrony

Linguistically, the Old Iranian languages continue the highly inflectional character of Indo-European. The tendency toward simplification is already seen in Old Persian in the 4th century B.C., largely concomitant with a shift in stress patterns, such that the original synthetic inflection was largely lost and replaced by analytic constructions. Middle Persian and Parthian are the result of those changes. The existence of masculine/feminine gender in several modern dialects of NW Iran shows that these dialects are a continuation of Old and Middle languages which must have been distinct from Middle Persian and Parthian. Similarly, the modern East Iranian languages continue the inherited inflection to some degree. On the other hand, all modern languages and dialects, including Persian, developed new formations and categorical distinctions, resulting in radically restructured morphosemantic verbal and case systems (Tedesco 1921; Lentz 1926; Windfuhr 1975).

E. Religious Minorities

Of the old religious minorities, the Zoroastrians, concentrated in the desert cities of Yazd and Kerman, have retained their central W Iranian dialect. The Armenian and Georgian Christians in and near the central city of Esfahan have retained their Indo-European Armenian and Caucasian Georgian language, respectively.

Many Jewish communities have adopted Persian. Judeo-Persian has a long-standing literary history. In fact, the oldest preserved texts in New Persian are written in the Hebrew script: a private letter from the

8th century A.D., found near Khotan in Chinese Turkistan; three brief inscriptions, dated 752 A.D., found in E Afghanistan; and a 9th-century inscription found in S India in Travancore. These texts are evidence for the use of the new vernacular by minorities as opposed to the continued official use of Pahlavi, Sogdian, and of course the new dominant language, Arabic. Many contemporary Jewish communities in Iran have retained the local Iranian dialects (Lazard 1968, 1974), while the Muslim population switched to Persian. Of particular interest is a "secret" language, called Lotera›i, which is used by Jews throughout Iran (Yarshater 1977). While the nominal and verbal morphology is Iranian (usually the local dialect), the vocabulary is replete with Semitic words, mostly Hebrew but also Aramaic. It appears that the latter reflects the original situation, which may go back to antiquity, while the former were absorbed later. Compare, for example, the following sentence in Lotera›i with the same in the dialect of Golpayegan (compare Book-Pahlavi, below):

ANNI BĀY -un b (e) -EZ -on xiābān, š-on vā- (e)-EZ -on
mon g -un be -š -on xiābān, š-on o var-e -gard -on

I want to go out (lit. in the street); I shall go and return.

Yarshater (1977: 2) analyzes this as follows: ANNI < Heb *›ani,* "I"; BĀY < Aram *bāy,* "want"; EZ < Aram/Heb *‹zl,* "to go." Golpaygani *-un/-on* is a first singular ending, *be-* a subjunctive prefix, *vā-/var-* is verbal prefix "back," *e-* is an imperfective prefix, here marking the future.

F. Language Contact

In view of the fact that Old Iranian and much of Middle Iranian is not well attested, Iranian loans in contemporary non-Iranian languages are an important source for the diachrony and dialectology of Iranian linguistics. Those languages include Elamite, the language of the predecessors of the Achaemenids in Fars and one of the administrative languages at Persepolis (Paper 1955), Akkadian, Armenian (since Achaemenid times), and, to a lesser degree, Old Egyptian, Greek, Lydian and Lycian, Latin, Indic, and, later, Arabic (Mayrhofer 1971; Schmitt 1973; Hinz 1975; Mayrhofer 1978; Schmitt 1978; Rossi 1981).

G. Aramaic

The Neo-Aramaic dialects of the contemporary Jewish, Christian, and Mandaean minorities and the Iranian languages form one of the most striking cases of linguistic symbiosis. It has lasted for some 2,500 years, with both Aramaic and Iranian fairly well known throughout this time. The most decisive event in this relationship was the adoption of Aramaic as the administrative language of the Achaemenid empire. While Aramaic influence on Iranian is limited (Weryho 1971), the main recipient was Eastern Aramaic from the 6th century B.C. on, most noticeably in the lexicon with many of the typically Indo-European Iranian compounds, most dramatically in Babylonian Middle Aramaic. Included were not only Iranian names and titles but also administrative, military, and everyday terms (e.g., *dt* [Dan 6:8, etc.] < OP *dāta,* "law, justice," and the compound noun *dtbr›* [Dan 3:2–3] < OP *dāta-bāra,* "judge"). They are found in the Aramaic parts of Daniel and Ezra (also in the Hebrew of Ezra, Esther, Nehemiah, and Daniel; i.e., the books dealing with the Achaemenid period), and in Aramaic inscriptions and other texts found throughout the empire from Egypt, Asia Minor, and the Caucasus all the way to Afghanistan. Included in this group are texts on papyrus and leather from Egypt, such as the so-called Driver documents (13 letters, apparently sent to Egypt from Babylonia or Persia in the later 5th century B.C., which are replete with Old Persian loans), a translation of two royal inscriptions, the administrative clay tablets from Persepolis, and legends on coins, seals, mortars, and pestles. Middle Iranian loanwords are found in the rabbinic writings of Babylon such as the Talmud and the Midrash, in Babylonian magic texts, and in Christian writings in E Syriac. The majority of these Middle Iranian loans are not Persian but NW Iranian, reflecting the Parthian dialect of the Arsacid rulers, and possibly also symbiotic Iranian dialects. That is the case with the Neo-Aramaic dialects in Iranian and Iraqi Kurdistan today, which naturally show much greater interference from neighboring Iranian dialects such as Kurdish (Telegdi 1935).

Linguistically more significant, this contact led to the radical restructuring of the East Aramaic tense system. Specifically, Old Persian had developed a new periphrastic past tense based on the perfect participle in which the agent (subject) is expressed not by the direct (nominative) case but by the oblique (dative/genitive) case, whereas the patient (direct object) is in the direct case and/or marked by the

personal ending. This also developed in East Aramaic, e.g., OP *mana kṛtam asti*, "I have made," lit. "to, by me made it is," and E Aram. *šmyʿ-ly*, "I have heard," where the participle *šmyʿ* is followed by *ly*, which is from *l-y*, originally "by, to me" (Kutscher 1977: 70–89; Polotzky 1979. This past tense construction, later confined to transitive-causative verbs, is not to be mistaken as a "passive," which continued to exist, was not confined to the past, and did not allow the mention of the agent.)

H. Writing Systems

Most Iranian scripts are varieties of, and developments from, Aramaic. See ARAMAIC SCRIPT. The exceptions are the 36 signs of the Old Persian cuneiform (Diakonoff 1970; LeCoq 1974; Windfuhr 1970), Bactrian written in a variety of the Greek alphabet (evidence for the Greek intermezzo in Afghanistan and central Asia), and Saka, which is written in a form of central Asian Brahmi, the origin of which is still debated. Religion played a major part in the adoption or use of a script. Thus, with Mani being a native speaker of Aramaic, Manichaean Parthian and Middle Persian are written in a script most similar to Aramaic. Khwarezmian and Buddhist Sogdian are written in another form of Aramaic, Manichaean Sogdian is in the Manichaean script, and Christian Sogdian is written in the Syriac script.

Quite early Aramaic began to be used heterographically so that Aramaic words, not infrequently in inflected forms, could stand as symbols for Iranian ones. Later, Iranian endings, or parts of Iranian words, began to be added as a mnemonic device. The final stage of Sassanian Middle Persian writing, i.e., the cursive Book-Pahlavi of the Zoroastrian writings, mostly dating from the 9th century, still retains many heterographs. For example:

GBRʾ ZY *pyl* TMH *dyt* MN-W LWT-H *gwspn-dʾn pd dšt kwp* YḤWWNt ḤWH-*d*

mard i pīr anōh dīd kē abāg gospandān pad dast kōf būd hēnd

"There he saw some old men who lived on plains and mountains with their sheep" (Brunner 1977: 4). The adjectival construct with GBRʾ ZY *pyl* stands for Persian */mard ī pīr/*, "man-relational marker-old" = "old man," TMH for */anōh/,* "there," MN-W for */kē/,* "who," LWT-H for */abāg/,* "with," *t* in YḤWWNt to mark participial *t* and *d* to mark the third person plural copula */hēnd/* in the periphrastic past YḤWWNt ḤWH-*d* for */būt hēnd/,* "they were, have been."

In this writing system, the letter shapes had partially merged so that the original 22 letters were reduced to 14. (On the development of the Middle Iranian scripts, specifically Book-Pahlavi, see Henning *apud* Spuler 1958: 21–40; Kutscher 1970: 393–99; Nyberg 1974 2: 1–7, Humbach 1974; Humbach and Skjaervo 1983 3/2: 132–9; Delauney 1985). In order to record the then orthodox pronunciation of the sacred Avestan texts as accurately as possible, an ingenious Avestan alphabet was invented during Sassanid times (possibly the 6th century A.D.), based on the Book-Pahlavi script. Its 48 (originally 60) signs distinguish not only long and short vowels but also minute conditioned variants of the consonants, aspiration, palatalization, etc. (Morgenstierne 1942; Windfuhr 1972).

Finally, Late Khwarezmian is written in Arabic. In fact, the Arabic script is now used for all literary modern Iranian languages except those used in the Soviet Union.

GERNOT L. WINDFUHR

LATIN

Originally the language of Latium, the region of Italy in which Rome is situated. It became the dominant language of the W Mediterranean with the expansion of Roman power. Colloquial or "Vulgar"

Latin, spoken in various provinces of the Roman Empire, in the course of time developed into the Romance languages of France, Spain, Portugal, Italy, Switzerland, and Romania.

A. The Latin Language

Latin belongs to the Italic branch of the Indo-European (IE) family of languages. The Italic branch comprised both Q and P languages or dialects, according to how the unvoiced Indo-European labiovelar sound was represented by *qu* (as in Lat *quattuor,* "four," from IE *$*q^w$etwor*) or by *p* (as in Oscan *petora,* Umbrian *petur,* "four"); Latin was a Q language.

IE intervocalic *s* became *r* in Latin; thus the genitive plural of *ā-stems* (IE **āsōm*) became *-arum* (contrast Gk *-aōn,* contracting to *-ōn,* with the disappearance of intervocalic *s*).

Of the IE cases, Latin retains the ablative, not only in its original ablative sense (denoting separation) but in the instrumental sense as well. The locative survives in place names and in a few common nouns (e.g., *domi,* "at home").

Latin forms the genitive singular of *o*-stems in *-ī,* which was taken over also by *ā*-stems (the ending *-ae,* as in *aqua vitae,* was formerly a dissyllable, *-āī*). The original IE genitive singular of *ā*-stems survives in *paterfamilias*.

Latin has no definite article; the situations in which its absence leads to ambiguity are fewer than might be expected. (The translator of the Rheims NT of 1582 used the Latin Vg as his base, but paid regard to the Gk text when deciding whether or not to use the Eng definite article.)

The Latin passive is formed by the addition of *-r* (e.g., *amor,* "I am loved," alongside *amo,* "I love"), as in other Italic languages or dialects and the neighboring Celtic languages and also in the remote Hittite and Tocharian languages.

The aorist (past historic) and perfect tenses have fallen together into one Latin form, called the perfect; e.g., *amavi* means either "I loved" or "I have loved."

Except in deponent verbs (verbs passive in form but active in meaning), Latin has no perfect participle active. In the NT this gives rise to some theological problems: in Heb 1:3, for example, the Gk aorist participle, "having made purification," is rendered in Vg by the present participle, "making purification," which obscures, or indeed contradicts, the point which the author intends to make.

Latin was the official language of Roman colonies in the east and west alike, and it was the language of the Roman armies wherever they were stationed; but in the E Mediterranean, Greek was never displaced from its position as the language of culture and general communication which it had held since Alexander the Great's conquests.

B. Latin Literature

The earliest specimens of Latin writing are inscriptions dating from the 5th century B.C. onward. Latin literature in the proper sense begins in the second half of the 3d century B.C., with Livius Andronicus, who translated Homer's *Odyssey* into Latin, and Naevius, author of an epic poem on the Punic War. Both of these authors used the native Saturnian meter, but it was soon displaced by imported Greek meters like the hexameter, used by Ennius (239–169 B.C.) for his *Annales,* an epic poem on the history of Rome. In the same period, Plautus and Terence presented the motifs and techniques of the Attic New Comedy in Latin dress.

But Roman genius made sure that Latin literature was no mere copy of Greek models but had a character and distinction of its own. Lucretius (*ca.* 55 B.C.) bent the hexameter to didactic use in his six books *On the Nature of Things,* an exposition of Epicurean philosophy. Cicero (d. 43 B.C.), in his orations, letters, and philosophical treatises, raised Latin prose to a level which has remained unsurpassed. Virgil's *Aeneid* (between 29 and 19 B.C.), for all its indebtedness to Homeric epic poetry, is an independent work of genius. Horace (65–8 B.C.) has by his *Odes* endeared himself to appreciative readers of all succeeding generations. Livy (59 B.C.–A.D. 17) wrote the history of Rome in 142 volumes, of which 35 are extant. These are some of the names which justify the description of this phase of Latin literature as the golden age.

To the silver age belong the philospher and tragedian Seneca (d. A.D. 65), his nephew the epic writer Lucan, the encyclopedist Pliny the Elder (d. A.D. 79), and his nephew the letter writer Pliny the Younger;

the satirist Juvenal; Tacitus, Rome's greatest historian; the biographer Suetonius; and Apuleius, whose *Golden Ass* is a splendid example of early novel-writing. There was a falling away of literary power in the following generations, but new life was breathed into Latin prose by the Latin church fathers.

C. Latin in the NT

Latin plays only a marginal role in the NT. It was one of the three languages of the "title" fastened above Jesus' head on the cross (John 19:20). There is a sprinkling of loanwords from Latin in the Greek NT: *assarius,* "penny" (Matt 10:29; Luke 12:6); *census,* "taxes" (Mark 12:14, etc.); *centurio,* "centurion" (Mark 15:39); *colonia,* "colony" (Acts 16:12); *custodia,* "guard" (Matt 27:65); *denarius* (Mark 6:37, etc.); *flagello,* "scourge" (Mark 15:15 = Matt 27:26); *forum* (Acts 28:15); *legio,* "legion" (Mark 5:9, etc.); *libertinus,* "freedman" (Acts 6:9); *linteum,* "towel" (John 13:4–5); *macellum,* "meat market" (1 Cor 10:25); *membrana,* "parchment" (2 Tim 4:13); *mille* (sc. *passus*), "mile" (Matt 5:41); *modius,* "bushel" (Mark 4:21 = Matt 5:15 = Luke 11:33); *paenula,* "cloak" (2 Tim 4:13); *praetorium,* "palace," "praetorian guard" (Mark 15:16 = Matt 27:27; John 18:28, etc.; Acts 23:35; Phil 1:13); *quadrans,* "penny" (Matt 5:26; Mark 12:42); *semicinctium,* "apron" (Acts 19:12); *sicarius,* "assassin" (Acts 21:38); *speculator,* "soldier of the guard" (Mark 6:27; found also as a loanword in rabbinical Heb *spiglaṭor,* with the same sense, "executioner"), *sudarium,* "napkin," "handkerchief" (Luke 19:20; John 11:44; 20:7; Acts 19:12); *taberna,* "tavern" (Acts 28:15); *titulus,* "title" (John 19:19–20).

Paul may have been able to claim his citizenship rights in Latin, *civis Romanus sum* (cf. Acts 16:37; 22:25; 25:11). He would have heard Latin spoken in Roman colonies such as Philippi and Corinth (although his chief associations were with Greek-speaking residents) and in his contacts with the Roman army. When he planned to evangelize Spain (Rom 15:24, 29) he must have been prepared to use Latin as his regular means of communication there; perhaps it was to gain fluency in it that he visited the Latin-speaking province of Illyricum (Rom 15:19). In Rome, however, Greek would serve him adequately: the city was completely bilingual, and the Roman church was Greek-speaking until the end of the 2d century.

D. Latin in the Church

Latin appears to have come first into Christian use in the Roman province of Africa, whose capital city, Carthage, became a Roman colony in 146 B.C. It was here that the first Latin Christian literature appeared, preeminently the writings of Tertullian of Carthage, which belong to the years A.D. 196–212. Parts, at least, of the Bible were available in a Latin version in Africa in the last quarter of the 2d century. In 180, the church of Scillium, near Carthage, possessed a copy (evidently in Latin) of Paul's letters. Tertullian quotes extensively from the Latin scriptures and Cyprian, bishop of Carthage (249–257), uses a practically complete Latin Bible.

Pope Victor I (ca. A.D. 190) is said to have been the first Latin-speaking bishop of Rome (Hier. *Vir. Ill.* 34). The first substantial contribution to Latin Christian literature produced in Rome was Novatian's treatise *On the Trinity* (ca. A.D. 250).

In the following centuries, Latin literature was enriched by a succession of gifted Christian writers, including Hilary, bishop of Poitiers (d. 367), author of the work *On the Trinity;* Ambrose, bishop of Milan (339–397), preacher and exegete; Jerome, who produced (among many other things) the first Latin translation of the OT direct from Hebrew; Pelagius (ca. 350–430), commentator on Paul's letters and the first British author; and Augustine of Hippo (354–430), "assuredly the greatest man that ever wrote Latin" (Souter 1927: 139), whose intellectual and spiritual powers, finding expression in a long succession of outstanding treatises and letters, have to this day exercised a profound influence on Christian thinking in the Western tradition.

Throughout W Europe for many centuries, Latin remained the language of church, law, and scholarship. Moreover, outstanding literary works in prose and poetry continued to appear in Latin until the 18th century. In his *Ecclesiastical History of the English People (Historia ecclesiastica gentis Anglorum),* Bede of Jarrow (673–735), a man of wide and deep learning, showed himself a master of the historian's art. The Irish scholar Johannes Scotus Erigena (815–877), translator of Pseudo-Dionysius' *Celestial Hierarchy* into Latin, produced original philosophical studies. Abelard (1079–1142) showed his best literary qualities in his letters and hymns rather than in his controversial writings.

Although in the reformed churches Latin was largely displaced by the vernacular tongues, it continued to be used as a literary medium. Luther and Calvin wrote in Latin as well as in German and French, respectively; and in the following century, John Milton wrote in Latin (both prose and poetry) as well as in English. Only in the second half of the 20th century, with the encouragement of vernacular liturgy, has Latin ceased to be the invariable liturgical language in the Roman Catholic Church.

F. F. BRUCE

PHOENICIAN

The term Phoenician properly denotes those dialects of Canaanite spoken in antiquity in the region of the Lebanon (Phoenicia). Canaanite, called "the speech of Canaan" by its native speakers (Isa 19:18), was the indigenous Northwest Semitic language of all ancient Lebanon and the biblical land of Canaan. To the Canaanite family of languages also belonged the regional dialects of Judean (Hebrew), Moabite, Ammonite, and Edomite. Two dialects of Phoenician Canaanite are known: Byblian, the language of the city-state of Byblos, and Tyro-Sidonian, that of the city-states of Tyre and Sidon and their dependencies in central and S Lebanon. With the political and economic ascendancy in Phoenicia of Tyre and Sidon in the 1st millennium B.C.E., Tyro-Sidonian Phoenician emerged as the common language or *koinē* of all Phoenicians; although Byblian continued to be the official tongue of the city of Byblos, its linguistic importance was negligible. Trade and overseas expansion, already in process at the end of the 2d millennium B.C.E., carried and transplanted Tyro-Sidonian Phoenician far beyond Phoenicia to Cyprus, Greece, N Africa, SW Spain and the Balearic Islands, W Sicily, Sardinia, and Malta. Western Phoenician (Punic), the language of the Carthaginian state and its vast empire, rivaled in importance Greek and Latin in classical antiquity; it survived in N Africa well into the Christian period, counting among its native speakers the Roman emperor Septimius Severus, the poet Apuleius, and the Church Father Augustine of Hippo.

Classical Phoenician, specifically the Tyro-Sidonian (TS) of Lebanon proper and the Phoenician kingdoms and communities in Cyprus and Greece, was essentially similar to Hebrew (Heb) except for minor dialectal differences. Accordingly, the relatedness of TS and Heb may be described succinctly in terms of these differences.

A. Alphabet and Writing

Phoenician was written in a regional variety of the Proto-Sinaitic linear alphabet especially adapted to its 22-consonant inventory. It was this 22-letter alphabet, together with the Phoenician names of the letters, that was subsequently borrowed by other Canaanite-speaking peoples, including the Israelites, and by the Arameans and later the Greeks. Phoenician orthography was always purely consonantal; although the system of the *matres lectionis* (vowel letters) used in Hebrew, Moabite, and Aramaic was known to the Phoenicians, it was rarely used by them.

B. Phonology

The phoneme /z/ was pronounced [zd] or [zz], and /ṣ/ was pronounced [st], [ts], or [ss]. Proto-Semitic /š ś s/ had fallen together as [s], as in the Ephraimite dialect of Canaanite (see Judg 12:4–6); thus, the absence of the sound [š], which made it impossible for the Ephraimite to "pronounce correctly" Judean /šibbólet/, made it possible for St. Augustine to relate Punic *salus* [salūs] = Heb /šalōš/, "three, trinity," to Latin *salūs,* "salvation" (see Aug. *Ad Rom.* inch. Exp. 13). Phoenician did, however, represent the reflexes of /š ś/ by the alphabet letter *š;* only rarely by the letter *s*. The Proto-Semitic vowel /a/ had three reflexes in Phoenician: (1) [a] in an open unstressed syllable, (2) [e] or [i] in a closed unstressed syllable, and (3) commonly but not always [o] in a stressed syllable: TS /hessūs/ = Heb /hassūs/, "the horse"; TS /banó/ =

Heb /baná/, “he built.” Proto-Canaanite /ō/ had the reflexes (1) [ō] in a closed unstressed syllable and (2) [ū] in an open unstressed and commonly but not always in a closed stressed syllable: TS /dōbrīm/ = Heb /dōbĕrīm/, “they say”; TS /dūbér/ = Heb /dōbér/, “he says”; TS /śanūt/ = Heb /šānōt/, “years.” The Proto-Semitic diphthongs /aw/ and /ay/ were contracted to [ō] or [ū] and [ē] or [ī], respectively, under all conditions.

C. Noun and Adjective

The feminine singular afformative is always /-ót/: TS /milkót/ = Heb /malká/, “queen.” The nouns “father” and “brother” have the stems /ʾabū-/ and /ʾaḥū-/, respectively, in the construct state and with suffixal pronouns: TS /ʾabūnóm/ = Heb /ʾăbīhém/, “their father.” Some nouns have forms different from those in Hebrew in the singular and plural: TS /śatt/ = Heb /šaná/, “year”; TS /ʾīsīm/ = Heb /ʾănāšīm/, “men”; TS /māqūmīm/ = Heb /měqōmōt/, “places.” Some nouns common in TS are uncommon or unknown in Heb: the word for “gold” is /hārūṣ/, the common Heb word /zāhāb/ being unattested; “foot” is always /paʿm/, never /regel/; “great,” “large,” is /ʾiddīr/ or /kibbīr/, never /gādôl/; “small” is /ṣaʿīr/, never /qāṭān/; and “beautiful” is /śippīr/, not /yāpe/.

D. Pronouns

For “I” TS has /ʾānīki/ = Heb /ʾānōkî/; “you” (second masculine singular) was /ʾátta/, with stress on the initial syllable, in contrast to Heb ultima-stressed /ʾattā/. For “they” TS has the common gender pronoun *hmt* (pronunciation unknown). The possessive pronoun “our” is /-ón (u)/ = Heb /-énu/, and “your” (masculine plural) is /-kom/ = Heb /-kem/. In the third person, the TS possessive pronouns have complementary forms: /-o/, “his,” /-a/, “her,” and /-óm/, “their” (common gender), are used when the nouns are in the nominative or accusative case, but /-i/, “his, her,” and /-nóm/, “their,” are used when in the genitive case. When the noun ends in a vowel, the forms are /-yò/, “his”; /-yà/, “her”; and /-nom/, “their.” The demonstrative pronouns are /zde/ and /zdō/ for the masculine and feminine singular, respectively, and /ʾillī/ for the common plural; when used adjectivally, the demonstratives follow the noun and do not as a rule receive the definite article: TS /heqqart zdō/ = Heb /haqqiryâ hazzōt/. The relative pronoun is /ʾīś/ = Heb /ʾăšer/; unlike its Heb counterpart, it is regularly used with participles. For “all, every, each,” TS has /kil (l)/, corresponding to Heb /kol (l)/. TS does not have the adjective /ʾaḥēr/, “other, another,” of Heb; “another” is expressed either by the adjective /zor/ or the ordinal /śenī/, and “the other” by the construct plural noun *ʾḥry* (pronunciation unknown): TS /ʾarūn zor/ or /ʾarūn śenī/, “another coffin,” = Heb /ʾārôn ʾaḥēr/; TS *ʾḥry hbtm* = Heb /habbātîm haʾăḥērîm/, “the other houses.”[w]

E. Verb

The suffixing form (past perfective) of the causative stem in TS is /yiCCeC/ = Heb /hiCCìC/: TS /yiqdeś/ = Heb /hiqdīš/, “he dedicated.” The third feminine singular of the suffixing form (past perfective) of all classes of verbs, including III*y*, ends in /-a/: TS /baná/ = Heb /bānĕtâ/, “she built.” A distinction in inflection between indicative and nonindicative exists in the second and third person plural of the prefixing form of the verb: /yelekūn/, “they will go” (indicative) but /yelekū/, “let them go!” (jussive). The form /wayyiCCoC/ of Heb expressing past perfective action is unknown in TS; instead, TS uses the infinitive absolute with following subject (noun or independent personal pronoun): TS / (wa) katūb ʾānīki/ = Heb /wāʾ ektōb/, “I wrote.” TS makes extensive use of the infinitive construct /liCCūC/ as a surrogate for the future tense, the jussive, and the imperative. Some verbs in TS have forms somewhat different from those in Hebrew: TS /yaton/ = Heb /nātan/, “he gave”; TS /ḥawo/ = Heb /ḥāyâ/, “he lived.” Some verbs in TS are uncommon or unknown in Hebrew and vice versa: TS /ṭ-n-ʾ/ (*Qal, Piʿel* and *Yipʿel*), “to set up”; TS /ḥ-z-y/ = Heb /r-ʾ-y/, “to see” (unknown in TS); TS /k-n/ (*Qal*) = Heb /h-y-y/, “to be”; TS /ḥ-m-d/ and /ḥ-b-b/ (*Yipʿel*) = Heb /ʾ-h-b/, “to love” (unknown in TS); TS /p-ʿ-l/ = Heb /ʿ-ś-y/, “to do, make.”

F. Other Parts of Speech

The preposition *b-* /bi-/ has the free variant *ʾb-* /ʾef-/, with prothetic vowel and spirantization of the bilabial, as well as the predictable variant *bn-* before suffixal pronouns: TS *bn* /bVnó/ = Heb /bō/, “in him.” The preposition /ʿal/ has the free variant /ʿalt/, with excrescent -t. TS does not have the preposition /ʿim/ of Hebrew, using rather /ʾit (t)/. The conjunction /ʾô/, “or,” of Hebrew is unknown, with TS using

/ʾim/ instead. For "in order that," TS has *lkn* (pronunciation unknown) = Heb /lĕmáʿan/. The negative particle *lʾ* /lō/ of Heb is unknown; TS uses /ʾī/, /bal/, or /ʾībál/ to negate the indicative mood. For the accusative particle TS has the complementary forms *ʾt* /ʾot/, used immediately before a noun with possessive pronoun, and *ʾyt* (pronunciation unknown) used in all other cases; the accusative particle governs the genitive case of the noun, which must then receive the appropriate form of the possessive pronoun.

CHARLES R. KRAHMALKOV

PRE-ISLAMIC SOUTH ARABIAN

For the present purpose, South Arabia is approximately congruous with modern N and S Yemen (the Yemen Arab Republic and the People's Democratic Republic of Yemen). In this area there are many thousands of inscriptions dating from some time in the first half of the 1st millennium B.C. down to the mid-6th century A.D. Almost all of those anterior to the latter 3d century A.D. are drafted in four languages commonly called Minaic, Sabaic, Qatabanic, and Hadramitic, on the basis of a listing of the four most important *folks* (ethnē) of S Arabia by the 3d-century B.C. Greek geographer Eratosthenes. Inscriptions in the first three cluster in the valleys and montane plains draining into the sand desert called by Arab geographers the Ṣayhad (on modern maps Ramlat al-Sabʿatayn); and even the Hadramites, whose inscriptions are rather widely spread in the E part of the domain, had their "metropolis" Shabwa not in the Wadi Hadramawt proper but on the E border of the Ṣayhad. It is thus convenient to group these four languages as "Ṣayhadic," rather than "Old (or Epigraphic) South Arabian," because a few inscriptions have been found, mostly to the south of the Ṣayhadic area, in a still undeciphered language which is certainly none of the four known Ṣayhadic languages.

At the NW end of the Ṣayhadic belt, the Wadi Jawf is linguistically divided, with Minaic in the E part and Sabaic in the W part; Sabaic also covers a large area comprising the high plateaus S of the Wadi Jawf, and the oases at a lower level E of the high plateau area, including the Sabaean "metropolis" Marib. Qatabanic is centered on the Wadis Ḥarīb and Bayḥān with the area S thereof.

Some Ṣayhadic texts are found well outside the S Arabian area: notably at Dedan (modern al-Ulā), where there was a Minaean trading establishment, and at Samhar (modern Khor Rori), a little east of Sallalah in what is now part of the sultanate of Oman. Additionally, there is a very small scattering of inscriptions spread over an even more extensive area: those in Egypt and the Mediterranean island of Delos reflect S Arabian trading interests; those in central Arabia are a result of military expeditions.

The earliest South Arabian inscriptions known are Sabaic; use of the other three languages began (so far as their epigraphic record goes) slightly later, and continued in the case of Minaic down to about 100 B.C., in the case of Qatabanic and Hadramitic to about the beginning of the 3d century A.D. Sabaic continued in use through the 4th to 6th centuries, but with features which suggest that it may by that time have been developing into something more like a "learned" prestigious language than one actively spoken. Because in that period the political control of the whole of S Arabia was in the hands of the so-called Tubbaʿ kings, who were of Himyarite stock, it is possible that Sabaic was yielding to Himyaritic: this is an Arabian dialect, albeit one rather more divergent than most from the general average of Arabic dialects, and showing more archaic features.

Muslim writers were acquainted with the history of only the three centuries immediately preceding Islam, and consequently applied the term Himyaritic to all pre-Islamic inscriptions (and other material remains); European scholars of the 19th century tended to echo this, by calling all Ṣayhadic texts "Himyaritic," but this is a complete misnomer.

All S Arabian pre-Islamic languages are written in the South Arabian variety of the South Semitic alphabet, including 29 letters, in contrast with the limited repertory of 22 letters found in the Phoenician-Hebrew-Aramaic group of alphabets. But the two script families did share a common origin in the remote past. Other members of the South Semitic script family are the old North Arabian scripts and Ethiopic (the latter deriving apparently directly from South Arabian). But the South Arabian script was not limited to rendering South Arabian languages, whether Ṣayhadic or another; it was also used for Hasaitic (an old-Arabian language of the al-Ḥasā area in E Arabia), and for Arabic in Qaryat al-Faw (an important caravan city on the route linking Najran with NE Arabia); although the few inscriptions from Najran appear to be Sabaic, the population probably spoke Arabic, using Sabaic as a prestigious language in the same way that the Arabic speakers of Palmyra used Aramaic for epigraphic purposes.

Alongside the monumental variety of South Arabian script, we now have a handful of documents on wood in a highly cursive script (based, however, on the monumental script) and apparently used for epistolary purposes. This script is extremely difficult to read, and though work is now proceeding on decipherment of the texts, it will be a long time before satisfactory results can be expected.

The South Arabian alphabet is basically consonantal, with no notation for short vowels and none for long *ā* (apart from a single instance, a late text of the Tubbaʿ period in which the Jewish name Yahuda is spelt in Aramaic fashion as *Yhwdʾ*); it remains disputable to what extent *w* and *y* may have been used as vowel letters. Nor is there in general any notation for consonant length (a lack found also in Ethiopic, despite the fact that the latter has evolved a system of vowel notation); Minaic texts, however, do show some half-dozen words in which duplication of a consonant may plausibly be thought to represent length of the consonant, as in Greek, although this manner of noting the feature is totally unknown in any other Semitic alphabetic script. All this manifestly places severe restrictions on our knowledge of the linguistic structures.

The Ṣayhadic languages are unmistakably Semitic, but they are made distinct from all other Semitic languages by the use of an affixed *-n* (in Hadramitic *-hn*) with the function of a definite article, so that Arabic speakers consciously equated it with their own prefixed *al-*. Also noteworthy is the maintenance of three unvoiced sibilant phonemes, a feature shared with a group of languages still spoken today in the Sallalah region and the island of Socotra, of which the main representative is Mahri; these possess besides */s/* and */š/* a further phoneme with lateral articulation (rather like Welsh */ll/*). So far as cognates in other Semitic languages can be detected, over 80 percent of the cases show the following correspondences:

Ṣayhadic	**Mahric**	**Hebrew**	**Arabic**
s^1	*/š/*	*š (šin)*	*s*
s^2	lateral */ś/*	*ś (śin)*	*š*
s^3	*/š/*	*s (samek)*	*s*

The shape of the letter s^3 closely resembles that of a Northwest Semitic *samek* at the beginning of the 1st millennium B.C.; and while the shape of s^2 is that of the ambiguous Northwest Semitic *śin/šin,* the cognates suggest that its value was that of the *śin*—whatever that may have been. The extra letter shape would thus have been s^1, which looks like a differentiated version of *s*.

The other letters additional to the 22-letter alphabet are the six which Arabic has over and above the latter, and their shapes are mainly secondarily developed forms: *ḡ* based on *g*, *ḏ* on *d*, *ḫ* on *h*, *ḍ* on *ṭ*, *ẓ* on *ṣ* (indeed, these two often interchange), and *ṯ* for which rather oddly the closest resemblance in shape is *y*.

Another general feature of Ṣayhadic is frequent assimilation of *n* to a following consonant (other than a laryngeal or glottal) when the two are continuous. Assimilated and nonassimilated spellings, however, are almost equally common.

Within the Ṣayhadic family, there is a cleavage between Sabaic and the other three. Sabaic has *h-* as the prefix of the causative verb-stem and *-h-* in third person affix pronouns (cf. Heb *Hipʿīl*, *-oh, -ah, -hem*), while the others have s^1 (cf. Akkad *šaprus, -šu, -šum;* Syr *šapʿel;* Mahric causative verb-stem in *š-* and sibilant pronoun affixes). Some texts, however, show a mixture of both sibilant and *h* forms; and, as elements in personal names, *h-* verb-stem formations are almost universal. The verb-stem formant *h-* is retained in the imperfect and the participle (in contrast with Hebrew).

A peculiarity of Hadramitic is loss of phonemic distinction between s^3 and *ṯ*, and between *z* and *ḏ*, so that the two letters in each pair are used indifferently. Also notable in Hadramitic is a consonantal differentiation in the third person sing. affix pronoun: masc. $-s^1$, fem. $-s^3$ or *ṯ* (paralleled in Mahric by masc. *-š,* fem. -s); elsewhere in Ṣayhadic the consonantal base of these pronouns is uniform for both genders.

Qatabanic has a *b-* prefix for the indicative imperfect verb, without which the verb has a jussive or optative force. Imperfects in *b-* occur sporadically in Minaic, but without sufficient evidence of their value.

In earlier Sabaic, and in the other three languages, the numeral 3 has the form s^2lt *(t),* but in Sabaic from about the 1st century A.D. this is replaced by *tlt (t).* One notes that the noun-stem affix which appears in Ugaritic and Akkadian as *-t* is in Ṣayhadic always so spelt, and never (as in the Hebrew and Arabic non-construct forms) with *-h.*

There are some traces of a verbal perfect-tense inflection with first person sing. and second persons marked by *-k,* as is the case in Ethiopic and Mahric, in Himyaritic (where it may be due to the Ṣayhadic substratum), and in some of the present-day Arabic dialects of Yemen (presumably inherited from Himyaritic).

The Marib area and the highlands west of it exhibit what may be termed standard Sabaic; but to the north and south there are texts showing dialectal peculiarities. One such dialect, for which textual evidence in any quantity has only just become available, is that of the Radmān folk, in the southeast corner of present-day N Yemen around the town of Radāʿ, and thus in close proximity to the Qatabanic area; as might be expected, this shows some admixture of forms recalling Qatabanic. Another dialect is evidenced in a small group of texts from around Haram in the Wadi Jawf, which have the preposition *mn,* "from," whereas in all other parts of the Ṣayhadic domain "from" is expressed exclusively by *bn* (very common) or *ln* (occasionally in Sabaic); it can be surmised that these forms are expansions with the differentiated meaning "from" as well as, respectively, "in, at" and "to, for." Ṣayhadic has only one preposition meaning "to, for" covering the ranges of Hebrew *lĕ-,* Arabic *li-* and Hebrew *ʾel,* and Arabic *ʾilā:* this preposition is in Sabaic and Qatabanic *l-,* in Minaic *k-,* in Hadramitic *h-.*

Sabaic, and to a partial extent Minaic, has two imperfect verb forms, one simple, the other characterized by affixed *-n.* While the latter is often used in main verbs with a jussive or optative sense, it also occurs frequently in subordinate clauses of all kinds, including relative ones; it is thus in no way parallel functionally to the Arabic "energetic" *-n* forms.

In its use of nominal "broken" or internal plurals, Ṣayhadic outdoes all other Semitic languages; such plurals are almost universally used, even for denominals in *-y;* e.g., *ṣrwḥy,* "man of Ṣirwāḥ," pl. *ʾṣrḥ,* where Arabic would admit only *Ṣirwāḥiyyūn.* Barely a dozen Ṣayhadic nouns, such as *bn,* "son," *ym,* "day," etc., are attested with external masc. pl. forms, additionally to internal ones.

A feature to which the term "consecutive infinitive" has been applied is that where two or more verbs are immediately (without intervening words) coordinated with each other, the normal rule is that only the first exhibits the appropriate morphological markers of the finite verb in respect to gender, number, and tense, while the following ones are devoid of those markers, thus showing a quasi-infinitival form, although semantically they have the same gender, number, and tense implications as the leading verb.

Lack of vocalization is especially frustrating in regard to the verbal system. The graphic forms show only a base-stem *fʿl* and derivative stems *hfʿl*/$s^1fʿl$, *tfʿl, ftʿl* and $s^1tfʿl$ (and a few Minaic examples of *fʿʿl,* see above). A **nfʿl* stem is completely unattested; but it has to be noted that in Mahric and Ethiopic the *n-* prefix stem is confined to verbs from quadriliteral roots, of which only one is attested in Ṣayhadic, and

that is a *hfʿl* stem. It remains uncertain how far these graphic forms may conceal a variety of vocalizations; though one Sabaic form at least, *ts*^{2}*m* (from root *s*^{2}*ym*), might be thought to demonstrate a *tafaʿla* stem, which exists in Ethiopic though not in Arabic. At all events, one must not allow the inadequate graphic evidence to mislead one into inferring that the verb system had more similarity to the Arabic one than to the Ethiopic or Mahric systems.

Relatively little work has been done so far on syntax. One does, however, gain the general impression that Ṣayhadic had a fairly close resemblance to Arabic in this domain, with a few notable exceptions. It is regular for two or more substantives to govern a single genitive jointly, contrary to the classical Arabic rule that the form "the (X + Y) of Z" must be rephrased as "the X of Z and its Y." An asyndetic relative clause, or a prepositional phrase qualifying a substantive, may be treated like genitives in that the governing substantive has the morphological form of a "construct" (i.e., a substantive followed by a possessive pronoun or another substantive in the genitive), whereas this feature is in Arabic generally restricted to cases where the governing substantive is a time word (e.g., *sanata māta,* "the year he died").

A lexical survey is hampered by the interpretational divergencies (sometimes bizarrely extreme) among scholars. Many of these have tended to pillage Lane's *Arabic Lexicon* in their search for cognates, with too little regard for the fact that the medieval Arab lexicographers (on whose work Lane is based) often cite as the meaning of a word a connotation derivable solely from a particular context and quite inapplicable outside that context. Nor should it be forgotten that the bulk of our inscriptions antedate Arabic by at least half a millennium, in which time there is ample scope for substantial semantic shifts. But subject to these cautions, it is true that the tendency in the last few decades, for scholars to have recourse increasingly to the vocabulary of Arabic for explaining Ṣayhadic, has had considerable pragmatic success.

The Ṣayhadic lexicon retains some old Semitic words that have totally disappeared from the Arabic vocabulary, such as *ʾbn,* "stone," and *ʿḍ,* "wood." Sabaic *lbʾ,* "lion, lioness," survives in Arabic only in the feminine *labuʾah,* while what has now become the *vox propria* for "lion" in Arabic, *ʾasad,* is revealed as originating in a metaphor by Ṣayhadic *ʾs*^{1}*d,* "warrior." Minaic *rtkl* has the same sense as Hebrew and Aramaic *rkl,* "to trade," whereas Arabic *rakala* means only "to kick." Ṣayhadic *kwr,* "mountain," and *nwd,* "wind," survive at the present day in Yemeni dialectical usage, though unknown in standard Arabic or in any other Semitic language.

Both the Ethiopic and the Mahric languages have provided useful materials: *fṯḥ,* "lawsuit," recalls Ethiopic *fätäḥ,* "law"; the numeral *ṭd,* "one," exists in Mahri as *ṭad;* and *ḥbr* (designating something that damages crops) is better connected with Jibbali (Mahric) *ḥor* < *ḥbr,* "cold," than, as hitherto thought, with Hebrew *ḥěběr,* "sorcery." Sometimes the search for cognates is fruitless: when we read in a Minaic inscription on a sarcophagus, "This sarcophagus is that of so-and-so … who *fqr* in the 22d year of Ptolemy," it is absurd to suppose that the verb can mean anything except "died," although this sense of the root is found nowhere else in Semitic.

As might be expected, Sabaic vocabulary of the 4th–6th centuries shows an increasing convergence with Arabic. One interesting example is the root meaning "join together": in normal everyday Arabic this is *ǧamaʿa,* which, however, makes its first epigraphic appearance in the 6th century A.D.; earlier Ṣayhadic appears (judging from derivatives) to have used in this sense *krb,* while in Arabic *karaba* means "draw near, approximate," with a secondary development "to oppress," and then "to grieve" (transitive).

In the 4th–6th centuries we encounter also a certain number of loanwords, mainly from Syriac; e.g., *bʿt,* "church"; *qs*^{1}*s*^{1}, "Christian priest" (Syriac *qěšišo*); *brk,* "bless." Before that period loanwords are decidedly sparse. In some early texts we have a priestly title *ʾfklt* (pl.), Akk *apkallu;* in the 2d–3d centuries A.D., *ṯf,* "tablet," Akk (ultimately Sum) *ṭuppu.* Also of this latter period are a few terms evidently still considered foreign, and applied only with reference to non-Ṣayhadic-speaking peoples: Habashite (Abyssinian) military contingents are referred to as *ʾḥzb* (Ethiopic *ḥězb*), and among the spoils taken from Habashites are listed *dglmt,* "bracelets, anklets," (Ethiopic *děgělma*).

Considered overall, the content of the Ṣayhadic monumental inscriptions is starkly archival in character: building records, dedications, funerary texts, legal enactments, "victory" texts, and so forth. They are

uniformly drafted in the third person, and we have less than half a dozen showing a first or second person form; the cursive texts may be expected eventually to enlarge our knowledge in this respect. But the 1st–3d centuries A.D., which are much more amply documented than any other period, provide us with a large number of texts recording the presentation of votive offerings to deities, and these throw valuable light on everyday life. There is a small group of so-called "pentitential" texts, recording expiation for ritual offenses, particularly against ritual purity; the rules inferable from these bear a strong likeness to purity codes prevalent throughout the ANE. (On the modern languages of this region, see the Introductory Survey at the beginning of this entry.)

C. Relation to Biblical Hebrew

_____

A. Languages in Ugarit

During the LB Age, the city-state of Ugarit flourished as a cosmopolitan center of trade and commerce. As a result of its international character, several languages and various scripts were employed in the city. In addition to the native language, Ugaritic, evidence has survived of use at the same time of Akkadian, Hittite, Hurrian, and other languages. Some of these (e.g., Akkadian) were principally employed in the context of international trade and diplomacy; others (e.g., Hurrian) may reflect the mixed ethnic population within the city-state. The variety of languages was paralleled by the use of various scripts, including alphabetic cuneiform (used especially for Ugaritic itself), syllabic cuneiform, and hieroglyphic. Our knowledge of languages employed in Ugarit is based entirely on inscriptions, which include both archival texts and short inscriptions on monuments, tools, and other items. The multilingual context of the city-state had an influence on the native language, revealed both in loanwords and occasional grammatical forms. In addition, a few quadrilingual vocabularies have survived, in which Hurrian, Sumerian, and Akkadian equivalents of Ugaritic words are provided. One must suppose that professional scribes at Ugarit would have been multilingual in order to function properly in their profession.

B. The Language

1. Classification. The Semitic languages are commonly classified into three principal groups on a broadly geographical basis which corresponds conveniently, though not exactly, to linguistic divisions: East Semitic, Northwest Semitic, and South Semitic. There is general agreement that Ugaritic is a Northwest Semitic language, although there is continuing debate as to the precise subclassification of Ugaritic within the Northwest Semitic grouping. Some scholars assign Ugaritic to the "Canaanite" division of Northwest Semitic, though in fact the use of this term for languages of the 2d millennium B.C., like Ugaritic, involves historical and geographical difficulties. It is better to restrict its use, at least as a linguistic term, to the period after 1000 B.C., when the Northwest Semitic languages are known with certainty to have been split into two groups, Canaanite (i.e., Hebrew, Phoenician, Moabite) and Aramaic. Ugaritic does not, in fact, share all the characteristics of the later Canaanite. Thus one of these characteristics is the shifting of long stressed /a/ vowels to long /o/. For example, the feminine plural noun-ending in /-āt/ becomes /-ōt/. Ugaritic does not share this feature, whereas Hebrew does. In this context it is wiser to regard Ugaritic simply as a pre-Canaanite Northwest Semitic language.

There is no doubt, however, that Ugaritic has many affinities, both lexical and grammatical, with such languages as biblical Hebrew, Phoenician, and Moabite. It also has some affinities with Aramaic (for example, the shifting of the Proto-Semitic consonant /ḏ/ to /d/, against Hebrew /z/ and some lexica). We should note also links with the earlier Amorite (known to us only through personal names of the Mari period) and evidence of continuity with Eblaite. In summary, despite uncertainty over the subclassification of Ugaritic, it is agreed that it shares much with biblical Hebrew: a large, common lexical stock, certain fundamental grammatical similarities, and some common features of idiom and style.

2. Script, Phonology, and Vocalization. The native language of Ugarit had its own script, a form of alphabetic cuneiform, probably invented by the scribes of Ugarit, perhaps in the 15th century B.C. It combines the graphic principles of syllabic cuneiform (i.e., wedge-shaped marks on clay), with which the scribes of Syria were familiar, with the principle of the consonantal alphabet, which may have been learned from Byblos in the S. There were other, linear, consonantal scripts in use in the mid-2d millennium B.C., including the "Proto-Sinaitic" scripts of Sinai and Palestine. The normal Ugaritic script, written left to right, employed 30 symbols, though a shorter form of the alphabet, written right to left, has survived in a few texts (see below). The Ugaritic script tradition died out when the city was destroyed or soon afterwards and the innovative center of script development shifted S to Phoenicia.

The consonantal Ugaritic alphabet employs a wider range of symbols and represents a wider range of consonants than have survived in biblical Hebrew. Separate signs, for example for /ḥ/ and /ẖ/ and /ʿ/ and /ǵ/, suggest a phonology akin to Arabic rather than Hebrew (though there is evidence that Hebrew had more sounds than the Hebrew script could adequately represent). Vowels were not normally separately represented in the Ugaritic script. Hence, one cannot describe the script as alphabetic in the modern sense: it was left to the Greeks to develop an alphabet which included consonants *and* vowels as separate signs. Ugaritic is thus like Hebrew (for which the elaborate vocalization system was developed in the postbiblical period). However, in Ugaritic the letter ʾ*alep*, the glottal stop, was written in three different forms to indicate the accompanying vowel. This, along with some Ugaritic texts and word lists written in the syllabic script normally used for Akkadian (a script which *does* represent vowels), enables us to establish a fairly clear idea of the vocalization of Ugaritic words. This vocalization is partly based on comparative Semitic grammar, especially comparison with Akkadian and Arabic.

3. Principal Features. Although the settlement of Ugarit goes back to the Neolithic period, and its importance grew from ca. 2000 B.C., all our sources of information on the linguistic situation in Ugarit come from the LB Age, ca. 1400–1200 B.C. This is too short a period of time, given the limited sources, in which to trace precisely chronological developments and change in the Ugaritic language. Some of the Ugaritic texts, because of their conservative nature, may preserve archaic linguistic features; a few of the administrative texts, from the last years of Ugarit prior to its destruction, reflect later modifications in the form of the language. Although Ugaritic ceased to be used after ca. 1200 B.C., it may be noted that Ugaritic had a direct linguistic and literary heir in Phoenician (of which relatively little is preserved) and some features of ancient Ugaritic are claimed to survive in the Arabic of the nearby modern city of Latakia (Badre et al. 1976: 105, 116, 125). From the perspective of comparative studies with the Bible, it needs to be remembered that all the evidence of Ugaritic is considerably earlier than any of the direct evidence for Hebrew.

More than 1,300 texts in the Ugaritic language have been recovered from Ras Shamra and nearby sites. The majority of these texts (economic, administrative, etc.) are in a standard form of the Ugaritic language, although the prose style is often abbreviated, almost shorthand, in the manner of such texts. A more elevated form of the language, marked by literary style and elegance, is found in the poetic texts (approximately 50 in number, though some are very long) and in some prose texts, such as letters and descriptions of religious rituals, many of which were found in royal and priestly archives. These texts of distinctive poetic style were probably the work of professional scribes, with the more mundane economic and practical texts reflecting the needs of merchants and administrators.

Unvocalized Ugaritic in transliteration looks very similar to unvocalized Hebrew in transliteration. There are, however, some major grammatical differences in addition to the phonological differences already alluded to. Nouns have case endings (as in Classical Arabic and Akkadian). Reconstruction, based on the methods of recovering vocalization referred to above, allows us to distinguish, for example, nominative, accusative, and genitive singular (/kussiʾu/, /kussiʾa/, /kussiʾi/, "chair, throne"). The dual is fully operative in Ugaritic. Another obvious feature is the absence of any definite article. The verbal "tenses" (if they can be so called) are perfect *qṭl* and imperfect *yqṭl* as in Hebrew, Arabic, etc., though the use of the two is complex. The *yqṭl* form is frequently used for descriptions of past events, especially when one verb follows another in a descriptive sequence. In vocabulary, Ugaritic shares much with the Canaanite languages, though there are also many words shared with Akkadian. Some may be loanwords; others may go back to a much earlier stratum of Syrian Semitic, having been used already in Eblaite.

The poetic style of the literary texts (mythology and legends) shares the characteristics of Semitic poetry throughout the ANE and especially of the Northwest Semitic area. A notable feature of the poetic texts is the dominance of various forms of parallelism, together with related features such as formulaic language and the use of conventional word pairs in poetic parallel. Although the texts that have survived in the Ugaritic language provide some insight into the written forms of the language, they provide only partial understanding of what might have been the spoken forms of Ugaritic in everyday life.

4. Geographical Distribution. Inscriptions in the Ugaritic script and closely related scripts have been found over a wide area, but the evidence is hard to interpret. It is not always possible to be sure that an inscription in the Ugaritic script is in the Ugaritic language, since the inscriptions from outside Ugarit itself are invariably very short. One, from Sarepta, is thought to be in Phoenician. Nor is it possible to be sure that Ugaritic was normally used in the place where such an inscription has been found, since the particular text might be the product of an expatriate Ugaritian or the result of trade.

In general terms, Ugaritic was used in the city-state of Ugarit. The boundaries of the state changed from time to time, but they may have extended as far N as the Jebel el-ʿAqra (later Mt. Casius), E into the Orontes valley, and S as far as Tell Sukas (on the coast south of Latakia). Within this broad geographical area, inscriptions in Ugaritic have been found at Ras Shamra (Ugarit itself), Minet el-Beida (the nearby port), Ras Ibn Hani (a few km SW), and Tell Sukas. All these inscriptions (with the exception of three from Ras Shamra) are in the longer, conventional alphabet and presumably reflect the standard dialect of Ugaritic. A text in a variant form of the short alphabet, written right to left, was found at Tell Nebi Mend (ancient Qadesh) in the Orontes valley (Millard 1976: 459–60); whether this region was ever part of the kingdom of Ugarit is uncertain, though the dialect represented by the inscription may differ slightly from that in use in Ugarit itself.

Further inscriptions in the Ugaritic script have been found in regions that were never part of the kingdom of Ugarit (Craigie 1983: 153–57): Tell Taanach, Mt. Tabor, Kamid el-Loz, Beth Shemesh, and Sarepta. All these inscriptions are in a shorter form of the alphabetic cuneiform script, some reading left to right (Sarepta, Tell Taanach), some reading right to left (Mt. Tabor, Beth Shemesh), or some reading in both directions (Kamid el-Loz).

During a Swedish excavation at Hala Sultan Tekke in S Cyprus (1981), a silver bowl was discovered containing a short inscription in a form of the Ugaritic script. It is by no means certain, however, that Ugaritic was spoken in Cyprus (except, perhaps, by Ugaritic merchants), and the bowl was probably imported from the nearby Syrian coast. (See further Bordreuil 1983: 7–15.)

C. Relation to Biblical Hebrew

Despite the debate over classification, the rediscovery of the Ugaritic language has been of immense value for the study of biblical Hebrew (and vice versa). In the area of lexicography, a knowledge of Ugaritic words has frequently shed light on the meaning of otherwise obscure Hebrew words. To give but one example, in Prov 26:23 the obscurity of the Hebrew text has been resolved on the basis of recognition of the fact that a Hebrew scribe had at some stage corrupted a word corresponding to Ugaritic *spsg*, "glaze." The importance of Ugaritic in this context will be clear from the consultation of modern commentaries on biblical books, especially poetic books. Perhaps the 3-volume Psalms commentary in the AB series by Mitchell Dahood is the richest in the application of Ugaritic material to the elucidation of biblical Hebrew texts. Dahood's new meanings for Hebrew words were not always well enough supported by Hebrew evidence from context, but his approach is reflected in numerous monographs on individual OT books.

In the study of grammar (e.g., the forms and function of verbs, the usage of prepositions), Ugaritic has illuminated our knowledge of Hebrew, particularly with respect to archaic forms. Features like the rarity of the definite article and the use of the imperfect verb form for past action are seen also in Hebrew poetry. Hebrew's strange switching of verb forms in the "*wāw*-consecutive" may be partly explicable from comparison with Ugaritic. There are traces of case endings in Classical Hebrew: the /-īm/ masculine plural ending contains within it the /-ī/ which was originally an oblique case ending matched by a nominative /-ū/. The Hebrew prepositions have been the subject of renewed study in the light of Ugaritic usage.

The parallelism of Ugaritic poetry, the use of formulaic language and idiomatic expressions, and other features have contributed greatly to the study of Hebrew poetry. The Ugaritic language is a particularly valuable resource in the study of archaic and poetic aspects of the Hebrew Bible.

LAODICEA (PLACE) [Gk *Laodikeia* (Λαοδικεια)]. A city in the Lycus valley of SW Phrygia, hence called *Laodicea ad Lycum* to distinguish it from other cities of the same name.

A. The Hellenistic and Roman City
B. Jewish Settlement
C. The Church of Laodicea

———

A. The Hellenistic and Roman City

Laodicea was founded by the Seleucid king Antiochus II and named in honor of his wife, Laodice, between his accession to the throne in 261 B.C. and his divorcing her in 253 B.C. According to the elder Pliny (*HN* 5.105), it was built on the site of an older settlement first called Diospolis and later Rhoas. The name Diospolis ("city of Zeus") might reflect the fact that Zeus was the chief deity of the place, as he was of Laodicea.

Laodicea stands on the S bank of the Lycus (modern Çürük-su), between two lesser streams, the Asopus (modern Gümüş-çay) on the W and the Capsus (modern Başli-çay) on the E. It is situated 10 or 11 miles downstream from Colossae and 6 miles S of Hierapolis. At Laodicea a northbound road left the Iconium-Ephesus highway and ran by Hierapolis to Philadelphia and the Hermus valley. The ruins of Laodicea are plainly visible 5 miles N of Denizli, between the villages of Eskihisar to the S and Goncali to the N.

One of the earliest appearances of Laodicea in history was when Achaeus, rebelling against his cousin Antiochus III, had himself crowned king there in 220 B.C. (Polyb. 5.57.5). The city rapidly increased in importance, to the point where it rivaled and then surpassed its older neighbor Colossae.

By the Peace of Apamea, imposed by the Romans on the Seleucids in 188 B.C., the region in which Laodicea lay was transferred from Seleucid sovereignty to that of the kings of Pergamum. When the kingdom of Pergamum, bequeathed by its last ruler to the Romans, was reconstituted as the Roman province of Asia, Laodicea and its neighbors were thenceforth under Roman control (129 B.C.).

Laodicea was one of the few cities of Asia to hold out against Mithridates VI, king of Pontus, when he overran the province in 88 B.C. It similarly held out against Labienus when he invaded the province at the head of a Parthian army in 40 B.C.; as a reward for the city's loyalty to Rome, Mark Antony conferred Roman citizenship on several leading Laodiceans.

Laodicea belonged to a *conventus,* or assize district, to which Hierapolis, Hydrela, Themisonium, and Cibyra also belonged. Although it was called the Cibyratic *conventus,* its court actually met at Laodicea (Plin. *HN* 5.105). From Cicero, to whose jurisdiction Laodicea and the other cities of the Cibyratic *conventus* belonged during his proconsulship of Cilicia (51–50 B.C.), we learn that it was a center of financial and banking operations (*Att.* 5.15; *Fam.* 3.5), as well as a place where gladiatorial shows were to be seen (*Att.* 6.3.9). Strabo (12.8.16) attests its economic prosperity at the beginning of the 1st century A.D.

Laodicea suffered severely from earthquakes. One is recorded in the principate of Augustus: the case for relieving the Laodiceans, with the people of Thyatira and Chios, was presented to the Roman senate by Tiberius, the emperor's stepson (Suet. *Tib.* 8). A later earthquake in A.D. 60 devastated the area. Laodicea was destroyed, but was rebuilt from its own resources without state assistance (Tac. *Ann.* 14.27.1).

In addition to its natural resources, Laodicea profited from the munificence of some of its leading citizens, among whom special mention is made of Hieron, who in the 1st century B.C. bequeathed over 2,000 talents to the city and adorned it with many fine public works, and of the family of Zeno the orator (Strab. 12.8.16). Zeno led the Laodiceans in their resistance to Labienus, and he was the first of them to be rewarded with Roman citizenship by Antony: he figures thenceforward as Marcus Antonius Zeno.

The family of Zeno enjoyed a brief period of splendor. His son Polemon, who had aided his father in resisting Labienus, was appointed by Antony king of Cilicia Tracheia, which he ruled from Iconium; after Antony's defeat and death (30 B.C.), he made his peace with Octavian (the future Emperor Augustus), who made him king of Pontus and the Bosporus.

Laodicea was noted for its textile products: the local wool, said to be even softer than that of Miletus, was raven-black in color—the result, according to Vitruvius (*De Arch.* 8.3.14), of the water drunk by the sheep. It appears, moreover, to have been the chief medical center of Phrygia. Its medical school may have been sponsored by the temple of the Anatolian deity Mēn Karou, about 13 miles W of the city. There is no evidence for the suggestion made by Ramsay (1895: 52) that Mēn Karou was Hellenized as Asklēpios. Neither is there positive evidence for the frequently repeated statement (as in Ramsay 1909: 419) that the "eyesalve" (*kollyrion*) produced in Laodicea (cf. Rev 3:18) was a preparation made from powdered Phrygian stone, recommended by Galen (*De sanitate tuenda* 6.12) as a specific for eye complaints, though it was quite possibly so.

Over and above their worship of Zeus and Mēn, the Laodiceans consulted the oracle of Apollo at Klaros in Ionia, to which they sent an annual delegation. The title *neōkoros,* "temple warden" (cf. Acts 19:35), was conferred on the city by Commodus (180–192) for its devotion to the imperial cult; the title was withdrawn after his death but restored by Caracalla (211–218) in the form "*Neōkoros* of Commodus and Caracalla."

With the reorganization of the Roman Empire toward the end of the 4th century A.D., Laodicea became the seat of government of the newly established province of Phrygia Pacatiana, mentioned in the endnote to 1 Timothy in later manuscripts and the KJV: "The first to Timothy was written from Laodicea, which is the chiefest city of Phrygia Pacatiana."

The site was partly excavated in 1961–1963 by an archaeological party from Laval University in Quebec, led by Jean des Gagniers. In particular, they completely cleared the nymphaeum, or public fountain house (des Gagniers 1969). The water supply for this came from the spring now called Başpinar in the upper part of Denizli: an aqueduct (part of which still survives) carried the water from that spring by force of gravity to a clearing basin on the S side of Laodicea, and from there it was piped under pressure (Weber 1898–1904) to a water tower that fed a water basin and feeding chambers, which in turn fed the fountains.

The nymphaeum, which apparently dates from the early 3d century A.D., contained a life-size statue of Isia. It was repeatedly reconstructed. The square water basin in the SW quarter was converted into a closed chamber that served as a Christian meeting place.

Other recognizable structures include an odeum or council chamber, two theaters (a larger one of Greek date and a smaller one of Roman date), the gymnasium (less probably a bathhouse) with a dedicatory inscription to Hadrian and his wife Sabina (A.D. 123/124), and an "amphitheatral" stadium (as it is called in inscriptions) of the exceptional length of 380 yards, dedicated to Vespasian by a wealthy citizen in A.D. 79 and formally consecrated by the proconsul of Asia (father of the future Emperor Trajan). This stadium was used not only for athletic contests but also for gladiatorial shows.

The tower-flanked triple arch, at what is now called the Ephesian Gate, W of the city, was dedicated to Domitian (A.D. 81–96). Practically all the recognizable buildings are of later date than the earthquake of A.D. 60.

In A.D. 494, there was another devastating earthquake, from which Laodicea seems never to have recovered, although it survived after a fashion until the Turkish conquest.

B. Jewish Settlement

When Antiochus III, shortly after 213 B.C., settled 2,000 Jewish families from Babylonia in Lydia and Phrygia, to help to stabilize those two disaffected and recently reconquered areas of his empire (Joseph. *Ant* 12.149), many of them evidently made their home in Laodicea. Laodicea was one of the centers to which the proceeds of the half-shekel tax paid annually by male Jews in the area were brought for transmission. In 62 B.C., the half-shekels brought together in Laodicea amounted to the equivalent of 20 Roman pounds (Cic. *Flac.* 68); from this it has been calculated that over 9,000 half-shekels were collected in and around Laodicea. The Jewish population of Laodicea and its vicinity must have been considerable.

According to Josephus (*Ant* 14.241–3), the magistrates of Laodicea sent a letter ca. 45 B.C. to a high Roman official, probably the proconsul of Asia, confirming that, in accordance with his instructions, they would not impede the liberty of Jewish residents to observe the Sabbath and other practices of their religion.

C. The Church of Laodicea

Laodicea was probably evangelized, with the other cities of the Lycus valley, during Paul's Ephesian ministry (Acts 19:10)—not by Paul in person but, it appears, by his colleague Epaphras (Col 4:13). Nevertheless, Paul regarded those cities as part of his appointed mission field, and he had a sense of pastoral responsibility for their churches (Col 2:1). He mentions the church of Laodicea in his letter to the Colossians: he asks the Colossian Christians to convey his greetings to those in Laodicea (among whom "Nympha and the church in her house" are specially mentioned), and he directs that this letter be read also in the Laodicean church, and that the Colossians read "the letter from Laodicea" (Col 4:16). The "letter from Laodicea" (possibly a letter of Paul's to be procured by the Colossian church "from Laodicea") is unknown to us: it has been suggested, not implausibly, that it was destroyed in the earthquake of A.D. 60. The letter has been identified with the canonical Letter to the Ephesians; this identification, first made by Marcion (ca. A.D. 144), has little probability. Later an apocryphal "Letter to the Laodiceans" (a mere cento of Pauline phrases) enjoyed a wide circulation in Western Europe; a Middle English version of it appears in several copies of the Wycliffite NT. It ceased to be included among the NT writings from the Reformation onward.

The church of Laodicea was one of the seven churches of Asia addressed in Revelation. In the letter to Laodicea (Rev 3:14–22), the church is rebuked for allowing the wealth and comfort enjoyed by the Laodiceans in general to blunt the edge of its Christian confession: materially affluent and self-sufficient, it was spiritually "wretched, pitiable, poor, blind and naked." The city's economic prosperity, eye ointment, and wool could do nothing to help this spiritual destitution. The lukewarmness for which, thanks to this letter, the name of Laodicea has become proverbial, may reflect the condition of the city's water supply. The water supplied by the spring at Başpinar, it is suggested, was tepid and nauseous by the time it was piped to Laodicea, unlike the therapeutic hot water of Hierapolis or the refreshing cold water of Colossae (Rudwick and Green 1958); hence the Lord's words, "Would that you were cold or hot!"

The warning was apparently effective: the church of Laodicea continued for long to maintain its Christian witness. Between A.D. 161 and 167 a bishop of Laodicea, Sagaris by name, suffered martyrdom. In his time, said Melito, bishop of Sardis, at the beginning of his *Easter Festival,* there was much debate at Laodicea about the proper day for the celebration of Easter (Euseb. *Hist. Eccl.* 4.26.3). Sagaris was a Quartodeciman, holding (with Melito himself and other church leaders in the province of Asia, including Polycarp, bishop of Smyrna) that Easter should coincide with the Jewish Passover, on Nisan 14, regardless of the day of the week, in opposition to the growing body of Christian opinion which held that Easter should always be celebrated on the first day of the week, on which Jesus rose from the dead. Sagaris' part in the debate is invoked by Polycrates, bishop of Ephesus, another champion of the Quartodeciman position, in a letter on the subject which he addressed ca. A.D. 190 to Victor, bishop of Rome (Euseb. *Hist. Eccl.* 5.24.5). Polycrates and other Quartodecimans appealed to the precedent of John, the beloved disciple, who spent his last years in the province of Asia.

A church synod held at Laodicea around A.D. 363 promulgated 60 rulings—the Canons of Laodicea—which were acknowledged by later church councils as a basis for canon law.

F. F. BRUCE

LAODICEANS, EPISTLE TO THE. (1) A letter specified in Col 4:16 to be obtained from Laodicea and read by the Christians of Colossae; and (2) an apocryphal letter attributed to Paul and purporting to be the letter of Col 4:16, found in numerous medieval Latin and some Western vernacular mss of the NT.

The reference in Col 4:16 to a letter which the Colossians were to obtain "from Laodicea" has created a puzzle which has not yet received a generally accepted solution. From the 2d century to the present, there have been numerous endeavors to identify this letter, ranging from Marcion's retitling of Ephesians as Laodiceans (Tertullian, *Adv. Marc.* 5:17) to the denial that the letter ever existed. However, throughout the medieval period it was widely identified in the West with the apocryphal Letter to the Laodiceans. (See Enslin *IDB* 3: 71–72.)

A. The Apocryphal Letter to the Laodiceans

From the 4th century on, various patristic voices, both Eastern and Western, warned of a fraudulent Letter to the Laodiceans circulating under Paul's name (references, with texts, in Pink 1925: 179–82). While no such letter appears in any ancient NT Greek manuscript, an apocryphal Letter to the Laodiceans was known in the Eastern Church at least as early as Theodore of Mopsuestia (ca. 350–428 C.E.). He declared it inauthentic on the grounds that Col 4:16 does not refer to a letter written by Paul but to a (lost) letter from the Laodiceans to Paul. This view became normative in the Eastern Church.

It was otherwise in the West. Numerous Latin and some vernacular mss from the 6th to the 15th centuries contain an *ad Laodicenses* in varying positions among the Pauline letters (partial list of mss in Lightfoot 1884: 280–83). Although no explicit canonical claims were ever made for it (Gregory the Great, ca. 540–604 C.E., came close with his statement that Paul wrote 15 letters; *Moralia in Job* 35: 20), the manuscript evidence demonstrates that Laodiceans was considered genuine by a large portion of Western Christendom, despite the dominant tradition of a 14-letter Pauline corpus and the pronouncement of the Second Council of Nicaea (787 C.E.) against this "fabricated epistle."

During the 16th century, Laodiceans lost much of its popularity. The matter was officially settled for the Roman Catholics by the publication of a list of biblical books (*De Canonicis Scripturis,* 1546 C.E.) from which Laodiceans was excluded by the Council of Trent (1545–1563 C.E.). The letter also fell into disfavor among the Protestants, who perhaps were influenced by the disdain with which Erasmus (1469–1536 C.E.) regarded it; and so, for the first time, all major branches of the Church were united in declaring Laodiceans non-Pauline.

Yet, a few voices continued to speak in its defense. For example, the letter was included in Elias Hutter's Polyglot NT (1599 C.E.). The Heb, Gk, and Lat texts of Laodiceans in this publication were edited, revised, and republished in 1661 C.E. (Ebied 1966: 247). This latter edition perhaps was the original from which the triglot Laodiceans, discovered in the 1960s, was copied and published in 1679 C.E. (Ebied 1966: 243–44).

Modern scholars, however, are unanimous in regarding the apocryphal Laodiceans as a forgery. Its origins lie in a time well beyond the 1st century, and whatever value it may have relates to the later interpretation of Paul, not to Paul himself. Harnack (1924: 134–49) held it to be the Laodiceans mentioned in the Muratorian Canon (see also Quispel 1950). There, two letters, *ad Laudicenses* and *ad Alexandrinos*, are said to have been forged in Paul's name to promote Marcion's heresy (*finctae ad haeresem Marcionis*). To many scholars, however, it is not obvious that the apocryphal Laodiceans contains any of Marcion's distinctive emphases, even if it does incorporate some of his textual emendations to Paul's letters, as Harnack claimed. On the other hand, there is no evidence outside the Muratorian Canon of a second apocryphal Laodiceans.

The origin of the apocryphal letter is not later than the 4th century; it was known by Theodore of Mopsuestia, as noted above, and others, including Jerome (ca. 342–420 C.E.) and Augustine (354–430 C.E.). If the Muratorian Canon comes from the 4th-century East rather than the 2d-century West (Sundberg 1973), then there is no testimony to the letter's existence prior to the 4th century. Opinion is divided regarding a Lat or a Gk original, though the evidence for the latter is substantial (Lightfoot 1884: 289–91).

Slightly shorter than Philemon, Laodiceans is basically a collection of sentences and phrases from Paul's letters (critical Lat text and his translation into Gk in Lightfoot 1884: 285–92; Eng translation in James 1924: 478–79, Schneemelcher 1965: 131–32). The epistle's opening—"Paul, an apostle not of men and not through man, but through Jesus Christ …"—is obviously an echo of Gal 1:1. Dependence on Philippians is particularly evident: "For my life is in Christ and to die is joy" (v 8; cf. Phil 1:21); "And what is pure, true, proper, just and lovely, do" (v 15; cf. Phil 4:8); "That you may have the same love and be of one mind" (v 9b; cf. Phil 2:2). Most telling of all is the conclusion: "And see that this epistle is read to the Colossians and that of the Colossians among you"—obviously designed to reflect Col 4:16, "And when this letter has been read among you, see that it is read by the Laodiceans and that you read the letter from Laodicea." (For further parallels, see Schneemelcher 1965: 132.)

No motive for the composition of the apocryphal Laodiceans is apparent other than a desire to complete the Pauline corpus by supplying the letter of Col 4:16, thereby continuing the production of popular Christian texts in the pseudepigraphical tradition. Its persistence throughout the Middle Ages may be due to its incorporation of a number of doctrinal terms, concepts, and affirmations particularly important to the medieval Church, such as Paul's divinely appointed apostolate; the persons, though not the title itself, of the Trinity—God the Father, the Lord Jesus Christ, and the Holy Spirit; the day of judgment; salvation as eternal life; the mercy of Christ; rejoicing in suffering; the fear of God; standing firm in faith and resisting those who would lead astray; the truth of the Gospel; and intercessory prayer by a saint (Paul). With popular orthodoxy affirmed in so many ways in such a short writing, it is not surprising that literary and historical questions about it seemed unimportant to many medieval Christians. For them, Origen's words concerning Hebrews would have been appropriately applied to Laodiceans—its contents were worthy of Paul; therefore, it should continue to be treated as Paul's.

B. The Letter of Colossians 4:16

The apocryphal letter, therefore, proved to be a durable solution to the problem posed by Col 4:16, at least until the modern period. But other solutions have been proposed. A large portion of the early Gk discussion of Col 4:16 seems to have been aimed at strengthening the case against the apocryphal Laodiceans. As mentioned above, the argument was advanced that the wording of Col 4:16 (*tēn ek Laodikeias*—"the <letter> from Laodicea") indicates that the letter was not written to but from Laodicea. While this interpretation would allow Laodiceans to be written either by or to Paul (i.e., a letter which Paul wrote while at Laodicea or a letter from the Laodiceans to Paul), in either case it rules out a letter written by Paul to Laodicea (Lightfoot 1884: 273–74).

However, while it is grammatically possible to interpret Col 4:16 in this way, the immediate context requires a different interpretation. The letter is represented as exchangeable with Colossians. Two communities, only a three- or four-hour walk apart on a highway, receive two different letters. The author

of Colossians urges its recipients to ensure that each community reads both letters. The word "from" indicates not place of writing but place of access to the letter.

Whether Marcion's renaming of Ephesians as Laodiceans was based on the close textual relationship between Ephesians and Colossians or nothing more than Col 4:16 is uncertain. Marcion's solution has also been urged in more recent times (Lightfoot 1884: 279). Another alternative was presented in its most extensive form by John Knox (1935), who argued that the letter of Col 4:16 is the Letter to Philemon. Both views rest on questionable though different assumptions and have little scholarly following today. Earlier suggestions that Galatians, 1 Timothy, one of the Thessalonian letters, or 1 John was the original Laodiceans are not worth serious consideration (Anger 1843: 16–21; Lightfoot 1884: 272–76).

The apocryphal Laodiceans of course was not written by Paul. But did Paul write the letter of Col 4:16? The issue has become more complicated in recent years by increasing skepticism concerning the Pauline authorship of Colossians itself. If Colossians was not written by Paul, then the only textual evidence in the canonical Pauline writings for a letter of his to Laodicea is removed. On the assumption of a Pauline Colossians, a case can be made that the letter of Col 4:16 was not written by Paul but by the member of the Laodicean-Colossian community highly recommended in Colossians, i.e., Epaphras (Anderson 1966). However, a non-Pauline Colossians makes the very existence of an epistle to the Laodiceans problematic. Indeed, it is possible that the Laodiceans mentioned in Col 4:14 never existed except in the mind of the Deutero-Paulinist who wrote Colossians. On the other hand, it could be argued that Col 4:16, even if part of a pseudepigraph, is intended to validate another writing. Otherwise, its presence in Colossians is difficult to explain.

The identity of Laodiceans has also been approached as a canonical question: how a companion epistle of Colossians could have been lost when its value and use should have been guaranteed by Col 4:16. The trail of this line of reasoning has led to the proposition that the Epistle to the Hebrews, an integral part of the Pauline corpus in the East from the 2d century on, and Laodiceans are one and the same (Anderson 1975).

However, the identity of the letter mentioned in Col 4:16 is so closely related to unresolved questions regarding the origin and purpose of Colossians that further progress on the first must await a more complete understanding of Colossians as a whole. Pauline authorship of Colossians is less critical for this matter than its purpose and the call for an exchange of letters. Until a credible alternative emerges, it is best to assume that Col 4:16 refers to a real letter, whoever the author(s) of this letter and of Colossians may be. But whether that letter is extant under another name or was lost prior to the formation of the canon awaits a definitive statement.

CHARLES P. ANDERSON

LAPPIDOTH (PERSON) [Heb *lappîdôt* (לַפִּידוֹת)]. Husband of Deborah the prophetess, living in the tribal hill country of Ephraim, between Ramah and Bethel (Judg 4:4). The derivation of his name is uncertain, but it probably is a feminine abstract form [Heb *-ôt*] of *lappîd*, meaning "torch" or "lightning" (*HALAT*, 506–7). The temptation to associate his name with Barak, also meaning "lightning," has been

irresistible (Boling *Judges* AB, 95). The fact that the text identifies Barak as originating in the N part of Israel (Kadesh in Naphtali; Judg 4:6) makes this highly unlikely (cf. Soggin *Judges* AB, 64).
KIRK E. LOWERY

LARSA. An important Sumerian city that played a very active role in the beginning of the 2d millennium B.C. The city was built on the site of the present tell Senkéré about 20 km E of Uruk and about 40 km N of Ur. The Euphrates, which now runs more to the S, was able to irrigate the region then by means of a canal.

The tell was noticed by travelers as early as 1832, but the first excavation was undertaken by W. K. Loftus in 1854, when he took soundings from the high point of the tell. The inscribed bricks that were thus gathered allowed him to identify the Senkéré tell with ancient Larsa. Following Loftus, W. Andrae worked there for several days in 1903. But the attention of orientalists has mainly been attracted by the quality of the objects—the famous adorer of Larsa or the group of three standing ibexes, but also the large number of tablets—that came from clandestine excavations shortly after World War I. The exploration of the site was thus engaged under the direction of A. Parrot; the first excavation took place in the spring of 1933, but the second and the third did not occur until 1967. The fourth and fifth excavations were directed by J. Marqueron in 1969 and 1970. Since 1974, under the direction of J.-L. Huot, seven new excavations have taken place. In addition the region of Larsa was included in the survey done by R. McC. Adams and H. J. Nissen in order to study the organization of rivers and canals in S Babylonia.

The ovoid tell covers 2,000 m from N to S and 1,800 m from E to W. The average altitude is rather low, only 7 to 8 m in height, but the culminating point, which is the site of the temple of Shamash, the great sanctuary of the city called the Ebabbar, reaches 22 m.

Around this pole the village reaches down to a much lower level, with, in the region N of the Ebabbar, the domain of the palaces, including that of Nur-Adad. On the periphery, and more particularly on the E side, a rise in altitude could correspond to sectors occupied in earlier periods. The excavations are not advanced enough to provide any precise knowledge of the history of the city. It appears that its origins could go back to the Ubaid period, but nothing can be said about this period or the one following it. The oldest monument known to this day is the palace built by Nur-Adad (1865–1850 B.C.), and the texts are numerous for this period but practically absent for the 3d millennium. Larsa, in fact, only took on real importance after Gungunum defeated Isin (1932 B.C.), when he hoped to find there the heritage of the 3d Dynasty of Ur. From that time on, for a century and a half, Larsa was a dominant power; but it was never able to manipulate the existing equilibrium to its own advantage. When Hammurabi of Babylonia (1792–1750) took control of S Mesopotamia, he reduced Larsa to the rank of provincial capital. The city seems to have no longer played a major role in history, but it would remain important up until the Neo-Babylonian period and still knew activity even during the Hellenistic and Parthian periods.

One of the reasons for this long existence comes from the fact that the village sheltered one of the two large Mesopotamian sanctuaries dedicated to the solar cult. Larsa thus appears as the great center of the god Shamash (UTU in Sumerian), symbol of life, of light, and the expression of justice. It is understood that even after having to renounce all political pretensions, the city continued to exist thanks to its principal sanctuary, the Ebabbar. The excavations have not yet succeeded in pinpointing its origins, but its extreme antiquity is certain. It is apparently to the Old Babylonian period that one must credit the monumental form of the temple that is known, but the existence of certain rooms which are clearly unbalanced in their placement on the tell show an important transformation of the original plan, of which some vestiges have been found. The conception of the monument is grandiose: from tell Ebabbar, a succession of sanctuaries and paths join the ziggurat in a row of almost 300 m in length. The heart of the city is thus occupied by this unique complex that remained in this general form until the end of the 11th century B.C. In the 1st millennium, the temple seems to have been confined to the Ebabbar tell itself.

The second monument studied is the palace of Nur-Adad, which seems to be a very clear example, although incomplete, of palatial architecture from the beginning of the 2d millennium. Circumstances impeded Nur-Adad from finishing the palace and, for some unknown reason, none of his successors took

it up again. The excavation has thus given us a building that has never been inhabited and that exactly reflects the thinking of the architect who conceived it. The official courtyard, the throne room, the administration sector, a small sector of stores, and the common areas appear very clearly in the parts that have been uncovered.

Despite the intensity of the clandestine pillaging, the regular digs have uncovered some very beautiful objects: a large statue (61 cm) of a seated person, of which the head is missing; an androcephalous bull of a Neo-Sumerian type; the kudurru of Kudur-Enlil with superimposed registers lined with divine symbols; and above all the kudurru of Nazi-Marutash, decorated with a superb dog of Gula, a real *chef-d'oeuvre* of animal sculpture. Finally, a very beautiful collection of gold objects consisting of tools and finished products of a rare quality came from a cache found under the floor of a room of the Ebabbar. For further discussion, see *RLA* sub "Larsa."

LASEA (PLACE) [Gk *Lasaia* (Λασαια)]. A city located along the S coast of Crete about 5 miles E of Fair Havens or Kaloi Limenes. The ship carrying Paul, during his voyage to Italy, anchored at Fair Havens and supplies were probably obtained from nearby Lasea (Acts 27:8). The captain of the ship decided not to winter there, despite Paul's warnings, and sailed on to the W into a storm which wrecked the ship.

The textual variations in the spelling of the city's name may reflect an uncertainty of the location of the site. The relatively dense distribution of cities on Crete may have led to the confusion. Some scholars have equated Lasea with the Lasos mentioned by Pliny (*HN* 4.12.59). A Mediterranean survey team led by T. A. B. Spratt located ruins near Fair Havens which have been identified with Lasea. The ruins of the city have never been systematically explored, but several early tholos tombs in the vicinity have been documented.

LASHA (PLACE) [Heb *lešaʿ* (לֶשַׁע)]. One of the places mentioned in Gen 10:19 which defined the limits of the territory of the Canaanites. Since the passage reads "in the direction of Sodom, Gomorrah, Admah, and Zeboiim, as far as Lasha," some scholars have assumed that Lasha represents the SE boundary of Canaanite land and have sought a location for it along the SE shore of the Dead Sea. Ancient and rabbinic tradition equated it with Kallirrhoe (modern Wadi Zerqa Maʿin), the hot springs and health resort of Herod the Great, but modern archaeological work in that area has provided no support for the identification. Others, by emendation of the name, have equated the place with Laish (Dan) and therefore have seen it as a N boundary of Canaan. Neither identification can be proved, and thus Lasha's location remains unknown.

LASHARON (PLACE) [Heb *laššārôn* (לַשָּׁרוֹן)]. The king of Lasharon is listed as one of the 31 Canaanite kings defeated by Joshua (Josh 12:18). Since the name Lasharon occurs nowhere else in either the OT or other ancient sources, and is accompanied in the same verse by Aphek (M.R. 143168), most scholars accept the LXX reading of the verse, "King of Aphek of/belonging to Sharon" (*LBHG,* 230). The

Sharon is a geographical term used to describe the coastal plain located roughly between the Carmel and the Aphek region. Since there are Apheks in Asher and in Transjordan, it would not be unreasonable to specify in the text which Aphek was meant in this passage. See APHEK (PLACE).

Boling rejects this solution, suggesting that Lasharon could stand independently for the N coastal plain as a whole, which he notes would have been swampy and sparsely settled in antiquity (*Joshua* AB, 328). This does not explain why such a nonurban region would have a "king" like the towns in the rest of the list. If Lasharon is an independent location, it remains unidentified.

LAST SUPPER. According to the NT, Jesus of Nazareth was present at a final meal with his disciples on the night before his death (1 Cor 11:23–25; Mark 14:22–25; Matt 26:26–29; Luke 22:15–20; cf. John 6:51c). What actually happened at the Last Supper? Numerous analyses of the Last Supper have led to a remarkable variety of interpretations, many of which appear to have been influenced by the confessional stances of their proponents. In an effort to answer historical questions about the Last Supper, first some general observations will be made; then it will be asked whether the Last Supper was a Passover meal; and finally there will be an attempt to determine what Jesus said and did, and the significance of his words and actions.

A. General Observations
B. Was the Last Supper a Passover Meal?
C. The Words of Jesus
D. Questions of Meaning

———

A. General Observations

From the 3d century B.C. onward, there was a growing Hellenistic influence on Judaism, including Judaism in Palestine. This influence touched on most aspects of life, including table customs and feasts. The history of religions provides two analogies to the Last Supper: the significance of community meals in the OT and in contemporary Judaism (under the influence of Qumran) and the use of eschatological metaphors related to meals. C. Burchard (1987: 118–19; but see Lindars 1987: 193–96) suggests that perhaps *Joseph and Aseneth* can help explain why the central rite of Christianity was a solemn act of consuming bread and drinking from a cup, why gestures concerning these were remembered and attributed to Jesus, and why a narrative about these acts was formed at all. To be sure, the meals of the earthly Jesus can be compared to numerous noncultic friendship and family meals, and for the ancient oriental a common meal bound the table companions in fellowship. Jewish customs provide the background for understanding Jesus' actions at the Last Supper, whose framework was that of a Jewish festive meal, but not necessarily that of a Passover (Delling *TRE* 1: 49; Klauck 1982: 330–31; 369–70). According to von Meding (1975: 544–52), the historical background of the Last Supper is to be found in the ritual meal of Jeremiah (16:7), designed to console those who grieve. However, in this investigation one does well to recall Toynbee's caution that the uniformity of human nature sometimes produces similar results in similar situations where there can be no suspicion of any historical bridge by which the tradition could have been mediated from one culture to another. For instance, all human beings eat, and when they do most of them seek companionship with one another and with their god (Metzger 1968: 10–11). Moreover, some of the data postdates the NT evidence, and consequently should only with caution be used to explain it.

The NT texts themselves may well not lead us back to Jesus' own words but rather to an earlier report about those words. There is also the likelihood of an oral tradition in which there would be a considerable variability in the wording. Certainly, the texts that we now have do not postdate the actual event by many years, and the apostles who were present naturally functioned as a kind of check on what was said. However, we are not sure whether Jesus at the Last Supper used Hebrew or Aramaic or a combination of both. Jesus might have spoken in Aramaic; but as scholars (e.g., Fitzmyer 1979: 1–27, 38–43, 85–113;

Hurst 1986: 72–73) stress, the mother tongue of Jesus is meagerly represented, so a skepticism toward older approaches used in reconstructing the language of Jesus is a healthy trend.

Most scholars now agree that Jesus' words and actions at the Last Supper should be understood in terms of his whole ministry. One fact of that ministry universally agreed on is that Jesus ate fellowship meals, at least some of which included sinners. This acceptance of sinners and outcasts into table fellowship implies forgiveness (e.g., Mark 2:15–17; Luke 5:29–32; 7:36–50; 15:1–2; 19:1–10; Reumann 1985: 4). Likewise, whatever the historical facts behind the feedings of the multitude (Mark 6:30–44; 8:1–10), they were fellowship meals. On the other hand, the first explicit references in the NT to an agape meal are in 2 Pet 2:13(?) and Jude 12.

In addition, granted the historical validity of Peter's identification of Jesus at Caesarea Philippi as "Messiah," what did the disciples think, thereafter, of meals they ate with Jesus? Did they view them as anticipations of the messianic banquet? The Last Supper would probably, at a minimum, have been Jesus' final act of fellowship with his disciples and an anticipation of the messianic banquet that he would share with them in the coming of the kingdom.

The vast majority of scholars recognize that Jesus ate a final meal with his disciples. Actually, the "breaking of bread" and "blessing" (thanksgiving) would have been typical of a Jewish meal, and there simply was not enough time for a cultic legend to develop (Marxsen 1952–53: 303). Also, it is the only one of Jesus' meals that can be dated, and the report about it could easily enough have been based on what those who were there remembered. Besides, some historical elements can be detected in the gospel account as a whole. For example, both Luke and Paul retain a reference to the meal between the liturgical actions over the bread and wine (Luke 22:20; 1 Cor 11:25), and there are two unprecedented actions of Jesus: he passed a single cup among his disciples, and, as a prophet, he explained his own symbolic gesture. Marxsen (1979: 102–8) is less sanguine about establishing the historical reality of the Last Supper.

Without yet entering into the question of literary genre, two reflections should be made about the Last Supper. It is questionable whether "parabolic" adequately explains Jesus' words and actions. Rather, Jesus performs an efficacious sign, a prophetic symbolic act. As Ezekiel (5:1–5) had identified his hair with Jerusalem, so Jesus has identified himself with the bread and wine (Beck 1970: 192–97). However, "symbolic" is not to be opposed to "real"; on the contrary, the symbolic is the depth dimension of the real (Léon-Dufour 1987: 10, 162–65). The Last Supper likewise resembles a farewell meal. This is the context in which it now appears in Luke 22:14–38, and John 13–17 supports such an understanding (cf. Gen 27:1–40; *Jub* 22:1–9; 31:22; *T. Napht.* 1:1–4; 9:2). The solemn nature of a farewell meal marks the significance of what is said by the one departing (Friedrich 1978: 310–14).

B. Was the Last Supper a Passover Meal?

Although a number of scholars identify the Last Supper as a Passover meal, a description of which is given in the Mishna (*Pesaḥ* 10; cf. Str-B 4/1: 41–76), the majority are still not convinced of this interpretation. However, many would concede that Jesus ate his final meal in a Passover atmosphere; there was, after all, the proximity of the feast. The cause of this scholarly disagreement is that, although the Synoptics identify the Last Supper as a Passover meal (Mark 14:12–16 parr.; Luke 22:15), John (13:1–2; cf. 19:14, 31, 36) does not. Jesus' Jewish opponents did not enter the praetorium so that they might not be defiled, but so that they could eat the Passover to be held after Jesus died (John 18:28).

The main proponent of the Last Supper as a Passover meal is Jeremias (1977: 15–88), and Leaney (1967: 51) provides a partial listing of scholars on both sides of this debate. The following are the weightier reasons for the claim that the Last Supper was a Passover meal. The Last Supper took place in the evening and extended into the night (1 Cor 11:23; cf. Mark 14:17; John 13:30), when it was obligatory that the Passover be eaten. Normally, the Jewish main meal was in the afternoon. Jews in the time of Jesus sat at ordinary meals, but the Passover ordinance was that they should recline as a symbol of liberty. In fact, Jesus and his disciples reclined at the Last Supper. A dish of hors d'oeuvres precedes the breaking of bread only at the Passover, and this dish is referred to in Mark 14:20; Matt 26:23, and John 13:26. It was customary on the Passover night to give alms to the poor (cf. John 13:29). Wine was drunk at the

Last Supper, and the drinking of wine was obligatory at the Passover. The Last Supper concluded with the singing of a hymn (Mark 14:26; Matt 26:30), which would have been the second part (Psalms 114 or 115–118) of the *hallēl* which closed the Passover meal. After the meal, Jesus did not return to Bethany but went to the Mount of Olives, for after the Passover, one was supposed to stay within a certain distance of Jerusalem, which included Gethsemane but not Bethany. The Passover *haggadâ,* according to which the person presiding explained the various elements in the meal as it progressed, probably suggested Jesus' words over the bread and wine (Barclay 1967: 20–34; Ruckstuhl 1985: 41–44).

Opponents of this view have pointed out that a Jewish festive meal (cf. Str-B 4/2: 611–39) would satisfy most of these claims for the Last Supper as a Passover meal. Moreover, the mention of Jerusalem and of the *hallēl* belong to the redactional framework of the narratives. Further, in the days prior to his arrest, Jesus and his disciples would for reasons of security have met at night, so the meal at that time would not necessarily have been a Passover (Kahlefeld 1980: 42–43). More specifically, scholars raise the following objections to the claim that the Last Supper was a Passover meal. (1) Jesus shared his last meal with only the Twelve, a community of men, but a Passover was a family affair, with women and children present. Nor is Jesus portrayed as the paterfamilias, who would normally have left to an honored guest the closing blessing over the cup (Kuhn 1957: 83–4). (2) The Greek noun *azyma* is the proper designation of unleavened bread, but *artos,* "bread," occurs in the institution accounts (Mark 14:22; Matt 26:26; Luke 22:19; 1 Cor 11:23). (3) No mention is made of the paschal lamb or the bitter herbs (Bornkamm 1959: 149; see Mark 14:20; Matt 26:23; John 13:26). (4) The accounts speak of a common cup, whereas at the Passover, individual cups were used. (5) Mark 14:1–2 (= Matt 26:1–2; Luke 22:1) preserves the correct chronology, two days before the Passover and the feast of unleavened bread; the Synoptics mention the chief priests' and scribes' desire to arrest Jesus by stealth and to kill him, but "not during the feast, lest there be a tumult of the people" (Mark 14:2). This correct date is contradicted later in the text (Mark 14:43–50) when Jesus is arrested on the feast (i.e., the night of the 15th of Nisan). Likewise, Jeremias' translation of *Mē en tę̄ heortę̄* (RSV: "Not during the feast"; Matt 26:5; Mark 14:2) as "not in the presence of the festival crowd" is questionable. (6) On the festival day, the 15th of Nisan, some of the following events mentioned could not possibly have occurred: the carrying of arms (Mark 14:43 = Matt 26:47; Mark 14:47–49 = Matt 26:51–55; Luke 22:38), the session of the Sanhedrin and the condemnation of Jesus to death, the coming of Simon of Cyrene "from the country," Jesus' burial and the purchase of linen by Joseph of Arimathaea. (7) Jesus celebrated a different type of Jewish meal with his apostles, e.g., a *kîddûš,* a *ḥabûrâ* (Gamber 1987: 6–8, 31), or a solemn or festive Jewish meal. The most original tradition (Mark) has several features which correspond to the structure of the Essene cultic meal, and the daily meals of the Essenes were certainly analogous to those of the Jerusalem church (Kuhn 1957; 78–93). More likely, the Last Supper was a *tôdâ,* a liturgical meal accompanied by words of praise and proclamation, but not necessarily literally a sacrifice (Léon-Dufour 1987: 38–45; Giraudo 1981: 174–77; cf. 81–360). (8) Finally, the Jewish Passover meal was celebrated only once annually. How, in the early Church, did the custom develop that the Lord's Supper was regularly celebrated?

Proponents of the argument that the Last Supper was a Passover meal attempt to answer each of these objections. It is quite certain that the word *artos* can be used for unleavened bread, and the institution narratives are primarily cultic formulas of the early Church. Thus, the emphasis is on Jesus' words over the bread and wine, rather than on what was important at the ordinary Passover. Jeremias' translation of Mark 14:2 may be questionable, but pilgrims were already in Jerusalem several days before the feast, and the Jewish officials would have been concerned about their reaction to Jesus' arrest. Finally, the events indicated could have happened on the festival day. Soldiers and ordinary individuals, for defense, could bear arms on festival days or the Sabbath. Moreover, in spite of the prohibitions of executions on festival days, the rabbis held that in a few special cases (enumerated in Deuteronomy) the death penalty had to be carried out on the feast. Jesus, as a false prophet, would be one of these special cases (Deut 13:5). There is the additional technicality that the Romans, not the Jewish officials, were the ones who carried out the execution. The fact that Simon of Cyrene was "coming from the country" does not necessarily mean that he had been working in the fields on the festival day. It was too early in the day to be coming from the

fields, and he may have been coming to the temple for morning service. Of course, he may not have been a Jew. Buying and selling were forbidden on the Sabbath and on feast days, but exceptions were made for real needs, like a death (Str-B 2: 812–34; b., *Šabb.* 151a; *t., Šabb.* 17.13; cf. John 13:29). Finally, the *qiddûš* was a prayer of sanctification said at the beginning of the Sabbath or of a festival meal by the head of the household over a cup of wine to be drunk by him and the others who were present. The Sabbath *qiddûš* always took place on Friday evening after sunset, when the Sabbath began, not earlier. A *ḥăbûrâ* was a religious fellowship, and Pliny (*Ep.* 10.96.7) apparently viewed the Christian celebration in this way. But a *ḥăbûrâ* had particular concerns: observance of the Torah and performance of religious duties, including attendance at special ritual meals held in connection with circumcision, engagements, weddings, and funerals. Jesus and his disciples did not form such a fellowship (Higgins 1954: 13–23; Kilpatrick 1983: 67–68).

It is not possible to show that the Essene meal influenced the account of the Last Supper. The three definite texts (1QS 6.4–6; 1QSa 2.17–21; Josephus *JW* 2.130–31) about the Essene meal are laconic. This meal was celebrated twice daily, but not in the evening, and no women were present. Women may have been present at the Last Supper, and the order of blessings, instructions, and prayers at that meal differs from the order of the Essene meal. Moreover, at the Essene meal the benedictions were made by a priest who had precedence over everyone else present, and we are not sure that the Essenes drank wine at their meal (Jeremias 1977: 31–6, 46). However, that the Last Supper may have been a *tôdâ* meal appears to be a real possibility.

Other solutions have been proposed to explain why the Synoptics and John do not agree that the Last Supper was a Passover meal. There is, of course, the possibility that Jesus anticipated the Passover. Moreover, different calculations for the time of the Passover could have arisen, because Galileans, for various reasons, could have had trouble determining the exact time of the full moon. Finally, the Jews of Jerusalem may have postponed the Passover so as not to have two consecutive days of rest (Nolle 1948: 44–45).

Billerbeck proposes that two calendars were a day out of step with each other in the year of the Last Supper. These two calendars are alleged to have come into existence because of a dispute between the Sadducees and Pharisees, and were realized because extra days had to be inserted to keep the lunar calendar in harmony with the solar one, or because there had been a difficulty in determining the date of the new moon.

A. Jaubert (1957: 105–36) likewise argues that two calendars existed at the time. The official, priestly calendar was lunar, and that of Qumran, solar. John is correct by the official Jerusalem calendar, and the Synoptics are correct in terms of the calendar used at Qumran and, perhaps, in Galilee. According to the solar calendar, the Passover would have been on Wednesday. This would allow two whole days, from Tuesday evening to Friday afternoon, to account for the following gospel data: the paschal meal; the arrest at Gethsemane; the double trial before the Jewish officials; the trial before Pilate, with a visit to Herod followed by another session before Pilate; and finally the sentence, procession to Calvary, and death (Johnston 1957: 109–13; Vogt 1955: 403–13). However, Jaubert's theory has not commanded wide assent.

H. Hoehner assumes the existence of two different methods for calculating the hours of a day: sunset to sunset or sunrise to sunrise. The Galileans and the Pharisees would have used the latter method, and so celebrated their Passover one day earlier. But this theory would have Jesus celebrating the Passover on Nisan 14, which seems most unlikely. Billerbeck's theory appears to be the most reasonable of these three calendrical theories (Marshall 1981: 71–75).

Leaney (1967: 52–53, 62) contends that a considerable amount of weight has been given to the Fourth Gospel as a historical document, but that this is unwarranted. Certainly, all four gospels are strongly influenced by theological interests. Nonetheless, to suppose that the most obviously theological of them all can correct the others on details of history is extremely hazardous. According to John, Jesus is the lamb of God (John 1:29, 36) and was handed over to be crucified at the exact time when the Passover lambs were beginning to be sacrificed in the temple (John 19:14). Moreover, the anointing of Jesus at

Bethany takes place six days before the Passover, when the lamb for the meal was chosen (John 12:1); and when Jesus' legs are not broken, this is understood as the fulfillment of the verse "Not a bone of him will be broken," part of the prescription for the treatment of the Passover lamb (John 19:36; cf. Exod 12:46; Num 9:12). This theological concern of John (cf. 1 Cor 5:7) would explain why he does not identify the Last Supper as a Passover meal. Furthermore, since a number of the indications that the Last Supper was a Passover meal are to be found in John's gospel, Ruckstuhl (1985: 43–44) claims that originally John's gospel saw the Last Supper as a Passover meal just as do the Synoptics. On the other hand, the earliest neutral Christian tradition and the evidence from astronomy support the chronology given in John's gospel (Ogg 1965: 96; Strobel 1977: 64–78, 450–56).

Were the Last Supper a Passover meal, the relationship between the old covenant and the new and between promise and fulfillment could be better clarified. But above all, at a Passover meal, Jesus' words of interpretation and the command of repetition would more easily be understood (Jeremias 1977: 88; cf. 1972: 201–3). However, none of the above theories about the Last Supper as a Passover meal has won the day.

C. The Words of Jesus

The NT texts (1 Cor 11:23–25; Mark 14:22–25; Matt 26:26–29; Luke 22:15–20; cf. John 6:51c) are the primary sources for determining what can be said historically about the Last Supper. Originally, these reports were handed on as units independent of the passion narrative (Schelkle 1976: 388), and their correct literary form is "etiology," which as such says nothing about the historical question, but only grounds and reflects the community's practice (Léon-Dufour 1987: 161; Neuenzeit 1960: 96–100). Since scholars regularly limit themselves to the "institution narratives" in their efforts to determine what happened at the Last Supper, this presentation will do likewise. But this is not to deny that Jesus at the Last Supper said and did more than is contained in these narratives; nor to accept the view that notices like the denials of Judas or of Peter are without historical basis. I will generally follow the lead of Merklein (1977: 88–101, 235–44) in the historical analysis of these texts.

Matthew follows Mark's account, but he does make some stylistic improvements. He adds "eat" to the words over the bread to parallel "drink" of the wine and makes the liturgical expansion, "for the forgiveness of sins." All of the other texts preserve some more primitive elements than does Mark (Hahn 1986: 247). For instance, we find "on the night" (1 Cor 11:23) and "after supper" (11:25) in Paul; in Luke (22:19–20), the double eschatological perspective and the omission of the copulative (*estin;* cf. v 19) with the word over the wine; and in John (6:51), the translation variant "flesh" (Jeremias 1977: 189).

Despite the fact that the shorter text of Luke 22:15–19a (omitting vv 19b–20) is claimed to be the more difficult reading, and that the normal tendency of its chief witness, Codex Bezae ("D"), is to expand a text, which it does not do in this case, nevertheless, most scholars follow Schürmann (1951: 364–92, 522–41; 1955: 15–132; Hook 1974: 624–30) and accept the longer text (Luke 22:15–20). The structure suggested by Petzer (1984: 249–52) for these verses gives support to this opinion. Actually, the longer text may be the more difficult reading, since one must now explain the presence of two cups and why one of them precedes Jesus' words over the bread. These difficulties probably explain why the Syriac versions have three different rearrangements of the texts (Barclay 1967: 38–39; see Metzger 1971: 173–77).

The Lukan and Pauline texts probably go back to the same traditional strand but are not dependent on one another. To be sure, Paul wrote first, but Luke (22:19–20) does not reproduce Paul's syntax in *touto mou estin,* "This is my," or *en tō̧ emō̧ haimati*, " (in) my blood," nor both commands of repetition (1 Cor 11:24–25). Moreover, the Lukan use of *didomenon,* "given," with the words over the bread, and the absence of *estin* from the words of the cup, may be explained by an Aramaic (Hebrew?) original. These points, plus a few characteristics noted below, lead to the conclusion that Luke is closer than Paul to the original form of their common traditions.

Mark's institution narrative is more consistently near the Semitic idiom. Jeremias (1972: 200) finds no fewer than 23 Semiticisms in Mark 14:22–25. Compared with 1 Cor 11:23–25, Mark relies more heavily on "and" and follows the Semitic syntax of genitives and verbs. The text in 1 Cor 11:24–25 does not show these clear traces of Semitic syntax; it also reduces the emphasis on blood (Kilpatrick 1983: 20–27).

There appear, then, to have been two traditional strands: Mark (Matthew) and Luke/Paul. Perhaps John 6:51c, "… and the bread which I shall give for the life of the world is my flesh," represents a third strand, although it bears a strong and developed resemblance to Luke 22:19 (cf. 1 Cor 11:24): "This is my body which is given for you."

The wording of these different strands provides a guide in reconstructing the phrasing of the oldest Aramaic or Hebrew tradition. The words "he took bread … broke … said/saying '… this is my body' " belong to the oldest tradition, because these words are common to both strands of tradition. Aramaic *gûp* may have been used for "body" (Dalman 1929: 130–31), but the implication would be the whole person, not the contrast "body (flesh) and blood." Mark's "blessed" (*eulogēsas* [14:22 = Matt 26:26]) is more likely to be original than the Lukan/Pauline "when he had given thanks" *(eucharistēsas),* because the verb *eulogein* translates Heb *bārak,* "bless," in LXX; in the tradition of prayer, *bārak* introduces Jewish festive meals. The Greek verb *eucharistein,* by contrast, never translates *bārak* in LXX; it is found only in apocryphal books for which no Semitic original is extant. "He gave" (*edōken*) could also belong to the original, for although Paul does not have it, it is logically presupposed. Moreover, the fact that Luke has it does not necessarily mean that he took it over from Mark. On the other hand, Mark does not mention the Lukan/Pauline "which is for you." Actually, Luke/Paul may well be the more original because the Markan reading could have been influenced by the liturgical unity of the words over the bread and wine. This unification allows the Markan tradition to place the phrasing after the cup and to apply it to both actions. In reality, a whole meal separated these events, and in such a case the Markan phrasing without further explanation would not have been understandable. Moreover, the Lukan/Pauline tradition finds support in John 6:51c, "for the life of the world." On the other hand, the Markan expression "for many" is to be preferred since it is more Semitic and corresponds better with the earthly Jesus' concern for all. The import of the phrase would be much like that of Mark 10:45: "For the Son of Man also came not to be served but to serve, and to give his life as a ransom for many."

Luke once has the command, "do this in remembrance of me"; Paul, twice (Luke 22:19c; 1 Cor 11:24c, 25c). If this command was original, the Markan tradition omitted it. Yet Paul's text leaves the impression of having expanded on the directive. Benoit (1939: 386) astutely observed, "A rubric is not stated, but executed," and if the Last Supper were a Passover meal, repetition of the injunction would follow naturally (cf. Exod 12:14, 26–27; 13:3, 7–9). The English translation which best renders all the nuances of the Greek is "Do this as my memorial" (Chenderlin 1982: 2). Jeremias' proposed paraphrase of the command (1972: 198), "Continue to bind yourself in table-fellowship to the messianic community that God may remember me," has not won wide acceptance. Certainly, the early Christians believed that they were to repeat the Last Supper event. Jesus did choose bread, a life-sustaining food, to express his lasting presence among his followers (Léon-Dufour 1987: 174–75).

The Lukan/Pauline "after supper" accords with the protocol of a Jewish meal, because the blessing of the cup was done after the meal (Kahlefeld 1980: 46–47). This wording was suppressed by the Markan tradition when it joined the cup with the bread.

The Markan "And he took a cup, and when he had given thanks he gave it to them" seems to be an effort to parallel the report about the cup with that about the bread. A similar effort is made by the Lukan/Pauline "likewise" or "in the same way" in "And likewise the cup." It is impossible to decide on the original wording, but there is no need to deny the fact that Jesus made reference to the cup.

The Lukan/Pauline words over the cup are older than those of Mark. Again, the Markan tradition, "This is my blood," parallels what is said about the bread. That the Lukan/Pauline "This cup (which is poured out for you is the new covenant) in my blood" would have been changed from such a parallel to its present phrasing is hard to imagine. Also, the Lukan text has no copulative verb and thus is closer to the Semitic original. The Markan tradition has placed the chief emphasis on the elements (i.e., bread and wine) and moves in the direction of a sacramental consideration. Moreover, the Markan wording, which draws a closer connection between Jesus and the blood, would be more repulsive to a Jewish audience. Finally, the Markan "and they all drank of it" is secondary. It somewhat parallels the "Take, (eat)" said of the bread and makes explicit an assumed action by the apostles.

A few scholars see the words over the cup to be a formula *ex eventu* (i.e., composed after the event). Thus, the Last Supper would have been a celebration *sub una* (under one species, bread), and the parallel actions and words related to the cup developed later as a counterpart to the bread narrative (see Beck 1970: 195–96). The Acts of the Apostles does speak only of "the breaking of bread," and the church in Syria during the first few centuries apparently knew of only one element at the Lord's Supper (Léon-Dufour 1987: 176). Also, the earthly Jesus' fellowship meals with his disciples may not have included wine. But the phrasing in Acts is an abbreviation and should not be taken to indicate only one element (Higgins 1954: 56–63). Very likely, the two kinds of meals that Jesus ate with his disciples only gradually were united, and the one viewed as more important prevailed (cf. Schürmann 1970: 68–70).

Both traditional strands relate the cup to a covenant motif. The Lukan/Pauline tradition sees an eschatological fulfillment of the prophetic promise of a "new covenant" (Jer 31:31), while the Markan one is typological and views Jesus' death as a repetition of the OT covenant sacrifice (Exod 24:8: "blood of the covenant"). To eliminate a covenant motif from the original tradition appears unjustified, given its presence in both traditions, but "covenant" does not occur in any of the sayings attributed to Jesus elsewhere in the gospel. Whether Jesus designated this covenant as "new" or in reference to Exod 24:8 is another question. Jeremias (1977: 194–95) earlier held on grammatical grounds that *tēs diathēkēs* (Mark 14:24: "of the covenant") was a later addition; in Aramaic a noun with a personal pronoun suffix cannot be followed by a genitive. But Jeremias has recognized that his linguistic objection was based on the false assumption that the sequence in Greek must have been that of the Semitic original. Besides, Emerton (1955: 238–40) has pointed out that in Syriac, a Semitic language akin to Aramaic, a suffix can stand for a noun in the genitive different from the one that follows it.

Significantly, the Qumran documents demonstrate that the idea of covenant was much alive at the time, and it should be noted that Exod 24:8 and Ezek 16:6 were used in the Haggadah to interpret the wine of the Passover as blood, making covenant between God and the people (Leaney 1967: 57). Lang (1975: 526–29) and Wagner (1975: 543–44) hold that "new covenant" is part of the oldest recoverable tradition. It could be argued that there was a reformulation of the cup-saying to give it a form parallel to the bread-saying. As a result of this process, the allusion to Exod 24:8 became all the clearer, and the word "new" was dropped, because a covenant established by Jesus' blood would ipso facto be to a different covenant from the Mosaic covenant and could only allude to the new covenant of Jeremiah (Marshall 1981: 45–46, 91–92). The original wording would have been "new covenant."

"Of my blood of the covenant," the Markan tradition writes, "which is poured out for many." Luke specifies the cup with the words "for you," while Paul does not. Were these words originally joined to the bread and only attached to the blood after the two actions were united, with reference to the intervening meal having been dropped? If "this is my body" and "this is my blood" are both left without explanation, there would be more confusion than communication. So either the redemptive theme and the covenant motif go back to Jesus, or at least one of them does; otherwise the words of Jesus are to be rejected in their entirety. This last position is difficult, if one accepts the eschatological statement of Jesus in Mark 14:25 (cf. Luke 22:15–18; 1 Cor 11:26), in which Jesus does give a positive interpretation of his death.

Mark 14:25 (Temple 1960–61: 77–85) and Luke 22:15–18 (cf. 1 Cor 11:26) introduce an eschatological aspect and provide a positive interpretation of Jesus' death. Mark 14:25 stands at the end of the account, while the passage in Luke 22:15–18 stands before it. Luke's placement may be more correct, and Schürmann (1953: 1–74, 123) has claimed that the Luke 22:15–18 text is an independent report and the oldest tradition of the Last Supper. Occasionally, Mark 14:25 is considered an abbreviation of these verses, but more probably Luke 22:15–18 is a further development of the former (Pesch 1978: 26–31). Luke 22:18 is less Semitic and so less original than Mark (Higgins 1954: 37). Merklein (1977: 236) contends that, since the authenticity of Mark 14:25 is hardly to be disputed (cf. Hahn 1986: 246–47; Léon-Dufour 1987: 165–68, 171), it can serve as a heuristic key in determining what Jesus did at the Last Supper. It allows us to conclude two things: Jesus reckoned with his proximate violent death (that of a prophet), yet he maintained the value of his message about the coming of the kingdom. In fact, a regular feature of Jewish thought is the messianic banquet God will prepare for his people (cf. Zeph 1:7; *1 Enoch*

62:14; *2 Enoch* 42:5). Jesus would not have needed tremendous prescience to realize his dangerous situation, and he did anticipate a resurrection of the dead. Moreover, the messianic banquet figures in his teachings (e.g., Luke 13:28–29; 22:30). It should be noted that a few scholars have proposed that Mark 14:25 is to be identified with the original words over the cup.

For Jeremias (1977: 207–18), the Luke 22:15–18 passage informs us of Jesus' avowal of abstinence on behalf of Israel. Jeremias sees the avowal confirmed by the practice of the Quartodecimans who, inspired by this example, fasted for the Jews during the night of the Passover and only ate their agape and Eucharist at 3 A.M.—the next morning. The Quartodecimans read and explained Exodus 12 and awaited Jesus' second coming at their Passover. Jeremias' student Lohse (1953: 62–89, 136–37) supports this position. However, G. Ogg (1965: 89–92) is less certain that the Quartodecimans fasted for the Jews; rather, he contends, it was a fast for the death of Jesus. In fact, Jeremias has not convinced many scholars of the historicity of such an avowal.

D. Questions of Meaning

Granted that we may not be able to get back to the original report about the Last Supper, what meaning is to be attributed to what we can recover? There is rather complete certainty about a number of items. Jesus did celebrate the Last Supper, and his words over the bread and wine were unique. The Last Supper was a fellowship meal like those he had celebrated any number of times with his disciples. These meals implied an acceptance of everyone, sinners included. But the Last Supper was also a thanksgiving or a blessing. Although thanksgiving was a part of every Jewish meal, nonetheless the Last Supper's joyful aspect was balanced by the sobering awareness that it was also a farewell meal. We simply cannot determine whether it was a Passover meal or not; however, a reasonable assumption is that it was celebrated in a Passover atmosphere. If it were not a Passover meal, it may well have been a *tôdâ* meal of praise and proclamation.

During the course of the meal, Jesus, in prophetic manner, identified himself with both the bread and the wine in the cup. At a meal people are fed, and Jesus did identify himself in some way with this nourishment.

There is no reason to deny that Jesus was aware of his forthcoming death and saw it as part of God's eschatological salvific activity (Schürmann 1973: 353–60). Almost everyone will agree that Jesus' death, as was his life, was for others. Such an understanding corresponds well with what we can determine about the earthly Jesus. Less enthusiasm has been shown for the contention that Jesus interpreted his death in terms of Isa 52:13–53:12 (but see Pesch 1978: 89–111). On the other hand, Jesus apparently spoke of a covenant; moreover, the evidence seems to favor his having spoken of a "new" covenant. The mention of covenant and blood implies sacrifice, and this, plus other actions of Jesus, may have led to the repetition of the meal. In fact, it was repeated. Finally, the vast majority of scholars accept the eschatological dimension of the Last Supper as a messianic banquet celebrated in anticipation of the coming kingdom (cf. Günther 1985: 41–64).

LASTHENES (PERSON) [Gk *Lasthenēs* (Λασθενης)]. A native of Crete who became a high official under Demetrius II Nicator, a Seleucid king. Josephus informs us that Lasthenes served as this king's mercenary chief in Crete during the latter's accession (*Ant* 13.4.3.86), which he ultimately realized with a political victory over Alexander Balas (1 Macc 10:67). Lasthenes' main military contribution to Demetrius was assistance in aiding the latter's landing in Cilicia, ca. 147 B.C. Diodorus infers that Lasthenes later became the chief minister proper (Diodorus 33.4) of Demetrius, and possibly the governor of Coele-Syria (1 Macc 10:69). Lasthenes' importance surfaces in a written exchange between Demetrius and Jonathan the Hasmonean, the high priest (1 Macc 11:20–37). The king, trying to flatter the Jews, recites his earlier letter sent to Lasthenes (1 Macc 10:22–26). Ironically, the first usage of the Demetrius-Lasthenes letter was to win support away from Jonathan, whereas the reference to the same letter (1 Macc 11:20–37) is now employed to flatter the same Jonathan. Lasthenes is referred to as "kinsman" and "father," which are court titles rather than indications of blood relationships. "Kinsmen of the King," who were much older than the king, such as Lasthenes was to Demetrius, probably received the title of "father" as well (Bickerman 1938: 42–43).

LAVER [Heb *kiyyôr* (כִּיּוֹר)*;* Gk *loutron* (λουτρον)]. Bronze washbasin situated in both the tabernacle and temple courtyards. Although situated in the cultic precincts, the laver itself was not a ritual object. The tabernacle laver (Exod 30:18, 29; 31:9; 35:16; 38:8; 39:39; 40:7, 11, 30; Lev 8:11) was filled with water for the priests to use in washing their hands and feet (Exod 30:17–21). Made of the mirrors of the "women who ministered at the door of the tent of meeting" (Exod 38:8), it was placed on a bronze base between the altar and the entrance to the tabernacle.

The temple passages in 1 Kings contain a description of ten bronze lavers (1 Kgs 7:38), each supported by an elaborate stand (1 Kgs 7:27–37). The lavers themselves were bronze bowls, each with a capacity of forty baths (ca. 243 gallons). The stands were incredibly ornate. Each was 4 cubits square (ca. 6.5 ft square) and 3 cubits high (ca. 5 ft). The sides were set with framed panels decorated with animals—lions, oxen—and cherubim in relief. The frames themselves were decorated with "beveled work." Each stand rested on four bronze wheels, each 1.5 cubits high, with bronze axles, thus forming a sort of cart. Projecting 1 cubit upward from the stands at each corner were supports, decorated with wreaths, and holding a band or ring ("crown"), 0.5 cubit high, in which the laver itself was placed. The band was paneled, perhaps in metope divisions, and decorated with cherubim, lions, and palm trees.

Various archaeological discoveries contribute to an understanding of what lavers looked like (Paul and Dever 1973: 258–59). Metal lavers from Megiddo and Ras Shamra provide some information, as do some Cypriot bases. In particular, carriage bases from Larnaka have wheels, and one is decorated with a sphinx, a lion, a chariot, and two figures. Also, an 8th-century bowl from Salamis is made of bronze and rests on a tripod stand decorated with fanciful animals.

All of these artifacts feature some elements in common with the Solomonic lavers, but none can provide an exact parallel for these elaborate courtyard furnishings. If the biblical depiction is to be taken literally, the lavers would have been far taller than an average person. Thus, it is difficult to comprehend how they

may have been used. Furthermore, it is unlikely that the relatively small wheels could have supported the stand, the laver, and nearly a ton of water.

Whatever the reality of the lavers was, they did not survive as long as the temple did. King Ahaz partially dismantled them (2 Kgs 16:17), removing the frames and the laver. But the stands themselves may have survived until the Babylonian conquest (2 Kgs 25:13, 16; Jer 52:17, 20).

The lavers were essential for priestly purification, and they may also have had symbolic value. The Hebrew word has been related to the Akkadian *kiuri,* or *ki-ùr,* meaning "copper caldron." This term may go back to a Sumerian term meaning "foundation of the earth" (*ARI,* 152–54). If so, the lavers participated in the cosmic terminology that characterizes many aspects of the vocabulary used for the Jerusalem temple.

The NT word *loutron* is translated "washing." It is the same as the LXX word for "lavers" and is used metaphorically in relation to baptism (Titus 3:5; Eph 5:26). See also SEA, MOLTEN.

CAROL MEYERS

LAW [Heb *tôrâ* (תּוֹרָה)*;* Gk *nomos* (νομος)]. This entry consists of three articles, one surveying law as a cultural phenomenon in the ANE world in which the Hebrew Bible emerged, one examining the various forms of law present in the Hebrew Bible, and one surveying religious law in early Judaism of the NT period.

BIBLICAL AND ANE LAW

The considerable amount of evidence available from both the Bible and ANE sources makes a comparison of laws possible. The sources, social systems, types of cases, and principles behind juridical decisions require detailed treatment.

A. Sources Available for Study

The Bible preserves several significant collections of laws: the Decalogue, the Covenant Code, the Holiness Code, and the Deuteronomic laws. These collections, although not labeled as such by the ancient writers, have been identified as literary units by modern scholars. Most, but not all of the formally stated biblical laws are found in these pentateuchal collections; and supplementary knowledge of biblical legal practices comes from narrative accounts and other, nonlegal books. But the Bible remains the single most important source for the study of Israelite society and culture. Modern archaeology, to be sure, has recovered meaningful data relating to some aspects of life in biblical times; however, the disappointingly small quantity of extrabiblical ancient Hebrew written records limits the ability of scholars to reconstruct and describe cultural features such as the nature and practices of biblical law beyond that which is recorded in the Bible itself.

Archaeology has been significantly more successful in providing knowledge about law in non-Israelite societies, particularly for those ancient communities of people who wrote their records on clay tablets in cuneiform scripts. These ancient cultures, namely the Sumerians, Babylonians, Assyrians, and Hittites, have yielded collections of their laws as well as of contemporary public and private documents describing a full range of legal and economic activities. The major law collections of the ANE are the Codes of Urnammu (CU, see *ANET*, 523–25), Lipit-Ishtar (LI, see *ANET*, 159–61), and Hammurapi (CH, see *ANET*, 163–80); the Laws of Eshnunna (LE, see *ANET*, 161–63); the Middle Assyrian Laws (AL, see *ANET*, 180–88); and the Hittite Laws (HL, see *ANET*, 188–97). They are supplemented by fragments recording additional Sumerian and Neo-Babylonian laws, as well as by scribal textbooks and other legal compositions such as royal edicts and treaties.

The contemporary ancient legal documents can be numbered in the thousands. They record the legal transactions from the everyday life of individuals and families. They come from many cities in western Asia and cover a span of over two thousand years. The sheer quantity of these ANE materials has created a discipline and discourse which are carried on separately from consideration of parallels or similarities to biblical laws and legal traditions. These nonbiblical materials need to be analyzed on several levels. One task or level is to sift through the documents of everyday life in an effort to describe the actual legal practices of the time. A second task is to compare the practices of everyday life with the provisions contained in the law collections in order to see if they are identical. A third task is to compare the legal practices of various periods and places. The comparative study of biblical and ANE law relates to this third level of analysis. Many legal practices and problems described in the Bible also appear in the nonbiblical ANE traditions. While there are, to be sure, cultural differences between these ancient societies, there are also similarities. The task of comparative study is to look at both differences and similarities in an effort to better understand the nature and scope of biblical laws and legal practices within their ancient setting.

B. Oral and Written Laws

1. In the Ancient Near East. It has become increasingly clear that the formal law collections, both in the OT and in the ANE, were not intended to be complete codes of law. The term "code" is still often applied and may be retained, provided that one realizes the term's noncomprehensive nature. A good illustration of the phenomenon can be seen in comparing the Eshnunna Laws (LE) with the Laws or "Code" of Hammurapi (CH). Both collections were written within a century of one another and emanate

from virtually the same cultural milieu in Babylonia. Legal areas mentioned in both collections, for example, are the hire of wagons and boats (LE 3–5; CH 236–39, 275–77). The Laws of Hammurapi add a case (CH 240) dealing with losses due to collision and sinking of a craft, whereas the Eshnunna laws add another case, not covered at all in the Hammurapi laws, dealing with loss caused by someone using a vessel without the owner's permission (LE 6). Both additions seem to be valid cases that could have fairly been considered by either society in its respective law collection.

The collection of Eshnunna laws, which is about one fourth the size of the Hammurapi laws, includes additional provisions not found in the larger corpus. Thus, for example, one finds the hire of harvest workers (LE 7–9) and of a fuller (LE 14); a slave woman who covertly passed her child to a free family (LE 33–35); a bailee falsely claiming the theft of bailed goods in his possession (LE 36); the sale of an inheritance share by one of two heirs (LE 38); a biting by a mad dog whose owner was previously publicly admonished (LE 56–57); and a battery causing injury to a finger or collarbone (LE 43,46).

The Eshnunna laws, moreover, also contain cases which, while not found in the Hammurapi laws, do appear in other ANE legal compositions or in the Bible. For example, loan fraud (LE 20) is covered in the Edict of Ammiṣaduqa 5, 7 (Kraus 1984: 172–74); the rape of a slave woman (LE 31) is also dealt with in the "Code" of Urnammu (CU 8); the required payment for wet nurses (LE 32) is covered in the school composition *ana ittišu* III iii 45–50 (CAD L, p. 293 *lubuštu;* M pt. 2, p. 265–66 *mušēniqtu*); the redemption of a house sold for debt (LE 39) is dealt with in Lev 25:29–34; the case of an ox goring and killing another ox (LE 53) is discussed in Exod 21:35.

The incomplete nature of these Babylonian law collections is further demonstrated by other, significant omissions. There are important legal areas which were, clearly, fully operative in Babylonian society, since they are abundantly reflected in the contemporary documents. Some of these areas are even mentioned in the "codes" in a tangential or passing fashion, but the activities themselves do not appear as the primary subject of a law paragraph or provision. So, for example, one finds no cases directly dealing with arson, treason, theft of livestock, surety, barter, murder, manumission, or sale. The omission of such common cultural areas in the law collections can hardly be the result of any design or plan, particularly when one considers that, in the Hittite laws, some of these same areas are omitted while others like arson (HL 98–100), murder (HL 1–6), and livestock theft (HL 57–70) are included.

It is apparent, from all such omissions as described above, both of major concepts and of individual cases or provisions, that the validity of the Babylonian laws did not depend upon their being written down. The law collections themselves, moreover, appear as secondary inclusions within larger, nonlegal, literary frameworks: building inscriptions, monuments, and scribal textbooks and exercises. Even for royal edicts and treaties, there was likewise significant oral activity connected with their execution and promulgation. Writing functioned primarily as a means of disseminating and remembering information. The act of writing was not necessarily an inherent part of legal process; documents were not written for all transactions but, apparently, mainly for cases arising out of complicated, potentially contestable life situations. Thus, for example, real estate sales and manumissions, more often than not, were recorded inasmuch as the new owners or freed slaves needed proof of the change in status. But many other transactions, including marriage, division of property, adoption (without manumission), sale of immovables, and most criminal proceedings, typically do not appear to have required regular use of written records.

2. In the Bible. The biblical law collections, even when considered *in toto,* fall short of including all of the legal areas operative in ancient Israelite society. There are, first of all, categories which appear in the ANE laws but which are absent or unregulated in the OT law collections. Many of these categories are, however, alluded to in the Bible; thus, it is certain that they were operative in Israelite society. So, for example, robbery (tangentially mentioned in Lev 5:21–26—Eng 6:2–7; 19:13), hire of wet nurses, lease and rental of property, surety (cf. Gen 43:9; Prov 6:1; 20:16), hire of labor (cf. Lev 19:13; Job 7:2), bride-price and dowry (cf. Exod 22:16; 1 Sam 18:25), and sale (e.g., Isa 24:2; 2 Sam 24:24; etc.). In connection with sale, Jer 32:11 mentions the "sealed deed of purchase … and the open copy." This custom finds parallels in the Dead Sea Scrolls (*DJD* 2: 244–46), the Elephantine papyri (Porten 1968: 198–99), and the

Mishnah (*B. Bat.* 10:1). This type of document is ultimately derived from the practice of using an inscribed and sealed clay envelope to contain and protect a cuneiform document; the text written on the inner tablet was duplicated on the outside envelope.

Some of the other "missing laws" also appear in the Mishnah. While one cannot assert that all regulations of the Mishnah go back to the biblical period, some laws apparently do, at least to the extent that they can be shown to have ANE parallels. For example, the Babylonian laws treat the case of how to dispose of marital gifts and property in a situation where either the bride or groom-to-be has died before the wedding. This case appears in LE 17 and CH 163–64. The case is not discussed in the Bible but does appear in the Mishnah (*B. Bat.* 9:5). Another such case is "assault" upon the dignity of an individual by slapping his face. This case is considered in LE 42 and CH 202–4, and in the Mishnah (*B. Qam.* 8:6); this offensive act is also addressed by the NT (Matt 5:39, Luke 6:29).

One can look again to the Mishnah for "preservation" of laws dealing with rental of houses and lease of fields (*B. Meṣ.* 8:6–9, 10:1–10). These activities are highly visible both in the Laws of Hammurapi (CH 42–47, E–G) and the contemporary cuneiform documents. An arrangement modeled after a field lease may be reflected in Lev 25:15–16. Another such example is the special class of dowry property (Akk *mulūgu;* Heb *mĕlōg*) and the type of property for which the user is responsible regardless of loss (Akk *ul imūtū,* "they shall not have died," said typically of livestock and thus described as *ṣōn barzel,* "iron sheep," in the Mishnah; cf. *Yebam.* 7:1, *B. Meṣ.* 5:6).

The paucity of ancient Hebrew records limits real knowledge about the use of writing in Israelite legal practice. Scholars have noted the absence of writing; for example, in the description of Abraham's purchase of the cave of Machpelah (Genesis 23) as well as in the redemption of Naomi's family property in Ruth 4:1–12. But documents were written for the redemption of family property by Jeremiah (Jer 32:6–14) and were prescribed for divorce in Deut 24:1–3, Isa 50:1, and Jer 3:8. Some scholars have seen the use of written documents as a late development, perhaps reflecting increased foreign influences and sophistications (cf. further Job 31:35). The biblical law collections, however, are all represented as part of orally delivered addresses or sermons. The renewal or rereading of the law is similarly depicted; the laws are read out to the populace in Deut 31:10–13, 2 Kgs 23:1–3, and Neh 8:1–9:3. So it would seem that in ancient Israel, as for her Near Eastern neighbors, writing was not an indispensable feature of the legal tradition and practice but functioned, rather, as an aid to memory (cf. Deut 31:22–26; Josh 24:26).

C. Authority and Law

1. In the Ancient Near East. The laws are upheld by the king as part of his duty of governance. The king is responsible for ruling the people in accordance with principles of justice and equity; the king functions as a judge for his subjects and from time to time also issues public decrees in order to afford redress to various groups of free citizens who have been disadvantaged due to debt. But the king is not the primary author or originator of the law. Even in their "codes," kings do not claim to have invented or discovered the laws they present.

The administration of justice, however, did not fall solely on the king. In addition, cases were heard by local courts of village elders, councils, or residential districts (Akk *šībūt alim, puḫrum, bābtum*); commercial affairs were regulated by the merchants of the city (Akk *kārum*). Cases also came before courts convened under the jurisdiction of provincial civil and military officials who, on some occasions, also functioned as judges. Temple priests were at times also judges, although more frequently they were involved in an ancillary way, administering an oath or ordeal for evidentiary purposes. All of these local courts, unlike the royal court of the king, were composed of three or more individuals who formed judicial collegia. The verdicts of judges were accorded great respect; in Mesopotamia, litigants who contested judgments were subject to heavy fines, mutilation, or death. In Ḫatti, one who rejected the verdict of the king had his house torn down; but one who rejected the verdict of the king's judge could suffer the death penalty (HL 173). This severe protection of authority is paralleled in Deut 17:8–13.

2. In the Bible. The royal court of the king appears in the OT (e.g., 2 Sam 15:2–6; 1 Kgs 3:28); a legend about Solomon portrays him as the ideal monarch and judge who sought and attained a quality of wisdom sufficient to judge (RSV "govern") his people in the most excellent fashion (1 Kgs 3:9–12).

There were also local judiciaries consisting of village elders (e.g., Deut 21:2–3; 1 Kgs 21:8–11; Ruth 4:2, 9–11) or town councils (e.g., Deut 35:7–9; Ezek 16:40). The Bible speaks of specially appointed judges who presumably took their authority from the king or from the central government (2 Chr 19:5; Deut 16:18; Mic 3:9; 7:3).

Priests appear to play a noticeably larger role as judges in ancient Israel. They are pictured as functioning alongside of other royal appointees (2 Chr 19:8–11), alongside of the king himself (Deut 17:18–20), or even acting alone as if there were no other governmental structure (Deut 17:8–13; Ezek 44:23–24). Scholars have assigned this enhanced role for priests to the experiences of the Persian period, when Judea possessed only local government, led by the priestly elite in Jerusalem. Priests play only a cultic role during the early monarchy (2 Sam 20:26–27; 1 Kgs 4:4–5).

The ultimate authority of the laws was seen as coming from God. In this respect, Israelite society was very different from other ANE societies. Yet there are laws recorded in the Bible that do come from the reigning kings. There is, for example, the law of booty decreed by David (1 Sam 30:24–25); the terms used to describe this law, Heb *ḥōq, mišpāṭ*, are used also in the Pentateuch to describe divinely given laws (e.g., Lev 26:46; Deut 4:1, 5, 8; Ps 147:19). One thus cannot look to terminology as an indicator of divine origin since other terms used to denote law are likewise also operative in the human sphere. Thus, Heb *tôrâ* (Prov 1:8; 6:20; 13:14; 31:26) and *miṣwâ* (Prov 6:20; Jer 32:11; 35:16, 18; Isa 29:13; 2 Kgs 18:36) describe the instructions or commands of parents and monarchs. In a similar fashion, Heb *piqûd* and *ʿēdût* also arise, respectively, out of backgrounds that are taken from the sphere of human actions; namely, of assignment and of solemn stipulations accepted under oath (Tadmor 1982: 142–52). All of these terms relate to communications given by those in authority and imply the duty of the receiver or listener to obey. The authority could be parent, elder, government official, priest, king, or God.

Prophets do not appear to have functioned as judges, but were connected to the transmission of laws to Israel. The laws are pictured as coming to Israel through the agency of the prophets, especially Moses; and the term *tôrâ,* pl. *tôrôt*, eventually came to be used to describe any and all laws given by God to Israel via the prophets (Deut 4:8, 44; Jer 26:4–5; Lam 2:9; Neh 8:1, 8, 14). The laws in the Pentateuch are represented as spoken directly by God to Moses, who, not surprisingly therefore, is described as the prophet of highest rank (Num 12:6–8; Deut 34:10). Prophets otherwise do not appear to have played any role in the judiciary or in the everyday administration of justice, although there are a few attempts to create a link between the prophets and the judiciary. One case is the story of Jethro and Moses, where Moses is advised (Exod 18:21) to "choose able men from all the people such as fear God, men who are trustworthy and who hate a bribe." These men are then appointed to serve as judges of the "lower courts" under Moses. Another link appears in the hybrid career of Samuel who, in addition to serving as a priest under Eli (1 Sam 3:1), also was a "seer" (1 Sam 9:9), led his people to military victory (1 Sam 7:10–14), and together with his sons served as judge (1 Sam 7:15–8:3).

3. Law and Ethics. The linking of God to law added an important ethical dimension to the worldview of ancient Israel. Since God was the source of law, the failure to observe the law became an offense against the deity. This linking, however, also succeeded in placing ethics in the matrix of human history and fostered the concept of ethical standards to which God was also responsibly connected. One sees this, for example, in the protestations of Job and in the argument of Abraham (Exod 18:23–25); "… Shall not the Judge of all the earth do right?" This ethical idealism is very much present in the speeches of the prophets (cf., for example, 1 Kgs 21:17–19; Isa 1:15–17; Jer 22:13–17; Amos 5:12–15; 8:4–6; Mic 3:9–11, etc.). The other ANE cultures of course also believed in ethics, but they did not achieve this concept of an integrated moral universe.

4. Covenant. The laws in the Pentateuch are connected to the concept of the covenant, i.e., of bonds and agreements that were made between God, the sovereign Lord, and Israel, his subject people. The biblical covenants were modeled after the formal agreements or treaties that existed between monarchs and their vassals in the political sphere of the ancient world. Similarities in ceremony and detail have been noted; they include "the cutting of the covenant," which was accompanied by the slaughter of a sacrificial animal; public assembly; oaths of allegiance or agreement; invocation of the gods, and their curses upon

those who violated the oaths or agreements (Weinfeld 1972: 59–146). However, the biblical covenants differ from the ANE treaties in that what were originally stipulations of allegiance or agreement (Josh 24:1–27) became much expanded and transformed into paragraphs of laws and commandments. Through their acceptance of the covenant, these were seen as becoming binding upon the Israelites (Exod 19:4–8; 24:3–8; Deut 5:1–5; 26:16–27:8).

Covenant is central to the presentation of the pentateuchal laws and commandments. The occasions of making and renewing the covenant became in fact settings for revealing and restating some or all of the laws (2 Kgs 23:1–3; Jer 34:8–22; Ezra 9–10; Nehemiah 9–13). The covenant also carried with it important theological ideas: the divine authority to command; the obligation of Israel to obey; the meting out of reward and punishment for keeping or disobeying the laws; the concept of an awesome but still intimate relationship between God and his people; authority for those individuals or groups who were seen as custodians or teachers of the law; and a continuing, eternal bond between God, the sovereign, and Israel, his vassal.

The ANE treaties were not used as vehicles for presentation of laws to the population in general. Their stipulations remained rooted in the actual political contexts in which they were written. They deal with political matters of loyalty, dealings with hostile powers, military activity and support, extradition of fugitives, and the like (McCarthy 1978: 82–83, 103, 107–121). There are, of course, also political covenants or treaties in the Bible (Gen 21:22–32; 31:44–54; 1 Kgs 20:34); and these are similar in character to their ANE counterparts. But the concept of a connection between divine covenant and divine law is solely a product of Israelite theology. See also COVENANT.

5. Apodictic Law. Some scholars, following Alt (1934: 134–71) have linked covenant with biblical laws or precepts formulated in "apodictic style." This term describes what Alt saw as categorical, unconditional formulations of laws, including those presented in the imperative form; that is, words and commandments spoken by God in direct address to the Israelites. The subject matter of these laws, more often than not, could be described as dealing with the "sacral realm of human relations with the divine"; i.e., moral pronouncements of general character rather than the illustrative situations of case law. The apodictically formulated laws relate to the religious as well as to the secular realm of life. Alt saw them as uniquely Israelite in origin, in contrast with the "casuistic" or case law which was part of a common heritage shared with the Canaanites and other Near Eastern peoples (see F.1. below).

Other scholars, however, have noted that second person imperative statements occasionally also appear in the Hittite vassal treaties alongside of the more common casuistically formulated ones (McCarthy 1978: 60–62, 82–83). There are noncasuistic formulations to be found even in the otherwise overwhelmingly casuistically styled ANE law collections. These also occur in the extensive nonlegal literature; e.g., in moral directives, wisdom compositions, or curse formulations (Paul 1970: 112–24). Second person address is frequently found in Hittite and Akkadian religious rituals (*ANET*, 207–10, 334–45). This usage offers a valid parallel to the frequent use of second person statements in the cultic commandments and procedures contained in the Pentateuch. Apodictic statements are therefore not unique to ancient Israel; they can be seen as deriving from contexts involving sermons, moral exhortations, and rituals.

D. Shared Social Norms

There are a number of striking parallels between some biblical and ANE laws; the similarities are so close that they invite comment and explanation. Certain similarities may derive from societal norms that were held in common by both ancient Israel and her neighbors. So, for example, one finds common attitudes and prohibitions against sorcery (Exod 22:17; Lev 20:27; Deut 18:10–14; CH 2; AL A47; HL 44, 170), kidnapping and sale of the abducted person (Exod 21:6; Deut 24:7; CH 14; and with less severe penalties, HL 19–20), and false witness (Exod 20:16; 23:1–3; Deut 5:20; 19:16–21; CU 25–26; CH 1, 3, 4). There is a call for honesty in dealing with others; e.g., a condemnation of judges who take bribes (Exod 23:8; Deut 16:19) and of merchants who sell with false weights and measures (Lev 19:36; Deut 25:13–15; CH 108). Since these offenses were often concealed from public knowledge, the ancient societies turned to their deity for appropriate punishments and rewards (Prov 20:23; Reiner 1958: 14, l.

46; Lambert 1960: 132–33, l. 97–102, 107–21). The ancient kings recognized, as their duty, the standardization of weights and measures (e.g., Yildiz 1981, the prologue; cf. Ezek 45:9–12).

There are common attitudes respecting property rights. Thus, one finds laws condemning the moving of boundary markers between properties (Deut 19:14; 27:17; AL B8–9; HL 168–69; Reiner 1958: 14, l. 46). The Bible and the Hittite laws, perhaps by coincidence, perhaps by tradition (see sec. F.1. below), juxtapose laws dealing with damage to a neighbor's property by trespassing animal or fire (Exod 22:4–5; HL 98–99, 105–7). There is recognition of a duty for property owners to protect others from the consequences of negligent acts of omission. In the Bible, one finds this duty expressed in the cases of the missing parapet (Deut 22:8) and the unfilled pit (Exod 21:33). In Babylonia, one finds this concept in the case of the farmer who failed to maintain or shut off irrigation channels shared with his neighbors (CH 53, 55). There are shared values relating to the return of lost property. Deut 21:2–11 and HL 71 are very similar cases dealing with the holding of a lost animal whose master cannot be identified. Both traditions include positive statements on the virtue of returning the lost animal or object to its owner (Deut 2:1; HL 45). There are also common laws about the responsibility for goods (Exod 22:7–9; CH 120; LE 36) and animals (Exod 22:12–13; CH 266–67; *ANET*, 525–26; Sumerian laws 9–10) left in safekeeping.

One finds common customs as well as common values. Many of these appear in the area of family; e.g., the giving of an extra share of inheritance to the first born. This right is vouchsafed even in the case of a second marriage (Deut 21:15–17; AL B1; *ANET*, 198, Neo-Babylonian laws par. 15; CAD E, p. 78, *elâtu* A). There are provisions dealing with obligations of the husband to both wives should he take a second wife (Exod 21:10–12; CL 24–28; CH 148–49, 170–71; Falkenstein 1956: 8–9; Schorr 1913: 316–17). Sons are usually the heirs, but daughters did inherit in the absence of sons (Numbers 27; 36; cf. Job 42:15; Thureau-Dangin 1907: 72, l. 44–45; CL 22; Civil 1965: 4–5; CH 180–81). Childlessness, i.e., having no heir at all, was a problem that could only be partly alleviated. For the widow left without children, there was levirate marriage (Gen 38:8–11, 26; Deut 25:5–10; Ruth 4; see also AL A30, 33, 43; HL 193). Adoption was another alternative; it was very common in Babylonia, Assyria, and N Syria in the 2d millennium (cf. CAD M pt. 1, pp. 319–21 *mārūtu,* 306 *mārtūtu*). Adoption is poorly attested in the Bible; but one finds awareness of the practice in 1 Chr 2:34–36, as well as fragments of formulas in 2 Sam 7:14 and Ps 2:7. Legitimation of children born of a slave concubine was another possibility (Gen 35:22–26; Prov 17:2; CH 170–71). A childless wife, at times, is even seen as providing her husband with a free (Frymer-Kensky 1981: 211–12; Greengus 1975: 13–24) or slave concubine (Genesis 16; 20:1–8; CH 144–46). There are common practices relating to divorce, e.g., in the recitation of oral formulas in Babylonia, the Elephantine papyri, and the Bible (Greengus 1969: 518–20), along with "stripping" the divorcée or widow who remarried of her husband's assets (Hos 2:4–5; Huehnergard 1985).

E. Laws Protecting the Family

1. Sexual Taboos. There are shared norms in the sphere of incest taboos. One thus finds common prohibitions against a man having sexual relations with his mother (Lev 18:7; CH 157; HL 189), daughter-in-law (Lev 18:15; 20:12; Deut 27:23; CH 155), daughter (Lev 18:10—actually for a granddaughter; there is no statement on a daughter, but the taboo can be inferred *a fortiori*—CH 154; HL 189 [and stepdaughter in 195]), or father's wife (Lev 18:8; 20:12; Deut 27:20; HL 190). For this last offense, a less severe penalty is given in CH 158; namely, being expelled as an heir. HL 190, moreover, does not consider relations with a father's wife to be a sin after the death of the father. These alternative views of this type of incest is echoed in the earlier history of Israel. Reuben, who had sexual relations with his father's concubine Bilhah (Gen 35:22), was likewise expelled from his position as chief heir by Jacob (Gen 49:3-4). The custom of taking one's father's wives after his death is also visible in the stories surrounding Absalom (2 Sam 16:22; 20:3) and Adonijah (1 Kgs 2:13–25).

Common sexual mores are visible again in the prohibition against a man having sexual relations with two related women, i.e., two sisters or a mother and daughter. The former situation is condemned in Lev 18:18 and HL 194, but was earlier permitted for the marriage of Jacob (Gen 29:21–30). The Hittites extended this prohibition even to half sisters or cousins of the woman in question; cf. the treaty of Šuppiluliumas I with Ḫuqqana of Ḫajaša (Haase 1984: 81–82). Sexual relations with a mother and

daughter is prohibited in Lev 18:17; 20:14; HL 191. HL 194, 200, however, did not extend the full force of this taboo to two slave or captive women. There appears to have been a comparable prohibition against a woman having sexual relations with two men who were brothers or father and son. This latter situation is condemned in Amos 2:7; condemnation of both situations may be inferred, among the Hittites, from HL 194, which releases the taboo penalty for a slave woman. The situation of two brothers is condemned in the treaty with Ḫuqqana. The Bible does not discuss the situation of two brothers having sexual relations with an unmarried woman, but condemns it with the married wife of a brother (Lev 18:16; similarly, HL 195). One also finds commonly shared sexual taboos against bestiality (Lev 18:23; 20:15–16; Deut 27:21; HL 187–88, 200) and male homosexuality (Lev 18:22; 20:13; AL A19–20).

In Lev 18:3 and 27–29, it is implied that the Egyptians and the native peoples of Canaan did not observe the same taboos that were enjoined upon Israel. There is, unfortunately, no real data available for the sexual attitudes of the Canaanites, and the data for Egypt are likewise insufficient. But the cumulative evidence given above for the Hittites, Babylonians, and Assyrians suggests that the Israelites were neither the first nor only people to honor such taboos.

2. Adultery. The mores relating to adultery were similar but not uniform. In ancient Israel, if a married or betrothed woman committed adultery, both she and her paramour had to die (Lev 18:20; 20:10; Deut 22:20–24; Ezek 16:38–42); if the wife was a slave, then there was no penalty except that the paramour was required to provide a guilt offering (Lev 19:20–22). This case of adultery with a consenting slave wife has no ANE parallel. Babylonian and Assyrian laws also treat the case where a free married woman entrapped a man who did not know her status; in such cases, the wife dies but the man goes free (Yildiz 1981, law 7; AL A14, 22–23). The ANE laws also add another level of handling: if the husband wishes to spare his guilty wife, he may do so in Ḫatti and Assyria (he may also punish or mutilate her); but in every case, the same level of punishment meted out to the wife is also meted out to her lover (CH 129; AL A13, 15; HL 197–98). For these ANE societies, the wife and her lover shared the same penalty as long as they were both equally guilty of adultery. The biblical laws do not discuss any mitigating circumstances or variant handling; Prov 6:34–35 can be interpreted as depicting the rage of a betrayed husband who refused ransom or compensation from his wife's paramour. But one must recognize that ransom for adultery is so far not widely attested either in the Bible or in the ANE. There is a case of monetary compensation along with an exculpatory oath for near adultery in AL A22. This case has been compared with the mollifying gifts and the exculpatory declaration made by Abimelech to Abraham for the near adultery in Genesis 20. The case of a wife who is accused by a third party of adultery appears in the ANE law collections but not in the Bible (CU 11; CH 132; AL A17); the wife had to vindicate herself by submitting to an ordeal. The wife who was not accused but whose husband merely suspected her of adultery had to take an oath in CH 131. In such a case, Num 5:11–31 has an ordeal-like ceremony in addition to the oath.

The ANE laws, as pointed out above, do not have a parallel case to Lev 19:20–22 dealing with adultery with a consenting slave wife, but they do treat another situation, absent in the Bible, of the rape of a virgin slave girl (Yildiz 1981, laws 6–8). Finkelstein (1966: 360) has suggested that the slave's consent may have been meaningless; the penalty for rape may be seen as damage to property. The biblical law requiring a guilt offering may thus perhaps be a way of attaching some "guilt" to an otherwise unpunished or unpunishable act.

3. Rape. The laws on rape are similar in all of the ANE cultures. In the case of an unmarried virgin, the rapist pays a fine and must marry the woman and never divorce her; the Assyrian laws add talionic retaliation against the rapist's wife if he is already married (Deut 22:28; AL A55). The Sumerian laws 7–8 (*ANET*, 525–26) add mitigating factors: if the girl was in the street with her parents' knowledge, the rapist may or may not marry the girl. In the case of the betrothed or married woman, the penalty is death for the rapist and the woman goes free if one can presume that she struggled and was coerced. If the rape occurred in a remote spot, such as the fields or the mountains, the wife is presumed to have cried out and is thus innocent of wrongdoing. If the attack took place in the town, the woman is presumed guilty if she did not cry out (Deut 22:23–28; CH 130; LE 26; HL 197; AL A12, 16). The Assyrian laws (AL A23) add a further mitigation: in the case of the entrapped wife who was raped in town but who did not cry out

when released, her paramour and procuress suffer the death penalty but the laws leave her punishment up to her husband.

F. Personal Injuries

1. A Common Legal Tradition. Certain laws which are found in the Bible and in the ANE collections not only deal with the same subject material but do so in a way that includes remarkably similar details. Prime examples are the personal injury laws of the goring ox and the pregnant woman who is struck and miscarries (described below). The repeated use of these specialized (some scholars say unusual and unlikely) life situations as the setting for illustrating what moderns might call principles of negligence and liability suggests that these laws might in fact be part of a literary or scholastic tradition, created for the purpose of teaching these principles. The law codes of the ANE, moreover, almost invariably present the laws in casuistic or case form. The casuistic style is very much the preferred mode of presentation in the scribal traditions of Mesopotamia and her neighbors. This mode occurs not only in law but also in the analytic literature of such things as omens, divination, and medical symptoms. In this vast, casuistically styled literature, the protasis states the problem while the remedy or interpretation appears in the apodosis. Then, too, there is the fact of the existence of ancient schools and the observed retention and transmission of such "classics" as the Code of Hammurapi in these schools over the centuries. See EDUCATION (MESOPOTAMIA). Because of these factors, scholars have looked for cultural sharing among ancient Israel, Babylon, Assyria, and Ḫatti. Some scholars, notably Alt (1934: 112–29), saw the Covenant Code, which contains the greatest number of parallels to the case laws of the other ANE law codes, as the oldest set of biblical laws. The basic materials of the Covenant Code, he suggested, might have been borrowed from the Canaanites, who held them in common with the other ANE peoples from whom law collections are known. Other scholars (Müller 1903: 210–44; Speiser 1963; Cardascia 1977; Westbrook 1988: 1–8) have visualized a continuing tradition of a Near Eastern common law in which ancient Israel more directly shared. At this stage of knowledge, however, the actual mechanisms of cultural contact and transmission still remain elusive (Finkelstein 1981: 17–20).

2. The Goring Ox. In the biblical version of the goring ox cases, the ox that gored a human must be stoned and its flesh not eaten. The Mesopotamian parallel cases say nothing at all about the fate of the ox (Exod 21:28–32, 35–36; CH 250–52; LE 53–54). Some scholars (Müller 1903: 165; Finkelstein 1981: 26–29) have explained the punishment of the ox as a religious value: the goring ox has "transgressed" the boundaries of the natural order by attacking a human being, whether free or slave. The idea of punishing animals is not confined to Israel; the Hittite laws (HL 199) present the case of an ox or a pig which leaped upon a man (apparently with sexual intent); the ox is to be killed but not the pig.

3. Miscarriage. In the case dealing with the pregnant mother who dies when she is struck and miscarries, some of the ANE laws (CH 209–14; AL A21, 50–53) impose the death penalty, while others (Civil 1965: 4–6) require only compensation. The laws that impose the death penalty, moreover, also allow talionic reprisal against the pregnant wife or daughter of the man responsible. If the pregnant woman was a slave or a member of a lower social class, then the laws require only compensation.

A second case, which the above laws also present, is the situation in which the foetus dies but the mother survives. In all of the laws, the penalty is then only monetary. Sumerian laws 1–2 (*ANET*, 525–26), moreover, vary the penalty according to whether the blow was accidental or intentional. The Assyrian laws (AL A53) discuss one additional case, not treated by any other collection, dealing with the woman who induces her own abortion; the death penalty is given.

The biblical cases (Exod 21:22–24) have been subject to various interpretations, due to uncertainty about two Heb words: *ʾāsôn* and *pĕlīlîm* (RSV "harm, judges"). In the first case, where there is no *ʾāsôn*, the striker pays compensation in (accordance with the) *pĕlīlîm*. In the second case, where there is *ʾāsn*, the consequence is talion, with the death penalty. The traditional interpretation of these verses follows the ANE parallel cases and takes *ʾāsôn* to denote the death of the mother. Accordingly, in the first case, where compensation is given, only the foetus dies; in the second case, which leads to talion, both mother and foetus are lost. Among modern scholars, Speiser (1963) has suggested interpreting *pĕlīlîm* in accordance with HL 17–18, where the compensation given for the foetus varies according to how close it

was to birth. But other scholars have put forth other interpretations, claiming that *ʾāsôn* refers to the child rather than to the mother. For Jackson (1973), the first case deals with a premature but live child; the second deals with a stillborn child. For Westbrook (1986), the child in both cases dies; he interprets *ʾāsôn* as "unknown perpetrator"; the first case has an identified striker, but the second does not. He suggests that Exod 21:24 ("you shall give life for life") must be understood as compensation rather than as a death penalty. These alternative interpretations are defensible in view of the uncertainty about the meaning of the two words mentioned; however, they fail to explain the ANE parallel cases, as well as the fact that the traditional interpretation itself also has a long history, going back to rabbinic times.

4. Battery. The ancient personal injury laws dealing with battery exhibit remarkable parallels between ancient Israel and her neighbors. The catalogue of selected injuries listed in the Bible, i.e., eye, tooth, bone, hand, foot, etc., is very similar to what is found in other collections. These selections could simply be the product of shared human experience. But they could also be the product of a scholastic tradition, especially since one finds them associated with the rubric of talionic retribution.

The cases are numerous and varied. The Bible treats these injuries together as a group in several places (Exod 21:24–25; Lev 24:19–20, 22; Deut 19:21). In the other ancient codes the injuries are listed either separately or in smaller groups. Thus, eye (CH 196; LE 42; HL 7), tooth (CH 200; LE 42; CU 19; HL 7), foot (CU 15; HL 11), bone (CH 197; LE 45, CU 16), finger (LE 43), hand (LE 44; HL 11), nose (CU 17; LE 42; HL 13–14), ear (LE 42; HL 15), and collarbone (LE 46).

In general, the laws make the striking party subject to talion in all cases where the injury is permanent. The mitigating circumstances of intention are admitted in CH 206–7 in a case where the injury could have led to the death of the victim. In the same situation, Exod 21:18–19 omits consideration of intent. Both of these codes, however, make the striking party responsible for the victim's medical care and incapacitation. HL 10 also includes responsibility for medical costs and incapacitation in a case of a debilitating head injury.

There are two other cases of battery worthy of mention that involve talion. One is the case of the woman who in a fight assaults a man's genitals. The woman is punished by mutilation both in the Bible (Deut 25:11) and in the Assyrian laws (AL A8). The other case is the son who strikes his father or mother; he is punished by mutilation in CH 195 (this case mentions only the father) and by death in Exod 21:5.

5. Talion and Compensation. The presence of talion in the Bible and in the laws of Babylonia under Hammurapi and the absence of talion in the laws of Sumer, Eshnunna, and Ḫatti have stimulated scholarly discussion and debate. Previously, many scholars had argued that whereas earlier societies practiced talionic retribution, i.e., corporal punishments comparable to the injuries suffered, later and perhaps more enlightened societies renounced talion for monetary compensation. However, there were problems with this view after the ANE "codes" were discovered. For example, why in the Code of Hammurapi are personal injuries to freemen punished by talion but injuries suffered by lower social classes or slaves only punished by monetary compensation? Also, why do the codes in Eshnunna and Sumer, which are earlier in time than Hammurapi, know only compensation and no talion? A. S. Diamond (1957) has argued that this is the case because the simpler, less developed societies preferred to settle injuries through compensation; talion is not primitive but a later development, reflecting the advancing power of the state. Freemen are then protected by the more serious consequences of talion while slaves and lower classes are left with the older system of compensation. Talion is developed in order to give maximum protection to the rights of free citizens, both in the ANE and Israel. Diamond suggests that in societies where social stratification is present, talion also serves to remove the differences between rich and poor freemen; the wealthy person cannot then just "buy off" the damage caused by his offense.

Westbrook (1988: 41–47) argues that the division between talion and compensation has been overstated; in fact, both modes of settlement coexist at all times, in ancient Israel and in the ANE. The inclusion of either compensation or talion in a given law formulation is the product of didactic selection; the laws should not be read in contrastive but in complementary fashion. To sustain this view, however, one must address a number of problems. Among them are: (1) the need to reconstruct talionic reprisals into the laws where they are not absent, notably the law "codes" of Urnammu, Eshnunna, and Ḫatti; (2)

the need to insert compensation into cases which state only talion; and (3) the need to take notice of the apparently simultaneous practices of applying talion to injuries sustained by the upper classes but requiring only compensation for injuries against lower social groups.

G. Homicide

1. In the Bible. The laws of all ancient societies uniformly condemn murder, but there are differences in the punishments meted out. Biblical law continued the tribalistic practice of allowing the kinfolk of the victim to take blood revenge against the slayer or his family members. Blood revenge was practiced during the early monarchy (2 Sam 14:7–11). The account of David's handing over the sons of Saul to the Gibeonites (2 Sam 21:1–15) shows that this talionic death penalty coexisted with the alternative of compensation. In Num 35:31–34, however, compensation for intentional homicide is strongly condemned. Additional reform came about through rejection of the earlier practice of extending responsibility to family members for crimes committed by an individual (2 Kgs 14:5–6; Deut 24:16; Ezekiel 18). In Num 35:9–28 and Josh 20:1–9, the concept of a city of refuge to protect accidental slayers from blood revenge is introduced; there is also an attempt to enforce some process of proof by two witnesses before vengeance could be taken against a murderer.

2. In the Ancient Near East. One finds the coexistence of compensation and blood revenge in Assyria in all periods (AL A10; B2; Roth 1987; CAD D, p. 79, *damu*). But among the Hittites one finds only compensation (HL 1–5); indeed, a letter of Ḫattusilis III to Kadašman-Enlil of Babylonia (ca. 1270 B.C.) explains that the slaying of Babylonian merchants in N Syria could only be redressed through compensation, and that it was not customary for the Hittites to give the death penalty for murder (Klengel 1980; Haase 1984: 86; *ANET*, 547). Murder of a member of the royal family, however, according to the edict of Telepinu, might be punished either by compensation or by the death of the murderer; the choice was left to the family (Haase 1984: 52–53). The situation in Babylonia was apparently different. While there is no case dealing directly with murder in the Code of Hammurapi, CH 153 metes out the death penalty to a wife who is an accessory to the murder of her husband. This same offense also led to the death penalty in an earlier, Sumerian record of a trial for homicide (*ANET*, 542).

3. Modern Perspectives on Ancient Values. The rejection of compensation for homicide in Num 35:31–34 has been taken by some scholars to reflect a deeply held principle; namely, that intentional homicide could never be assuaged except by the death of the murderer, as in Gen 9:5–6. These scholars see this rejection of compensation as marking an important cultural divergence between ancient Israel and her neighbors; it is a principle that reflects a high regard for the sanctity of human life (Müller 1903: 212; Greenberg 1960 and 1986).

Other scholars, however, have argued in almost the opposite fashion. They take the absence of the death penalty for murder, as well as its limited use overall in the Hittite laws, to be a mark of significant moral advancement in that society. They point to the stated abandonment of talionic penalties, e.g., in HL 92, 161–67, as further signs of this moral development (Haase 1987: 103).

4. Unsolved Murder. In the Bible (Deut 21:1–9), there is "guilt" attached to the magistrates (elders and judges) of the nearest neighboring community. They remove this guilt by an expiation ceremony which includes the killing of a heifer at a nearby stream, the washing of hands, and an exculpatory declaration by the magistrates. There is no compensation for the family of the victim, probably in keeping with the strong aversion to compensation discussed above.

The Hittite laws, which favor compensation, place the burden of the compensation on the property owners of the area where the murder took place (HL 6). The Hittite laws, further, include the case of the unsolved murder of a traveling merchant; here again, as in the letter of Ḫattusilis III cited above, there is compensation for the merchant and for any lost goods (HL 5).

The Babylonian laws (CH 23–24) address the case of the unsolved murder in connection with robbery. Here, too, the magistrates of the local community must give restitution for the goods and compensation for the victim. The same seems to have been true at Nuzi several centuries later (Gordon 1936).

H. Theft

1. In the Bible. Biblical responses to theft are varied: simple compensation is given to a keeper of livestock or shepherd from whom animals are stolen (Exod 22:10); the thief himself, however, if caught, must pay double if the stolen animals are recovered—and he must pay fourfold or fivefold (depending upon whether sheep or cattle are involved) for animals no longer recoverable. An impecunious thief could be sold into slavery (Exod 22:1). The theft of other personal property is covered in Exod 22:2. A thief breaking in during the day must not be killed, but a thief in the night could be slain without bloodguilt. One may also find readiness to apply capital punishment for theft in the statements made by David in 2 Sam 12:5–6, by Jacob in Gen 31:32, and by Joseph's brothers in Gen 44:9–10. Theft of property belonging to God (*ḥērem*) fwas punished by death (Josh 7:1, 18–25).

2. In the Ancient Near East. The Hittite laws treat theft in great detail. One finds penalties for the theft of certain domestic animals (ox, sheep, goat, horse, ass, mule) ranging from twice to fifteen times their value, depending upon the animal, its gender, age, etc. (HL 57–70). Theft of swine is punished by a lesser, monetary fine to the owner, ranging from six to twelve shekels, depending on the quality of the animal; theft of a piglet resulted in a smaller penalty (HL 81–85). Theft of other personal property was also punished by monetary fines along with restitution of the stolen objects. The penalties ranged from three to twelve shekels, depending on whether the thief was a freeman or a slave, the object stolen, the place, (i.e., whether in the barn or in the house), whether before or after the theft, etc. A slave might also be mutilated if he stole from a stranger's house (HL 91–97, 119–25, 127–43). Smaller monetary penalties were exacted from thieves who took produce from the garden or the orchard or stole timber (HL 101–4). The theft of bricks was to be repaid twofold (HL 128).

Theft of royal property could be punished by monetary fines; however, the theft of a bronze spear from the palace was punishable by death (HL 126). Theft or misappropriation of gold, silver, garments, or bronze implements belonging to a god's temple was also punished by death (*ANET*, 208).

In the laws of Babylonia, one finds parallels to the biblical cases of the housebreaking thief. The Eshnunna laws (LE 12–13) make the same distinction of whether the theft is by day or night: if by day, the penalty is compensation; if by night, the penalty is death. The penalty is the same whether the thief is found in the barn or in the house. The Hammurapi laws (CH 21) offer yet another parallel; a thief who is caught tunneling into a house shall be killed and hanged in front of his tunnel. The Laws of Hammurapi contain the most severe penalties for theft. Sellers and receivers of stolen goods belonging to a private person, a palace, or a temple receive the death penalty (CH 6, 9–13); looters and receivers of valuable property from minors or slaves are similarly punished (CH 7, 25). If a person, entrusted with a store of grain in order to look after farm activities (i.e., planting, feeding livestock) then steals the grain, the penalty is to cut off his hand if he is caught doing so; after the fact, the penalty is monetary. But the thief who cannot pay is subject to further physical violence: being dragged by oxen (CH 253–56).

Some scholars consider the death penalty for theft in the Laws of Hammurapi to represent an extreme point of view, one not in keeping with general Babylonian attitudes and practices. These scholars point to lesser penalties for theft even within the Laws of Hammurapi themselves and believe that the noncapital penalties are the earlier and more generally accepted laws of Babylonian society. Thus, for example, theft of timber was subject to monetary fine (CH 59) just as it is in the earlier Sumerian laws of Lipit-Ishtar (CL 10), in the Hittite laws (HL 128), and in the later, Neo-Babylonian laws (*ANET*, 197, par. 7—a case of a woman stealing brushwood). Monetary penalties are also given for theft of cattle (CH 8, 265), agricultural implements (CH 259–60), gold, silver, and other valuables consigned for transport or sale (CH 106–7, 112).

Further evidence for monetary penalties comes from four ancient documents of the kingdom of Eshnunna. In two trial proceedings for thieves (one free, one slave) caught while housebreaking, the civil magistrates bound the thieves over to the house owners for penal servitude (Greengus 1986: 157–59, 171–73; *ANET*, 545). This punishment finds its parallel in the sale of the thief in Exod 22:1, mentioned above. In the other two cases, thieves apprehended after the theft were likewise sentenced by the courts to monetary penalties (*RLA* 4: 249; Simmons 1960: 28–29).

The Assyrian laws (AL A3–4) contain a series of paragraphs dealing with restriction on a married woman's handling of domestic property; the stated penalty for taking and receiving these goods was death. However, theft of a stranger's property by a married woman was punished by compensation to the victim and mutilation of the woman by her husband (AL A5). If she stole temple property, the punishment was left up to the god's oracle (AL A1). AL C8 deals with the theft of animals and personal property; the penalties are monetary and a beating, plus a period of laboring for the king. If the thief is judged by the king himself, then the penalty would depend on the king's decision. However, just as in Babylonia, extant documents from the later Neo-Assyrian period repeatedly attest only to theft being punished by monetary penalties (CAD S, pp. 188–89, *sartu*).

I. Cultic Law

The ANE law collections have only infrequent references to cult or religious worship and practice. One may cite, for example, HL 166, which deals with a prohibition against mixed seeding that parallels Lev 19:19 and Deut 22:9; or CH 160, which, like Lev 19:23–25, suggests that new fruits were reckoned ready to be eaten in the fifth year of cultivation. The Hittite laws dealing with sexual taboos repeatedly use the term *ḫurkel,* "abomination," to describe these offenses (see sec. E.1. above). HL 25 levies penalties against one who fouls cisterns or vessels. But such examples are few in comparison to the biblical law collections which regulate many cultic and religious activities. The inclusion of such material in the Bible may be because the Bible received its final shaping during the latter half of the 1st millennium, during a time when ancient Israel became a small, theocratically governed province under Persian and Greek rule. The temple and its cult was one of the few areas that remained under indigenous, Israelite control. The exclusion of cultic laws in the ANE law collections may, correspondingly, have something to do with the subordinate roles of temples in autonomous, monarchal states.

Cultic regulations are by no means lacking in the ANE. In addition to the rituals cited above (sec. C.5.), one may also mention the Punic cult tariffs from Marseilles and Carthage (*ANET*, 656–57). Such regulations, however, do not appear as part of the royal law collections, which restrict themselves to situations of potential conflict arising out of person-to-person relationships. The biblical laws, which emanate from God, also include relationships between persons and deity. This extra or wider view may be considered another reason for the latitude of materials included in the pentateuchal laws.

J. Law and Social Welfare

1. Debts and Slavery. There was recognition, both in Israel and in the ANE, of social problems and dislocations caused by economic disparities and hardships. Especially severe was the problem of debt, which could force an individual to give up his property, home, fields, and eventually even his freedom. There is evidence in the laws of attempts to address these social and economic problems through relief-giving measures and regulations. The rights of a borrower with respect to items of his property pledged to his creditor are the subject of laws in the Bible (Exod 22:25–27; Deut 24:6, 10–13, 17; cf. Amos 2:8; 2 Kgs 4:1) and in the ANE (e.g., CH 49–52, 113, 241; AL C4, 9, G; CAD K, p. 308, *katû,* M pt. 1, pp. 372–73, *maškanu*). There is concern about persons who are distrained or enslaved because of their debts; such a person must be released after six years in the Bible (Exod 21:2–11; Deut 15:12–18) and after three years in Babylonia (CH 117). In the Assyrian laws (AL A39, 48) and in the Bible (Exod 21:7–11), one finds attempts to mitigate the consequences of debt slavery for unmarried women. There are laws aimed at preventing the ill-treatment of individuals, free or slave, who are left in pledge (e.g., LE 22–24; CH 115–16, 118–19; CAD K, p. 460, *kiššatu*). The Bible, too, has laws bearing on the ill-treatment of distrained persons (Lev 25:39, 43, 53); and one may also look to Exod 21:20–21, 26–27, as a piece of a larger social policy protecting all types of slaves. Deut 23:15–16 departs from the other Near Eastern law collections by forbidding the return of a fugitive slave to his master. The Near Eastern laws consider return to be a duty (CU 14; CL 12–13; CH 15–20; HL 22–24).

2. Redemption and Release. Property and persons who passed out of the possession of debtors into the hands of creditors could often be redeemed (e.g., Lev 25:25–28, 47–55; Jer 32:6–15; Ruth 4:1–12; LE 39; CH 118–19; AL A48; CAD I/J, pp. 171–72, *iptirū*). Otherwise, the forfeiture or sale became final. But even in such cases, there was relief in the form of periodic "jubilees," or years of release, when properties

might go back to the original owners. In the Bible, this event is termed *dĕrôr* or *yôbēl* (e.g., Lev 25:10–13, 23, 28, 31, 50, 54; Jer 34:8–16; Ezek 46:17). While the release for persons came after six years of servitude, the release for property was periodically set to occur every fifty years, irrespective of when the forfeiture or sale occurred (Lev 25:8–12).

In Mesopotamian sources, one finds an array of terms designating release; most importantly, Sumerian *ama.ar.gi$_4$, níg.si.sá,* and their Akkadian counterparts *andurāru mīšaru, kubussû* (cf. CAD A pt. 2, pp. 115–17; M pt. 2, pp. 116–17; K, pp. 489–90). These releases were most often associated with the accession of a new king or his "jubilee," celebrated some decades later. Typically, the release effected relief for various unpaid taxes on lands and harvests, cancellation of outstanding loans, discharge of debt hostages and slaves, annulment of property sales due to debts, or recompense for their loss.

The term *mīšaru,* often used in parallel with *kittu,* "truth," very early came to be a general term for "justice, equity." This development has been noted, especially in comparison with its Hebrew cognate *mêšārîm,* which is similarly translated. The question for biblical scholars, however, is to determine whether *mêšārîm,* like its cognate, also had a more specific meaning as a term denoting a royal release. There are frequent poetic images of God as king; and among these passages, one finds descriptions of his ruling the world *bĕmêšārîm,* "with equity" (e.g., Pss 9:9; 96:10; 98:9). One must also consider the fact that the social and economic factors which required relief were operative at all times, after the Exile as well as before. In Neh 5:1–13 is an episode similar to that of Jer 34:8–16; one finds persons and property being lost due to debt and a resolution to release secured by solemn oath. Nehemiah's release is not described by any specific term, but it may be seen as part of a continuing history of welfare actions in ancient Israel. Scholars have also pointed out that it is perhaps not accidental that the first laws of the Covenant Code are those dealing with debt slavery and release (Weinfeld 1982). The biblical laws prohibiting the taking of interest on loans may be seen as yet another attempt to alleviate the problems of debtors (e.g., Exod 22:24; Lev 25:35–38; Deut 23:20–21; Ezek 18:17; Amos 5:11). Elsewhere, usury was regulated but not forbidden, e.g., in Babylonia (CH L; LE 18; Greengus 1986: 194–96). The negative view of usury may reflect the experiences and attitudes of a largely agrarian Israelite society. This condition may likewise be the reason for the absence of biblical laws regulating the activities of merchants, professions, traders, and craftsmen.

SAMUEL GREENGUS

FORMS OF BIBLICAL LAW

In addition to categorizing biblical texts according to content, scholars classify texts according to their literary form. In the case of those passages which clearly articulate laws, the form has not been so easy to classify.

A. Alt's Categories
B. Criticism of Alt's Categories
C. A Syntactical Categorization
  1. Laws in the Conditional Form
    a. "When/If" Form
    b. Relative Form
    c. Participial Form
  2. Laws in the Unconditional Form
    a. Direct Address
    b. Third Person Jussive
D. The Setting in Life of the Biblical Legal Forms

———

A. Alt's Categories

Biblical laws mostly follow the pattern of the ANE law collections. However, while legal forms in these corpora are relatively few, those found in the Bible vary greatly in number and composition. The forms of biblical laws have been studied by a number of scholars, including Jirku, Jepsen, and Mowinckel. But it is A. Alt's essay (1967), "Die Ursprünge des israelitischen Rechts," first published in 1934, that has dominated the field of biblical law for a long time.

Alt noted that a number of legal forms were juxtaposed in the book of the covenant and, using the tools of form criticism, set out to differentiate between them by identifying two major types: "casuistic" and "apodictic." A "casuistic" law, Alt pointed out, is one that is built on the sequence of a protasis and an apodosis of a conditional sentence. The main case is introduced by the Hebrew conjunction *kî* ("granted" or "supposing that") and subsidiary cases by the weaker Heb *ʾim* "if." In its pure form, Alt added, all parties in the law are referred to in the third person. As an example, he quoted Exod 21:18–19, "Supposing men quarrel and one strikes the other with a stone or with his … and the man [who was struck] does not die but keeps his bed … if then the man rises again and supported on his staff can walk in

the street, he that struck him shall be clear, only he shall pay for the loss of his time, and shall have him thoroughly healed" (Alt 1967: 114).

Laws formulated in the "apodictic style," Alt stated, are generally rhythmic and terse; metrical in form; fundamental, categorical, and inclusive in character; they usually appear in series. He identified four groups: (1) laws introduced by an active participle and followed by the Heb formula *môt yûmāt* (e.g., Exod 21:12, 15–17); (2) a list of curses which begin with the Heb predicate *ʾarûr*, "cursed" (e.g., Deut 27:15–26); (3) three short series consisting of prohibitions in the second person singular (i.e., Lev 18:7–17; Exod 22:17, 20, 21, 27a–b [with interpolations], and Exod 23:1–3, 6–9 [with interpolations]; and (4) the Decalogue, where, as he put it, "the categorical negative is the strongest unifying element in the whole list" (Alt 1967: 153).

B. Criticism of Alt's Categories

Alt's distinction between "casuistic" and "apodictic" legal forms was accepted by many leading scholars, including W. F. Albright, U. Cassuto, W. J. Harrelson, R. A. F. Mackenzie, R. H. Pfeiffer, M. Noth, G. von Rad, and R. de Vaux. Even those who disagreed with some of his points continued to operate with his categories and terminology.

Naturally, Alt's classic division did not remain unchallenged, but further research showed a few shortcomings.

First, Alt did not recognize "mixed forms." Rather, he maintained that any deviation from the basic casuistic form was "a secondary variation in which stylistic elements of other forms have crept in" (Alt 1967: 114). This, however, led many scholars to contradictory conclusions. For instance, whereas O. Eissfeldt, who accepted Alt's division, considered the law in Exod 21:2 ("When you acquire …) as casuistic, J. van der Ploeg, another Alt follower, excluded it from this category.

Second, the participial forms presented a special problem. Alt had placed them among the apodictic laws, and in fact argued that they best exemplified the category itself; but other scholars, including M. Noth, J. J. Stamm, and M. E. Andrew, pointed to the description of the legal consequence as being reminiscent of the casuistic laws. Therefore, some followed Alt and placed the participial laws among apodictic (for example, H. J. Boecker, J. G. Williams, Pfeiffer, and Harrelson), while others (for instance, W. Kornfeld, R. Kilian) preferred to consider them casuistic.

Third, some scholars who have accepted Alt's two major divisions took a further step and provided subcategories based on content. For example, D. Patrick (1973) identified two different types of casuistic laws: (1) remedial law, where a penalty is prescribed in the apodosis (e.g., Exod 21:22); and (2) primary law which clarifies the rights and duties of the parties (e.g., Exod 21:2–6). Gilmer (1975) divided the casuistic "If-you" form into four subgroups: (1) the humanitarian If-you formulation; (2) the ceremonial If-you formulation; (3) the Holy War If-you formulation; and (4) the juridical If-you formulation.

Another group of scholars, however, went beyond Alt's divisions and proposed different categories. For example, Cazelles (1946) offered four groups of laws: (1) casuistic; (2) participial; (3) direct style formula; (4) conditional formula in direct style. F. L. Horton (1971) outlined them as follows: (1) participial; (2) casuistic, including mixed and relative forms ("he who …"); (3) apodictic, including prohibitions (Heb *loʾ* plus an imperfect verb form), wisdom prohibitives (Heb *ʾal* plus a jussive verb), and positive commandments. Lowenstamm (*EncMiqr* 5: 625–28) went even further and identified six different forms: (1) casuistic; (2) priestly ("he who …"); (3) commands or prohibitions in the third person; (4) commands and prohibitions in the second person; (5) participial; (6) mixed.

Fourth, beyond the issue of categories, some scholars raise questions about terminology. Boecker (1980), for example, replaces "apodictic" with the label "normative law." Gerstenberger (1965b) calls the second person prohibitions ("you shall not …") "prohibitives." W. Richter (1966) prefers to refer to the negative commands, Heb *ʾal* plus a jussive verb, as "vetitive." Even though Bright (1973) points out that there is a difference between the "*loʾ* prohibitive" (mostly found in law) and the "*ʾal* prohibitive" (most suitable for wisdom), others argue that it is difficult to discern a distinction in force between the two. Sonsino (1980) argues that the term "apodictic/apodeictic," first proposed by Alt, is far from being adequate to refer to biblical law. This word actually means, "of clear demonstration, established on

incontrovertible evidence" (*OED* 1: 387). It was used in Aristotelian logic to express certainty and absolute truth. As such, it is not appropriate to describe biblical laws which are considered products of divine revelation and not the result of logical conclusions.

C. A Syntactical Categorization

A study of legal forms in the Hebrew Bible shows that it is possible to group them in two categories based on their syntactical structure. Some biblical laws describe a case and then stipulate a legal consequence. Others present no case information. The first laws are retrospective and look back at a situation or a fact. The second type is prospective, absolute, and unconditional. On the basis of this distinction, the first type can be called "conditional," and the second "unconditional."

1. Laws in the Conditional Form. a. "When/If" Form. In this type, the protasis describing a case is introduced by the Heb particle *kî* ("when" or "in the case that"). The subordinate cases are introduced by Heb *ʾim* ("if"), *ʾô* ("or"), *ʾak ʾim* ("but if"), or "*wĕhāyâ ʾim* ("and if"). Three subgroups of this type can be identified:

(1) "When he." This is the predominant form in the ANE law collections. The protasis is introduced in Sum by TUKUM.BI, in Akk by *šumma* and, in Hit by *takku.* This form corresponds to Alt's casuistic laws. The verbs are usually in the third person imperfect, singular or plural. For example, "When a man steals an ox or a sheep, and slaughters it or sells it, he shall pay five oxen for the ox, and four sheep for the sheep" (Exod 21:37,JPSV). An important variation of this form is when the protasis is introduced by Heb *ʾiš kî* ("a man, when he …"), such as in Lev 24:17, "If a man kills any human being, he shall be put to death."

(2) "When you." In this form, both the protasis and apodosis contain verbs in the second person singular or plural. For example, "When you make a loan of any sort to your neighbor, you must not enter his house to seize his pledge: (Deut 24:10, JPSV).

(3) Mixed Forms. Here the protasis is in the third person and the apodosis in the second, such as in Deut 22:23–24, "When a virgin is pledged …, you shall bring …"; or conversely the protasis is in the second person and the apodosis is the third, as for example, "When you acquire a Hebrew slave, he shall serve …" (Exod 21:2).

b. Relative Form. The protasis here is introduced by the subject plus Heb *ʾăšer* ("who"), or simply by *ʾăšer* (Akk *awīlum ša,* or only *ša;* Hit *LÚ kuiš*). Two subgroups can be identified.

(1) Third Person Forms. See Lev 20:12, "A man who (*ʾiš ʾăšer*) lies with his daughter-in-law, both of them shall be put to death."

(2) Mixed Forms. There are a few examples of this form, found in cases where the verb in the protasis is in the third person imperfect, whereas the apodosis contains a verb in the first person perfect (e.g., "And whatsoever man there be of the house of Israel … that eateth any manner of blood, I will set My face against …" Lev 17:10, JPSV). The verb can also be in the second person perfect with *waw* consecutive, as in Lev 20:16, "A woman who approached any beast to mate with it, you shall kill (*wĕhāragtâ*) the woman and the beast …"

c. Participial Form. Here the protasis is introduced by a verb in the participial form and the apodosis, formulated in the third person, specifies the legal consequence, usually the death penalty. For example, "He who fatally strikes a man (lit. "the striker to death") shall be put to death" (Exod 21:12).

2. Laws in the Unconditional Form. a. Direct Address.

(1) Positive Commands. (a) Second Person. For example, "You shall make an altar of earth …" (Exod 20:24).

(b) Imperative. For example, "Honor your father …" (Exod 20:12).

(c) Infinitive Absolute. For example, "Remember (*zākôr*) the sabbath day …" (Exod 20:8).

(2) Negative Commands. Either with Heb *loʾ* plus a verb in the imperfect, such as "You shall not commit adultery" (Exod 20:14), or Heb *ʾal* and a verb in the jussive, such as "Do not degrade (*ʾal tĕḥallēl*) your daughter …" (Lev 19:29).

b. Third Person Jussive. (1) Positive Commands. For example, "The guilt offering shall be slaughtered …" (Lev 7:2).

(2) Negative Commands. For example, "They shall not shave smooth any part of their heads …" (Lev 7:2).

D. The Setting in Life of the Biblical Legal Forms

The origin and setting in life (*Sitz im leben*) of the biblical legal forms are obscure. One school of thought, represented by Alt, maintains that the so-called casuistic laws derive from a pre-Israelite period, perhaps the Canaanite legal system. On the other hand, as Alt argued, the so-called apodictic laws are Israelite in origin and emerged out of a cultic setting (see Deut 27:15–26; 31:9–13), namely, the "renewal of covenant" ceremony.

It is important to note, however, that there is a difference between the original setting in life which gave rise to a particular form, and the secondary setting in which the particular form became prevalent. Furthermore, as Gerstenberger (1965b) pointed out, it is highly problematic to place all the apodictic clauses within one cultic festival. Obviously, it is easier to identify secondary settings which employ specific forms by studying the different literary genres in the Bible. It is more difficult, if not impossible, to discover the original life setting which created the form.

Alt's assumption that the Israelites took over the casuistic form from the Canaanites has not been proved, inasmuch as no Canaanite law collection has yet been found. The dominant "when he" form was well known in the ANE law collections. See introductory article above. There is also no evidence, either biblical or extrabiblical, that the legal courts were the originators of the casuistic form, even though many scholars, including Alt, put forth a claim for this assumption. The original life setting of the "when he/you" form remains unknown.

The participial form was classified by Alt as part of the apodictic laws and he pointed to the curses in Deuteronomy 27 as its setting. However, it is highly doubtful whether curses are indeed laws. Some scholars (for example, F. Horton, R. H. Pfeiffer, S. Sandmel, H. Brichto, R. Sonsino) have argued that curses are basically part of liturgy or prayers, not of laws, although they are part of treaty formulas.

The contention that apodictic laws were purely an Israelite creation has already been disproved by many scholars who pointed out similar forms in ANE law collections, especially, the second person positive or negative commands. Also, there is little biblical evidence for a so-called covenant renewal ceremony, which presumably gave rise to the apodictic form. Nor is there proof that it ever took place periodically, in spite of Alt's contention.

Fohrer (1968) rightfully maintained that the directive "do this" or "do not do this" is as old as history itself. It is only when these commands or prohibitions form "series" that one can speak of patterns and look for a life setting. Gerstenberger (1965b), using the example of Jonadab ben Rechab's short prohibitions in Jer 35:6–7, argued that the original setting of the "prohibitives" is to be found in the instruction given within the tribe (i.e., Sippenethos). With regard to the "relative" form, Yaron (1962) observed that it is often used in proclamations and was most likely taken over by the legislators to express norms of conduct.

RIFAT SONSINO

LAW IN JUDAISM OF THE NT PERIOD

Most generally, "law" meant "divine revelation." It could refer to the totality of revelation or to any part of it. It included commandments (do not murder), admonitions and advice (treasures gained by wickedness do not profit), theological affirmations (the Lord is one), stories (the Exodus), worship (the Psalms), and more. These examples are all taken from the Bible, the primary (although not the only) expression of the law or revelation of the God of Israel. A proper appreciation of Jewish "nomism" requires that this range of meaning be grasped. The Mosaic code was given after the Exodus from Egypt, and "law" embraces both the story of God's gracious deliverance of the Israelite people and the requirements that were laid upon them—as well as the subsequent stories of failure and forgiveness.

———

A. Range and Meaning

Jews who knew other societies tended to identify the law of God with the values of the other cultures, with the result that the range of meaning embraced by the word "law" expanded still further. Thus Ben Sira equated universal Wisdom with the Jewish law (Sirach 24), and Philo attempted the much more difficult task of equating the law of Moses with cosmic order, the "law of nature" which governs the universe. The person who observes the Jewish law is thereby a loyal *kosmopolitēs,* citizen of the universe, observing the "sacred words of nature" (*Op* 3; *Spec Leg* 2.13). One who studies the "particular enactments" of the Mosaic law will find that they agree with "the principles of eternal nature" (*Vita Mos* 2.52; cf. 2.48–52). This is hard to show in detail, but Philo had allegory on his side.

Judaism is correctly called a religion of law, but this has not meant the reduction of philosophy, art, and science to the level of requirements which can be given in one sentence and either obeyed or not, but rather the expansion of the meaning of "law." It was once thought that the translation of Heb *tôrâ* by Gk *nomos* resulted in a narrowing of the conception of law from God's way in general to specific requirements. This has now been shown not to be correct. The semantic range of the words is approximately the same (Pasinya 1973; *IDBSup,* 909–11; when corrected by these and other studies, Dodd 1935: 25–41 still repays study).

In recent years scholars have rightly been concerned to correct the view that Judaism was "legalistic" in the pejorative sense, and this has led to the emphasis that *tôrâ* and *nomos* mean not only "law" but also "grace." When this emphasis is accepted, the characterization of 1st-century Jews as being "zealous for the law" (Rom 10:2) means not that they sought meritorious achievement and thereby became self-righteous, but rather that they lived faithfully within the covenant which was given by God's grace. The present author has argued that the context of grace is clear throughout Jewish literature of the period 200 B.C.E. to C.E. 200 and also that Paul, when criticizing "works of law," was not accusing his fellow Jews of legalistic self-righteousness (Sanders 1977; 1983). These points, however, should not prevent us from seeing that the words *tôrâ* and *nomos* usually mean "law" in our sense of the word.

While any part of revelation could be called part of God's law, both the Heb and Gk terms were especially used for commandments and prohibitions which are observable, or for the scrolls in which they are written down. When Josephus summarized "the laws and the constitution" (*Ant* 4.8.3 §194), he listed and explained commandments. In discussing the Greek translation of Hebrew Scripture, he spoke of the desire of Ptolemy II of Egypt to have a translation of "our law and the political constitution," but he added that the king had managed to obtain only the part containing "the law," not the entirety of sacred Scripture (*hoi hieroi grammatoi; Ant* 1.Proem.3 §11–13). Philo spoke of the Ten Commandments (*deka logoi*, "ten words") as "written laws" which had been "promulgated" by Moses. After discussing them he turned to the rest of the Mosaic legislation (*Dec* 1–2; *Spec Leg* I.1). The Ten Commandments are "general laws," while the others are "special" or "particular laws" (*Spec Leg* II.189). The "essentials of the law" in *Ḥag.* 1:8 are the commandments which are solidly based in Scripture, and the law which is read in *Roš. Haš.* 4:6 and *Meg.* 4:1–2 is distinguished from the Prophets.

Thus while a complete catalogue of occurrences of *tôrâ* and *nomos* would produce the range of meaning indicated in the first paragraph, the words usually mean "law." This discussion will take up law in this narrower sense, though we shall return to its place in Jewish thought more generally.

B. Sources

The sources potentially include all of Jewish literature over a range of some centuries. The Jewish literature which can be shown to have been written in the 1st century C.E. is this: the works of Philo and Josephus, several of the Dead Sea Scrolls, and a few works in the Apocrypha and Pseudepigrapha (e.g. *T. Mos.*, 4 Ezra, Ps.–Philo, some of *Sib. Or.*, probably *T. Job*). The earliest layer of rabbinic literature reflects the first century but may not have been written until later. Both earlier and later sources, however, are relevant to understanding the conception of law in the NT period, e.g. Sirach, Wisdom of Solomon, 1 Maccabees, *Psalms of Solomon, Jubilees.* For one topic, oral law, it is necessary to consider the entire Mishnah and Tosefta. The sources which are employed most are Josephus, Philo, the DSS, and the earliest layer of the Mishnah. There are fairly short surveys of the Jewish law in Philo's *Hypothetica* and Josephus's *AgAp* 2.22–30 §190–219. (There is a relationship of literary dependence between these two texts, either because Josephus knew the *Hypothetica* or because of reliance on a common source, possibly also used by Pseudo-Phocylides. See e.g. van der Horst in *OTP* 2: 566.) More detailed accounts of the legislation are in Philo's *Dec* and *Spec Leg* and in Josephus's *Ant* 4.8.4–43 §196–301.

C. Character and Contents

The most striking characteristic of Jewish law is that the "religious" law covered everything. Moses "did not make religion [*eusebeia,* "piety"] a department of virtue, but the various virtues … departments of religion." Unlike other cultures, in Judaism "religion governs all … actions and occupations and speech" (Jos. *AgAp*2.16 §170–71). They are not distributed among religious law, civil law, and philosophy.

Outsiders might speak of Jewish "ancestral laws" or "customs," and Josephus attributes these terms to gentiles (*Ant* 14.7.2 §116; 14.10.8 §213, 216; and frequently). He could use them himself (14.10.11 §223 and elsewhere), as could Philo (*Spec Leg* II.148). Josephus, Philo, and other Jews, however, regarded the "ancestral customs" as the will of God. The moral of Josephus's *Jewish Antiquities* was to teach that people prosper who "conform to the will of God," by which he meant the law (1. Proem 3 §14). Philo stated the case fully: While all people guard their own customs (*ethe*), this is especially true of the Jewish people. They hold "that the laws (*nomoi*) are oracles vouchsafed by God," a doctrine in which they are trained "from their earliest years" (*Gaium* 210). Moses is called by some the "legislator," but by others the "interpreter" of the sacred laws (*Vita Mos* I.1–2), which reflects Philo's view that they come from God. God himself spoke the Ten Commandments (*Spec Leg* II.189). The highest of God's powers is the legislative (*Sacr* 131). The Jews did not regard their "customs" as of human origin.

These two points, when combined, give the peculiar characteristic of Jewish law: all of life is to be governed by God's will. Scholars sometimes attribute this view to the Pharisees (Rhoads 1976: 34), but it springs from Scripture itself and was common to all forms of Judaism.

It was indicated above that "law" might go beyond "Scripture," and it has been customary to speak of the development of "oral law" in postbiblical Judaism. If all of life was to be lived in accordance with the will of God, the "will of God" had to be more comprehensive than what is found in Scripture. We shall understand better how the contents of the law could grow when we take up Interpretation (see E.).

D. Basic Distinctions

The Jewish law may be categorized in two ways: (1) Laws govern either (a) relations between humans and God or (b) relations among humans (with implications for the human-divine relationship). (2) Transgressions of the law are either (a) involuntary or (b) intentional. These categories are quite clear in Lev 5:21—Eng5:15; 6:1. In these lines are seen the distinctions between unwitting and intentional transgression, and between sins against God (the holy things of the Lord) and those against both God and "the neighbor" (against the Lord by deceiving the neighbor).

Philo, with his eye on this passage, distinguished the categories in the same way and noted that they determined how atonement is made for transgression (*Spec Leg* I 234, based on Lev 15:14–19; 1.235–38, based on Lev 16:1–7). Atonement brings forgiveness (*Spec Leg* I 235; Lev 6:7), but in the case of transgression against a fellow human redress of the wrong was to precede the sacrifice (Philo ibid.; cf. Matt 5:23–24), a point not directly made in Leviticus. These passages do not cover all cases, but they exemplify the principles of categorizing the law and determining appropriate atonements. Knowledge of these basic categories seems to have been common in Judaism.

Modern scholars often try to divide the law into "ritual" and "ethical" categories, but this is an anachronistic and usually misleading division. (This was pointed out many years ago by Lake [1932: 207], but not often heeded.) In such analyses the "moral law" is often considered to be embodied in the Ten Commandments, but this puts the commandments governing use of the Lord's name, the Sabbath, and graven images into the "ethical" division, where they clearly do not belong. Similarly some say that the "Noachian" commandments—those thought to have been given to all the descendants of Noah, and therefore to be required of gentiles (see G. below)—are "moral" commandments. (See e.g., Simon 1986: 163–66.) But these, too, include idolatry and blasphemy. People often think of the early Church as accepting the "ethical" commandments; again this is seen to be the wrong categorization. According to Acts, the commandments which the Jerusalem church wished to impose on gentile converts included the prohibitions against idolatry and eating meat with the blood in it—neither one "moral" (Acts 15:20). The major laws which govern relations between humans and God—such as the prohibition of idolatry—were maintained in all branches of Judaism, and many were inherited by Christianity. The commandments "between human and human" have of course been deeply influential.

The anachronism of the moral/ritual distinction is seen in another way: "ritual" commandments not infrequently have an "ethical" aspect. Thus tithing (a "ritual" requirement) included charity (a "moral" duty), and the laws of the Sabbath provided rest for laborers and even for animals (Deut 5:14). There are certain overlaps between the ancient category of "commandments which govern relations with God" and the modern one of "ritual law," and between the ancient "commandments which govern relations with fellow humans" and the modern "ethical law," but no more than overlaps. First-century Jews did not see a difference between the commandment not to eat holy food when ritually impure and the requirement to pay part of the tithes to the poor—except for the difference in penalty. The same God gave both commandments, and loyalty to him required obedience of them equally.

Modern critics of ancient Judaism often think that it was overly preoccupied with "ritual" commandments. Besides the fact that this is an error in categorization, it is anachronistic in an even more profound way. In the context of the ancient world, what distinguished Judaism was that it included not only commandments between God and humans, but also commandments between human and human. It refused to separate religious cult from everyday behavior, thus drawing the latter into the realm of the former.

E. Interpretation

It belongs to the nature of law that it must be interpreted and applied. If, as in the case of Judaism, all of life is to be lived in accordance with God's will, the demands on interpretation are heavy. First-century

Judaism did not call on individuals to decide in each encounter what it meant to love the Lord and the neighbor. Rather, certain ways of observing commandments grew over the years and became part of the law itself. Most observant Jews (and it will be argued below that most Jews were observant) were probably not conscious of living by interpretations of laws, but understood the law in light of the interpretation.

The biblical laws are by no means specific enough to cover all cases, and custom filled in the gaps. Further, biblical laws on the same topic sometimes disagree, and interpretations were required. Understanding biblical interpretation is fundamental to understanding Judaism, especially since in the NT period the various groups, parties, and sects presented their differences as being based on interpretation of Scripture (whatever the socio-politico-economic factors which are now thought to explain the groupings). To grapple with interpretation and tradition, and when these were included in "law" and not, and to understand how groups disagreed on interpretation, we may best take some examples.

1. Examples of Interpretation. a. Tithing. There are basically two different tithing laws in the Bible. Deuteronomy requires that one-tenth of agricultural crops and the firstlings of the flock and herd be taken to Jerusalem and eaten there, or converted into money which is spent in Jerusalem. Every third year, however (that is, the third and sixth years of each seven-year cycle), the tithe was not consumed in Jerusalem, but was given to the Levites and the poor (Deut 14:22–29; cf. 12:17–19). The second set of tithing laws, found in Numbers and Nehemiah, requires that one-tenth of crops and herds (counting adult animals as well as firstlings) be given to the Levites, who in turn tithe to the priests (Num 18:21–24; Neh 10:37–38). It is possible that Lev 27:30–33 preserves a third tithing law: one-tenth "to the Lord" could mean "directly to the priests," without making provision for the Levites. It is simplest, however, to read Leviticus in light of Numbers.

The 1st-century Jews, taking the entire Scripture to be the revealed will of God, naturally had to obey each set of laws. They were conflated in at least two different ways. Josephus (presumably reflecting the views of the priestly aristocracy) said that every year one-tenth was given to the Levites and one-tenth consumed in Jerusalem. In the third and sixth years there was a third tithe, to be given to the poor (*Ant* 4.4.3 §68; 4.8.8, 22 §205, 240; for three tithes cf. Tob 1:7–8). Rabbinic literature (possibly representing Pharisaic interpretation) requires only two tithes each year: the Deuteronomic, which is either "second tithe" (spent in Jerusalem in years one, two, four, and five) or the "poor tithe" (years three and six), and the Levitical, which is given each year except the seventh to the Levites (summarized in Danby 1933: 66 n. 9). If one assumes that all interpreters accepted that tithing laws did not apply in the sabbatical (seventh) year, these two opinions yield the following results: in each seven-year cycle there were, according to Josephus, fourteen tithes; according to the rabbis, twelve.

If these different opinions existed at the same time, which seems to have been the case, people must have been conscious of the difference. Presumably both the aristocratic priests and the Pharisees (assuming that rabbinic interpretation represents their views) saw their position as "interpretation" of the written law, the simple application of what it says, not as a supplement or "tradition" alongside it.

b. Sabbath. Biblical laws on the Sabbath are not numerous. Exodus 16 prohibits gathering food and cooking; the fourth commandment forbids "work" (Exod 20:8–11; Deut 5:12–15); Exod 34:21 explicitly includes plowing time and harvest as periods when the Sabbath must be observed, thus ruling out the appeal to "exceptional circumstances" as justifying nonobservance; Exod 35:3 prohibits making a fire; Num 15:32–36 shows that gathering firewood was forbidden and specifies the punishment for transgression as stoning; Num 28:9 *requires* sabbath offerings; Neh 10:31 forbids buying goods even from non-Jews; Neh 13:15–22 prohibits carrying burdens through the gates of Jerusalem and specifies several forms of agricultural labor as being forbidden; Jer 17:19–27 forbids bearing a burden through the gates of Jerusalem and even carrying it out of one's house.

Observance of the sabbath law depended on agreement with regard to the definition of "work." Even in the ancient world the conception of work varied a bit from time to time and group to group. The Bible does not explicitly include fighting as an activity forbidden on the Sabbath, and in the stories of warfare in the Bible the Sabbath does not figure; but sometime during the Persian or the Hellenistic period it came to

be understood that fighting is "work." Warfare is included in a list of activities forbidden on the Sabbath in *Jubilees* (mid-2d century B.C.E.), but without the special stress that would indicate that the point was debated (*Jub.* 50:12). Some years earlier, at the beginning of the struggle which resulted in independence from Seleucid rule, a group of pietists was attacked on the Sabbath and destroyed because they would not fight. After this it was decided to fight in self-defense (1 Macc 2:29–42), and this was interpreted to mean only if directly attacked. The law as thus interpreted (fighting is work) and amended (fighting is permitted in case of direct attack) seems to have been accepted by all, not just the specially pious. This rule was observed in 63 B.C.E. by the followers of Aristobulus II, who was a friend of the "eminent" and an enemy of the Pharisees (*JW* 1.7.3 §145–47; cf. Dio Cass. *Hist.* 37.16.2–4; on party allegiance, see *Ant* 13.16.2 §411). In the parallel account in *Ant* 14.4.2–3 Josephus states that "the law" permits defense on the Sabbath only in the case of direct attack (§63). When, at the beginning of the war against Rome in C.E. 66, the Jews attacked on the Sabbath, Josephus, at least in retrospect, regarded them as forsaking religion (*eusebeia*; *JW* 2.19.2 §518). That Jewish refusal to fight on the Sabbath counted as an ancestral law is proved by the fact that Rome respected it, and Jews were excused from military service in the empire (e.g. *Ant* 14.10.12 §225–27).

The basic rule not to fight was apparently an unconscious interpretation of the sabbath law. The decision to fight if directly attacked was not, to our knowledge, justified by biblical interpretation, but was a rule of practice adopted by common agreement. It is noteworthy that Josephus calls them both "law": Custom and tradition, both unconscious and conscious, could become law. We may assume that in the 1st century there were many traditional practices which were accepted by everyone as being part of sabbath law.

2. Interpretation of the Law in Common Judaism. It is not possible to give a full list of interpreted laws as they were accepted by Jews generally, nor would it be feasible even if it were possible. We may, however, get some idea of the contents of law practiced by most Jews and the way in which it was interpreted if we consider (a) developments of the Ten Commandments, (b) the laws for which the Jews were famous (or infamous), and (c) commandments which are said to be in the law but which in fact are not (these were probably practiced quite widely). Some items are in more than one of the following categories.

a. Developments of the Ten Commandments. (1) The prohibition of idolatry in the first two commandments was interpreted to mean that Jews could participate in the common Greco-Roman culture to only a limited degree. Sacrifices were offered on *behalf* of the emperor, but the possible interpretation that they were offered to him was carefully avoided, even by Herod (Smallwood 1981: 83, 148). Jews were exempt from the requirement of participating in pagan rites or in the cult of the emperor (Smallwood 1981: 147, 345). Jews did not, however (with rare exceptions), attack pagan temples or idols, doubtless for practical reasons; but this restraint was justified exegetically by the Gk translation of Exod 22:28—Gk 22:27, "do not revile gods" (Philo, *Vita Mos* II.26 §205; *Spec Leg* I 7 §53; Josephus, *Ant* 4.8.10 §207; *AgAp* 2.33 §237).

Worship of the one God, which is assumed in the first two commandments, was meticulously kept. The sanctity of the Temple was observed by all until the final stages of the war against Rome (for example, Josephus was safe from Menahem when he took refuge in the priests' court: *Life* 5 §20–21); the Jews were allowed by Rome to execute gentiles who went beyond the Court of the Gentiles (*JW* 6.2.4 §126; pietist groups complained that the priesthood did not maintain strict enough standards (*Pss. Sol*. 8:11–12; CD 4. 18; 5.6–7); the ordinary people sometimes attacked or accused unworthy priests (*Ant* 13.13.5 §372; *JW* 2.1.2 §7); throngs came to the Temple, both from Palestine and abroad, especially at the pilgrimage festivals (e.g. *JW* 6.9.4 §423–28); money came from all over the known world into its coffers (see F.). In the Diaspora, besides sending money and gifts to the Temple and occasionally making a pilgrimage to Jerusalem, Jews came together locally for worship and study. The rights to assemble and to have a "place of their own"—allowed to few groups—seem to have been the most prized privileges in the Jewish Diaspora. In the series of decrees listed in *Ant* 14, these rights are mentioned most often (*Ant* 14.10.8 §213–16; 14.10.12 §227; 14.10.16 §234; 14.10.17 §235; 14.10.20 §242; 14.10.21 §245; 14.10.23 §257–58; 14.10.24 §260–61; on these, see F. below).

(2) Sexual Laws were elaborated, especially in the Diaspora, and Jewish condemnation of homosexual practice became more pronounced than the prohibition of adultery (*Let. Arist.* 152–53; *Spec Leg* III.37–42 and frequently in Philo *AgAp* 2.24 §199; *Sib. Or.* 2.73; 3.596; 5.430; probably Wis 14:26; *Ps-Phoc.* 3; Rom 1:26–27; 1 Cor 6:9.) Philo also condemned prostitution, claiming that the law requires the death penalty (*Jos* 43; cf. *Spec Leg* III.51; *Hypoth* 7.1). Both Philo and Josephus said that sex is only for procreation (*Jos* 43; *AgAp* 2.24 §199). Various forms of sexual transgression are condemned in Wis 14:24,26; *Sib. Or.* 5.430; Paul's vice lists; and many other places.

(3) "You shall not murder" was applied against the Greek practice of exposing infants (e.g. *Sib. Or.* 3.765). (In the pagan view it was not murder.)

(4) "You shall not steal" and other laws forbidding dishonesty were encapsulated in the epigram, "do not pick up what you do not lay down" (*AgAp* 2.27 §208; *Hypoth* 7:6, immediately after the epigrammatic version of Lev 19:18).

(5) The sabbath law, as we saw above, was further developed.

b. Laws for which Jews were Famous. Pagan comments reveal that in the Greco-Roman world Jews were famous (or infamous) for the laws governing circumcision, Sabbath, food, and the worship of a single, invisible God. The Jewish desire to maintain their own worship was recognized throughout the empire [E.2.a. (1)]. Jews were by no means alone in practicing circumcision, and all cultures have calendrical rites. Nevertheless, all four points brought criticism from pagans, which sometimes was thoughtful but which usually took the form of ridicule. (For Sabbath, food, and circumcision see the passages conveniently collected in Whittaker 1984: 63–85; see further the index in Stern 1976–84; for ridicule of the worship of an invisible God, see *AgAp* 2.7 §80–81.)

c. Laws Attributed to Moses which are not in the Pentateuch. (1) Fighting is forbidden on the Sabbath, except in case of direct attack (E.1.b. above).

(2) Prayer twice each day. The Bible requires that the commandments be recalled "when you lie down and when you rise" (Deut 6:7), and many people fulfilled this obligation by saying the passage in which it occurs (the *Shema',* Deut 6:4–9 or only vv 4–5). Around this requirement grew the practice of praying twice a day as well, and Josephus regards this as part of the Mosaic law (*Ant* 4.8.13 §212–13). That Jews prayed every morning is implied by *Sib. Or.* 3:591–92. The rabbis expected prayer three times a day (*Ber.* 4:1), but in Qumran twice a day was the rule (1QS 9.26–10.1). The practice seems to have been widespread. The main thrust was probably thanksgiving (so Josephus).

(3) Attendance at synagogue and study of the Scripture on the Sabbath. This is regarded as part of the Mosaic law by both Philo (*Op* 128) and Josephus (*AgAp* 2.17 §175), and it is included in the Ten Commandments by Pseudo-Philo (*L.A.B.* 11:8).

(4) Education of children. Josephus attributes to Moses the requirement that children be taught to read and to learn the "laws and the deeds of their forefathers" (*AgAp* 2.25 §204).

(5) Purity laws. Jews throughout the world seem to have practiced extrabiblical purity laws, though not necessarily the same ones. In Palestine the use of standardized immersion pools was common (though more than one standard is attested) in order to facilitate the washings which are prescribed in the Bible. The pools themselves, however, are not biblical. In the Diaspora we learn of hand washing (*Let. Arist.* 305–6), and the construction of synagogues near natural water sources points to ablutions of some sort. The practice of building houses of prayer near the sea is said to be the Jews' "ancestral custom" in the decree of Halicarnassus (*Ant* 14.10.23 §258; cf. Acts 16:13). Philo considered it to be part of the Mosaic law that husband and wife should wash after intercourse before touching anything else (*Spec Leg* III.63). In *Sib. Or.* 3:592–93 there is a reference to morning ablutions. The extrabiblical purifications in the Diaspora may have arisen to compensate for the loss of those which the Bible requires for entering the Temple.

(6) The prohibition of abortion is attributed to Moses by Josephus (*AgAp* 2.24 §199–203).

(7) Burial rites were considered to be part of the law (*Hypoth* 7.7; *AgAp* 2.26 §205; cf. Tob 1:17).

(8) Animals were said to be protected by the law, especially if they take refuge in one's house (*Hypoth* 7.7,9; *AgAp* 2.29 §213).

(9) The binding force of vows was expanded by Philo (*Hypoth* 7.3–4; cf. the elaboration of oaths by the Pharisees according to Matt 23:16–22).

This is not a complete list of new "Mosaic" laws, but it indicates the way in which the law could grow to cover aspects of life not explicitly mentioned in the Bible. The points which were probably commonly accepted were the prohibition of fighting of the Sabbath; praying twice each day; attending synagogue on the Sabbath; teaching children the law (nos. 1–4). Most Jews probably extended the purity laws (5) in one or more ways. The other cases may not have been common, but they show the way in which the law naturally developed.

In some cases we can imagine the process of interpretation of the biblical law. Philo's new rule that nothing can be touched after intercourse may be compared to the biblical commandment not to touch holy things or enter the temple after intercourse and before purification (combining Lev 15:16–18,31; 22:3). The hallowing of other parts of life, especially in the Diaspora, is a natural development. Hand washing might be a partial imitation of the priesthood (cf. Exod 30:18–21), but more likely it is an application of Ps 24:4 ("clean hands and a pure heart"; cf. Deut 21:6 and the explanation in *Let. Arist* 306). Hand washing in the Diaspora was probably influenced by pagan practice. (For ablutions in Greek religion see Ginouvès 1962: 309–10.) The instruction of children is required by Deut 6:7, and in the 1st century it was probably a self-evident interpretation to think that this included teaching them to read. Conceivably studying the law every seven days is derived from Deut 31:10, which requires that it be read in public every seven years. That prayer should accompany the recitation of the *Shemaʿ* may have been self-evident. Whether or not these suggestions adequately explain the development of various laws, the principle in any case is clear: the law was lived, and this meant that it was interpreted, either unconsciously or self-consciously, and applied to cases which are not explicitly mentioned in it.

3. Pharisaic Interpretation and Traditions. a. Pharisaic Interpretation of the Law. Here we shall be concerned to illustrate, not canvass completely, Pharisaic interpretation of the law. We may take sabbath law as the main example. Pharisaic sabbath concerns can be at least partially reconstructed by studying the passages attributed to named Pharisees or to the Houses (Schools) of Hillel and Shammai. (The Houses discussions are for the most part one generation after the destruction of the temple in C.E. 70, but it is presumed that they maintain pre-70 Pharisaic traditions. The study of Pharisaic law is made possible by Neusner 1971 as modified by Sanders 1989.) The bulk of the surviving material consists of unresolved debates, so that often one cannot say what Pharisaic "law" was. An example is the question of giving work to gentiles which cannot be finished before the Sabbath begins, a practice which was prohibited by the House of Shammai but permitted by the House of Hillel (*Šabb.* 1:8). The topic may be regarded as a question of "interpretation": Does it matter who does the work? There were also debates between the houses over whether or not work which had been begun before the Sabbath could proceed if no further human effort was required: Could a bundle of flax finish drying in the warm oven (*Šabb.* 1:6)? This debate is part of the general interpretive question, what counts as work?

b. Pharisaic Traditions and the Question of Oral Law. All Pharisees, however, seem to have agreed on a very interesting development of sabbath rules. It is a conception indicated by the word *ʿêrûb*, "the fusion of sabbath limits" (Danby). By the erection of cross-beams, for example, all the houses in a courtyard or along an alley could be "fused" into one house, and then vessels containing food could be carried from house to house, thus permitting communal dining on the Sabbath (despite Jer 17:19–27). Sadducees did not accept such traditions, and one who lived in the same group of houses could prevent this custom by taking possession of the walkway first (*ʿErub.* 6:1).

The Pharisees did not pretend that the Bible allows the "fusion of sabbath limits," and this development is a "tradition" (Gk *paradosis*, Heb *qbl*). One of the chief characteristics of Pharisaism was the development of "traditions" which altered or supplemented the written law: "The Pharisees had handed down [*paredosan*] certain regulations [*nomima*] from [their] forebears [*ek paterōn diadochēs*], which are not recorded in the laws of Moses, and which on this account are rejected by the Sadducean group" (*Ant* 13.10.6 §297); "regulations [*nomina*] introduced by the Pharisees in accordance with the tradition

[*paradosis*] of their fathers" (*Ant* 13.16.2 §408; see also Mark 7:3). The characteristic of "traditions" is that they are understood by neither proponents nor opponents to be interpretations of the Bible.

Did the Pharisees consider their "traditions" to be law? Until very recently the unanimous view has been that they did—that Pharisees held that they and their predecessors had inherited from the holy men of Israel, all the way back to Moses, traditions which were of equal standing with the written law. This view has been based on two foundations: In *ʾAbot* 1:1–2:8 there is a chain of transmission of *tôrâ* which runs from Moses to Hillel and Shammai; and which then branches, being continued both by Hillel's physical descendants and by his disciple Johanan b. Zakkai and his students. *Tôrâ* in this passage has been interpreted as including the Pharisaic traditions, which are then seen to be called "law." The second important piece of evidence is the statement which is ascribed to Hillel in *Šabb.* 31a (= *ARNA 15*) that there are two *tôrôt,* one the oral law (*tôrâ šebeʿal peh*).

Before 1985 it could already be seen that this view is subject to challenge. Davies (*IDB* 3: 91) recognized that the term "oral law" is neither early nor widespread, and his discussion shows that he did not take the single ascription to Hillel to prove that Pharisees accepted a "two-fold law," written and oral. Other scholars also noted that the term for nonbiblical rules, according to Josephus, the NT, and early rabbinic literature, was not "oral law" but "tradition." Further, Rivkin (1984: 86–87) maintained that Pharisees held only other Pharisees responsible for observing their special rules. Observing them made one a Pharisee, but to be an obedient Jew one need only observe biblical law. Rivkin nevertheless used the term "two-fold law" to describe the Pharisaic legal corpus (Rivkin 1978).

Jacob Neusner, however, has argued that the entire theory of an oral law, coeval with the written law and equal in authority, is a late creation. The story about Hillel in *Šabb.* 31a, in which the term "oral law" occurs, is a retrojection from the time of the Babylonian Talmud (1985: 144–45). In the earliest rabbinic document, the Mishnah, no passage "demands the meaning 'not-written-down-Torah,' " and the implication of the regular distinction between "words of Torah" and "teachings of scribes" "precludes the conception of two Torahs of *equal* standing and authority, both deriving from God's revelation to Moses at Mount Sinai" (Neusner 1985: 26). The matter is actually not quite that clear, since Neusner considers *ʾAbot* not to be part of the Mishnah, but rather to date entirely from the time of the latest names in it, which puts it fifty years later than the Mishnah (1985: 6, 32). This principle, however, would take several other tractates out of the Mishnah. It is better to follow the usual practice of assuming that *ʾAbot* grew and that it contains late additions, rather than that it was written as a kind of pseudepigraphical work in the middle of the 3d century. When it is returned to the Mishnah, the matter changes a bit. The *tôrâ* in *ʾAbot* 1:1, which is said to have been handed down from generation to generation, cannot be the written law, since it is never maintained that the Pharisees and rabbis had a monopoly on that. It is, thus, nonwritten. But does it include the peculiarly Pharisaic *traditions* or only their *interpretations?* There is no answer within the tractate, which contains maxims but no legal discussions.

Neusner's challenge to the theory of "oral law" which goes back to Moses and was equal to the written law must be taken seriously, though when he excluded *ʾAbot* he made the case too easy. His second point is more persuasive: the Mishnah distinguishes between the words of the scribes and those of *tôrâ* in such a way as to "preclude" the view that the words of the scribes were *tôrâ.* Neusner's evidence (1985: 24–25) is not, however, complete. He intended to consider passages in which *tôrâ* and "words of the scribes" appear together, but some were omitted, and other passages on the words of the scribes were also relevant. Second, the meaning of the word *hălākâ* must be taken into account. Third, and most important of all, it is necessary to consider the passages which trace a rule to Moses.

A full study of the occurrences in the Mishnah and Tosefta of the three terms "words of the scribes," *hălākâ* and "Moses on Mount Sinai" is given in Sanders 1989. The results, which confirm Neusner's view, are these: (1) The words of the scribes are lower in importance than the words of the Bible (*tôrâ*), and transgression of scribal rulings is not considered to be real transgression. Thus, for example, according to *Para* 11:4–5 those who are impure only according to the words of the scribes may enter the temple. (2) The term *hălākâ* is often equivalent to "words of the scribes." In *ʿOr.* 3:9 *hălākâ* seems to be one grade closer to *tôrâ* than are the words of the scribes, but in other instances the meaning is the same:

traditional rulings which do not need to be proved by argument in order to be accepted within the group (the rabbis and possibly the Pharisees before them). They are, however, lower in status than the *tôrâ* (e.g. *Ned.* 4:3). (3) In several passages *hălākâ* is used together with the phrase "received [as a tradition]" (usually *meqūbbāl ʾănî*). In these cases the traditional *hălākâ* is regarded as correct (e.g. *Yebam.* 8:3), but it is not equated with *tôrâ.* (4) *Hălākâ* is *tôrâ* only when it is interpretation of *miqrāʾ* ("what is written) or of *tôrâ.* Thus in *Ḥag.* 1:8 *hălākôt* are "the essentials of the law" only when they are based on scriptural law. (5) Rulings which are "received as tradition," even when not called *hălākâ,* are often authoritative (e.g. *Zebaḥ.* 1:3 = *Yad.* 4:2). (6) Tradition (by whatever name) *may be rejected.* This is the case if it is the opinion of an authority who was outvoted at the time (*ʿEd.* 1:6) or if there is a conflicting tradition (*Giṭ.* 6:7). A rabbi might also doubt that the report is true (*Ohol.* 16:1). Even after hearing a tradition the rabbis may debate the issue anyway (*Yebam.* 16:7). (7) Tradition may only supplement exegesis (*t. Pisha* 4:14 Lieberman; Zuckermandel 4:2), or a proof by exegesis may be appended (*t. Sukk.* 3:1). (8) A special subgroup of traditional *hălākôt* consists of rulings which go back to Moses on Mt. Sinai. These last are never said to be "oral law": they are rather *hălākôt,* and presumably like other *hălākôt* which are not *interpretations* of the written law, they are inferior to the *tôrâ.* (9) None of the major Pharisaic traditions (e.g. *ʿêrûb*) is proved by any of the terms included in this survey. (10) In every case of a rule which was "received as tradition," it was known to only one rabbi, and therefore it was not part of regular rabbinic instruction. This counts very strongly against the view that these terms indicate Mosaic law. We may consider two examples: One of the *hălākôt* which is said to be from Moses on Sinai was known only to R. Eliezer, and it is cited as a postscript after the story of a lengthy debate conducted in ignorance of it (*Yad.* 4:3 = *t. Yad.* 2:15–16). In another case R. Akiba hears a tradition, said to go back to Gamaliel I, when he is in Babylonia. On his return to Israel he asks the Pharisee's grandson, Gamaliel II, about it. The latter then remembers that his grandfather had made the ruling in question. There follows a debate on the topic which is not influenced by the tradition (*Yebam.* 16:7).

Since a study of the terminology for traditional rules in the Mishnah and Tosefta supports Neusner's study of the word *tôrâ* in the same two collections, we may conclude that the rabbis of the Mishnaic period did not hold the dogma of oral law which has been attributed to them. Presumably the same is true of the pre-70 Pharisees, on the assumption that the rabbis of the Mishnah and Tosefta would not have given their "traditions" a lower status than they had enjoyed among the pre-70 Pharisees.

We have not proved that the Pharisees did not observe common and widely known extrabiblical traditions. On the contrary, we can be sure that they did. "The fusion of sabbath limits" is the best example, but probably hand washing should be included here as well. This extrabiblical practice is probably attested in the Diaspora earlier than in Palestine (*Let. Arist.* 305–6; the date of this text is not certain). The Pharisees, however, do seem to have practiced it (*Ber.* 8:2). What is striking is that these traditions are not said to go back to Moses on Sinai.

It is equally important to note that rabbinic literature, which discusses them extensively, posits neither penalty nor atonement for transgression. We noted that *Para* 11:4–5 explicitly states that a person who is impure according to "the words of the scribes" may nevertheless enter the Temple without being considered to have profaned it. The Pharisees, if judged by early rabbinic literature, did not equate their extrabiblical traditions with the Mosaic law.

If Pharisees consciously kept their peculiar traditions separate from the law, they are to be seen, despite their willingness to introduce innovations, as deeply conservative. They intended not to change the biblical law. They regarded their *interpretations* of the law as correct, and it may be assumed that they tried to have them enforced in society as a whole. But their traditions were their own: they made them Pharisees. In this context it is significant that Josephus said of the Pharisees both that they were regarded as the most "precise" (*akribēs*) interpreters (*JW* 1.5.2 §110; 2.8.14 §162; *Life* 38 §191; cf. *Ant* 18.1.15 §15, "exegesis") and that they followed "traditions" (*paradosis, nomima*) which the Sadducees rejected because they are not part of the written law (*Ant* 13.10.6 §296–97; 13.16.2 §408; 18.1.3 §12). These two aspects, it appears, should be kept distinct.

This view of Pharisaic tradition places them in the mainstream of thought in the Hellenistic period, which venerated tradition but did not consider it the equivalent of law. In a passage which may be indebted to Aristotle (so Colson 1939: 8, 435), Philo distinguishes between "customs" (*ethē*), which are "unwritten laws," and the written laws. The one who obeys only the latter "acts under the admonition of restraint and the fear of punishment," while the one who obeys the customs displays voluntary virtue (*Spec Leg* 148–50; cf. *Gaium* 115). The Pharisees intentionally went beyond the letter of the law, and they seem to have considered themselves to be doing so voluntarily, rather than because they "knew" more laws than did others and thought that obedience to these further laws was strictly required.

4. Essene Interpretation. The Essenes had numerous nonbiblical sabbath laws (staying with the same main example). According to Josephus they would not light a fire, remove a vessel "or even go to stool" on the Sabbath (*JW* 2.8.9 §147). The *Damascus Document* contains a long list of sabbath laws: the sectarian Sabbath began early, "when the sun's orb is distant by its own fullness from the gate" behind which it would set. Not only was the conduct of business forbidden, but so was speaking about work. One should not walk more than about 500 yards from home, edible fruit and other food could not be picked up, water could not be drawn or carried, perfume (or medicine) could not be worn—and so on (CD 10:14–11:18). Although most of the Sabbath regulations are not justified exegetically, one of them is: "Let no one offer on the altar on the Sabbath [any offering] except the burnt-offering of the Sabbath; for thus it is written: 'apart from your sabbath-offerings' " (CD 11.17–18, trans. Rabin 1958). The last phrase is taken from Lev 23:38. The context is ignored, as is common in ancient exegesis. According to Leviticus, on festival days special offerings were presented "besides" or "apart from"—that is, in addition to—the ordinary offerings of the day. According to CD, on the Sabbath one may bring no offerings "apart from sabbath offerings" rather than "in addition to them," thus reversing the plain meaning of the text. (Sabbath offerings had to be brought because of Num 23:9.)

The justification of the sabbath rules which are not supported exegetically is apparently given in CD 6.18–19: those who enter the covenant are "to keep the Sabbath day according to its exact rules and the appointed days and the fast day according to the finding of the members of the new covenant in the land of Damascus." "New covenant" here may be governed only by the appointed (festival) days and the fast (the Day of Atonement), but in principle the sect was willing to claim that its covenant was at least partially "new" and therefore different. This new covenant contained "hidden things" not previously known (CD 3:14). Similarly in one of the scrolls which represents the monastic community at Qumran a new member is required to take an oath to "return" to the "law of Moses" according to "all that was revealed of it to the sons of Zadok" (1QS 5:8–9). In this formulation the "law of Moses" includes the traditional Scriptures but also new revelations to the Zadokite priests, and the door is left open for there to be more: the partitive "of it" (*mimmennâ*) implies that more yet may be revealed.

The Temple Scroll (11QTemple) takes this position to its logical conclusion: it attributes a revision of substantial parts of the Hebrew Bible directly to God by use of the first person, and new laws are created. Thus, for example, a verse in Nehemiah is used in developing laws for a new festival, called by Yadin (1985: 102) the "Feast of the Wood Offering."

Thus both of the known branches of the Essenes (represented by CD and 1QS respectively) had it both ways: they accepted "the law of Moses" as their guide; they introduced new laws and claimed that they were new revelations from the same source. Their handling of and claims for the new sectarian rules contrast sharply with the Pharisees' position on their peculiar traditions.

5. Authoritative Interpreters. Once it is realized that law must be interpreted, the question of who the interpreters are becomes vital. Traditionally in Judaism the priests were the teachers and interpreters of the law, assisted by the Levites (Deut 31:9; Neh 8:3–9). During the Persian and Hellenistic periods, local government was headed by the high priest. According to Sir 45:17 the priests were the nations' teachers; and the Hasmoneans, originally ordinary priests, assumed the high priesthood and its authority before they took the title "king." In Herod's day no one else had much authority, but during the periods of direct Roman rule of Judaea (C.E. 6–41; 44–66) the prefects/procurators lived in Caesarea, and the chief priests

were relied on to provide local government in Jerusalem (Sanders 1985: 194–98; 270; 312–17; cf. Goodman 1987).

Modern scholars have often denied that the priests still served as teachers and authoritative interpreters of the law in the NT period, proposing that the Pharisees had assumed that role. It is sometimes even said that the priests no longer cared to interpret the law, and one scholar has pushed this back to the time of Ezra, stating that he was a scribe and not a priest (despite Ezra 7:1–5; Neh 8:9) (Maccoby 1980: 61–62; Rajak 1983: 19). Appeal is made to Josephus' statement that the Sadducees (the dominant party among the priestly aristocracy) could accomplish nothing, since the masses preferred the Pharisees (*Ant* 18.1.4 §17). In other passages, however, Josephus states that the priests were the recognized authorities (especially *AgAp* 2.21 §184–89; *Ant* 14.3.2 §41; 20.10.5 §251). The second view is supported by the individual narratives in Josephus, the Gospels, and Acts of trials and of times of crisis, when the priests demonstrated their influence both with the crowds and with the Romans.

Even in the Diaspora, priests interpreted the law. In discussing the synagogue service Philo said that either a priest or an elder read and expounded the law (*Hypoth* 7.13), and other evidence indicates that priests retained their identity and influence in the Diaspora (*AgAp* 1.7 §32; Kraabel 1981: 84). We may conclude that in general the priests fulfilled their traditional office of interpreting the law (see also Neusner 1971: III, 230, 296).

There were also, however, lay teachers who often had considerable influence, as the story of Judas and Matthias (probably Pharisees) makes clear (*JW* 1.23.2–4 §648–55; 2.1.2–3 §4–13). The Pharisees, the Essenes and possibly other pietist groups had their own recognized authorities. Many Pharisaic regulations had to do with domestic arrangements with regard to work on the Sabbath and other holy days, avoiding corpse impurity, and other matters. There was also debate about public behavior which was in the control of the individual, such as whether or not to lay one's hands on the head of a sacrificial animal offered on a "festival day," when most forms of work were forbidden (*Ḥag.* 2:2–3). In only one instance is a Pharisee assigned a law which determined public policy: the *prosbûl*, a legal device for ensuring the collection of a loan during the sabbatical year, is attributed to Hillel (*Sipre Deut* 113; *Šeb.* 10:3–6). It is possible, however, that this regulation was not originated by him, since it is attested elsewhere (DJD 2 100–4 no. 18).

That Pharisees in particular were equipped, as were priests, with the education which allowed them to interpret the law is made clear by a story in Josephus. The council (*koinon*) in Jerusalem, at the behest of Simeon b. Gamaliel, decided to send a commission to investigate Josephus' conduct of the preparation for war in Galilee. The four commissioners were "of different classes of society but of equal standing in education," since those who were "of the lower ranks" *(dēmotikoi)* were Pharisees. The non-Pharisaic member was descended from high priests. The test was not knowledge of military tactics, but of the "laws" or "ancestral customs" (*Life* 39 §196–98).

Who followed which interpretation when there was a conflict is hard to know. We noted (E.1.a.) that the tithing laws were interpreted differently by the aristocratic priests and the Pharisees (if represented by the rabbis). Since priests and Levites collected the tithes in person (*Life* 12 §63; *t. Peah* 4:3), their interpretation doubtless often prevailed; but a group of farmers might band together and insist on separating tithes according to the more lenient Pharisaic interpretation.

The overall picture is this: (1) Many aspects of life were lived in accord with the law as commonly interpreted. (2) The priests retained their authority as interpreters of the law. During the Roman period the priestly aristocracy ruled Jerusalem, but priests were influential elsewhere. (3) Lay teachers of the law were also influential and at least sometimes had considerable followings. (4) Pietist groups could follow their own interpreters in many areas of life, especially private ones.

F. Knowledge and Observance of the Law

Josephus claimed that Jews differed from members of other societies because of their knowledge of and obedience to the law. "Should anyone of our nation be questioned about the laws, he would repeat them all more readily than his own name." He continued, "a transgressor is a rarity; evasion of punishment by excuses an impossibility" (*AgAp* 2.18 §178; cf. *Hypoth* 7.14). Both Philo (*Gaium* 192; *Hypoth* 6.9) and

Josephus held that Jews were willing to die for the law, and Josephus especially used this statement to prove general Jewish loyalty to the law (*AgAp* 2.32 §234; see 30–32 §218–35; *Ant* 15.7.8 §248). Despite this claim, some—such as Josephus himself—preferred life to dying for the law. Nevertheless the history of the period shows that his claim was largely true. Again and again Jews faced death rather than transgress the law or allow profanation of the city and the temple (e.g., the Roman standards at the time of Pilate and the statue which Gaius ordered to be placed in the temple, *Ant* 18.3.1 §55–59; 18.8.2–5 §261–83). Gaius's threat led Philo to predict a worldwide revolt (*Gaium* 213–15; cf. 159, 192–215), and it is very likely that this would have been the consequence had the act been carried out. The cry, "no master but God" (*Ant* 18.1.6 §23), never ceased to rally people who were willing to die for the law. Hadrian's proscription of circumcision was probably a major cause of the second revolt (*HJP²* 1: 536–40).

The willingness to fight and die if need be might be said to have been motivated only by "nationalism," not by attachment to the observance of the law. Apart from the difficulty of distinguishing national identity from loyalty to the Mosaic code, there is further evidence of Jewish observance. Most generally, it should be borne in mind that true atheism was virtually unknown in the ancient world. Jews believed that God had given his law and that he took note of obedience and transgression. Popular indifference is less likely in that climate than in the modern one.

In giving more specific evidence, we begin with the Diaspora. Jews were famous throughout the empire for the persistence with which they maintained their "ancestral customs." We saw (E.2.b.) that they were ridiculed for their dietary laws and for keeping the Sabbath. In mixed cities gentiles exploited Jewish devotion to the Sabbath by bringing legal charges on the day of rest and in other ways (*Ant* 16.2.4 §45). Jews throughout the world paid the temple tax. Here the proof is simple: after the first revolt against Rome, the tax was directed to other purposes, and it was reimposed after the second revolt (Smallwood 1981: 345, 371–78, 480, 515–16). Several Jewish authors testify to the wealth which poured into the temple from the half-shekel tax, firstfruits and free-will offerings (*Let. Arist.* 40; *Gaium* 156; *Spec Leg* I.77–78; *Ant* 16.6.7 §172; 18.9.1 §312–13, all referring to offerings from the Diaspora), and these again may not be doubted. More than one avaricious gentile saw the temple as a source of wealth: it was plundered by Antiochus Epiphanes IV (1 Macc 1:21–24; *Ant* 12.5.4 §248–50), by Crassus (*Ant* 14.7.1 §105), and by Sabinus, procurator of Syria ca. 4 B.C.E. (*JW* 2.3.3 §50). Although Pilate confiscated sacred money to build an aquaduct, he did not plunder the temple treasury (*JW* 2.9.4 §175).

We can get a good idea of the publicly obvious laws which Jews in the Diaspora wished to observe by analyzing the proclamations and letters quoted in *Ant* 14. After Julius Caesar defeated Pompey and decided to bestow favor on the Jews, cities throughout the empire passed decrees either restoring Jewish rights or establishing them. Permission to assemble, to have common meals, to have a place of their own, and especially to keep the Sabbath heads the list. This complex of rights is followed by freedom from military service (sometimes connected with sabbath observance), permission to observe their rites and to give money for them, the right to have their "native food" supplied in the market, and permission to decide their own affairs (*Ant* 14.10.1–26 §185–268, esp. 214–64). Several of these items would not be at issue in Palestine, and other important observances would not have been mentioned because they were not subject to public observation or control. It is noteworthy that circumcision is not in the list. At that point in the history of the empire cultural homogeneity was not considered, and so circumcision was not an issue. When, almost 200 years later, Hadrian forbade circumcision, the consequences were disastrous, as we noted above. Circumcision was, however, known to be a distinguishing mark of Jews (E.2.b.). Despite the limitations of the evidence which these decrees provide, the list of practices, and in fact the existence of the decrees, support the view of general Jewish observance of the main laws.

This evidence from the Diaspora can be applied, *mutatis mutandis*, to Palestine, but more evidence can be cited. We may focus on the "common people." Modern scholars frequently say that the vast majority of Jews "neither knew nor followed the law," or that they were ignorant of it or "lukewarm" about obeying it (Lohse 1976: 80; Davies 1984: 17; Rhoads 1976: 33; Neusner 1986: 54). The only evidence from ancient sources which can be cited is John 7:49: "This crowd, who do not know the law, are accursed," which is taken to prove either that the generality of Jews did not know or keep the law, or that

the Pharisees believed that they did not (the first view: Lohse 1976: 80; the second view: Jeremias 1969: 266). The same scholars would not take a single sentence in John as proving something about Jesus, and it can hardly be taken as satisfactory evidence for the common people of Palestine or the Pharisees. Against it stand all other sources.

No opinion could less-well reflect the overwhelming impression given by ancient literature, both Jewish and pagan, than the view that ordinary Jews neither knew nor observed the law. Even the Mishnah supports the opposite view. The rabbis, for example, thought that the ordinary people would protect items which belonged to a priest from contracting corpse impurity (*Ṭohar.* 8:2); they held them to be trustworthy about Second Tithe (*Ṭ. Yom* 4:5); and they regarded them as trustworthy with regard to the priests' portion of the Levitical tithe (*Dem.* 1:3). The rabbis, presumably following the Pharisees, had special tithing and purity laws which the common people did not keep, and these have given the wrong impression to scholars who have not distinguished the Pharisaic/rabbinic view of biblical law from their view of party "traditions." The learned and the pious did not think of the ordinary people as transgressing the major biblical laws.

Archaeology lends some support to the view that the laws were commonly observed. Numerous immersion pools have been found both in Jerusalem and elsewhere. With regard to the most difficult form of impurity to remove, corpse impurity, we may note Josephus's statements that Antipas had a hard time populating Tiberias, since it was built on a graveyard (*Ant* 18.2.3 §36–38). Philo regarded it as routine that pilgrims to the temple were kept outside for a week while they were purified of corpse impurity (*Spec Leg* I.261). During the brief reign of Archelaus there was a substantial riot which was caused, among other things, by his refusal to depose his high priest in favor of "a man of greater piety and purity" (*JW* 2.1.2 §7).

We may suppose that most Jews, both in Israel and in the Diaspora, observed most of the law. (For a slightly different but well-nuanced view of observance in Galilee, as judged by the 2d century rabbis, see Goodman 1983: 102–11.)

With regard to knowledge of the law, attendance at synagogue once a week was customary and was often regarded as a law, and so people heard the Bible read and expounded (E.2.c. (3); see further *Ant* 16.2.4 §43, "quoting" Nicolaus of Damascus; *Hypoth* 7.13; *Gaium* 156; *Hel. Syn. Pr.* 5:14–18). Synagogues (or houses of prayer) existed wherever there were Jews, and they fulfilled their function. Even without attending synagogues, Jews would learn the essentials of the religion and of the national way of life. The sabbath rest, the obligation of circumcision, the special dietary laws, and the reasons for the festivals would have been understood by all who lived within a Jewish community. Gentiles were widely acquainted with these practices (though sometimes imperfectly), and some found them attractive. The public importance of the feasts of pilgrimage (Passover, Booths, and Weeks), and of the fast day (the Day of Atonement), ensured that the relevant biblical passages were known.

Josephus, Philo, Pseudo-Aristeas, and others who waxed lyrical about Jewish knowledge and observance of the law of course engaged in idealization, and general education among the populace did not lead to universal obedience. But the fact of Jewish education in the biblical law and the rest of Scripture is undeniable, as is the overall loyalty of Jews throughout the world to the law.

Christian scholars have often supposed that Jewish law is extremely difficult: the laws were too numerous to know, let alone perform (in Bultmann's neat but ill-informed phrase, 1956: 66). This is not true. Josephus was correct when he wrote that the laws are "simple and familiar" (*AgAp* 2.22 §190). Rabbinic discussions of purity are involved and a bit difficult, but not many needed to follow them. In any case even these laws are easier than modern tax law—and they are less voluminous. Biblical law itself is simple and fairly small in volume. Most laws and semi-legal practices are obeyed by routine: waking, saying the morning prayers, blessing the bread, not killing or robbing anyone on the way to one's workplace, not cutting down one's enemy's fruit trees, listening quietly when lectured by one's parent—thus are fulfilled many laws each day.

G. Gentiles and the Jewish Law

Since the God who gave the law also created the universe, many Jews thought that his will should have been evident to all, at least to some degree. Philo equated the "law of nature" with the Jewish law (section A). This is an extreme position if one tries to harmonize Plato, Aristotle, and Moses. At another level of intellectual effort, however, many Jews would have agreed. Their God really had created the world, and his full will had been made known through Moses and the other prophets. In the new age there would be a common law for all (*Sib. Or.* 3.757–59). Gentiles had missed the revelation, but they should be able to discover some of it at least. This is put eloquently and gently in Wisdom 13 (Gentiles are "little to be blamed" for mistaking the creation for the creator, though they should have seen more clearly; praying to their own artifacts, however, is stupid and completely without excuse), with less nuance by Paul (Rom 1:18–23), and encouragingly by Philo (as did Abraham, others may study the world of sense perception and "come to find the likeness of the invisible world of mind," *Migr* 105; cf. 192–95 and often).

When it comes to particular laws, it is difficult to make good generalizations about Jewish expectations of gentiles. According to Pseudo-Philo, gentiles should know all the law and will be judged by it (*L.A.B.* 11:1–2). Few expected this much, and Noah was looked to as the source of laws which could be held to be universally binding. In *Jub.* 7:20 he is said to order his sons to do justice, "cover the shame of their flesh," bless the creator, honor father and mother, love the neighbor, and avoid sexual immorality and pollution. With great emphasis he warns that anyone who eats blood will be destroyed (7:28–33). This makes a total of seven commandments. In *t.* ʿ*Abod. Zar.* 8:4 it is said that Noah gave his sons seven commandments, and six are then named: the establishment of courts and five prohibitions—idolatry, cursing the Name, incest, murder, and robbery. There are additions to this list in 8:6,8, based on Deut 18:10–11. Subsequently, rabbis would try both to employ the number seven and to take account of the commandments which appear in the Bible before the giving of the law on Mt. Sinai. (For these see *EncJud* 12: 1189–90; *EncJud* 12: 1190–91.) The list of prohibitions in Acts 15:29 ignores muder, incest, and robbery (forbidden throughout the world) and names only prohibitions which are peculiar to Judaism, but which many Jews seem to have thought gentiles should observe (avoiding meat with blood in it and meat offered to idols).

H. Epitomes of the Law

Epitomizing—often called summarizing—the law probably springs not from the feeling that the laws are too many and too burdensome, but from the desire to grasp the heart of the matter. The legal books of the Bible offer their own epitomes of the major categories of the law—commandments which govern relations between humans and God and those which govern relations among humans. The Deuteronomist seems to have intended the *Shema*ʿ (Deut 6:4–9) to be a partial summary of the laws which had just been given (the Ten Commandments). "The Lord our God is one Lord" recalls the first two commandments. Similarly the author of Leviticus 19 grouped together several commandments which govern relations among humans and then concluded with summary statements: "you shall love your neighbor as yourself"; "you shall love [the stranger] as yourself" (Lev 19:18, 34). Jesus' statement that Deut 6:4–5 and Lev 19:18 are the greatest would not have surprised many (Mark 12:28–31). Philo singled out these same two commandments as giving the general burden of the law, though he put them in his own words: "God asks nothing … difficult, but only … just to love Him"; the law "stands preeminent in enjoining fellowship and humanity" (*Spec Leg* I.299,324). Similarly he noted that "two main heads" stand above all else in the law: "one of duty to God as shown by piety (*eusebeias*) and holiness (*hosiotētos*), one of duty to fellow humans as shown by humanity (*philanthrōpia*) and justice (*dikaiosynē*)" (*Spec Leg* II.63).

Many Jews observed the commandment in the *Shema*ʿ to place the laws on their doors and to wear them. According to Josephus, Jews posted on their doors and bound on their arms "the greatest of the benefits they have received from God" (*Ant* 4.8.13 §212–13). We cannot be sure what the passages were which he had in mind. One may assume that the Ten Commandments and part of the *Shema*ʿ were included (as on the Nash Papyrus); possibly part of Deuteronomy beginning with 10:12, which is reminiscent of the *Shema*ʿ (as on a *mezûzâ* parchment found in Qumran cave 8); possibly the Ten Commandments, the *Shema*ʿ, Deut 11:13–21 and Num 15:37–41 (according to *Tam.* 5:1 the passages said twice daily by the priests). Traditional Jewish practice has been to put into the phylacteries (tephillîn) the

four passages in which the wearing of "these words" on the hand and forehead are commanded: Exod 13:1–10; 13:11–16; Deut 6:4–9; 11:13–21. These passages singly or collectively summarize the main understanding of common-denominator Judaism: God chose the people, will preserve them, and requires obedience to the law.

There are also one-line summaries of the law, and these do not include the commandment to love God—perhaps because the passage was said every day and so was assumed. The best-known instance of a one-commandment summary of the law is a story told of Hillel, who said to a would-be proselyte, "What is hateful to you, do not to your neighbor: that is the whole Torah, while the rest is commentary thereof; go and learn it" (*Šabb.* 31a). Possibly this story is no more reliable than is the connected one about the oral law. In any case, the formula "what is hateful to you, do not to your neighbor" predates Hillel. It is found in Tob 4:15, written sometime in the 2d century B.C.E. There, however, it is one of a list of wise admonitions, not an epitome of the law. Philo gives a similar statement at the head of a list of laws and customs which exemplify it (*Hypoth* 7.6). The positive form of this principle is attributed to Jesus: "Whatever you wish that men would do to you, do so to them; for this is the law and the prophets" (Matt 7:12). These formulations, while all based on Lev 19:18, are cast in an epigrammatic mold. Finally, we note that Paul summarized the law by quoting Lev 19:18 (Gal 5:14; Rom 13:8–10). In the second instance he also cited the commandments not to commit adultery, not to kill, not to steal and not to covet. Interestingly, he then explained that since "love does no wrong to a neighbor" it "is the fulfilling of the law" (13:10). That is, Paul knew the negative form of the saying and found it useful.

One cannot determine the full contents of a teacher's ethics or theology from an epitome. Philo follows the negative love commandment with both negative and positive admonitions, such as, "If the poor or the cripple beg food of him he must give it as an offering of religion to God" (*Hypoth* 7.6). The epitomes of the law based on Lev 19:18 leave out of account the commandments which govern the human-divine relationship, but this does not mean that the person who employed the epitome would have tolerated idols (in the case of Paul, note Rom 1:23). Too much should not be expected of one-line statements of "the whole law," and we gather from them a basic thrust rather than a principle which truly encapsulates the entirety of the law. The rabbis subsequently offered numerous summaries or "cores" of the law, most of which are listed in Sanders 1977: 112–14.

I. Theological Context

Both theologically and chronologically election (or, more generally, grace) comes before the law, reward and punishment come afterward. All forms of Judaism of the period which are known to us regard the obligation to obey the law as the response to God's choice and deliverance of the Jewish people, and likewise they all regard him as reliable and just in giving recompense. Evidence from the main bodies of literature is given in Sanders 1977. The covenantal context of the Jewish law is clear throughout the rest of the literature (e.g. Ps.-Philo, *L.A.B.* 11:1–5; 13:10 and often; *Hel. Syn. Pr.* 4:38–40; 12:56–57), but it has been so often denied that we should add two representative statements by Josephus: at the sacrifices Jews (or possibly priests) do not ask God for blessings, "for He has given them spontaneously and put them at the disposal of all, but for capacity to receive, and, having received, to keep them" (*AgAp* 2.23 §197). Discussing the (supposed) requirement of the law to pray at dawn and bedtime, Josephus states that Jews should give thanks to God for the gifts which he has given them through the deliverance from Egypt, and they should post on their doors and their arms "the greatest of the benefits they have received from God," thus showing to all "the loving care with which God surrounds them" (*Ant* 4.8.13 §212–13).

LAYING ON OF HANDS. See HANDS, LAYING ON OF.

LAZARUS (PERSON) [Gk *Lazaros* (Λαζαρος)]. The name of Lazarus, an abbreviated transcription of *El-azar* ("God helps"), appears in the NT only in the gospel of John and a short parable in Luke 16:19–31. It is the only proper name to appear in a NT parable attributed to Jesus. The Lazarus of the parable is a poor man who stands in contrast to a rich man, not only in life, but also after death, when their respective roles are reversed: Lazarus is in the bosom of Abraham, whereas the rich man is in Hades. The parable concludes with a significant logion, "If they do not hear Moses and the prophets, neither will they be convinced if some one should rise from the dead" (Luke 16:41), thereby suggesting a link between a man named Lazarus and teaching about the resurrection in early Christian tradition.

The Lazarus of the Fourth Gospel, an inhabitant of the town of Bethany and the brother of Martha and Mary, was raised from the dead by Jesus and was present at a meal six days before Jesus' final Passover, at which time his sister Mary anointed the feet of Jesus in preparation for Jesus' burial (John 11:1–12:11). This Lazarus, repeatedly described as loved by Jesus (John 11:3, 5, 36) and once as his friend (John 11:11), is one of the principal named disciples in the Fourth Gospel, even though his role is admittedly a passive one. He never makes an explicit profession of faith in Jesus, nor does he ever speak. The gospel shows no particular interest in his person or his personal history.

The literary form of the narrative in which he appears generally corresponds to that of the miracle story, but its dialogical structure and metaphorical character set it apart from the typical miracle stories of the Bible and the ancient world. Johannine style characteristics are found throughout the narrative in such a way as to impart a Johannine character to the entire account in its present form. Nonetheless scholars are convinced that the literary history of the narrative is quite complex. Its very complexity undermines attempts to determine precisely the earlier strata of tradition.

As to the origins of the Johannine story, scholarly opinion falls under three headings. Some scholars continue to hold that the raising of Lazarus was an historical event. Others hold that the Johannine story is a conflation of various material in Luke, particularly the parable of Luke 16:19–31 and the Martha and

Mary story of Luke 10:38–42, along with the stories of the raising of Jairus' daughter (Luke 8:40–56; par., Matt 9:18–25; Mark 5:21–43) and the son of the widow of Nain (7:11–17). A third group holds that there is a common tradition behind the Lazarus story in John and the various other NT accounts of raisings from the dead.

Many scholars draw attention to the possible influence of popular legends and biblical motifs upon the Johannine narrative. Thus they eschew attempts to reconstitute factual events. The majority of scholars, in fact, consider that the search for facticity admits of no solution and that the argument over the historicity of the story is misguided. As a thoroughly Johannine story, the account is dramatic and largely symbolic; facts, as such, do not form its central theme.

The Johannine story is dramatically placed at the end of Jesus' public ministry, just before the Passion of Jesus, to which it directly leads (John 11:45–53; 12:10–11; cf. Mark 11:18; Luke 19:47–48). It is the last in the Fourth Gospel's series of signs, the import of which is principally christological. Although the traditions behind the story of the raising of Lazarus may have been influenced by an attempt to deal with the delay of the Parousia (John 11:6; cf. 1 Thess 4:13–17), the Johannine story is essentially a proclamation of Jesus' power over sickness and death. It is a portrayal of Jesus self-revelation as "the resurrection and the life" (John 11:25). As a narrative figure, Lazarus is the symbol of the authority, power, and significance of Jesus as the Resurrection and Life. He represents the disciple of Jesus who has died, and who will be raised because Jesus has been glorified (John 11:4, 40).

On the narrative level, Lazarus' four days in the tomb (John 11:6, 17, 39; cf. vv 13–14) point to the reality of his death. His death, though real, is not ultimate. Human death serves a divine purpose and is overcome through the resurrection effected through the power of Jesus. The gospel carefully distinguishes between the resurrection of the disciple (a resuscitation) and that of Jesus (a true resurrection). This is symbolized in the wrapping cloths: while Lazarus is unwrapped, Jesus leaves the wrappings behind (John 11:44; 20:4–7).

In the *Secret Gospel of Mark* Lazarus is cited, without specific mention of his name, as one blessed by Jesus and raised from the dead by Jesus at Bethany. Later tradition identified him as the bishop of Kition on Cyprus (Eastern tradition) or Marseilles (Western tradition). The British exegete J. N. Sanders held that Lazarus was the beloved disciple of the Fourth Gospel (John 13:21–26; 19:25–27; 20:2–10; cf. 18:15–16).

RAYMOND F. COLLINS

LAZARUS AND DIVES. Only the Gospel of Luke has preserved a story that has come to be known as the Parable of the Rich Man and Lazarus (16:19–31). It tells of a rich man who, while alive, used to dress in purple and linen and to feast daily (v 19), and of Lazarus, a crippled, sick, and destitute man who used to lie at the rich man's gate in hopes of receiving leftovers from the latter's table (vv 20–21). After their deaths, however, Lazarus is secure in Abraham's bosom (v 22), whereas the rich man is in torment in Hades (v 23). He appeals to Abraham for mercy and specifically for Lazarus to come and relieve his thirst (v 23). Abraham, however, denies the request because an impassable chasm separates them (vv 24–26). The rich man then asks that Lazarus be sent to his five living brothers to warn them of a similar fate,

but Abraham again denies the request, saying that they have Moses and the prophets (vv 27–29). When the rich man insists that only an appearance of one from the dead would cause them to repent, Abraham retorts that those who do not listen to Moses and the prophets are not likely to believe someone raised from the dead either (vv 30–31).

A. Distinctive Features

This parable is among the forty-odd parables of Jesus which are preserved in the canonical gospels. Indeed, the word "odd," now used in its more usual sense, may be the best way to describe this parable, at least initially, for interpreters have long noted its many unusual features. For example, when compared with the other parables, which focus on ordinary experiences, this one's depiction of life beyond the grave is immediately striking (Creed 1953: 209), and, on closer inspection, its surface and deep structures are likewise idiosyncratic (Funk 1982: 36, 40, 54). But what has most often drawn attention is the otherwise unprecedented use of a named character in a parable. Indeed, the surprising appearance of the poor man with the name Lazarus (who is not to be identified with the Lazarus of John 11) prompted some patristic commentators to classify this story as a "narrative" rather than as a "parable" (Plummer Luke ICC, 391). They were presumably thinking of a rhetorical definition of parable (*parabolē*) as a literary form which draws on ordinary or daily experiences and does not use specific or named individuals (John Doxapatres, *Hom. in Aphthon.* 3 [Walz 1835: 2.273]). In any case, the presence of a name for the poor man also prompted some copyists to name the rich man as well. Thus early on, the copyist of P^{75} names him Neues, whereas others over the centuries call him Nineve, Finaeus, or Phinees. In the late Middle Ages readers of the Latin Vulgate began to regard the adjective *dives* ("rich") as a proper name (*Rich*ard, as it were) (Cadbury 1962; cf. Grobel 1963–64: 381–82). Thus the title of this article: Lazarus *and Dives*.

B. History of Interpretation

For most of this century the view of Adolf Jülicher, Hugo Gressmann, and, to a lesser extent, Rudolf Bultmann have established the way that scholars approach and interpret this parable. Jülicher (1910: 2.634) divided the parable into two parts (vv 19–26 and 27–31) since he regarded the latter verses, which concern the fate of the five brothers, to be only loosely connected to the story about Lazarus and Dives. Gressman (1918) then proposed an Egyptian folktale of reversal as the source of the first part of the parable (vv 19–26) and claimed that the parable thereby had two points, one for each part, with Jesus' new conclusion to the folktale (vv 27–31) being the more important one (for the folktale itself: Griffith 1900: 42–43). This history of religions proposal seemingly confirmed Jülicher's literary analysis. Finally, Bultmann (1963: 203), approaching the parable as a form critic, asked whether one or both parts of the parable go back to Jesus himself, or are merely (as he thought) the product of the Church. How enduring and influential these literary, history of religions, and form critical studies have been is immediately apparent from a perusal of the articles, commentaries, and monographs on this parable since their time (Hock 1987: 448–51).

And yet, several recent studies of the parable hint at a new interpretation. For example, the parable's literary unity has received a sustained and sophisticated defense (Schnider and Stegner 1978–79). In addition, while some have pressed the parallels between the parable and Egyptian folktale (Grobel 1963–64), others have noted important differences (Fitzmyer *Luke X–XXIV* AB, 1127) or denied the relevance of the folktale altogether (Pax 1975: 267). In fact, the parallels are neither as close nor as explanatory as the constant citation of the folktale would suggest, and certainly not helpful precisely where the parable is most opaque, that is, in providing a rationale for the reversal in fortunes of Lazarus and Dives. Accordingly, some scholars have sought clarifying parallels in such Jewish sources as *1 Enoch* 92–105 (Nickelsburg 1978–79; Esler 1987: 189–91). But the closest parallel so far adduced comes from the mid-2d century sophist, Lucian of Samosata, whose highly Cynicized *Cataplus (Trip to Hades)* not only treats the theme of wealth and poverty, as does the Enoch literature, but also contains parallels in characters, plot, and dialogue which that literature does not (Hock 1987: 457–61). Indeed, the parallels are so close—the deaths of a rich man and poor man, their subsequent reversal in Hades, and the futile attempts of the rich man to change his new situation—that Lucian's and Luke's stories may ultimately go back to a common source: the Cynic Menippus' *Nekyia,* or *Trip to Hades* (cf. Diog. Laert. 6.101). In any case, the

greater length of Lucian's *Cataplus* permits clarification of details in the parable—for example, the hedonistic and presumably immoral life-style implicit in Dives' characterization by reference to his fine clothing and sumptuous dining. More important, this greater length includes the plausible explanation for Lazarus' and Dives' reversal in fortune. Thus, in the light of Lucian's account, the reversal is not so much because of Dives' neglect of Lazarus outside his gate and Lazarus' faith in God, as so many interpreters have claimed (Hock 1987: 453 n. 28 and 454 n. 29); rather, it is because of Dives' wealth and the immoral hedonism which wealth allows and Lazarus' poverty which assures his purity and virtue (Hock 1987: 460–61).

Finally, Bultmann's denial of authenticity to this parable has met with some approval (Mealand 1980: 39–40; Horn 1983: 152, 181), though more often for vv 27–31 only (Crossan 1973: 66–67; Schottroff and Stegemann 1978: 38). But given the new views regarding the parable's literary unity and background, it seems appropriate to reopen this question and ask: Where should the origin of this parable be placed? To be sure, the parable is consistent with Lukan redaction with its emphasis on wealth and poverty (Esler 1987: 164–69), but pre-Lukan features in the parable already indicate that it is earlier than the redactor (Mealand 1980: 32). Indeed, similar views on wealth and poverty also appear earlier in Mark's gospel (4:19; 8:36; 10:17–27) and in Q (e.g., Matt 5:3 = Luke 6:20 and Matt 22:1–10 = Luke 14:15–24). Still, one might stop short of tracing the parable all the way back to Jesus, preferring instead to follow D. Mealand (1980: 48–49) in assigning the origins of the parable to the late 40s of the 1st century in Jerusalem when the Church faced a local famine. But such a sharp critique of wealth as that found in the parable hardly requires so specific an occasion, as the subject was a constant theme of Cynic philosophizing (see CYNICS) and was even a part of the sophists' repertoire (Russell 1983: 27–30). In addition, their repertoire also included the testimony of those from the dead, learned early on in the rhetorical exercise known as *eidolopoiia* (Aphth. *Rhetor.* 11 [Rabe 1926: 34]), which obviates the problem of Lazarus's return from the grave as presupposing the resurrection of Jesus (Mealand 1980: 48). And finally the Cynic tone to the parable need not cause a problem, given the Hellenization of Palestine in general and even the birthplace of Menippus in nearby Gadara (Strabo, 16.2.29). The parable of the Rich Man and Lazarus would therefore seem to have a good claim to authenticity.

RONALD F. HOCK

LEAH (PERSON) [Heb *lēʾâ* (לֵאָה)]. The elder daughter of Laban, sister of Rachel; Jacob's first wife and mother of six sons and a daughter. Leah's name probably means "cow"; her sister Rachel's, "ewe."

The stories of Genesis 12–50 focus on the threefold promise to the patriarch Abraham of land, descendants, and a great name (Gen 12:1–3), and how this promise is passed on from father to son. The narratives about the matriarchs, then, are not primarily about the women themselves as individuals, but rather about their roles as the legitimate or "correct" wife and mother of the male successor. The question of who is the correct wife, mother of the heir, should be seen in the context of marriage and kinship systems of the Israelite society. Marriage alliances here are endogamous, i.e., within one's own tribe or social group. Lines of descent are patrilineal, traced through the father instead of the mother.

Jacob's mother, Rebekah, expresses to Isaac her fear that Jacob would marry a Hittite woman, i.e., marry exogamously (Gen 27:46). Isaac then commands Jacob, "Arise and go to Paddan-aram to the house of Bethuel your mother's father; and take as wife from there one of the daughters of Laban your mother's brother" (Gen 28:2). Leah (and Rachel) are related endogamously to their husband Jacob as matrilateral cross-cousins: Jacob's mother's brother's daughters. See Wander (1981) and Donaldson (1981) regarding the complexities of such endogamous patrilineal relationships.

Several recent studies show that the biblical stories of the matriarchs follow a literary paradigm whereby the legitimate wife is paired with a rival co-wife who possesses certain characteristics that the other lacks (Brenner 1985; 1986; Cohen 1983). The competition and jealousy between the two are the destructive consequences of the patriarchal and polygamous society where the narratives are played out. Both sides represent incomplete womanhood, shadowy reflections of the other. Because of the asymmetry of both entities, the two women are locked in conflict until one can expel the other or the other dies. The person of Leah must therefore be studied along with her complement, Rachel.

Leah and Rachel are sisters married to the same man. Rachel is described as beautiful and lovely, and Leah's eyes are described as *rakkôt* (Gen 29:17). The word *rakkôt* is usually translated as "weak," but its more usual meaning is "tender" and "soft." In Deut 28:54, 56 and Isa 47:1, it denotes refinement and delicacy of breeding. Leah has often been maligned as unattractive, this focus on physical beauty sometimes interpreted as the reason Jacob loved Rachel more. However, it could be as Cohen (1983) suggests that while Rachel was more outwardly beautiful, her sister may have been more sensitive and kind—tender of spirit.

The identities of both women revolve around the common desire to bear sons for their husband. This is an expectation of the patriarchal society in which both live, of the women themselves, and also of the narrative structure of the text which concerns God's promise to the patriarchs of land, posterity, and a great name. The texts relate the bitter competition between the two sisters to realize their goal of sons for Jacob.

Leah, the older sister, the first wife, is unloved by her husband. But she is very fertile. She gives birth to six biological sons (Reuben, Simeon, Levi, Judah, Issachar, Zebulun; Gen 29:31–35; 30:14–20), two adoptive sons through her maid Zilpah (Gad and Asher; Gen 30:9–13), and a daughter named Dinah (Gen 30:21). Rachel is the younger sister, subordinate to Leah in the household as second wife, but cherishes her husband's love. Nevertheless, she is barren.

The climax of the two sisters' rivalry is over the mandrakes that Leah's son, Reuben, found for his mother (Gen 30:14–20). Mandrakes were considered an aphrodisiac and an aid to fertility. When Rachel asks for some from Leah, Leah bitterly reproaches her sister. Apparently, Jacob has been spending more time in Rachel's bed than in Leah's. Rachel agrees that for the mandrakes Jacob can spend the night with her. In an amusing episode, Jacob encounters Leah after a day's work in the field. Leah remarks that he must sleep with her, for she has "hired" him for the price of her son's mandrakes. Leah conceives in that union, but ostensibly the mandrakes worked for Rachel. She finally bears Joseph for her husband with the wish that she can bear another. Unfortunately, the next son born to Rachel, Benjamin, will result in her death due to a hard labor (Gen 35:16–19). The rivalry between the sisters ends, but at the price of one sister's death.

LEBANA (PERSON) [Heb *lĕbānâ* (לְבָנָה)]. The name of a family of temple-servants who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. The name appears in Ezra 2:45 in the phrase "the sons of Lebanah" (Gk *labanō*), where the temple-servants are distinguished from the people of Israel, the priests, and the Levites. The parallel passage Neh 7:46–56 lists "the sons of Lebana" in Neh 7:48 (Gk *labana*), and the later parallel 1 Esdr 5:29 follows Ezra 2:45 with "the sons of Lebanah" (Gk *labana*). The word is found in some manuscripts as *lĕbānāʾ*, which has given rise to minor differences in transliteration. The Eng versions favor "Lebanah."

STEVEN R. SWANSON

LEBANON [Heb *lĕbānôn* (לְבָנוֹן)]. The name of this region in the Levant (from the semitic root *lbn*, "to be white"), which in the historical books of the OT is generally preceded by the definite article, presumably alludes to the whiteness of the country's mountains when covered with snow (Jer 18:13). Lebanon's ancient boundaries are not sharply delineated in ancient sources, but probably were much like those of modern Lebanon except that the narrow strip of Phoenician territory on the Mediterranean coast where Tyre, Sidon, and other cities were located was not regarded as part of the region.

A. Geography and History

Lebanon's varied terrain consists of three major features. Parallel with the coastal plain, the Lebanon Mountains (referred to simply as "[the] Lebanon" or occasionally "Mt. Lebanon" in the OT [Judg 3:3]) rise to an elevation of more than 10,000 ft (3,300 m). Parts of the W slopes of this 100-mile (160-km) chain, benefiting from westerly Mediterranean winds, receive an average of 60 in (150 cm) of precipitation during the rainy winter season, which in higher elevations falls as snow. The E slopes descend to the fertile Beqaʿ, a N extension of the Jordan Valley, which lies some 3,700 feet (1,100 m) above sea level. Although biblical writers were aware of its existence, the Beqaʿ is seldom mentioned in the OT; it appears as the "valley of Lebanon" in Josh 11:17 and 12:7. The region's only major perennial river, the Litani, commences in the N-central part of the valley and flows SW until it debouches near Tyre on the S coast. East of the Beqaʿ rise the more arid Anti-lebanon (i.e., "behind the Lebanon") Mountains, which, although somewhat lower than the W range, include at their S extremity Mt. Hermon, the summit of which has an elevation of some 9,200 ft (3,000 m). The Anti-lebanon is mentioned much less frequently in the OT than is the Lebanon range; it appears in Josh 13:5 as "Lebanon toward the rising sun." In several instances, however, the LXX appropriately translates the Heb "Lebanon" as "Anti-lebanon" (Deut 1:7, 3:25, 11–24; Josh 1:4, 9:1).

During the past hundred years archaeological excavations have been conducted at many sites in Lebanon, but much remains to be learned about the history of the region. Human habitation began in the Stone Age and can be followed through successive periods of Near Eastern history. Small and relatively defenseless, but occupying a strategic position in the Levant, the region was repeatedly invaded and conquered over the centuries. During the 2d and 1st millennia B.C., Lebanon participated in the broad cultural trends of the MB–LB, Iron Age, and Hellenistic Age, but the prosperity of the Beqaʿ and the sparsely settled hill country was modest by comparison with that of the coastal Phoenician cities. In the Roman period a cult center at Baalbek in the Beqaʿ became known throughout the empire for its magnificent complex of temples.

B. In the OT

Lebanon is mentioned nearly 70 times in the OT. The region was never part of the kingdom of Israel, although the book of Joshua asserts that Joshua conquered territory as far N as the town of Baal-gad at the S end of the Beqaʿ (Josh 11:17, 12:7, 13:5–6), and represents God as declaring that he would give to Israel all of the territory "from the Negev to Lebanon" (Josh 1:4; cf. Deut 11:24). According to 1 Kgs 9:19 (= 2 Chr. 8:6), the S part of Lebanon was under Israelite hegemony for a brief time during the reign of Solomon, who is said to have carried out building projects "in Jerusalem, in the Lebanon, and throughout his whole dominion."

Although frequently harsh in their condemnation of Edom, Moab, Philistia, Syria, and other nations around Israel, the biblical writers almost always refer to Lebanon in a positive, or at least neutral, way, in part because it was a geographical region rather than a kingdom. Numerous passages allude to the richness of the country. The agricultural abundance of the Beqaʿ is mentioned in Ps 72:16, where hope is expressed that the reign of a good king will cause crops to flourish like those of Lebanon. The region's wine is said to be famous (Hos 14:7). Lebanon is sometimes linked poetically with Sharon, Bashan, and Carmel, all of which were relatively fertile regions. In Isa 33:9 the prophet describes the desolation of Lebanon when God is not present (cf. Nah. 1:4), and two chapters later celebrates the restoration of Zion, when the wilderness will bloom and "the glory of Lebanon" will be given to the land (Isa 35:2; cf. 60:13).

So positive and compelling was the imagery of Lebanon for biblical writers that at times "Lebanon" was used almost as a poetic surrogate for "Israel." In contemplating the return of Jews from Egypt and Assyria in the postexilic period, Zechariah declares that God will gather the exiles "into Gilead and Lebanon, until there is no more room for them" (Zech 10:10–11). Although not among the tribes of Israel, Gilead had historically close connections with the N tribes. The terms "Gilead" and "Lebanon" are again linked in Jer. 22:6 (cf. v 23), where they appear as metaphors for Judah in her coming destruction; there are, however, no negative connotations regarding Gilead and Lebanon themselves, for God declares through the prophet that both Gilead and "the heights of Lebanon" are dear to him.

Particularly valued by the Israelites and other prophets of the E Mediterranean region were Lebanon's forests of pine, fir, cypress, cedar, and other trees (see Brown 1969: 140–212). The W slopes of the Lebanon range provided a superb climate for evergreen trees, whch were valued for the size and durability of their timber and even the fragrant odor of some of the wood (Hos 14:6; cf. Cant 4:11). The primeval forests, a few remnants of which survived into the 20th century in isolated places in the mountains, had been less depleted during the early biblical period than the oak forests of Palestine and Transjordan. The cutting of Lebanon's timber was initially a monopoly of the coastal cities, and later of the monarchs of conquering empires. Some of the wood was used regionally in the manufacture of ships (Ezek 27:5), and some was exported at considerable profit. As early as the 4th millennium B.C., Egypt was a purchaser of timber from Lebanon for use in the construction of buildings and boats. The OT contains numerous allusions to wood from Lebanon in connection with the Temple in Jerusalem (1 Kgs 5:6–14 = 2 Chr 2:7–16) and Solomon's "House of the Forest of Lebanon" (1 Kgs 10:21 = 2 Chr 9:20; cf. 1 Kgs 7:2 and 10:17). The Song of SolomonSolomon states—either factually or figuratively—that Solomon's palanquin was made of the wood of Lebanon (Cant 3:9). By the time of Hezekiah's rule in Judah in the late 8th century B.C., the forests of Lebanon had already suffered considerable depredation, most recently at the hands of Assyrian monarchs (2 Kgs 19:23 = Isa 37:24; Isa 10:34), who continued the royal monopoly. Around 520 B.C. Cyrus of Persia permitted timber to be brought from Lebanon for the reconstruction of the Temple in Jerusalem (Ezra 3:7).

Of all the evergreen trees of Lebanon, the cedar made the deepest impression upon the writers of the OT. Solomon is said to have delivered scholarly discourses on plants, "from the cedar that is in Lebanon to the hyssop that grows out of the wall" (1 Kgs 4:33). The cedars are cited a number of times as metaphors of loftiness and nobility (Isa 2:13, 10:34). Ps 104:16 declares that the trees of Yahweh are as green and leafy as the cedars of Lebanon. In Judg 9:15 Jotham's parable of the trees likens the people of the city of Shechem to the cedars of Lebanon. Ps 92:12 envisions the righteous person growing as tall as a cedar of Lebanon, while the Song of SolomonSolomon alludes to the bridegroom's legs being as sturdy

and noble as the cedars of Lebanon (Cant 5:15). Not infrequently the cedars appear as a direct or implied metaphor for a ruler or an empire. Davidic kings of Judah are sometimes so designated, e.g., Isa 14:8 and Ezek 17:3. In Jer 22:6 the disobedience of Judah and her king is likened to the felling of the choicest timbers in Lebanon, and in v 20 of the same chapter Lebanon and Basham appear in poetic parallelism in a similar context. In 2 Kgs 14:9 (= 2 Chr 25:18) Jehoash, king of Israel, sends to Amaziah, king of Judah, a message in which he likens the two rulers to a thistle and a cedar on Lebanon, and immediately afterward likens himself to a wild beast of Lebanon. On occasion a non-Israelite ruler or empire is likened to a cedar of Lebanon (Isa 10:34; Ezek 31:3–18), but only as an opportunity for a prophet to point out how poorly the empire lived up to that noble image and how deserving it is of punishment. Habakkuk singles out the region as an instance of violence wrongly done to it—perhaps, it has been suggested, the felling of its trees (Hab 2:17).

Some allusions to Lebanon have overtones of myths about N Canaanite deities venerated in the mountains, e.g., Cant 4:8 "Come with me from Lebanon, descend from the top of Amana, from the peak of Senir and Hermon" (cf.7:4). Although applied to Lebanon within the context of the OT, some of the more cosmological allusions to Lebanon or Hermon may, like ones pertaining to Zion as the "Mount of the Lord," perhaps have had their origins in the much older Canaanite religion.

C. In the NT. The NT does not mention Lebanon as such. There is no evidence that Jesus ever visited the region, although MT 16:13 records that he went into the district of Caesarea Philippi (Dan, or Panias) in the extreme N part of Palestine. Attempts to identify the "high mountain" of Jesus' transfiguration (Matt 17:1–11 and parallels) with Mt. Hermon in Lebanon must remain speculative, especially since Mt. Tabor in N Palestine is the traditional location of that episode. Tyre and Sidon appear in the NT, but, as in the OT period, the coastal region was regarded as part of Phoenicia rather than of Lebanon (cf. Mark 7:24–31).

LEBANON, HOUSE OF. See TEMPLE, JERUSALEM.

LEBAOTH (PLACE) [Heb *lĕbāʾôt* (לְבָאוֹת)]. See BETH-LABAOTH (PLACE).

LEBBAEUS (PERSON). See THADDEUS (PERSON).

LEBONAH (PLACE) [Heb *lĕbônâ* (לְבוֹנָה)]. A town in the hill country of Ephraim to the N of Shiloh (Judg 21:19). The exact location is disputed; both El-Lubban (M.R. 173164) and Lubban Sherqujeh have been suggested as possible sites. Though mentioned only once in the OT, it was apparently of sufficient importance to serve as a reference point for the location of Shiloh. See *HAB* and *GTTOT*.

ELMER DYCK

LECAH (PLACE) [Heb *lēkâ* (לֵכָה)]. A community founded by Er, son of Judah (1 Chr 4:21). The name is mentioned only this once; the location is unknown. The suggestion that the name might be a corruption of Lachish (as hinted by Aharoni, *LBHG*, 227) is untestable. The Chronicler adopts the genealogical formula "x the father of y" to describe the relationship between a community and its founder, so that the name is to be taken as that of a community rather than that of a person (so NEB).

ELMER DYCK

LECTIONARY. A lectionary is a collection of selected scriptural readings used in worship and arranged according to the liturgical year.

A. Early Jewish Lectionaries

Evidence for the regular reading of the Law and the Prophets in worship during the 1st century C.E. is found in Josephus, Philo, and the NT. In *AgAp* 2.17.175, Josephus writes that Moses instituted the regular reading of the law. As the supreme form of instruction, the law was to be heard weekly in order that the assembled community should obtain a thorough and accurate knowledge of it. Philo (*Somn* II 18.127) also reflects an apparent sabbath practice of reading and expounding the holy books. In Acts 15:21, Luke states that Moses is ready every sabbath in the synagogues. Likewise, according to Acts 13:14–15 and Luke 4:16–17, the Law and the Prophets are read in the context of synagogue worship. Guilding (1960: 6) also cites the preface to Sirach as reflecting a 2d century B.C.E. practice in which the law was read publicly by Jews in Egypt. However, the precise meaning of this text is not clear. Even so, the evidence clearly points to regular readings from the Law and the Prophets in synagogue worship during the 1st century C.E. This practice certainly appears to derive from a much earlier date, but direct literary evidence is insufficient to document it.

It is less clear if these readings were conducted according to a fixed pattern or lectionary. By the time of the Mishnah, however, a regular pattern of readings is reflected (*m. Meg.* 3:4, 4:2–10). In *t. Meg.* 3:10 and *b. Meg.* 31b, the consecutive nature of the Torah readings for the sabbath afternoon, Monday, and Thursday services is indicated. Moreover, *m. Meg.* 4:10 and *t. Meg.* 3:4 imply that prophetic texts were also read according to a fixed pattern. *j. Meg.* 4:75a and *Sop.* 21:4 have been cited as evidence that Jewish tradition recognized stages in lectionary development (Guilding 1960: 8). In these texts, the lessons for the festivals and special sabbaths were thought to have been instituted by Moses, whereas the readings for the sabbath afternoons, Mondays, and Thursdays were considered to have been established by Ezra. From the beginning of the 3d century C.E., the evidence testifies to a regular pattern of readings from the Law and the Prophets in synagogue worship. However, the late date of this evidence makes its use, as witness to Jewish practice in the 1st century C.E. or earlier, methodologically problematic (Crockett 1966: 13–46; Heinemann 1968: 41–48; Morris 1964: 13–34).

Still unclear is the type of lectionary reflected in these Jewish texts. In *b. Meg.* 29b, it is written that the people of Palestine complete the reading of the Pentateuch in three years. Likewise, in *m. Meg.* 4:2–4, it states that the sabbath law is to be read by at least seven people, no one of whom may read fewer than three verses. Hence, the reading of the Law would consist of at least 21 verses. A lesson of this length read on each sabbath would correspond to a three-year cycle. It is indicated in *b. Meg.* 23a that the *Haftarah,* in order to correspond to the reading of the Law, should also consist of at least 21 verses. It may be that traces of a triennial lectionary can also be seen in the Masoretic divisions known as Sedarim, since these divisions accord roughly with a three-year cycle. It has also been argued that the Halakic Midrashim, *Mek., Sipra, Sipre,* reflect a Palestinian triennial lectionary (Guilding 1960: 9).

The starting date of this supposed lectionary (Nisan or Tishri) is also a matter of debate and conjecture (Büchler 1893: 420–68; 1894: 1–73; Guilding 1960: 11–20). Finally, Guilding argues that the hegemony of the Babylonian Gaonate eventually led to the replacement of the triennial lectionary by an annual lectionary in all but a few localities (1960: 8; cf. Crockett 1966: 23–24; Jacobs 1905: 254).

The arguments for a fixed triennial lectionary at an early date have been challenged. It has been noted that the NT does not mention a lectionary. Indeed, the evidence suggests that organized cycles of Sunday readings are not found in Christian circles until at least the 4th century (Dix 1945: 360–61). Furthermore, it is unclear whether the reference to three years in *b. Meg.* 29b is intended to be literal or approximate. There is no evidence that this cycle began at a fixed point or that it was used uniformly in all localities. If a lack of uniformity existed in the Amoraic period and perhaps later, it is argued that more could not be

expected of an earlier period (Crockett 1966: 13–35; Heinemann 1968: 41–48; Morris 1964: 15–34). Hence, the topic of early Jewish lectionaries has provoked considerable debate.

JAMES W. AAGESON

B. Early Christian Lectionaries

1. The Byzantine Lectionaries. The liturgical books which the Greek Orthodox Church uses to this day include, along with the fixed and variable parts of liturgies and other offices, *to euaggelion* (in contrast to the *tetraeuaggelon*, the normal ms of the Gospels) and *ho apostolos,* occasionally combined into *to apostoloeuaggelon.* All of these books stand in a fixed tradition of content and form which reaches back to the early Middle Ages and thus well into the time of the tradition of manuscripts.

Thus it is that altogether almost 40 percent of all extant Gk mss of the NT also belong to these liturgical books. These liturgical mss with NT texts are collected under the designation *Lectionaries* and are listed independently. These represent an alternative to those mss (and accordingly to those text editions) which attach to consecutive offerings of verses in the NT information about the days on which the indicated Gospel or Epistle sections are to be read in worship. Whereas these latter editions always appear as an index, in which the sequence of the days of the church year and references to NT pericopes to be read are collected, the lectionaries offer, instead, exactly in the sequence according to which they are to be read, the actual text of NT passages.

A prerequisite for the emergence of such lectionaries is firm ecclesial organization which regulates the sequence of the celebrations of the church year, the liturgical arrangement of these celebrations, and the determination of Bible texts, prayers, hymns, etc. to be read. However, for historical reasons, such organization is nowhere imaginable before the 4th century. But since 95 percent of the 2,252 extant lectionary mss and fragments, i.e., over 2,000, show uniform arrangement in reference to the succession of days and celebrations and to the choice of pericopes, something more must stand behind these mss: a world church, such as it arose from the 5th to the 7th century in the Byzantine church with its center in Constantinople, dominant for Eastern Christianity.

2. Construction and Text Sequence. The succession of days in these Byzantine lectionaries conforms, of course, to the church year. Beginning with Easter Sunday and continuing for the holy season up to Pentecost, pericopes from Acts and John are offered for each day, including the weekdays. For the subsequent time lasting 16 or 17 weeks through September 14 (Holy Cross Day), the majority of lectionaries offer readings for Saturdays and Sundays (*sabbatokyriakar*) from Matthew and Pauline Epistles. Thereupon follows a similar 17-week period, up through the end of January or beginning of February and the pre-Lenten season, with readings for Saturdays and Sundays from Paul and Luke. It is otherwise in both of these latter periods with the mss intended for use in cloisters, for, since the liturgy is celebrated daily, the mss show readings for all days. In this case the Pauline Epistles as well as Matthew and Luke do not suffice, whereupon, in each period from the 12th or 13th week on are offered also readings mostly from Mark; and at the end of these periods are offered from the *Apostolos* readings from the Catholic Epistles.

During Lent (*tessarakostē*) the liturgy with the sacrifice of the mass is only celebrated on weekends; whereupon, for these days there are only NT texts, which come predominantly from Hebrews and Mark. On the weekdays, with the liturgy of previously consecrated elements (*prohēgiasmenōn*), the OT is read, which the rest of the time only finds use in other offices. During Holy Week, with its special, daily celebrations, up to Easter Eve, the Passion narratives of the Gospels are read.

Regularly following this cycle (the so-called *Synaxarion*), which is dependent upon the variable period of Easter, is a second cycle fixed on dates, beginning with the Byzantine new year on September 1. This series of days (known as *Menologion*) offers readings for a fixed calendar of celebrations of the Lord, Mary, and mainly the Apostles (e.g. Christmas, Epiphany, the Annunciation, Saints Peter and Paul). This cycle later expanded to include the many celebrations of the fathers, saints, and martyrs. Standard pericopes were predominantly read for these, which were then only notated, since they were, as a rule, already transcribed.

Combinations of readings and references for "special occasions" (*eis diaphorous mnēmas*), i.e. celebrations of explicitly local character or the pastoral offices (burial, etc), complete the Byzantine lectionaries.

3. Origins and History of the Lection Systems. The assignation of pericopes to reading cycles and individual celebrations is characteristic for the history of the origins of the lection systems and should be explained with reference to the development of Gospel pericopes in the Byzantine church. It is doubtless the case that for the central celebrations of Christendom, along with their preparatory celebrations and afterwards, germane pericopes were read: the baptism narrative for Epiphany (January 6—celebrated in the East into the fourth and fifth centuries with a function analogous to Christmas in the West), Luke 1:24ff for other high feasts such as the central celebration of Mary on March 25 (*annuntiatio, euaggelismos*), etc. Here one sees certainly the oldest stratum of the pericope system. The same obtains for the celebration of the Passion with its several modes of celebration in different regions of the Church.

Along with this basic situation with regard to pericopes, which is widely similar in all spheres of the Church, certain documents or groups of documents are read at certain times of the year in consonance with synagogue usage, as is evidenced in the homilies of the Church Fathers. Later, with the further evolution of the lection system, issues the determination of fixed reading sequences, first for Sundays, the weekly celebration of the resurrection of Christ. The Byzantine church affixed pericopes from John to the weeks after Easter, pericopes from Matthew to the weeks after Pentecost, and pericopes from Luke to the time from September on. These Sunday sequences offer in the unfolding of the Gospels the most important depictions from the life of Jesus or central addresses. Certainly for the Saturday celebrations of the liturgy during the same periods of time a series of pericopes from the same Gospels were chosen, a form of sequential reading of selected pericopes in the order of the book (so-called *Bahnlesung*), omitting texts already used.

The remainder of the text of the Gospels is used for pericopes which are read, principally in cloisters, in the liturgies on the rest of the weekdays, except during the weeks when the Gospel of John is read.

It can be demonstrated from the nature of pericope choices and from the bounded tradition in the lectionaries that the phases above are also a matter of successive historical developments which extend into the 7th and 8th centuries. Theologians have long falsely regarded the temporal order of these stages of development, setting it into premature times. C. R. Gregory identified temporal developments and maintained that he was able to place them from the beginning to the end of the 2d century. American lectionary scholars (who for a long time worked alone in the study of lectionaries, e.g., K. and S. Lake, E. C. Colwell, B. M. Metzger, A. Wikgren, and their students) modified this position and claimed to be able to date the Byzantine lectionary system from the 4th or 5th century. A. Ehrhard and the Hagiographies and, then, OT scholar A. Rahlfs proved that the concluding formation of the Byzantine lection system must have lasted into the early 8th century, an opinion which is fully substantiated by the age of extant manuscripts. That the book of Revelation was not used in the Byzantine lection system also is not contradictory. The book was recognized as canonical in the East from the 4th century, but it has its own tradition and history which make it quite independent of NT manuscripts.

The arrangement of pericopes in the lectionaries displays some peculiarities. After a standard introductory formula (*tō kairō ekeinō, eipen ho kyrios, adelphoi,* or the like), follow most often changes in the text's form. These are to acquaint the hearer with pertinent details of the reading which one otherwise could glean from the context. Occasionally at the end of the lection special key words are appended.

Connectors of insertions or harmony-like combinations of the narratives of different Gospels also occur. Many of these details found their way into the mss of the continuous text.

4. Lectionaries of Other Regions of the Church. The discovery in 1975 at the Sinai Cloister of ten new lectionaries has issued in new insights and points of view regarding the contruction of the lection system and of lectionaries. These Gk mss did not evidence the Byzantine system as was supposed, although they assumed the outward appearance of the Byzantine lectionaries. It was striking that these lectionaries offered only one cycle and that they inserted movable feasts, celebrations, and weeks of fasting between celebrations on fixed dates, using only Sunday readings. Between Easter and Pentecost, but with other demarcations, one reads from John; the following sixteen Sundays utilize pericopes from Matthew, the next fourteen Sundays readings from Mark, and the six Sundays in Lent the gospel of Luke.

It is further obvious that the readings for Easter and Eastertide are offered in connection with Holy Week. All told the sequence of pericopes, at the end of which stand pericopes for special occasions, proceeds one and a half times during the year. Because all witnesses are damaged at the beginning and at the end and differ in detail from one another, a uniform beginning (sometime in the spring) or end of the church year cannot be identified as is the case with the Byzantine lectionaries.

However, these new lectionaries, as well as others which were earlier already regarded as "outsider" mss, show some commonalities with the lection system from Jerusalem, which at that time was only extant in Armenian and Georgian manuscripts. This holds for the succession of celebrations as well as for the selection of pericopes. But as the Georgian lectionaries represent a later stage of development in relation to the Armenian lectionaries, so also the newfound Gk lectionaries in relation to the Georgian lectionaries. Their derivation from Jerusalem, however, is clear and can be shown with reference to the sequence of pericopes—their demarcations as well as rich arrangement for Holy Week. Indeed there is also a certain influence from Byzantium, especially in the externals such as introductory formulas and organization of the mss, which were written in the time from the late 8th century to the early 10th century.

A first publication of a sequence of pericopes from a comparable ms by G. Garitte in 1977 drew little notice. By virtue of the newfound lectionaries, this article has come into its own; however, a comprehensive discussion of the issues will be possible only after the publication of the Sinai lectionaries.

The Byzantine influence in these newfound lectionaries becomes ever more apparent, since one observes the following curiosities: in four of the new Sinai lectionaries there is a succession of days typical of the Jerusalem lection system, with its juxtaposition of fixed-date and movable feasts which continue beyond the bounds of Easter; and there are pericopes which display the specific delineation of the Byzantine lection system. The mss date from the time from the 11th to 13th centuries.

Besides the two groups there are in the list of lectionary mss witnesses that are not to be associated with the Byzantine lection system. Rather, these mss demonstrate an open relationship to Egypt—either they are bilingual Greek-Coptic or demonstrably discovered in Egypt. These display a prototype of the Coptic lection system, so also the few papyri (also from the sands of Egypt) with text that is not written progressively, offering only pericopes: P1 (papyrus Florence, 3d century), P3 (papyrus Vienna, 6th to 7th century), P6 (papyrus Strasbourg, 4th century), P34 (papyrus Vienna, 6th century), and P44 (papyrus New York, 6th to 7th century).

5. Text-critical Value of the Lectionaries. Miraculous text-critical worth has long been expected of the lectionaries, since their date of origin was at one time set too early, and also because it was maintained, on the basis of general experience and scanty examination, that all of the elements related to the liturgy, closely conditioned by tradition, must also preserve in the lectionaries the reading style of the earliest times. The systematic examination of the lectionaries in Chicago in the 1930's had a sobering effect. Certainly the early Byzantine reading styles determined the textual character of certain series of pericopes in the Byzantine lectionaries, which led some to maintain that the lectionaries were related to the so-called Caesarea text. The basic character of the text, however, is Byzantine. This obtains for the readings from the *Apostolos* as well. Therefore, the lectionaries have text-critical worth only for later tradition history, in specific, for the history of Byzantine texts.

The early Byzantine, and even pre-Byzantine, elements in the lectionaries with the late Jerusalem lection system support this set of suppositions. More accurate details can be expected only after the publication of the new Sinai mss, a joint venture of the Hiera Synod of Sinai Monks and the Institut fuer neutestamentliche Wissenschaft, Muenster. See TEXTUAL CRITICISM (NT).

LEEKS. See FLORA.

LEFT, LEFT HAND. The Hebrew word *śĕmō᾽l* indicates the left, the left side, or the left hand. It is used often with *yāmîn* to form a pair, left and right. When used as a general direction, left referred to north (Gen 14:15; Josh 19:27), the direction to one's left when one faced east.

There are a few instances where left has a negative connotation: "A wise man's heart inclines him toward the right, but a fool's heart toward the left" (Eccl 10:2). Likewise the separation of the sheep from the goats in Matthew 25, may suggest a negative connotation for the left: the goats who are to be condemned are placed on the left, while the sheep who are to be blessed are placed on the right. But most often neither right nor left is given a special connotation. In many cases, the path is a straight one from which one is not to depart, either to the right or to the left (Deut 5:32).

Left-handedness was unusual in ancient Israel, as in our culture. Few references are made to ones who were left-handed. In general, the right hand was primary, holding the major weapon, while the left hand held the defensive weapon. The right hand held the sword while the left held the shield. The right hand held the arrow and pulled the cord, while the left hand held the bow. Some specially skilled warriors were trained to use their left hand, thus giving them an advantage in combat situations. As such they were not natural left-handers, but had their right hands bound so that they were forced to become ambidextrous. Ehud was one such ambidextrous warrior. Because he could use the left hand as well as the right, he was able to hide his weapon and assassinate Eglon, king of Moab, striking him from the unexpected left side (Halpern 1988: 41; cf. EHUD). Among the warriors of Benjamin were 700 left-handed warriors (Judg 20:16), likewise ambidextrous.

LEGATE. See PALESTINE, ADMINISTRATION OF (ROMAN).

LEGION [Gk *legiōn* (λεγιων)]. See ROMAN ARMY.

LEHABIM [Heb *lĕhābîm* (לְהָבִים)]. Var. LUBIM. Descendants of Egypt according to the Table of Nations (Gen 10:13; cf. 1 Chr 1:11) who, according to the genealogies, is a son of Ham and grandson of Noah. While not direct, Semitic kinsmen of Israel, their association with Israel's powerful Egyptian neighbor make them a significant people to the writers of the genealogies. The Hebrew form of the name in the MT is not found outside these genealogies, so no further information is available. There is a widely held view that this is an alternate spelling of *lûbîm.* These are the Libyans, who are mentioned elsewhere in the OT (Nah 3:9; Dan 11:43; 2 Chr 12:3; 16:8). They lived in N Africa, immediately W of Egypt, so

would geographically fit their position in the genealogies. The proposed reading is supported by the rendering of the name in the LXX.
DAVID W. BAKER

LEHEM (PLACE) [Heb *leḥem* (לֶחֶם)]. A possible place name somewhere in the territory of the tribe of Judah, and is so rendered by the RSV (1 Chr 4:22). However, no such place has been identified. The name appears in a recorded event concerning two Judahites, Joash and Saraph, who had returned to Judah after a period of having ruled in Moab (or possibly having married Moabites). The Heb *wĕyāšuḇî lāḥem* presents some difficulty since various translations are possible.

1. It can be taken as a personal name, Jashubi Lehem, as done by the KJV, NKJV, NASB, and NIV. The verse would then read "… Joash and Saraph who ruled in Moab and Jashubi Lehem." Such a reading, however, does not simplify the identification and perhaps creates further ambiguity as to whether Jashubi Lehem is a place's or person's name.

2. As has been suggested, perhaps the phrase is not even a name but should be emended as evidenced in the Gk *apestrepsen autous*. The Hebrew would then read *wayyāšuḇû lāhem,* "but they returned" (lit. "returned to themselves"). Thus the verse would read "… Joash and Saraph, who ruled in Moab, but returned." Similar idioms or idiomatic forms are attested in Num 22:34; Deut 5:30; and 1 Sam 26:12.

3. Lehem in this verse could possibly be a shortened form of Bethlehem, as so rendered by the JB and TEV. If so, the verse would read "… Joash and Saraph, who ruled in Moab and returned to Bethlehem." This reading would appear to fit the Judahite context of the verse better.

4. Another possibility is to consider Lehem as a geographical name and to emend the reading to *wĕyōšḇê leḥem,* "and the inhabitants of Lehem." The probability of this reading is enforced by the presence of *wĕyōšḇê* and *yāšḇû* in v 23 (cf. *ʾanšê rēḵāh* of 1 Chr 4:12).

5. It is also possible to read *wĕyōšḇê leḥem,* "and the inhabitants of bread," to parallel *weyōšḇê nĕṭāʿîm,* "and the inhabitants of planters," in v 23. Both *leḥem* and *nĕṭāʿîm* should then be treated as names of agricultural districts for the royal workers.
WANN M. FANWAR

LEHI (PLACE) [Heb *leḥî* (לֶחִי)]. An unknown location, it appears in the Bible as a geographical designation in Judg 15:9, 14, 17, 19. (Otherwise *leḥî* appears in the Scriptures 21 times referring to the cheek, jawbone of a human being or an animal.) It is situated along the Philistine frontier and the lowland of the tribe of Judah, a site where the Judeans surrendered Samson to the Philistines. The place name also ties in with the description of Samson's exploits: slaying a thousand Philistines with the jawbone of a deadly donkey, and the miracle performed by God to quench Samson's thirst.

The Judeo-Aramaic variants *leḥî; lĕḥāyat; liḥyāʾ; lĕḥāytāʾ;* and Arabic *laḥy (un)* are cognate with the biblical *leḥî.* Generally, the words are translated as "cheek," "jawbone." Yet, the connection of the biblical form and the variety of the Judeo-Aramaic forms with the Akk *līt*u or *lētu (m)* suggests a wider range of meanings. The Akkadian adds also the connotations of the "side" and metaphorically "side of an object," and "side of a topographical feature." These meanings, while prevalent in the Targumim and Rabbinical sources, have never been utilized.

Scholars tended to view *leḥî* in Judges as a geographical place name. Among the prominent suggestions for a possible identification are Khirbet Lāqīya (M.R. 136081) close to Beer-sheba and Beit Jibrin (M.R. 140112). Both, however, are much too far from the place where Samson engaged the Philistines. Likewise, Abel's (*GP*, 369) proposal of Beit ʿAṭāb is also farfetched. The most prevalent identification is with Kh. eṣ-Ṣiyyāgh (M.R. 149128) at the mouth of Wādi en-Najīl 2 km S of ʿArtūf and 7 km E of Timnah. The meaning of the Arabic place name is "the Ruin of the Goldsmiths." The assumption is that the Arabic place name eṣ-Ṣiyyāgh represents the word *siagōn,* the Greek cognate of the Hebrew term *leḥî,* "cheek" "jaw," which appears in the Greek translations of Aquila, Symmachus, and in Jerome's Latin translation of Eusebius' *Onomasticon.* However, the resemblance of sound between the first two syllables even if possible to indicate relationship between the Greek word and the place name obviously represents

a later tradition from post-OT times transmitted through Greek-speaking people and Christians. Further, there is no indication that the Greek translators perceived *siagōn* to mean a place name rather than a mere translation of the Hebrew word. Indeed Josephus (*Ant* 5 §300), who refers to *siagōn* as a place name, expressly says: "a spot which today is called *siagōn* = jawbone … but which of old was nameless." This leaves the above suggestion topographically valueless.

Taking another direction, Burney (*Judges* LBS, 371) suggests that *leḥî* is a geological formation reminiscent of a jawbone. He proposed the sawlike teeth appearance of Wādi Isma‹īn, a possible location since it may resemble a jawbone, but his evidence remains inconclusive.

The consensus among the scholars then is that *leḥî* denotes a specific place but there is no agreement as to its identification. Accordingly, it makes sense to seek the meaning of the word elsewhere. The neglected collateral evidence of the Akkadian sources is an essential clue for providing an alternative meaning for the term *leḥî*.

The Akkadian turns of speech in which the term *līt*u occurs show that metaphorically the cheek or the lower jawbone are employed for "border" or "limit" or "circumference." It is current in Akkadian literary sources and has been established as employing the metaphorical meanings by C. H. Gordon (1936: 81–2). It was the practice of the Nuzians to describe topographical features in terms of the lower facial part. Thus when they depict the beginning of the city limits they use the term "*le-et*," "jawbone" of the city. In the same vein, a boundary of a parcel of real estate transfer is described as "along the "cheek" (i.e., "bank") of the PN canal." *Litu* therefore is an essential word in recording limits in the Nuzian legal documents. It seems that biblical *leḥî* follows its Akkadian forerunner. Accordingly, *leḥî* as a place is not a specific place name, but, as its Nuzian prototype, means any border—in this case the entire borderline between the Judeans and the Philistines.

Further, it is significant that in all passages where biblical *leḥî* connotes the physical cheek, jawbone, the Targumim substitute the biblical *leḥi* with a different Aramaic term.

Judeo-Aramaic variants of *leḥî*, however, are employed only in translating biblical terms associated with limits of districts or borders. It is only in Judges 15 and specifically in reference to *leḥî* (which according to the Targum designates a regional geographical description) that the Targum is meticulous in employing the biblical term *leḥî*, which resembles mostly its cognate *lētu* phonetically as well as semantically.

It also stands to reason that the deployment of Philistine troops is along the entire border rather than in a specific location. The proposal gains cogency from the use of the verb *wayyinnāṭĕšû* (Judg 15:9) "they were deployed." The only other employment of the verb *nṭš* in the *Nip‹al* in warfare occurs in 2 Sam 5:17; 22 where the Philistines deploy troops over a wide geographical region to seize David, just as in the present case they spread out their soldiers to capture Samson. There and here *nṭš* is characteristic of army deployment for searching a specific foe (i.e., David and Samson) rather than for a siege of a particular location. Furthermore, the Masoretic pointing of the word *balleḥî* (Judg 15:9, 19) definitely implies a common noun rather than a proper noun of a place. Thus enigmatic *leḥî* embraces an old meaning already embedded in its Akkadian precursor *līt*u.

MEIR LUBETSKI

LEHUN (M.R. 231097). A site located in the Madaba district (biblical Moab), on the N plateau of the Wadi Mojib (biblical Arnon), 7 km SE of Dhiban (biblical Dibon) and 3 km E of Ara'ir (biblical Aroer). The site, measuring 1100 m (N–S) by 600 m (E–W), has been excavated by a Belgian team directed by Dr. P. Naster (1977–84) and Dr. D. Homès-Fredericq (1977–88).

A chalcolithic settlement is attested by a number of surface flints and a few sherds. An EB I A-B tomb (ca. 3200–3100 B.C.) was found at the edge of the plateau in area B3. More than 130 ceramics, often undamaged, were discovered in a layer of 40 cm height. They can be compared with the pottery found in

the cemetery of Bab edh-Dhra of the same period. An EB settlement in area C1 has still to be excavated (Homès-Fredericq 1986: 87–94).

At the end of the LB Age, an extensive village was located in area D: houses with ovens, silos, cooking pots, and storage jars, as well as a scarab of the 20th dynasty, were excavated. In the S part, chosen for its strategic position overlooking the Arnon valley toward the Dead Sea, the LB houses were levelled in the beginning of the Iron Age: their walls were used as foundations for a fortress (measuring 33–37 m [E–W] by 43 m [N–S]), built probably at the same period as the settlements of Balu'ah, Ader, and Medeniyeh. This fortification system may reflect the need of the Moabite kings to protect their possessions from the invasions mentioned in the Bible and from nomadic tribes.

The large amount of storage jars found in it suggests its use as a storage fortress, possibly built to supply the garrisons of Ara'ir. The breaks in the fortification walls and the filling in of the casemate rooms with stones attest different attacks of the building. A new year's bottle of the Saite period (7th–6th century B.C.) shows that Lehun was once more in contact with Egypt (Homès-Fredericq 1982).

The N part of the site seems to have been important in the Nabataean period both as an agricultural market and as a religious center: a square Nabataean temple (with sides measuring 6.25 m), built of local limestone, is decorated with the embossed technique popular in Palestine during the 1st century A.D. (Homès-Fredericq 1989). The pottery remains corroborate this date. An altar measuring 2 × 1.25 m, leaning to the E wall, shows a typical oriental pattern. In the 1988 season the temple was restored to a height of 3.4 m. A larger building in sector A1 (unexcavated) probably belongs to the same period.

A Byzantine or Early Islamic bell-shaped cistern has been discovered near an Islamic settlement in area A2, on the W slope of the wadi Lehun. A small road separates the presumed Islamic village from a late Mamluk mosque (15th century A.D.). A coin, discovered on the floor, gives a *post quem* dating for the mosque as after the late 14th century A.D.

Remains of Late Islamic walls and Ottoman houses and pipes show that the village of Lehun has been continuously occupied up until modern times.

DENYSE HOMÈS-FREDERICQ

LEJJŪN (M.R. 228072). A site located in biblical Moab, ca. 40 km E of the Dead Sea at an elevation of ca. 700 m above sea level. A perennial spring feeds the Wadi Lejjūn, a tributary of the Wadi Mūjib. The site lies in a shallow valley surrounded by low hills on all sides but the E. Although situated near the edge of the desert, the site receives rainfall sufficient for dry farming of wheat in winter.

The earliest settlement now attested at Lejjūn is a substantial fortified city of the EB Age, as yet unexcavated. Kh. el-Fityān, a Roman *castellum* 1.5 km NW of the spring, seems to have been built over a Moabite fort. In the early Roman period, a Nabatean watchpost (Rujm Beni Yasser) was constructed on a hill 1.5 km E of the spring. Occupation resumed ca. A.D. 300 with the construction of a Roman legionary fortress for *legio IV Martia,* the smaller *castellum* of Fityān, and the reoccupation and reconstruction of Yasser. The site was then known as "Betthorus," if the commonly held identification is accepted, and was a key element in the Roman fortified frontier, the *Limes Arabicus.* The *limes* was intended to control the incursions of neighboring nomadic Arab tribes from the desert. The modern Arabic name, "Lejjūn," seems to be an Arabic corruption of the Latin *"legio."*

Excavations begun in 1980 by the Limes Arabicus Project have examined the legionary fortress, Fityān, Yasser, and the Roman forts of Qaṣr Bshīr, 15 km NE of Lejjūn, and Da῾jāniya, 75 km S of Lejjūn.

The rectangular legionary fortress (242 × 190 m, 4.6 hectares) is typical of Roman military architecture. The main building materials were limestone, chert, and basalt. The enclosure wall is pierced by four gates,

one in the middle of each wall. Twenty U-shaped interval towers and four circular angle towers project from the wall. A major street (*via praetoria*) extends from the E gate to the center of the fortress; another major street (*via principalis*) runs from the N gate to the S and meets the *via praetoria* in the center of the fortress. Here is situated the headquarters building (*principia;* 63.5 × 52.5 m). This building consists of a large outer courtyard, a transverse inner courtyard, and a range of official rooms in the rear, including offices and the *aedes* or shrine of the legionary standards. The *aedes* is entered through a monumental entrance that once contained a barred iron gate, which permitted soldiers to view the sacred legionary standards, but insured the security of the shrine.

The E half of the fortress is devoted to long blocks of barracks. Their plan suggests an original legionary complement of 2,000 men. After an earthquake in 363, the original barracks were demolished and replaced by only half the former number, suggesting a reduction of 50 percent in the size of the legion in the late 4th century. The barracks have yielded evidence about the equipment, diet, and activities of the rank and file Roman legionaries.

A church is located within the fortress near the N gate. It appears to have been erected about 500 and was destroyed by the earthquake of 551. It is basilical in plan (24 × 13 m) with a narthex, apse, and sacristy. The church is small and rather shoddy, even by the modest standards of Transjordan. It lacks marble, mosaics, and frescoes. The date of the church and other evidence suggest that the bulk of the legion converted rather late to Christianity. Moreover, the pagan cult of the standards in the *principia* appears to have survived into the early 6th century.

Outside the fortress an extensive *vicus* or civilian settlement grew up. A large rectangular structure (35 × 28 m) excavated in the western *vicus* apparently served as a *mansio* or inn. It was built early in the 4th century, but was destroyed by the earthquake of 363. In the E *vicus* a Roman temple has been excavated; it also was built about A.D. 300 and testifies to the paganism of the original garrison.

A complex of hydrological installations is associated with the fortress, including a dam that conserved the outflow of the spring, two water channels that extended from the spring to the fortress, and a reservoir within the fortress.

Soundings at Kh. el-Fityān revealed a much smaller fort or *castellum* atop the steep N bank of the Wadi Lejjūn. The fort commands an excellent view in all directions and probably served as the hub of an observation and signaling system radiating from Lejjūn. The fort was erected contemporaneously with the legionary fortress about A.D. 300 and was occupied until the 5th century.

The watchpost of Rujm Beni Yasser, originally a Nabatean foundation of the 1st century B.C. or A.D., was reoccupied and enlarged by the Roman legionaries ca. 300. Like Fityān, it served as a component of the signaling system until abandoned during the 5th century.

The legionary fortress was built in the reign of Diocletian (284–305) as part of a massive military buildup in this sector of the frontier against nomadic Arab raids. There is as yet little direct evidence that the garrison evolved into *limitanei,* or hereditary peasant militia, as implied by the *Codex Theodosianus* in the early 5th century. Another earthquake in 502 damaged the barracks and the *principia.* The final occupation in the early 6th century suggests a reduced and rather rundown garrison. The ancillary posts, such as Fityān, Yasser, and Bshīr, were now abandoned. This may be associated with the demobilization of some *limitanei* by Justinian along the eastern frontier ca. 530. A final earthquake in 551 ended ancient occupation of the site.

LEMUEL (PERSON) [Heb *lĕmû᾽ēl* (לְמוּאֵל)]. The king of Massa, whose words (received from his mother) are recorded in Proverbs 31. Virtually nothing is known of Lemuel except that his territory or tribe was Massa (31:1). Massa is listed among Ishmael's "descendants" (Gen 25:14), but its location remains uncertain. See AGUR; MASSA. Keil and Delitzsch identified it as either N Arabia or a region in the Hauran mountains (1873: 263). Some interpreters read the Heb *massā᾽* as "burden/oracle" rather than a place name. Keil and Delitzsch, however, pointed out that the designation "oracle" normally identifies a speech conveying God's judgment (261), and there is no hint of judgment in this passage. The name, "Lemuel" has been understood as a symbolic reference to Solomon (for the meaning of the name, see W. McKane *Proverbs* OTL, 408). Jewish rabbis translated it literally, "towards God" which was understood as a name for Solomon, according to Cohen (*Proverbs* SonB, 209). This could be related to the otherwise obscure LXX reading ("spoken *by God*"), where "Lemuel" has been translated rather than recognized as a proper name.

LEND. See INTEREST AND USURY IN THE GRECO-ROMAN PERIOD.

LEOPARD. See ZOOLOGY.

LEPROSY. A disease in humans (also known as Hansen's disease) caused by the bacillus *Mycobacterium leprae.* This term "leprosy" is commonly used (more for convenience than medical accuracy) as a translation of Hebrew *ṣāraʿat* in the OT and Gk *lepra* in the NT. Scholars now generally agree that OT *sāraʿat* is not leprosy nor does it include it and that NT *lepra,* if it refers at all to leprosy, does so only as one among many skin conditions. See also SICKNESS AND DISEASE. This discussion will use the transliterations *ṣāraʿat* or *lepra* when speaking of the biblical condition and reserve the term leprosy for true leprosy. *ṣāraʿat* in the OT describes phenomenologically discrete lesions or defects which are found on human skin, in fabrics (cloth and leather), and on walls of houses. *lepra* in the NT is used of human skin diseases, following the OT tradition.

B. In the NT

———

A. In the OT

The major discussion of *ṣāraʿat* is in Leviticus 13–14 of the Priestly legislation (= P) of the Pentateuch. Lev 13:1–46 treats the diagnosis of the condition in people; 13:47–59 treats its diagnosis in fabrics; 14:1–32 contains the prescriptions for the purification of people after recovering from the condition; and 14:33–53 discusses the diagnosis of the condition in houses and purification after their renovation. (Lev 14:54–57 is a titular subscript to both chapters.) P discusses *ṣāraʿat* elsewhere in Lev 22:4 and Num 5:2. Outside P, the condition is discussed in Exod 4:6–7; Num 12:10–15; Deut 24:8; 2 Sam 3:29; 2 Kgs 5:1–27; 7:3–10; 15:5 = 2 Chr 26:16–21. It is unclear if Job's ailment (Job 2:7–13) is to be considered *ṣāraʿat* (cf. 18:13).

1. Scientific Diagnostic Suppositions. a. In Persons. A major concern of scholars has been to describe what *ṣāraʿat* is scientifically. While they agree that in fabrics and houses it is a fungal growth, they have

been slower in coming to a consensus about what the lesions or infections in humans are from a medical point of view. This situation is mainly due to problematic terminology in Leviticus 13–14 (such as *śēt, sappahat, baheret* [all types of inflammations, cf. 13:2, etc.]; *ʿamōq/šāpāl* "deep" [what is meant by this is unclear; cf. 13:3, 4, 20, 21, etc.]; *kēhâ/kēhê* "fade (?); faint, dull (?)" [cf. 13:6, 21, 26, etc.]). This terminology can only be properly understood after a medical diagnosis of the conditions has been made; it cannot be a priori a major aid for determining what diseases the prescriptions intend. Another problem in diagnosing *ṣāraʿat* is that the narratives and laws only give a very general description of the lesions. Even the detailed text of Leviticus 13 gives only enough description of the lesions that constitute *ṣāraʿat* so that a given condition may be determined to be pure or impure. They do not give full medical descriptions. This lack of description often allows for only broad, nonspecific, and consequently somewhat tentative conclusions (cf. Sussman 1967: 209–10). And finally, in some places P gives symptoms that are plainly undiagnosable according to modern medical knowledge.

Despite these problems, scholars have reached some agreement about the probable diagnosis of *ṣāraʿat* in humans. The most certain conclusion is that it is not leprosy and does not include it. The main argument for this is that the symptoms Leviticus describes do not suggest leprosy:

(1) The symptoms of leprosy progress very slowly over a period of several years. The swift development of *ṣāraʿat* required by quarantine periods of seven days (Lev 13:4, 5, 21, 26, 31, 33) does not fit leprosy.

(2) Leprosy is not curable without drug therapy; but Leviticus 13–14 indicate that a person may recover from *ṣāraʿat.*

(3) Leprosy is not primarily an exfoliative disease as is the case with *ṣāraʿat.*

(4) Though leprosy in darker skinned people could show hypopigmentation of the skin, the hair does not characteristically turn white or yellow as is required for some types of *ṣāraʿat* (Lev 13:3, 10, 20, 25, 30).

(5) Leprosy is not associated with boils or blisters (the meaning of *šĕhîn* is uncertain) and burns as a secondary manifestation (Lev 13:18–23, 24–28).

(6) One symptom of advanced leprosy is the loss of feeling accompanying nerve destruction. Leviticus 13 does not discuss such a prominent symptom.

(7) And Leviticus 13 does not discuss the necrosis and destruction of the feet, hands, and facial bones associated with advanced leprosy.

If these considerations do not entirely rule out leprosy, at most it would be only one among many skin diseases that could be considered *ṣāraʿat.* But it is doubtful if leprosy existed at all in the ANE at the time of the OT so that it might be considered *ṣāraʿat.* No certain historical attestations of the disease exist (in documents or in material finds) in this area of the world before the time of Alexander the Great. Only about this time do Greek writers start talking about leprosy (mainly under the term *elephantiasis*). Human paleopathological specimens prior to the 6th century C.E. do not show skeletal changes that are characteristic of leprosy. Many passages from texts from the ANE and some archaeological data from before 300 B.C.E. which have been explained as indicating the existence of leprosy are extremely ambiguous and do not refer decisively to leprosy (Lowe 1947: 57–59; Moller-Christensen 1967; Hulse 1975: 87–90; Dols 1979: 314–18).

While it is easy to say what *ṣāraʿat* is not, it is more difficult to say what it is. Taking the non-P texts first, one finds a very general description of the symptoms. A frequently recurring description in these passages is that the lesion is "like snow" (Exod 4:6; Num 12:10; 2 Kgs 5:27). This may refer more to the flakiness of the lesion than to its color (the adjective "white" which appears in some translations of these passages is not in the Hebrew). Num 12:12, in which Aaron pleads Miriam's cause, gives a more vivid description of the condition: "Let her not be like a dead (fetus) which when it comes out of its mother's womb half of its flesh is eaten!" Though this is hyperbolic it nevertheless indicates that *ṣāraʿat* is to a certain extent exfoliative or desquamative. A fetus that has died in the womb takes on a reddish color which lasts for the first few days after death. After this period it becomes an odd brown-gray. As it continues to become macerated in utero before finally being expelled, the skin is shed in large sheets.

The evidence from the non-P texts does not allow for specific conclusions, but it is at least evident that *ṣāraʿat* is a disease or group of diseases in which there is flaking or exfoliation of the skin. Such symptoms are a prominent feature of skin diseases such as psoriasis, eczema, seborrhea, and certain mycotic infections.

The evidence from the P texts though more specific (yet to a certain extent unintelligible) does not contradict the picture gained from the non-P texts. Seven sections in Leviticus 13 discuss various conditions in human skin (vv 2–8, 9–17, 18–23, 24–28, 29–37, 38–39, 40–44; see D. Wright's chart summarizing the symptomatology in J. Milgrom *Leviticus* AB, on Leviticus 13). The diagnosis of 2 of these from a modern medical perspective is quite certain. Lev 13:40–41 clearly talk of normal balding of the head (alopecia; on Lev 13:42–44, see below). Lev 13:38–39 speak of multiple faint (or dull) white spots (*bĕhārōt*) on the skin, called *bōhaq.* This is probably one variety of leukoderma known as vitiligo in which patches of the skin and hair lose their pigmentation. Small to very large areas of the skin surface can be affected. It should be noted in vitiligo the skin does not flake. As we will see below, flaking is associated with possible unclean conditions. (Surprisingly, Lev 13:28–29 does not talk of the existence of depigmented hair common in vitiligo.) Both baldness and vitiligo are clean conditions (i.e., they are not *ṣāraʿat*).

The cases in the other sections of Leviticus 13 are more difficult to diagnose. Lev 13:2–8 can be subdivided into two cases: a general case in vv 2–3 and a dependent subcase in 4–8. The descriptions of the spots that can be called *ṣāraʿat* in Lev 13:4–8 are too general to allow specific medical identification. The symptoms are, summarily, a flaky patch of skin (presumably indicated by the color white, cf. the white and red-white spots or lesions with raw flesh in Lev 13:10, 14–16, 19, 24) without white hair or "deepness" which either spreads after one week or stays the same or spreads after two weeks. These symptoms fit many types of skin diseases such as psoriasis, seborrhoeic dermatitis, certain mycotic infections, patchy eczema and pityriasis rosea (cf. Hulse 1975: 96). This diagnosis correlates with the view of *ṣāraʿat* found outside P.

The diagnosis of the spots (a *śĕʾēt, sappaḥat,* or *baheret*) in Lev 13:2–3, on the other hand, is difficult, if not impossible. The main symptom here is whiteness of hair. It also has "deepness" which appears to require involvement of the skin, a visible subcutaneous lesion. And it is also may have flakiness: other cases of a *baheret* or *śĕʾēt* later in the chapter are described as white or red-white which suggests flakiness for these types of lesions (see the preceding paragraph). The condition is not vitiligo (which appears to be described in Lev 13:38–39), since it is generally not associated with flakiness or a subcutaneous lesion. While medical experts can suggest various rarer types of conditions which could fit the difficult and vague description of Lev 13:2–3 (e.g., some types of nevi), it is possible, knowing the systematic propensities of P, that this source has described a disease which does not reflect medical reality, perhaps by conflating symptoms of separate diseases thought to be impure.

The latter possibility is attractive since elsewhere in these regulations we find clear evidence of ideological systematization: (1) The term *ṣāraʿat* is applied to not only human skin diseases, but to phenomenologically discrete defects in fabrics and houses. (2) The literary and prescriptive structure of the *ṣāraʿat* rules for persons, fabrics, and houses is very similar. (3) Seven-day quarantine periods are prescribed for each of these three cases though the conditions are discrete. (4) The three cases focus on the color of the lesions as the main or initial criterion for diagnosis.

Other sections in Leviticus 13 describe what seem to be unreal conditions as well as symptoms that are roughly diagnosable, as in Lev 13:2–8. Lev 13:18–23 and 24–28 are parallel to each other and speak of secondary lesions arising from a boil or blister. The conditions that are initially judged to be *ṣāraʿat*—lesions with "deepness" and white hair—seem to be artificial like those in Lev 13:2–3. On the other hand, lesions developing from boils and burns that are quarantined because they lack white hair and "deepness" and then spread are *ṣāraʿat* and reflect the same real medical conditions as Lev 13:4–8.

Lev 13:9–17 is parallel to vv 2–8 (note the resumptive repetition of v 2 in v 9). The case of Lev 13:10–11 (a white *śĕʾēt* with white hair and ulcerated skin [*miḥyat bāśār ḥay;* cf. 1 Sam 2:15]; called a chronic or advanced *ṣāraʿat* lesion) seems to be an unreal condition. The ensuing verses discuss the case where

the lesion expands so that it covers the entire skin. If it does this so that no ulcerated skin appears the lesion is pure (Lev 13:12–13; the lack of ulcerated skin is implicit from v 14). If ulcerated skin reappears, it is *ṣāraʿat* (Lev 13:14–15). If the ulcerated skin turns white again (i.e., flakiness without ulceration), it is pure (Lev 13:16–17). The point of Lev 13:12–17 is not to show a paradox (i.e., a small spot is unclean but a lesion that covers the whole body is clean), but to show that a lesion that does not have ulcerated skin is clean even though it may cover the whole body. This is a good case of how the symptomatology may be idealistic and not realistic. It is doubtful that in reality a lesion would cover the whole body. Such a description is a legal stratagem. In terms of a medical description, if the condition of white hair in Lev 13:9–11 is not to be carried through Lev 13:12–17, a condition such as psoriasis which may cover large parts of the body and develop broken or raw skin may be intended. If white hair is implicitly present in the cases in Lev 13:12–17, then it appears to be an unreal condition.

Lev 13:29–37 treats conditions of hair on the head or in the beard. The main case (Lev 13:30) speaks of a "plague" (*negaʿ*)which is "deep" and in which there is thin yellow (or copper colored, *ṣāhōb,* cf. Ezra 8:27) hair. This condition is a type of *ṣāraʿat* called *neteq.* Some have suggested that this may be diagnosed medically as favus, a mycotic infection with *Trichophyton schoenleinii* which can cause color changes in the hair, hair loss, and patches of scaling skin. In the ANE however, inadequate nutrition must always be considered a significant etiology for disease. For example, Kwashiorkor, a protein deficiency syndrome, which is still seen in Arab children, is associated with a copper-red to yellow colored fine hair and scaling of the skin (Wilkinson 1977: 166; Fitzpatrick et al. 1979: 1020–23).

Lev 13:31–37, a subcase of Lev 13:29–30, speaks of cases where "deepness" and black hair (and presumably yellow/copper-colored hair) do not initially appear in the suspected *negaʿ* spot. (This lack of black hair and presumably yellow/copper-colored hair may imply a hair loss has occurred at the spot.) If the spot spreads after one or two quarantine periods it is presumably *ṣāraʿat.* These symptoms are general enough to allow the same diagnosis as in Lev 13:4–8.

Finally, Lev 13:42–44 (which depends on the discussion of baldness in Lev 13:40–41) states that if a red-white *negaʿ* appears in the bald area of someone's head that looks like a *ṣāraʿat* condition, it is to be considered such.

To summarize the character of the human conditions, both non-P texts and parts of the P legislation consider *ṣāraʿat* to consist of several types of skin lesions which exhibit exfoliation or scaling of the skin and which persist and do not exhibit a course of healing within the prescribed quarantine periods. It seems that P has elaborated upon this basic symptomatology extrapolating other symptoms which are consistent with its system of purity and impurity but which do not reflect medical reality.

b. In Fabrics and Houses. In comparison to human lesions, the general diagnosis of *ṣāraʿat* in fabrics and walls of houses is relatively easy (see Lev 13:47–58 and 14:34–45). The condition basically consists of greenish or reddish spots that spread after a seven-day quarantine period. These defects appear to be different types of mycotic growths. *ṣāraʿat* in a house, for example, may be one of several types of wood-destroying or wood-staining fungi, which may have brown, pink, red, blue, and grayish-olive colors (Hunt and Garratt 1967: 23–43). Only greenish and reddish defects are considered *ṣāraʿat;* gray black or dark brown fungal spots are implicitly considered clean. Akkadian texts shows that fungal growths were portents of evil in Mesopotamia (see *CAD* 8: 133 and Caplice 1974).

2. Sin and *ṣāraʿat.* The OT often (though not always; cf. Exod 4:6) attributes the appearance of *ṣāraʿat* to God's punishment for sinful behavior. Naaman is cured from *ṣāraʿat* when he humbles himself, but scheming and deceitful Gehazi is cursed with it (2 Kgs 5). When King Uzziah acted arrogantly by illicitly offering incense in the temple, *ṣāraʿat* broke out in his forehead (2 Chr 26:16–21; cf. 2 Kgs 15:5). Miriam, complaining about Moses' marriage and leadership, was cursed with it (Num 12:10–15; cf. Deut 24:8–9). David curses Joab and his posterity with *ṣāraʿat* for the murder of Abner (2 Sam 3:29). P once attributes the condition to God's hand (Lev 14:34). (On skin diseases as punishment, see also Deut 28:27, 35). The OT is not alone in this explanation. Other cultures similarly attribute various skin diseases and real leprosy to sin (in Christianity and Islam, cf. Dols 1983; in China, cf. Skinsnes 1964: 23–24, 29; ancient Persia, cf. Herodotus 1.138; in ancient Mesopotamia, cf. Kinnier-Wilson 1966). This of course is

just part of the larger tendency of premodern societies to attribute disease to supernatural causes. It must be noted, however, that though the OT may explain *ṣāraʿat* as arising from sin, having the disease itself with its concomitant impurity is not a sin. Particularly in P, having this type of impurity is not a sinful state; only mishandling it is. See UNCLEAN AND CLEAN.

3. Pollution Effect. The rules in Leviticus 13–14 are not just interested in diagnosing *ṣāraʿat* but have more as their goal the proper control of the condition since it is one of the more severe impurities in P. Not only can those persons and things suffering *ṣāraʿat* pollute holy items and therefore need to be kept separate from the sacred sphere (cf. Lev 22:4), affected persons and things are also able to communicate a level of impurity to profane (i.e., nonholy or common) persons and objects.

To be sure, P actually (and surprisingly) says little about the strength of the condition's impurity in regard to the profane. It only treats the effect of a suspected house (Lev 14:36, 46–47). The effect of unclean persons and fabrics, however, can be deduced. It is reasonable to suppose that persons and fabrics polluted at least like a suspected house. A suspected house pollutes anyone who enters it with a minor impurity lasting one day. Anyone who enters and tarries in this house has a slightly more severe impurity, requiring laundering, which lasts, according to the context of this rule and other purity laws, one day (cf. Wright 1987: 206–8). By analogy, being in the same enclosure with an affected person or fabric would pollute similarly. Another indication of the severity of the impurity is the extensive purification rites required (Lev 14:1–32, 48–53). As other impurities that need extensive purification rites communicate impurity to the profane sphere (e.g., those with abnormal genital discharges, Lev 15:1–15, 25–30; one corpse contaminated, Numbers 19), so would be the case with *ṣāraʿat.* The rabbis came to the conclusion that one who had *ṣāraʿat* polluted not only by being in the same enclosure with other persons and things (*m. Neg.* 8:8; 13:17, 11; *Kelim* 1:4), but like one with an abnormal genital discharge (*m. Zabim* 5:6; see DISCHARGE).

In addition to a person diagnosed as having *ṣāraʿat,* there is evidence to indicate that a person merely suspected of the disease could also pollute the profane sphere. A person who has been quarantined for two weeks but is in the end declared clean needs to launder (Lev 13:6, 34). After this prescription the text adds "and he shall be clean." Moreover, that a suspected house can pollute the profane sphere suggests that a suspected person should be able to pollute similarly. From the analogy with the house, one may conclude that a suspected person pollutes much like diagnosed persons which pollute like suspected houses (such is the conclusion of the Rabbis, *m. Meg.* 1:7; *Neg.* 8:8). This picture must be qualified slightly, for the person who is suspected for one week but who is afterwards declared clean is not required to launder (cf. Lev 13:23, 28). This hints that there may be a slight difference in the degree of impurity between one who is suspected for one week and one suspected for two weeks (cf. Wright 1987: 210–12).

Because of their ability to pollute the profane sphere, persons and things diagnosed or suspected of *ṣāraʿat* need to be restricted in or excluded from the area of human habitation or be otherwise destroyed. Lev 13:46 prescribes that those with *ṣāraʿat* must live outside the habitation (cf. Num 5:2–3). This restriction of *ṣāraʿat* affected persons is reflected outside P in Num 12:14–15; 2 Kgs 7:3–10 and perhaps 2 Kgs 15:5 = 2 Chr 26:21. Persons suspected of *ṣāraʿat* are to be shut up or quarantined (probably restricted in their homes) during the period of suspicion (Lev 13:4, 5, 21, 26, 31, 33). A suspected house is cleared out and shut up (indicating restricted access during this period; Lev 14:36–38). Suspected fabrics are quarantined as well (Lev 13:50, 54). *ṣāraʿat* infected building materials are to be disposed of outside the habitation in an unclean place (Lev 14:40, 41, 45) and fabrics incorrigibly infected are to be burned (Lev 13:52, 55, 57).

4. Purification Rites. The chapters from Leviticus prescribe purification rites for persons, houses, and fabrics that have recovered from the condition or that are declared clean after having been suspected.

The purification of persons is the most extensive (Lev 14:1–32). It consists of three parts: (a) 14:2–7: bird blood and water is sprinkled on the healed person by means of a live bird, cedar wood, crimson material, and hyssop. This sprinkling appears to remove impurity from the person. The live bird is sent away to remove the impurity from the person and locale (cf. the scapegoat in Lev 16:21–22). (b) 14:8–9: the person bathes, launders, and shaves at the beginning and end of a seven-day intermediate period. The

requirement to wait a week before full impurity is achieved may be to make sure the lesion has really healed and would hence be similar to the seven-day quarantine periods in Leviticus 13. The healed person still can pollute to some degree and must dwell outside his tent (cf. Wright 1987: 212–13). And (c) 14:10–32: the person brings sacrifices and blood and oil is placed on his ear, thumb, and toe of the healed person (cf. Exod 29:19–21; Lev 8:22–30). By these rites, the person who was formerly excluded from society is readmitted to full communal and spiritual life.

A person suspected of *ṣāraʿat* for two weeks but declared clean purifies by laundering his or her clothing (Lev 13:6, 34). Bathing may be included since P often leaves this requirement unsaid (Wright 1987: 185 n. 38). In view of this, bathing may also be necessary for a suspected person after one week (Lev 13:23, 28).

The purification of a renovated house follows essentially the same rite as that used for the first part of a healed person's purification (Lev 14:49–53). A mixture of bird blood and water is sprinkled on the house by means of a live bird, cedar wood, crimson material, and hyssop. The live bird is sent outside the city into the open country, dispelling the impurity.

As for fabrics, the purification rite is so brief as to be almost missed: a fabric from which a suspected spot has disappeared is to be washed (Lev 13:58). The washing in v 54 (not the same as that in v 58) is for removing the spot, not purification.

The purification rites just discussed do not cure *ṣāraʿat* lesions; they only purify from residual impurity after the spot has been removed or disappeared, or has been determined not to be *ṣāraʿat.* Notably, though P prescribes means for removing *ṣāraʿat* spots from fabrics and houses (cf. the first washing in Lev 13:54 and the tearing out of the spot in v 56; also the removal of infected building materials and their replacement in Lev 14:40–42: note these are all very practical, not ritualistic, procedures), it does not prescribe any cure for *ṣāraʿat* in persons. The only place where healing of human *ṣāraʿat* is found is in 2 Kgs 5 where Elisha prescribes a ritual for Naaman. Significantly, it is a prophet who prescribes the healing rite, not a priest. This bifurcation of duties fits into the larger OT picture where prophets heal and priests diagnose (cf. 1 Kgs 17:17–24; 2 Kgs 4:17–37; 20:7 = Isa 38:2; Jesus follows the prophetic ideal in his healing of those with *lepra;* see below).

5. Why is *ṣāraʿat* Impure? A question of much interest is why *ṣāraʿat* is considered unclean. O. Skinsnes (1964) has shown in his study of leprosy in China that social reactions to skin diseases may be similar in unrelated cultures. That is, people have a common natural aversion toward skin diseases; fears of such arise naturally and independently. This natural fear can be explained by M. Douglas' theory of impurity (1966): what is considered impure is largely that which is irregular or out of place. Against the norm of whole, healthy skin, skin diseases are abnormal; hence they are shunned. J. Milgrom (*Leviticus* AB, on Leviticus 13–14) sheds light on this psychological aversion by arguing, as many biblical exegetes have in the past, that *ṣāraʿat* is impure because it is connected with death. In the Bible, *ṣāraʿat* was already connected with death (cf. Num 12:12; cf. Job 18:13) and later Jewish tradition looked on *ṣāraʿat* as living death.

The foregoing helps to explain how aversion towards skin diseases may arise or be perpetuated in the biblical world, but it does not explain how or why a particular society, or part of that society (such as the P writers), formulated their view the ways they did. Social-anthropological and structuralist approaches are particularly helpful in explaining systems of purity rules. See UNCLEAN AND CLEAN (OT). Douglas argues (1966: 114–28) that purity rules that pertain to what leaves and enters the body reflect the society's larger concern for what happens at its social borders. The restrictions placed on the body mirror larger social concerns. J. Pilch (1981), building on Douglas, argues that *ṣāraʿat* rules also reflect this concern about the integrity of social borders since the condition is one that affects the surfaces of bodies, houses (their walls), and fabrics. Correct control of these superficial impurities images the society's concern to control its social boundaries.

B. In the NT

References to *lepra* in the NT are found only in the Gospels. The context of most instances is Jesus' miraculous power to heal (Matt 8:1–4 = Mark 1:40 = Luke 5:12 = 16; Matt 11:5 = Luke 7:22; Luke

17:11–19). Jesus also charged his twelve disciples to do works similar to his including healing of those with *lepra* (Matt 10:8). Once Jesus makes reference to the healing of Naaman (Luke 4:27). Another story has Jesus staying at the house of Simon who was affected with *lepra* (Matt 26:6 = Mark 14:3). It is also possible that the disease of Lazarus in Luke 16:20 was *lepra*.

These references follow OT tradition. The LXX uses *lepra* to translate OT *ṣāraʿat.* The use of *katharizō* "to purify" of Jesus' healing acts (Matt 8:2–3 = Mark 1:40–42 = Luke 5:12–13; Luke 4:27; Matt 10:8; Matt 11:5 = Luke 7:22; Luke 17:14, 17) also reveals dependence on OT tradition. This indicates that the same types of diseases termed *ṣāraʿat* in the OT figure in the NT. That *lepra* has a connotation equivalent to OT *ṣāraʿat* is also evident in Greek medical writers who most often use it to signify exfoliative skin diseases in general. These writers reserve the term *elephas* or *elephantiasis* for true leprosy.

There is some evidence, however, suggesting that though the NT term *lepra* followed OT tradition concerning *ṣāraʿat,* true leprosy could have been included under the term *lepra.* The best historical reconstruction of the spread of leprosy argues that the disease appeared in the Near East about 300 B.C.E. (at this time the Greek physicians in Alexandria became familiar with the disease) and began to spread to Italy, for example, just two centuries later. This allows the possibility that the disease existed in Palestine shortly before the time of Jesus. Some Greek writers, too, confused the beginning stages of leprosy with other skin diseases called *lepra.* This shows that people at the time of the NT could have included leprosy under the term *lepra* (see Dols 1979: 314–18).

LESBOS (PLACE). See MITYLENE (PLACE).

LESHEM (PLACE) [Heb *lešem* (לֶשֶׁם)]. Var. LAISH. A city mentioned in Josh 19:47 which the Danites captured, but which is called LAISH in Judg 18:7, 27. The LXX of Joshua reads neither Leshem nor Laish, but Lachish (Gk *Lachis*). This shift probably indicates an effort on the part of the translators (or the source from which they worked) to correct what they perceived to be an error in the MT, which put

the Danites so far N of their original inheritance. Both LXX texts of Judges (A and B), however, read Laish (Gk *Laisa*).

LETTERS. This entry consists of three separate articles surveying epistolography in the biblical world. The first covers the many letters written in Hebrew that have been discovered as a result of archaeological work. The second examines Aramaic letters and letter types. The third examines Greco-Roman letter-writing conventions, providing an important backdrop to our understanding of NT literature.

HEBREW LETTERS

Archaeologists have discovered many letters written in the Hebrew language and dealing with a variety of different subjects.

B. The Corpora
C. The Formulae
D. Transition to Body
E. Letter Types
F. Fragments of Letters Preserved in the Hebrew Bible

———

A. The Study of Hebrew Letters

The study of Hebrew epistolography in the biblical period only became genuinely possible with the discovery of letters from extrabiblical contexts. This is true because so few remnants of epistolary formulae are present in the letter fragments preserved in the Hebrew Bible and because of the historiographic problems of the Hebrew Bible. There were some early attempts at the study of the biblical Hebrew letters (especially Beer 1913; Marty 1939) but not until the publication of the Lachish ostraca was it possible, for example, to understand the phrase *wʿth,* which may be roughly translated "and now," (2 Kgs 5:6; 10:2) as an authentic remnant of the epistolographic style (*EncMiqr* 4: 972). The major groups of extrabiblical letters are those from Tell ed-Duweir (Tel Lachish in Hebrew), excavated in the 1930s and from Tel Arad, excavated in the 1960s. The *editiones principes* of these texts were primarily concerned with philological and historical questions (extensive bibliographies are to be found in Pardee 1982 and only the primary publications will be indicated here below). Loewenstamm's 1962 study (*EncMiqr* 4: 966–74) was path-breaking, and since then Pardee has provided an overview (1978b) and a *Handbook* (1982). These studies were in many ways dependent on the study of Aramaic epistolography, for which documents were discovered earlier (see the following article).

In spite of the insights afforded by these extrabiblical documents, however, knowledge of Hebrew epistolography in the pre-Medieval periods is still extremely scanty because of the dearth of documents (there are a total of 48 epistolary documents between ca. 700 B.C. and 135 A.D.) and because of the concentration of these few witnesses into discrete groups, as defined both geographically (Lachish, Arad, Meṣad Ḥashavyahu, Dead Sea) and chronologically (ca. 700–586 B.C., A.D. 132–135). These two factors give relatively clear snapshots of certain letter-types from particular places and time periods but leave massive periods and areas totally unaccounted for. As a result the history and interrelationships of many epistolary features are at present untraceable.

B. The Corpora

The oldest Hebrew letters presently known are from the early or middle of the 7th century: Murabbaʿāt 17, Arad 40, and Meṣad Ḥashavyahu (dates uncertain; see Pardee 1982: 117; 1978b: 323; and 1978a: 34 for bibliography). The first of these texts also has the distinction of being the only one of the pre-Christian Hebrew letters discovered to date to have been written on papyrus, all others being ostraca. Unfortunately, this document is the first stage of a palimpsest and only a few words are presently readable. The other two

are in much better condition. Indeed, the Meṣad Ḥashavyahu ostracon is almost complete (Naveh 1960; 1962). This "letter" consists of a plea addressed by a reaper (*qṣr*) to his superior (*ʾdny hśr*) asking that a garment be returned to him that had been confiscated by a certain Hoshayahu ben Shabay, whose title is not given. Arad 40 is from 2 persons, addressed to the father of one of them ("Your son Gemar[yahu], as well as Neḥemyahu, (hereby) sen[d greetings to (you)] Malkiyahu").

Most of the *Arad letters (AI)* are convincingly dated to immediately before the final conquest of Judaea by Babylonian and Edomite forces in 597 B.C. (Lemaire 1977: 231–35) and most of them consist of orders from superior to inferior to release foodstuffs from the Arad storehouses. Three of them contain kinship terms in the address (16, 24, 40) and one is clearly from inferior to superior (18: *ʾl ʾdny ʾlyšb* "To my lord Elyashib"). One enigmatic Arad text (88) begins *ʾny mlkty* "I have become king"; it is not classified here as a letter because it contains no epistolary formula and because it is so lacunary as to preclude determining whether or not it was functioning to effect "communication between two or more persons who cannot communicate orally" (the working definition of a letter given in Pardee 1982: 2). See also ARAD OSTRACA.

The *Lachish letters* (Torczyner 1938) are dated to about ten years after the Arad texts, that is, shortly before the Babylonian invasion which resulted in the capture of Jerusalem in 586 B.C. The mention of Lachish by name in one of the texts without any indication that the writer was at Lachish (4:10) may imply either that Tell ed-Duweir does not represent the site of ancient Lachish or that Lachish 4 was brought there from another site (Pardee 1982: 94; cf. Ahlström 1983; Yadin 1981/1984). The remarkable correlations between the siege ramp at Lachish and the ramp illustrated in Sennacherib's reliefs (Ussishkin 1982) seem to constitute a strong argument in favor of the latter solution, while the fact that several of the texts from the site (but not including text 4) were written on sherds from a single pot found alongside uninscribed sherds from the same pot (Pardee 1982: 77; Yadin 1981/1984: 182) seems to constitute a strong argument in favor of the former solution. The majority view is that the formulation "we are watching for/over the Lachish signals" (*ʾl mšʾt lkš nṣnw šmrm*) does not constitute a problem for the identification of Tell ed-Duweir with Lachish (e.g., Yadin 1981/1984: 181–82), though those who make the assumption do not explain why Lachish is not identified as being the writer's location. Perhaps the best explanation is that the writer was physically at Lachish when writing but was responsible for a broader district and could, therefore, refer to all the towns within the district simply by name.

The Lachish letters are primarily military in nature, though the only unveiled reference to political and military activities speaks of an embassy to Egypt by a certain Konyahu ben Elnatan who is called śr hṣbʾ "General of the Army" (3:13–18). The apparent ease of movement at the time of this letter as well as references to the sending and receiving of letters (5, 6, 12, 16, 18) and to the harvesting and distribution of crops (5, 9) have led some commentators (Lemaire 1977: 139–43; Pardee 1982: 77–78) to date the documents prior to the Babylonian invasion of 588 B.C. rather than shortly before the termination of the invasion in 586, as has generally been thought. See also LACHISH LETTERS.

The letters found among the Dead Sea Scrolls have all come from sites other than the main caves associated with Qumran; that is, from caves in Wadi Murabbaʿât (Milik 1961), Naḥal Ḥever (Yadin 1961), and Naḥal Ṣeʾelim (Milik 1957: 21). They were found alongside letters (and other texts) in Aramaic and Greek; all the documents seem to have found their way to the caves at the time of the Bar Kokhba revolt. The epistolary documents originated in Bar Kokhba's own circles and were in some cases written by Shimon ben/bar Kosiba himself (e.g., Hebrew letters Murabbaʿât 43, Naḥal Ḥever 5/6 12).

These letters deal with provisioning the forces of the revolt and with various problems of discipline (Murabbaʿât 43 "I swear by the heavens: Should harm come to any one of the Galileans who are with you, I'll put your feet in fetters as I did to ben Aflul"; Naḥal Ḥever 4/6 12 "Well-off you are—eating and drinking from the goods of Beth-Israel and not giving a thought to your brothers"). One document (Murabbaʿât 42) is formally very distinctive in that it contains a list of witnesses; it functions as a letter of attestation regarding the proper ownership of a cow that had been purchased (or seized) by a member of the revolting forces (cf. the Aramaic letters which contain lists of witnesses). See also BAR KOKHBA (LETTERS).

C. The Formulae

The Hebrew letters are more limited in number and in type than the Aramaic letters. Because the number of formulae is thus correspondingly reduced our ability to interpret the proper usage and the function of each formula is severely limited. The most complete Hebrew letters of the biblical period consist of address, greetings, transition to body, and body. All of these elements are optional, including the body (though there are no Hebrew letters of the type, there are Ugaritic letters which consist entirely of formulae).

The letters of the Bar Kokhba period include these elements and closing formulae as well. The use of the epistolary formulae appears to have been much more rigidly prescribed in this period, for the address and the greeting formula *šlwm* are always present, where verifiable, in this corpus of texts.

The *address* may consist either of a simple prepositional phrase or of a complete verbal sentence. The simplest formula is *ʾl* + PN, "To PN …" (Arad 1–8, 10–12, 14, 17); this may be expanded by the insertion of a title, *ʾl ʾdny* + PN, "To my lord PN …" (Arad 18, Lachish 2, 6). The only address formula in the Bar Kokhba letters is prepositional, but includes reference to both the sender and the addressee: *mn* PN (+ title) *ʿl* PN (+ title), "From PN to PN …" The verbal formula usually includes the verb *šlḥ*, "to send," as an epistolary perfect (Pardee 1983; Pardee and Whiting 1987) plus the phrase *lšlm* "to greet" (literally "for well-being"), e.g., *ʾḥk ḥnnyhw šlḥ lšlm ʾlyšb wlšlm bytk* "Your brother Ḥananyahu (hereby) sends greetings to (you) Elyashib and to your household" (Arad 16). This greeting formula thus contains an element of greeting but may itself be followed by another greeting formula (*brk* "to bless" [see below]).

Four of the Lachish letters (4, 5, 8, 9) and the judicial plea from Meṣad Ḥashavyahu contain no address formula. Because of similarities with other Lachish letters it is unlikely that this omission may be interpreted as indicative of a different origin for the letters in question. Either the address formula was not considered necessary because of a particular circumstance of transmission, as we have argued to be the case with the Meṣad Ḥashavyahu text (Pardee 1982: 23), or else all of these documents represent drafts, as Delekat (1970: 454) has suggested for the Meṣad Ḥashavyahu text and as Yadin (1981/1984) has surmised for the Lachish examples.

All of the Hebrew letters of which the relevant lines are preserved contain as part of the introductory formulae either the name, an epithet, or both of the recipient. The identification of the sender is much less frequent, however: seventeen of the Hebrew letters contain no marker whatever of the sender's identity. A clear chronological division may be seen here, for the sender is always identified in the Bar Kokhba letters.

Greeting formulae are always expressed verbally in the older corpora; there are five basic verbal expressions: (1) "to bless": *brktk lyhwh,* "I hereby bless you to YHWH" (Arad 16, 21, 40; compare the same formula in *Aramaic letters); (2) "to inquire": *yhwh yšʾl lšlmk,* "May YHWH inquire after your well-being" (Arad 18; also in Aramaic letters as well as in Ugaritic); (3) "to cause to hear": *yhwh yšmʿ ʾt ʾdny šmʿt šlm wṭb ʿt kym*, "May YHWH cause my lord to hear news of well-being and good (i.e., the best possible news) at this very time" (Lachish 5; with variants in Lachish 2–4, 8, 9); (4) "to cause to see": *yrʾ yhwh ʾt ʾdny ʾt hʿt hzh šlm,* "May YHWH cause my lord to see this time in well-being"; (5) "to send": *šlḥ šlḥt ʾt šlm bytk,* "I (hereby) send heartfelt greetings to your household" (Murabbaʿât 17). These greetings are always, where verifiable, from inferior to superior or between equals, never from superior to inferior.

All of the Bar Kokhba letters contain, where the relevant part of the text is extant, the one-word greeting formula *šlwm,* "Greetings."

D. Transition to Body

Most of the letters from the older corpora have an explicit marker of transition from the opening formulae to the body of the letter. This is the phrase *wʿt,* literally translated "and now," but the rhetorical function of which is to indicate a transition from a preamble of any sort to the purpose of the statement or from "topic to "comment" (Pardee 1985: 148). It is only omitted in five of the earlier Hebrew letters (Arad 4, 12; Lachish 2, 5, 6) and in the Lachish examples is in a sense replaced by the self-abasement formula *my ʿbdk klb ky,* "Who is your servant but a dog that …" This formula of transition is the only

epistolary formula that has been retained as such in the epistolary fragments preserved in the Hebrew Bible (2 Kgs 5:6; 10:2).

The Bar Kokhba letters contain a formulaically similar phrase, the particle *š* (paralleled in the Bar Kokhba Aramaic letters by the particle *d (y)*, the equivalent of *š*). It is positioned between the greeting and the body and must be considered a vestigial formula, for it functions contextually neither as a conjunction nor as a relative pronoun. Unfortunately, the data for the history of this usage are missing and we cannot say for the present how the formula developed. It must have been sensed as awkward, for it is only present in half the letters for which the relevant section is extant and published (present in Murabba‹ât 42, 43; absent from Murabba‹ât 46; 5/6b Ḥever 12).

The body of the extant Hebrew letters differs considerably from that of the Aramaic letters, for while the latter contain extensive formulaic sections, such is not the case with the Hebrew letters. Indeed, one can only identify certain epistolary *topoi* of a very general character which have to do with the nature of things normally discussed in a letter (questions of sending, giving, returning an answer, etc.: Pardee 1982: 150). This important empirical difference is probably a result of the paucity of extant documents and of the nature of the documents themselves (brief texts on ostraca) rather than a reflection of a difference in manner of expression between Hebrew speakers and Aramaic speakers.

In the earlier period *closing greetings* were not used in letters written on ostraca—which is to say there are no examples of closing greetings from the earlier letters, for the end of Murabba‹ât 17, the only Hebrew letter on papyrus from this period, is not extant. In the letters from the time of Bar Kokhba, however, closing greetings were only omitted in one letter (Murabba‹ât 43), elsewhere consisting of a form of the verb *hwh* "to be" + *šlwm,* as in *›hwh šlwm wkl byt yšr›l*, "May it be well with you and with all of Beth-Israel" (Murabba‹ât 42; see also Murabba‹ât 44, 46, 48; relevant section not extant in all other published documents).

The Bar Kokhba letters were also signed, which was not the case with earlier letters. There were four *signature formulae:* (1) that of the sender: PN *ktbh,* "PN has written (= dictated) it" (Murabba‹ât 42, [43], 46, 48); (2) that of the principal party in an agreement: PN *‹l npsw̌h,* "PN upon his 'life' " (Murabba‹ât 42); (3) that of a witness: PN *‹d,* "PN: witness" (ibid.); and (4) that of a notary (?): PN *m‹yd,* "PN attests" (ibid.).

E. Letter Types

The limited corpus, made up of relatively brief texts that are often badly damaged, precludes an analysis of letter types such as is possible for the Aramaic letters. It is quite possible that the Hebrew letters fit more or less well into the same categories but on the basis of the present documentation this is not certain.

The most consistently different corpora are the ones defined chronologically: the early letters differ from those of the Bar Kokhba era both in actual formulae and in optionality of use of the formulae (for details, see above). The greeting formulae of the Lachish letters are different from those of the Arad group, a fact that is difficult to explain, for the two sites were only separated by a few kilometers and the two corpora are only separated in time by about a decade. Aside from these major and obvious differences, certain features overlap from one corpus to another and one cannot define a document or a corpus in terms of one criterion or set of criteria. Nor, because of the various limitations already mentioned, can we determine the origin or explain the preference for certain formulae (e.g., the difference between the Lachish and Arad greeting formulae). Not even content can be used as a criterion because virtually all of the letters come from military contexts and show a disconcerting sameness of interests and allusions. There are, of course, some exceptions to the sameness: the poor reaper begging to have his outer garment returned (Meṣad Ḥashavyahu); the subservient officer of the Lachish documents who insists that he can read the letters sent to him and that he has permitted no intelligence leaks; the personal touches of the Arad letters addressed to kin as opposed to the general terseness of the letters from superiors to inferiors; the wrangling over property that is typical of an army that has to live off the land (Murabba‹ât 42); the documents signed by Shimon ben/bar Kosiba himself, which have restored this figure from legendary status (Son of the Star) to that of a real revolutionary commander. These distinctive features are more easily perceivable because of epistolary considerations (e.g., we know that it is Bar

Kosiba speaking because he has signed the letter; the list of witnesses in Murabbaʿât 42 is unique in the Hebrew corpus) or if the formulaic elements are defined in epistolary terms (e.g., the more effusive greetings in the letters between kin).

F. Fragments of Letters Preserved in the Hebrew Bible

There are eleven letter fragments in the Hebrew Bible that are reported in direct speech in contexts where a written missive is mentioned specifically (Pardee 1982: 169–82; for a broader study, where the mention of a written document is not placed as a limitation, see Knutson 1975): 2 Sam 11:15; 1 Kgs 21:9–10; 2 Kgs 5:6; 10:2–3, 6 (two letters); 19:10–13 = Isa 37:10–13; Jer 29:4–23, 26–28 (two letters); Neh 6:6–7; 2 Chr 2:11–15; 21:12–15. The contents of various letters and decrees are given in indirect speech in Esth 1:22; 3:13; 9:21; 2 Chr 30:1.

Because the epistolary formulae are not preserved (with the exception of *wʿth* in 2 Kgs 5:6; 10:2), not a great deal can be said about these texts in epistolary terms. The body of the extrabiblical letters has already been characterized as largely nonformulaic and the same can be said of the biblical documents. When dealing with the biblical texts one must contend with the additional problems of authorship and date, authenticity (in the present case, authenticity and/or exactness of the "quotation" from the "real" letter), and accuracy of transmission that are not present when dealing with the original epistolary documents.

It can be said in general that the epistolary fragments in the Hebrew Bible are of a brevity and sobriety that bespeaks authenticity of form if not necessarily of content. For example, *wʿth kbwʾ hspr hzh ʾlyk hnh šlḥty ʾlyk ʾt-nʿmn ʿbdy wʾsptw mṣrʿtw,* "And now, when this letter reaches you, I will have sent my servant Naaman to you for you to heal him of his leprosy (2 Kgs 5:6)." Whether or not the king of Syria ever sent one of his officials to the king of Israel in order that the latter have him healed of a skin disease, the letter, with the authentic touches in *wʿth* and in the epistolary *topos* of a reference to the present letter, is a perfectly plausible example of an ancient Hebrew letter. Other letter fragments, however, contain international professions of faith (2 Chr 2:10–15) and long discourses (Jer 29:4–23) that stand without parallel in the extrabiblical documents.

D. PARDEE

ARAMAIC LETTERS

Apart from a handful of texts in literary transmission (e.g., Dan 3:31–33—Eng 4:1-3; 6:26–28; Ezra 4:11–16, 17–22; 5:7b–17; 6:6–12; 7:12–26), published Aramaic letters from biblical times comprise some 70 examples written on papyrus or prepared skin, and some 46 brief messages written on ostraca. The vast majority of these letters are written in Imperial Aramaic. For a detailed listing see Fitzmyer's charts (1981: 40–46).

———

A. Terminology

The main Aramaic words used to designate letters (Dion 1981b) were *spr* and *ʾgrh.* The word *spr* can stand for many forms of the written word; curiously, this word only refers to letters in Egyptian family correspondence, where it is the term regularly used. As for *ʾgrh/ʾgrt (ʾ)* (Akk *egirtu*), this loanword too could originally receive other applications, but it soon became the general term for "letter," and it is widely used in our corpus. Other terms, many reflecting the cosmopolitan character of Imperial Aramaic, are either used sporadically (the Iranian words *ptgm,* "message," and *nštwn* "document," in Segal 1983: No. 125; Gk *qrtys* is not clearly a letter) or with specialized meanings (*ṭʿm,* "order," cf. Akk *ṭêmu; qbylh,* "complaint"; *zkrn,* "memorandum").

B. The Modern Study of Aramaic Letters

The study of Aramaic epistolography is a young discipline. The first Aramaic fascicule of the *Corpus Inscriptionum Semiticarum* (1889) contained only two fragmentary letters yielding any sense (nos. 144 and 152); the first one had been found in 1824. After the discoveries at Elephantine (1893–1909) and the basic philological work required for their publication, scholars focused their attention on the historical import of this find. In the 1970s a more literary approach to the letters emerged, stimulated by renewed interest in the form of NT epistles. In 1974 Fitzmyer (see now 1981) opened the way with a definitive description of the corpus and of the formal elements found in the letters. Alexander (1978) and Porten (1978; 1982) contributed many insights to the study of nonbiblical letters from the Persian era. Dion (1979; 1981a; 1982) extended to the other pre-Christian collections the analysis of formulary and *Sitz-im-Leben* exemplified by Whitehead's unpublished dissertation (1974) on the letters of Aršam. Any progress in the systematic study of ancient letter writing must rely on the efforts of philologists like B. Porten, excellently seconded by A. Yardeni, whose papyrological reconstructions deserve particular attention (see, above all, *TAD*).

C. The Corpus

The earliest example of an Aramaic letter is a 7th century ostracon from Assur (*KAI* 233), in a Mesopotamian form of Old Aramaic. This lengthy message deals with the business of high-placed servants of Assurbanipal, and is stylistically related to Neo-Assyrian royal correspondence (Dion 1979: 555–58). Next comes a document in Imperial Aramaic of the Neo-Babylonian period, the fragmentary papyrus letter of Adon, king of Ekron in Philistia (*TAD* A1.1). This is the first manifestation in Aramaic of an all-purpose letter type, best represented in the late 5th century by 15 papyri from Elephantine in Upper Egypt (*CAP*). These documents are largely centered on the crisis which came to a head in 410 B.C.

with the destruction of the Yaho Temple of the Jewish garrison. Many ostraca, from the same community or nearby Aswan, show simplified forms of the same style (Dion 1982: 533–37).

A batch of 8 papyrus letters of another type (BK; see *TAD* A2.1–7), found at Hermopolis West and probably written in Memphis early in the 5th century, represent a different form of Egyptian Imperial Aramaic, with Western dialectical features. These letters embody the correspondence of fairly Egyptianized gentile families of Syrian origin; however, three other letters basically of this type and also from Lower Egypt (Bresciani 1960; see *TAD* A3.3–4), were apparently addressed to Jews of Elephantine.

More than 13 letters on skin in East Imperial Aramaic (Driver 1954; henceforth referred to as *AD*), found at an unknown Egyptian site, belong to the archive of the satrap Aršam; they were written ca. 410–407 B.C. and deal with the administration of Aršam's Egyptian estate. The same forms are observed in a letter on papyrus found at Elephantine (*CAP* 26), which conveys the satrap's detailed instructions for repairs to a ship.

In 1966–67 and 1971–73, British excavations at Saqqarah (Segal 1983) yielded 202 fragmentary papyri and a handful of ostraca carrying texts in Imperial Aramaic, largely from the 4th century B.C. Dozens could be letters of an official/financial character (Segal 1983: 8 n. 9); unfortunately, all seem to have lost their decisive introductory formulae. Most interesting is No. 26, dealing with sanctions against Ionians and Carians in "the harbor" (Memphis?).

The last important batch of papyri comes from what may be regarded as the very end of biblical times, the Second Jewish Revolt against Rome (A.D. 132–35). The eight letters of Simeon Bar Kosiba, Prince of Israel, are written in vernacular Palestinian Aramaic. They were found in the "Cave of Letters" in Nahal Hever, and are only available in preliminary publication (Yadin 1961; henceforth referred to as *Hev.*). These letters form part of a much larger collection of Aramaic, Hebrew, and Greek documents from this period, discovered in the Judean Desert in the vicinity of En-gedi. See BAR KOKHBA (LETTERS).

D. Formulaic Features

1. External Formulae. A certain set of stereotyped expressions regularly functions as an external frame around the message proper. These formulae are used to direct the letter to its recipient *(Address);* to establish contact (*Initial Greeting* plus *Introductory Particle* [Aram *wkʿt* or variants], "And now"); to end contact *(Closing Greeting);* and finally—in official letters—to record details useful to archives/chanceries (scribe's *Colophon; Docket* pointing out the letter's object). *Secondary Greetings* to or from third parties ("Greetings, So-and-so!"; "So-and-so asks how you are"), planted at random in and around the Body of letters to friends or family, marginally belong here; but our remarks will be limited to those formulae which occur through most of the documentation.

Two *Addresses* are always present (Porten 1983): an External Address, written on the back of the rolled-up papyrus; and an Internal one, placed at the beginning of the letter. Both formulae observe the same conventions in the crucial order of precedence between the names of sender and recipient; but the external address includes information (patronyms, etc.) omitted in the internal one. *Initial Greetings* also occur in several forms, important in distinguishing between the main letter types. Some are centered on the noun *šlm* (literally: "well-being"); one uses the verb *brk* ("to bless").

(In the following list of formulae and throughout the rest of this article, parentheses indicate the possibility of omission, and brackets indicate the possibility of variation; translations are rather stiffly literal, so as to reflect the Aramaic wording as clearly and consistently as possible.)

a. Well-being (šlm). A good example of this type of initial greeting is the following: *šlm [mrʾy] [ʾlhyʾ] (klʾ) yšʾlw (śgyʾ) bkl ʿdn* "May (all) [the gods] seek the well-being of [my Lord] [abundantly] at all times." This can be traced back to the LB Age through Hebrew, Neo-Assyrian/Neo-Babylonian, Ugaritic, and peripheral Middle Babylonian examples (Dion 1982: 541–46). Expanded forms occur, formulaic phrases of similar intent being appended to this one. A second example is this: *šlm wšrrt śgyʾ hwšrt lk* "I send you well-being and good health in abundance" (more greetings may be appended). A third example is the following: *šlm wḥyn šlḥt lk* "I send you well-being and life."

b. Blessing (*brk*). A good example of this type is the following: *brk[tk] l[Ptḥ] zy yḥzny* [or *yḥwny*] *ʾp[k] bšlm* "[I] bless you by [Ptah], that he may allow me to see [or show me] your face in well-being." The

model is an Egyptian formula, documented in demotic since the 6th century B.C., with antecedents going back to the 19th Dynasty (Alexander 1978: 159; Couroyer 1978; Dion 1979: nn. 82 and 104).

2. Internal Formulae. Much of what is found within the body of an Aramaic letter is also formulaic in character, stereotyped expressions for ubiquitous needs and banal sentiments often being elicited by topics discussed in the letters. Many expressions, which occur only once in the small Aramaic corpus, are shown to be formulaic by parallels in other epistolographic traditions (Dion 1981a; 1982).

Some examples of such formulaic expressions appear in official letters and business letters: (1) *ʾyty [ly ʾlp ḥdh bydkm]* "There is [one boat of mine in your hands]" (this *ʾyty* + a noun is often used to introduce a topic); (2) *ʾp [qdmt znh] (ʾgrh) ʿl znh šlḥ[n]* "Even previously we have sent a letter about this;" (3) *ʾtʿst ʿl [ʾgwrʾ zk]* "Take thought for [that temple];" (4) *hn ʿl mrʾn [kwt] ṭb* "If it seems good to our lord;" (5) *kzy ʾgrtʾ [zʾ] tmṭʾ [ʿlyk]* "Whenever [this] letter reaches [you];" (6) *lʿbq* "Right away;" (7) *[ʿbdk ydnyh wknwth kn] ʾmrn* "Thus say [your servant Yedaniah and his colleagues]" (this is often used to introduce a statement); (8) *ʿl znh šlḥn hwdʿn* "This is why we send this information;" and (9) *śm ṭʿm* "Issue an order."

Other examples of formulaic expressions appear in letters written to friends and family: (1) *ʾl tṣpw ly* "Do not worry about me;" (2) *lkn ʾnh yṣp* "I am worrying about you" (this formula readily combines with the former one, as in Egyptian); (3) *ḥzy ʿl [ynqyʾ]* "Look after [the children];" (4) *mhy dh zy spr lh hwšrtn* "What is this, that you haven't sent me any letter?" (5) *mlʾ lbt* + pronoun: "to be full of anger against …"; and (6) *šlm (l)[nbwsh] tnh* "[Nabushah] is well here."

E. The Main Aramaic Letter Types

The external formulae used in Aramaic letters did not mix at random; their combinations formed a limited number of sets or *formularies,* which were deemed acceptable in various geographical areas and during various historical periods. The shape and permissibility of these formularies were conditioned by tradition and foreign influences as well as by the rank and identity of the correspondents and the nature of their business. Accordingly, more than one formulary was available to quite similar people setting out to discuss the same kind of topics. In Achaemenid Egypt for instance, Jews exchanging friendly letters could use either the strongly Egyptianized formulary best known from the pagan letters found at Hermopolis (see E.2 below), or an old West Semitic formulary which could apparently be plied to all sorts of purposes (see E.3 below). In the second case however, the intimate character of the communication is reflected in the addition of secondary greetings and/or a certain choice of internal formulae, which contribute to specify the *letter type* beyond the blank generic features of the formulary; the resulting form is described below.

In the following, only the best-known letter types will be described; a few examples of typological contamination will be noted where they belong. The large and early Assur ostracon remains isolated in our corpus; so also is a fragmentary complaint in letter form (*CAP* 16; discussed by Dion 1979: 577–78). The *zkrnʾ* recording a proposal for the rebuilding of the temple in Elephantine (*CAP* 32) is not really a letter, but a messenger's memorandum.

1. Egyptian-Style Family Correspondence. This type of letter is so designated because it has many features similar to Egyptian epistolography (Dion 1981a). Aside from ostraca, examples of this type of Aramaic epistolary are found in *TAD* A2 (all texts) and *TAD* A3.3. These date from the first half of the 5th century B.C., and reflect family members eager to keep in contact with one another, petty private concerns (such as purchases, wages, etc.). A good example of this type of letter is *TAD* A2.4:

> "Greetings, House of Banit in Assuan!
> To my lord Psami, your servant Makkibanit.
> I bless you by Ptaḥ, that he may allow me to see your face in well-being. Greetings, my mother Mama! Greetings, my brother Betay, with his household and his sons! Greetings, Raʿya!
> Do not worry about Harwas. As much as it's in my power, I am not leaving him alone; and now, I am exerting myself for him.
> To my brother Waḥpreʿ from his brother Makkibanit. I send you well-being and life. And now, if the (???) comes to you, send me a message through ʿAqba son of Waḥpreʿ. And now, whatever you may want, send me a message.

Dispatch to me enough skins for a leather suit. Keep getting barley from Taši and giving it in payment for beams, and leave with Mama any beam you can find. I bought striped fabric and scented oil to bring to you folks, but I could not find anybody to bring it to you.
And now, let them bring me castor oil: five handfuls.
Do not worry about me; I am worrying about you.
I am writing to ask how you are."
(*On the back of the scroll:*)
"To my father Psami, from Makkibanit son of Psami."

The elements associated with this type of formulary are the following (except for the date, elements in parenthesis are in fact used most of the time):

a. (*Temple Greeting*), exclusive to this letter type: "Greetings (= *šlm*), House of [Bethel] (and House of [the Queen of Heaven]) (in Assuan)!"

b. *Internal Address:* "To my [brother] So-and-so, (from) your [brother] So-and-so."

c. *Initial Greeting:* the writer seems free to choose between either (1) "[I] bless you by [Ptah], that he may allow me to see your face in well-being," or (2) "I send you well-being and life." The Padua letter (*TAD* A3.3) is exceptional in using "I send you well-being and good health …," a formula best known from Aršam's archive.

d. *Secondary Greetings* (see D.1 above).

e. *Introductory Particle:* "And now."

f. *Arrangement of the Body:* this tends to be a random sequence of short paragraphs, often beginning "And now."

g. (*Date*): only *TAD* A3.3 is dated; the calendar is Egyptian.

h. (*Closing Greeting*): "I send this letter about your well-being (*lšlmk*)," i.e., "to ask how you are."

i. *External Address:* "To my ([brother]) So-and-so (son of So-and-so) from your ([brother]) So-and-so (son of So-and-so). (To be delivered to) [Assuan].

2. Letter Types Sharing an All-Purpose Formulary. The three important letter types discussed below (a-c) use the same basic set of external formulae; this formulary is also used in *CAP* 38, a unique letter of introduction (Dion 1982: 565–70). The four basic elements of the formulary include the following: *Internal Address:* "To [my lord] So-and-so, [thy servant] So-and-so;" *Initial Greeting:* "May (all) [the gods] seek the well-being of [my lord] (abundantly) at all times;" *Introductory Particle:* "And now;" *External Address:* "To [my lord] So-and-so (son of So-and-so), [thy servant] So-and-so (son of So-and-so). A business letter (*TAD* A3.10) provides a useful example:

"To my brothers Ḥuri and *pṭmḥw,* your brother Spentadata.
May all the gods seek the well-being of my brothers at all times.
And now, there is one boat of mine in your hands—I share ownership with its master. Look, as for my share, whatever Aramantidata tells you to load on it, and whatever he wishes, let it be done for him. Moreover, my share in the rent of the boat [ ] pay it out to him.
There is some silver, 8 shekels, which I gave to to pay for grain to deliver to my house; and there is silver, 1 karsh, which I gave you to buy grain for Yatma. Sum total of the silver: 1 karsh, 8 shekels. If you buy grain with it and deliver it to our houses, fine; if not, pay it out to Aramantidata, he will bring it to us. And if the grain … (*a line of ill-preserved text is omitted*).
As for *Pṭmḥw,* let him stay (?) with you in the boat; do not let him get away from you until he comes to me.
To my brothers Ḥuri son of and *Pṭmḥw,* your brother Spentadata son of Fravartipata."

a. Official Letters. There are several witnesses to this type of letter, all written on papyrus (*TAD* A1.1 [?]; *CAP* 17; 27 [?]; 30–31 [copies of the same letter]; 70 [?]. They all come from the last three decades of 5th century B.C., except *TAD* A1.1, which was written ca. 600. Such letters were for internal use by government administrators, and the recipients all seem to have been highly placed. Some of the phraseological details reflect Mesopotamian contacts, in contrast to the Egyptian contacts reflected in the family correspondence (E.1 above). The adjustments to the formulary include the following:

(1) *Internal Address:* these letters may add titles to recipient's and sender's names, and mention the latter's "colleagues."
(2) *Initial Greeting* tends to be expanded.
(3) *Body of the letter* tends to be basically twofold, containing (a) background information, and (b) the main thrust of the message (petition, etc.).
(4) *External Address* (missing on atypical *TAD* A1.1): precise titles are used; the external address can include a developed list of senders and colleagues (*CAP* 17; Porten 1983).
(5) (*Colophon*): see Porten 1983: 414.
(6) (*Date*): according to the Babylonian calendar; regnal years cited.

b. Friendly Letters. There are numerous witnesses to this type, all on papyrus (*CAP* 37; 39; 40; 41; 56 + 34; 57; *TAD* A3.9; it is not clear whether *CAP* 21 [the "Passover Papyrus"] should be included in this category, in spite of its lack of specifying features). Letters of this type tend to date from the late 5th century B.C. (although *TAD* A3.9 is from 399 B.C.). They were not addressed only to friends and family; this type was the regular medium used by the Jews of Elephantine to discuss community problems (*CAP* 37; 56 + 34; *TAD* A3.9; also *CAP* 21?). In such instances, a "brother" is not always a blood relation. Internal formulae similar to those in the letters from Hermopolis do not always predominate. The adjustments to formulary include the following:
(1) *Secondary Greeting:* "Greetings, (my lord) So-and-so!"
(2) *The Body:* more similar to "Egyptian Family Correspondence" (E.1 above) than to "Official Letters" (E.2.a above).
(3) (*Date*): only appears in *TAD* A3.9, where the Egyptian calendar is used.

c. Business Letters. The witnesses to this type of letter include *CAP* 42; 54 recto; 54 verso; *TAD* A3.10; A3.11. They all date from ca. 475–450 B.C. to ca. 375–350 B.C. The imperative tone, the lack of friendly phrases, and other indications (e.g. interracial character of the Berlin papyrus) show that "brother" in these letters amounts to a business partner. Note also the manner of dating and the fact that two examples were folded like contracts rather than letters. The adjustments to the formulary:
(1) *The Body* consists of short paragraphs focused on imperatives or volitional imperfects. Often, several alternatives are envisioned: "If …; but if …"
(2) (*Date*): when one is given (*CAP* 42), it uses both Egyptian and Babylonian month names and indicates the regnal year.

3. The Style of Persian Chanceries. All examples have to do with the satrap Aršam (412–407 B.C.), and most were sent to Egypt from Babylonia. All but *CAP* 26, which is a papyrus from Elephantine, were found together at an undisclosed location and are written on leather. *CAP* 26 letter exhibits a few formal peculiarities and differs from the other pieces in its direct relevance to public administration, whereas the texts on leather deal with the satrap's personal business. *TAD* 6 is also peculiar in that it is more a kind of passport than a real letter. Yet it is striking that the same basic formulary, the same dry and meticulous administrative style, should prevail everywhere, in Egypt as well as in the center of the Persian Empire. In fact, affinities for 5th century B.C. administrative documents in Elamite have been pointed out by Whitehead (1974: 176–78), and introductory formulae like those of the Aršam letters are still reflected in many documents of the 1st millennium A.D. (Harmatta 1957). As noted above, this unified and perduring chancery style was able to contaminate letters belonging to other types (*TAD* A3.1; *CAP* 42), and yet it did not prevent official letters from also being written according to the "all-purpose" formulary.

An example of the Persian chancery style is an order written in letter form (*TAD* 4):

> "From Aršam to Armapiya.
> And now, Psamšek, my superintendent, sent me a message and said thus: Armapiya and the troops under his command are not obeying me in my lord's business (about) which I am telling them.
> And now, thus says Aršam: In the business of my estate, whatever Psamšek tells you and those troops under your command, obey him and do it.
> Be sure of this: if Psamšek sends me any further complaint about you, you will be thoroughly interrogated, and a harsh sentence will be applied to you.

Bagasrava is cognizant of this order; Aḥpepi was the scribe."
(*On the back of the scroll:*)
"From Aršam to Armapiya.
Concerning the fact that Psamšek sent me a complaint."

The basic formulary is as follows:

(1) *Internal Address:* "From So-and-so to So-and-so." In every case the sender is at least equal in rank to the recipient; from available evidence it is not clear whether a subordinate could send a letter to a superior.
(2) *Introductory Particle:* "And now" (always *wkʿt*).
(3) *External Address:* resembles the Internal Address, but titles are used, and geographical information is provided ("who is in Egypt").
(4) *Docket:* a brief note about the content, beginning with *ʿl*, "Concerning," is placed after the External Address.

Adjustments to the formulary as well as differences in the subject matter and the status of the correspondents make it possible to distinguish two letter types sharing the formulary described above:

a. Orders in Letter Form. The witnesses to this type include *TAD* 4; 7–11; cf. No. 6, and *CAP* 26 (with reservations, see above). The adjustments to the formulary include the following:

(1) *Arrangement of the Body:* background information is provided first, and then the order (*ṭʿm;* the Aram name of this letter type?).
(2) *Colophon:* twofold in texts of the main collection: "So-and-so is cognizant of this order; So-and-so was the scribe." On *CAP* 26 the formulation is somewhat different and suggests that the first official's title was *bʿl ṭʿm* (cf. Ezra 4:8–9, 17).
(3) *External Address:* includes the recipient's title, rather than sender's.
(4) *Docket: TAD* 8–9 and *CAP* 26 have a note in Demotic in addition to the Aramaic one (Whitehead 1978: 137–40).
(5) (*Date*): only on *CAP* 26 (using Babylonian month name and regnal year).

b. Letters to Equals. The witnesses include *TAD* 1–3; 5; and 12–13. The following adjustments to the formulary are noted:

(1) (*Initial Greeting*): "I send you well-being and good health in abundance" (such a greeting is omitted in *TAD* 12, which is a hostile letter). More wishes may be added, such as "Here things are fine with me; over there too, may things be fine with you!"
(2) *External Address:* usually lists the sender's title, not the recipient's.

4. A Letter Type from the Beginning of the Christian Era. There are several witnesses (*Ḥev*v A.Hev 1; 2; 4; 8; 10; 11; 14; 15 [all on papyrus]; and Yadin 1965: 111 [an ostracon from Masada]) to letter type dating ca. A.D. 66–135. An example of this type is *Ḥev*v A.Hev 15 (from the photo in Yadin 1971: 129):

"Shimʿôn to Yehudah bar Menasseh, to Qiryat ʿArabaya.
I have sent you two donkeys, in order that you send with them two men to Yehonathan Bar Baʿayan and to Masabalah, in order that they pack and send you palms and citrons at the camp. As for you, send away others, that they bring you myrtles and willows; then set those in order and send them to the camp. Large indeed is the army!
Be well."

Due partly to the preliminary nature of the publication, areas of uncertainty remain about some aspects of the formulary (e.g., was there any External Address?). Formal consistency does not seem as high as in letter types from earlier times (see esp. *Ḥev*v A.Hev 4). However, the following are noteworthy:

(1) *Internal Address:* Shimʿôn Bar Kôsibâ (the Prince over Israel), to So-and-so (+ geographical destination).
(2) (*Initial Greeting*): šlm/slm appended to the Address.
(3) *Introductory Particle: d (y).* In *Ḥev*v A.Hev 15, this is inserted within the first sentence.
(4) *Closing Greeting:* "Be well." The preliminary character of the publication often does not allow verification of its presence.

(5) *Sender's Signature:* "[Shimʿôn Bar Kôsibâ] has written this." (*Ḥev*v A.Hev 8). Same remark.

All the sufficiently clear examples carry commands of Bar Kôsibâ to his followers, not always of a military character, as shown by the example above. Letters in Hebrew from the same period (Pardee 1982: 122–44) use very similar formulae and cover an even greater variety of topics. Perhaps we are dealing with one more "all-purpose" formulary. Significantly, the most decisive phrases (Address, Initial Greeting, Closing Greeting) correspond to long-established features of Greek letters, documented in this same corpus from the Judean Desert: "So-and-so (+ title) to So-and-so, *Chareîn* ('Greetings') …, ʾErrōsō ('Be well!'). Here the multilingual character of epistolary forms appears more clearly than ever.

PAUL E. DION

GREEK AND LATIN LETTERS

The letter is one of the most common and socially significant kinds of written text from antiquity. Extant letters represent every level of Greco-Roman society from Egyptian peasants to Roman emperors. The letter served the most basic needs of day-to-day communication and the most highly developed art and ideology. The letter is also arguably the most important, and certainly the most prevalent type of literature in early Christianity.

———

A. Nature of the Letter
B. Sources
C. Letters and Education
D. Forms, Types, and Functions
E. Greek Epistolary Tradition
F. Latin Epistolary Tradition

———

A. Nature of the Letter

Three important characteristics of the letter are its occasionality, its fiction of personal presence, and its ability to absorb other genres. Letters more than other types of literature are obviously embedded in the social contexts and interactions of particular historical moments (for example, a nearly bankrupt shopowner sends a letter to a wealthy acquaintance begging for financial help). The times, places, social status, and historical contexts of sender and receiver are crucial components of a letter's meaning. The letter "fictionalizes" the personal presence of the sender and receiver. The authorial voice is constructed as if speaking directly to the audience. Letters also tend to be dialogical; the author in the text anticipates what the audience will say and how it will react. A letter may belong to an exchange of letters or other texts, and may incorporate portions of these texts into itself in the form of an imagined conversation. By its very nature the letter is able to assimilate texts belonging to other genres. Thus the letter has often served as the framework for essays, narratives, and poetry. In such cases the ostensible epistolary occasion and the audience may become purely fictional.

Some of these points are explicit in ancient epistolary theory, although both ancient and modern romantic notions about the letter's ability to convey unmediated personal presence has obscured the nature of epistolary rhetoric. Early in the 20th century, A. Deissmann contrasted the conventionality and artificiality of literary texts with the supposed spontaneous outpouring of personality in true letters. Today scholars are studying the highly conventional literary construction of the ancient letter's "outpouring of personality."

B. Sources

There are four different sources for our knowledge of ancient letters: letters preserved through literary transmission, letters discovered in modern times, letters preserved in inscriptions, and letters embedded in other kinds of literature. Many Greek and Latin letters were preserved and copied because they were valued as literature by certain communities. The Greek letters of Plato, Isocrates, Demosthenes, and Libanius and the Latin letters of Cicero, Pliny, Seneca, and Fronto fit into this category, as do the Christian letters in the NT, of the Apostolic fathers, Basil, Gregory of Nazianzus, Augustine, and Jerome. Letters preserved in this way tend to be more consciously literary than letters from the other categories and are often highly shaped by Greek or Latin rhetoric. Some letters in this category were written and collected with an eye toward publication. They also reflect a higher social level than other sorts of letters.

If we had only letters preserved by literary transmission, we would know little about letter writing among the masses of common people in the Greco-Roman world. In the late 19th and early 20th centuries great quantities of texts were recovered during the excavations of towns and villages in the dryer parts of Egypt where papyrus could survive. These texts include many thousands of often fragmentary letters. A few show the influence of rhetorical and literary training, but most are simple communications involving business relations, legal appeals, friendship, and family matters. The papyrus letters together with those preserved by literary transmission provide a view of the whole world of letter writing from Hellenistic times to the Byzantine period. A number of letters, mostly from Hellenistic monarchs, were copied onto stone as inscriptions. Such letters served as royal propaganda. Some Epicurean letters were inscribed in stone by a certain Diogenes in the Lycian city of Oenoanda. Finally a fairly large number of letters are found embedded in literary works. These appear most frequently in historical, biographical, and fictional narratives (see Acts 15:23–29).

C. Letters and Education

Basic letter writing was probably taught to boys in the so-called secondary stage of education by a *grammaticus.* At least some teachers of rhetoric trained their students in epistolary style. Although epistolary style and theory belonged to the domain of rhetoric, they were never an integral part of the extant rhetorical systems. The earliest significant discussion is in the work *On Style (De Elocutione),* wrongly attributed to Demetrius of Phalerum but actually written by someone else between the 3d century B.C. and the 1st century A.D. According to *On Style,* letters are to use the plain style or to employ a mixture of the plain and graceful styles. The letter is like one side of a dialogue. Letters also ought to be "real" communications between individuals and not technical treatises. Brevity is also desirable. Cicero in the 1st century B.C. and Seneca in the 1st century A.D. reflect a knowledge of Greek epistolary theory and

probably of handbooks on letter writing. In the elementary rhetorical exercises of Theon (1st century A.D.), letter writing is an exercise in characterization (*prosopopoiia*). In the early 3d century, the sophist Philostratus of Lemnos wrote a polemical work on proper epistolary style. The first rhetorician to include a full discussion of letters writing as part of a handbook comes only in the 4th century with Julius Victor who includes an appendix on the subject.

More important for the general practice of letter writing are epistolary handbooks. The apostle Paul and many other writers of Christian letters in the first three centuries reflect a handbook knowledge of letter writing style and theory. These handbooks fall into two types. The first kind are systematic treatises which show an interest in theory and a knowledge of rhetoric. The two extant representatives are the *Epistolary Types* also attributed to Demetrius of Phalerum and the *Epistolary Kinds* attributed in different manuscript traditions either to Libanius or Proclus. The first, in its original form, is probably from pre-Christian times and the latter is dated between the 4th and 6th centuries A.D. The handbook of "Demetrius" seems to have been written for professional letter writers in service to public officials. It discusses 21 types of letters. For each letter, "Demetrius" and "Libanius" provide a brief definition and a very brief sample letter often in the form of a rhetorical syllogism which captures the logic of the type. The handbook of Libanius discusses 41 types.

It is important to understand the interests of these handbooks and their approach to classifying letters. They show very little interest in style and structure. Rather each type represents a characteristic social occasion and shows how a certain social transaction could be effected by a letter. Thus, for instance, one writes a blaming letter when a social equal or inferior has failed properly to reciprocate benefits conferred by the writer. The letter informs the recipient that he or she has failed in this way and attempts to shame the recipient mildly, but not so as to destroy the basic relationship. The rhetorical tradition often used such stereotyped occasions for speech acts to classify speaking into genres. The broadest of these are the three divisions of rhetoric: The forensic speech of the lawcourt; the advising speech of the city council; the epideictic speech for praising good and criticizing evil. Most of the types of letters in the handbooks belong to the category of praise and blame and only a handful to the other divisions of rhetoric. Several letters in this category are types of exhortation and are so treated by the handbooks (e.g. letters of parenesis, consolation, admonition, rebuke, reproach).

A second kind of handbook is represented by the bilingual, Greek and Latin, Bologna Papyrus (3d or 4th century A.D.) and by model letters for students to copy (3d century B.C.–5th century A.D.). These show no interest in theory or rhetoric and often reflect only minimal literacy. The two kinds of letter-writing handbooks either aim at the beginning and advanced stages of education or were designed for people from different social-educational levels. The letters in the NT and among the writings of the Apostolic Fathers clearly reflect a knowledge of the more advanced level of handbook although not of advanced rhetorical training.

D. Forms, Types, and Functions

The thousands of papyrus letters discovered in Egypt largely represent common everyday kinds of letters produced by people with very modest levels of literacy. Frequently people who could not write had to dictate their messages either to a friend or a professional letter writer. Most common are family letters, letters of request, petitions, commanding letters, and letters of recommendation and introduction. The opening and closing conventions for Greco-Roman letters changed little over several centuries. This conservation is most clear among the common papyrus letters—by contrast most early Christian letters transmitted literarily seem quite creative. The ancient prescript typically contained three elements: the name of the sender, the addressee, and a salutation (for example, "Diogenes to Isias, greetings"). The prescript was often followed either by a wish for health or less frequently a thanksgiving or act or worship to a god. These basic elements could be amplified and elaborated in many ways. Usually letters closed with a formula of farewell and often with a list of greetings for others in addition to the addressee.

The letters of more educated people and literary letters are especially characterized by the ethos and conventions of Greek friendship. Classical Greek culture privileged friendship between male peers as the highest form of social relationship. The epistolary theorists assumed that the letter of friendship was both

the most basic and highest form of letter writing. Consequently the ethos and language of Greek friendship shaped Greco-Roman letter writing as a whole although that of upperclass writers more than others. The ethos of friendship was largely expressed through a set of standard themes and commonplace expressions: The letter is a friendly conversation; friends reciprocate in all things; friends will sacrifice for one another; friends are frank with one another; through the letter friends are together though physically apart (1 Cor 5:3; 1 Thess 2:17; Col 2:5); the letter contains an image of the writer's character; the letter is a consolation for a friend's absence; expressions of joy upon receiving a friend's letter; expressions of longing for a friend (2 Cor 1:16; 1 Thess 3:6–10; Phil 22; 2 John 12; 3 John 14).

Early Christian letters most nearly resemble the letters of philosophers and moralists. The Hellenistic philosophies sought to guide people to the good and happy life. Some philosophical letters are instructional treatises in doctrines but most are letters of exhortation in which teachers seek to guide and mold the characters of disciples. The letters of Plato and Aristotle were influential models. Epicurus sent many letters to widely scattered communities of his disciples regulating community behavior and exhorting them to the life of friendship and tranquility. In the 1st century A.D., Seneca wrote 124 letters addressed to Lucilius. Whether the correspondence is real or fictitious is a matter of debate. Nevertheless, the letters realistically depict the way that philosophical guides employed letters to lead their friends toward the happy life. Such letters prominently adapt friendship to this relationship of guide and student and present the "author's" character as a model for imitation. The same kind of hortatory features characterize the letters of Paul and other early Christian letters. Numerous purely fictitious letters were also written in the names of famous philosophers such as Socrates, Diogenes, Crates, and Heraclitus. These are largely hortatory and show marked similarities to pseudonymous Christian letters such as the Pastoral Epistles (1 Timothy, 2 Timothy, Titus).

E. Greek Epistolary Tradition

Letters had a significant literary and ideological impact in the form of collections. These were usually made after the author's death, although sometimes a collection might be compiled by the writer himself. From the 5th and 4th centuries B.C., the letters of Demosthenes and Isocrates were important models of style in the rhetorical tradition. The philosophical schools, however, were the great collectors of letters in the Greek tradition of letter writing. From classical Athens only the letters of Plato are extant, and their authenticity has been a matter of debate since Richard Bently raised critical consciousness by showing that the collections attributed to Phalaris, Themistocles, Socrates, and Euripides were fictitious. The collections from the 4th through 2d centuries B.C. of Aristotle, Theophrastus, Crates, Arcesilaus, and Carneades were very influential but are now lost. Only a few letters of Epicurus (341–270 B.C.) are extant, but they were the most important models for hortatory philosophical letters in Hellenistic and Roman times. Unknown Cynic philosophers in the later Hellenistic period and early empire produced extensive collections of fictitious letters under the names of Anacharsis, Crates, Diogenes, Heraclitus, Socrates, and the Socratics. These served as models for the Cynic life and as propaganda for debates among various kinds of Cynics. Some of the 97 letters attributed to the neo-Pythagorean philosopher Apollonius of Tyana (d. ca. A.D. 97) are probably authentic.

The other important non-Christian group of letter collections in Greek are the erotic and fictional literary letters written between the 2d and 5th centuries. Aelian (170–235) wrote 20 rustic letters in atticizing style. Following the same archaizing nostalgia for classical Athens, Alciphron (2d century A.D.) tried to imagine the words and world of farmers, fishermen, prostitutes, and parasites from 5 centuries earlier in his 122 letters. The love letters of Philostratus (2d century A.D.) are addressed to women and boys. A similar collection from a contemporary, the sophist Lesbonox, is now lost. In the 5th century, Aristaenetus incorporated erotic themes and language from writers throughout antiquity in his love letters.

The end of the extant pagan Greek tradition comes in the 4th century with the 80 letters of the emperor Julian (the "Apostate") and the rhetorician Libanius' 1,600 letters. Both are important sources for the history and aristocratic culture of their century. Libanius' letters strictly follow the rules of epistolary theory with regard to brevity, subject matter, and form.

The Greek Christian tradition of letter writing is a marked modification of but not a departure from the non-Christian Greek tradition. Christianity emerged as a movement within Judaism, but distinctive Jewish traditions of letter writing had only a minor influence on early Christian letters. The letter does not seem to have had the cultural and ideological importance for ancient Judaism that it did for Christian and Greco-Roman culture in general. Though Jewish letter writing as such exerted only a little influence, the Jewish concepts, symbols, language, and ethos of earliest Christianity gave a distinctive stamp to Christian letter writing. The earliest extant Christian letters are from Paul the apostle to the Gentiles (ca. A.D. 10–ca. A.D. 62). His letters provided a formative shape for much of later Christian epistolography. Paul's letters are Christian adaptations of common Greco-Roman types: protrepsis (Romans); admonition, advice (1 Corinthians); rebuke, apologetic, advice (2 Corinthians); rebuke, advice, paraenesis (Galatians); friendship, paraenesis (Philippians); paraenesis (1 Thessalonians); admonition (2 Thessalonians); recommendation/mediation (Philemon). These are types of letters most commonly written by philosophers and moralists as they tried to guide their disciples toward the happy life.

Other NT letters (Colossians; Ephesians; 1, 2 Timothy; Titus; James; 1 Peter; 2, 3 John; James; Jude) can also be understood as adaptations of similar Greco-Roman types. This is also true of the letters of Ignatius and Polycarp (early 2d century) and the lost letters of Dionysius of Corinth (late 2d century). These earliest Christian letters differ most from the letters of the great age of Christian letter writing in the 4th and 5th centuries in two ways. First they make much less use of the rhetoric of the technical rhetorical handbooks and the traditions of sophistic rhetoric. Second the ethos of Greek male friendship is much less important for these early letters than is the familial ethos of the household. Greek Christian letter writing reaches its peak in the 4th century with Athanasius, Basil, Gregory of Nyssa, Gregory of Nazianzus, and John Chrysostom. These writers fully integrated Greek literary culture into the life of monastic and aristocratic friendship.

F. Latin Epistolary

Cicero (106–43 B.C.) is the fountainhead of the Latin epistolary tradition. His 931 letters were written between 68 and 43 B.C. and published after his death in four collections. Cicero was familiar with the themes and commonplaces of Greek friendship and epistolory theory. He may have been most responsible for naturalizing the Greek epistolary tradition in Latin. A collection of Augustus' letters was extant in the latter part of the 1st century A.D. but has perished. The poetic epistles of Horace and Ovid remain from the Augustan age (late 1st century B.C. and early 1st century A.D.). Seneca's letters to Lucilius are modeled after the letters of philosophical guides like Epicurus. Pliny the Younger (61–112 A.D.) published 358 literary letters which he arranged chronologically. The orator Fronto's (2d century A.D.) letters to Marcus Aurelius and others mix oratory and epistolary friendship.

This legacy of great collections of Latin letters is echoed in Christian form in the 4th and 5th centuries in the letters of Ambrose, Jerome, Augustine, Paulinus of Nola, Sidonius and the poetic and prose letters of Ausonius. In these, the Greek and the Latin, the pagan and the Christian, the philosophical and the sophistic epistolary traditions melded into a new synthesis which had an enormous effect on the literature and thought of the West.

Though Christian belief and thought has deep roots in Judaism, Christian letter writing was literarily an adaptation of the Greek and Roman epistolary traditions. Indeed the Christian tradition conformed itself more to the artistic and rhetorical standards of Greek and Roman letter writing in the last centuries of antiquity. The letters of Paul and the other NT letters struck educated people in late antiquity as strange products of a remote subculture. Nevertheless they are fundamentally Greco-Roman letters. Christian letters from Paul to the end of antiquity continued to function as types of Greco-Roman letters, as a tradition within a tradition.

LETUSHIM [Heb *lĕtûšîm* (לְתוּשִׁים)]. A clan name mentioned in the genealogy of Abraham by his wife Keturah in Gen 25:3. Letushim (the plural form may be compared to similar plurals for groups in Gen 10:4—Kittim and Dodanim) is listed as one of the three sons of Abraham's grandson Dedan, the son of Jokshan. These three sons are not found in the matching, but abbreviated, genealogical clan list in 1 Chr 1:32–33. This may reflect a shift in population or politics by the time of the Chronicler. Albright (1953: 9–11) suggested that Letushim be translated as "craftsmen" thereby designating them as part of the economy of the city of Dedan. Winnett (1970: 191) disputes this and the identification of Letushim with Syriac *latusa,* "one who sharpens the sword," arguing that based on Ezek 27:20 Dedan's sole manufactured export was "saddle blankets." Whether they received this title before or after they settled in Dedan the people of the Letushim clan represent one of several obscure Arabian tribal groups who inhabited the fringes of the Negeb and N Arabian regions. Their very obscurity added to the contrast the biblical writer(s) wished to make between Isaac and the other sons of Abraham.

LEUCIUS (PERSON). See JOHN, ACTS OF.

LEUMMIM [Heb *lĕʾummîm* (לְאֻמִּים)]. A clan name mentioned in the genealogy of Abraham by his wife Keturah in Gen 25:3. Leummim is listed as one of the three sons of Abraham's grandson Dedan, the son of Jokshan. These three sons are not found in the matching, but abbreviated, genealogical clan list in 1 Chr 1:32–33. This may be due to shifts in population or a change in the political situation by the time of the Chronicler. The plural form of the name may reflect its use by a particular population group in the city of Dedan (compare similar plural names in Gen 10:4, Kittim and Dodanim). Winnett (1970: 191) suggests that the name's more generic meaning of "tribesmen, clansmen" identifies the Leummim as "mixed elements" within the city. Their very obscurity was used by the biblical author(s) to starkly contrast the importance of the descendants of Issac, and even those of Ishmael, with the children of this secondary wife. They received no inheritance in Canaan and were sent away to live on the eastern fringes of the Negeb and N Arabian regions.

LEVI (PERSON) [Heb *lēwî* (לֵוִי)]. The name of 4 people in the Bible. The meaning of the name is uncertain. Popular etymology in the Bible for the name is "to be joined" (Gen 29:34; Num 18:2, 4). More recent suggestions have included "to coil or twist" from Ar *lawa,* "to borrow" from Heb *lwy*, "priest" from Minaean *lwʾ,* and "to give oracles" from Ar *lawa.* None of these suggestions provides a satisfying or convincing solution to the problem of etymology. The name is also found in Amorite and Egyptian sources; the latter 2d millennium materials use the name as a geographical term for a region in SW Arabia. This, plus the early connection with Moses and his association with the region of Midian, may indicate a possible location for the origin of the tribe of Levi.

1. The third son of Jacob and Leah (Gen 29:34). He was the eponymous ancestor of the tribe of Levi, of the priestly Levites, and of all subsequent priestly factions. In some lists Levi is one of the twelve tribes,

sons of Jacob (Gen 29:31–30:24; Deut 27:12–13; 1 Chron 2:1–2); however, in other lists Levi is replaced by Manasseh or Ephraim and thus not listed among the twelve (Num 1:5–15; 7:12–83; Josh 21:4–7).

The first descendants of Levi were Gershon (Gershom), Kohath and Merari (Gen 46:11; Num 3:17; 1 Chron 5:27—Eng6:1), and all played a role in guarding (Heb *šmr*) and serving (*ʿbd*) the tabernacle (Num 3:21–37). Moses is said to have been a descendant of Levi (Exod 2:1–2) as were Aaron, Moses' brother (Exod 4:14; 1 Chron 5:27–29—Eng6:1–3) and Zadok (1 Chron 5:27–34—Eng6:1–8). Thus all three priestly groups, Levites, Aaronites, and Zadokites, traced their ancestry to Levi.

There are varying accounts of how Levi became a priestly group, the Levites. The first is in association with the golden calf story. After the "sons of Levi" killed the 3,000 men who were not on Yahweh's side (Exod 32:26, 28), Moses indicated that they had therefore entered the service of Yahweh (Exod 32:29). According to Numbers 3–4, the sons of Levi were taken by Yahweh instead of the firstborn (Num 3:45); and then following a census (Num 4:2), they were assigned various priestly duties (Num 4:1–49). If Aaron's descent from Levi is accepted, there is a third account in Exodus 28:1–4 where Moses is instructed by God to select Aaron from among the people to serve as priest.

Several stories demonstrate Levi's militaristic nature in Israelite society. In Genesis 34, Levi, along with Simeon, killed Hamor and Shechem in retaliation for the rape of their sister Dinah. Levi and Simeon guaranteed the success of their retaliation by attacking Hamor on the third day after he and the males of his city had been circumcised. A second account is that of the golden calf, mentioned above, where the sons of Levi killed 3,000 men for their apostasy (Exod 32:25–29). At numerous points the descendants of Levi (the Levites) were appointed "to guard" (rather than the usual translation of *šmr* as "to take charge of") the tabernacle or the ark (Num 1:53; 8:26; 1 Chron 23:4). The military nature of Levi is also noted in Jacob's blessing (Gen 49:5), and it became an explanation for the disappearance of Levi as a tribe (Gen 49:7) and the subsequent elimination of Levi from the list of twelve tribes. Finally, the intertestamental literature preserves the militaristic view of Levi (*T. Levi* 5: 3; *T. Sim.* 5: 4; *Jub.* 30: 18).

The militaristic activities of Levi have often posed a problem for scholars, as they attempt to relate the warlike Levi with the assumed irenic priests, the Levites. However, if one takes into consideration the fact that Levi's military actions are always in defense of Yahweh and the correct worship of Yahweh, the fact that the "sons of Levi," the priestly Levites, often performed militaristic activities such as guarding the tent of meeting, and the fact that Hittite parallels in the ancient world indicate that it is not unusual for priests to carry on martial activities, then it is no longer troublesome to connect Levi and the priestly Levites. Indeed, it is the fervent defense of Yahweh which is the consistent and characteristic role of Levi and his descendants.

JOHN R. SPENCER

2. The father of Matthat and son of Melchi, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:24). Gk *levi* may be an indeclinable form or a genitive form from Gk *levis,* although Blass/Debrunner are undecided (BDF pars. 53[1], 55[1e]). D omits Levi, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from Luke 3:29, the name Levi falls within a list of 17 ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer *Luke I–IX* AB, 500). Several problems revolve around the person holding this name, including the possibility that his son, Matthat, is the same person as Matthan in Matt 1:15, in which case the same person is given two different fathers. See MATTHAT #2. Kuhn (1923: 208–9) believes that the two Levi's of Luke 3:24 and 29 were originally identical, both derived from a common list that subsequently formed the basis for two parallel lists in Luke's genealogy: 3:26–29, Jesus to Mattathias, and 3:29–31, Joshua/Jesus to Mattatha. The first perhaps reflects a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention

Joseph as Jesus' father). Even though both Levi's are listed as fathers of a Matthat, this proposal has not proved convincing to most scholars.

3. The father of Matthat and son of Simeon, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:29). D omits Levi, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from Luke 3:24, the name Levi is unknown as an ancestor of Jesus in any other biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke I–IX* AB, 501). Jeremias (1969: 296) believes that it is anachronistic for Luke to include this name here, since there is no record of its use after the patriarchal period until the time of the Maccabees, although caution must be exercised in light of the limited nature of the available evidence. See above on Kuhn's proposal.

4. A tax collector who left his post to follow Jesus, throwing a big feast for him in his house (Luke 5:27, 29), known in Mark 2:14 as the son of Alphaeus. Because Levi is not mentioned in Luke's (6:13–16; Acts 1:13) or Mark's (3:14–19) lists of disciples, but a James the son of Alphaeus is mentioned at Mark 3:18, some texts list James at Mark 2:14 (see *NovTG*[26]), although a form of Levi is clearly the better reading, warranting an A from *UBSGNT* (see *TCGNT*, 78; cf. Taylor 1959: 202). "Levi the son of Alphaeus" is read in D at Luke 5:27 (for bibliography on textual problems see Lane *Mark* NICNT, 100–1). Levi is unknown in Matthew's Gospel, although a story is recounted of a disciple who was called to follow Jesus in the same manner (9:9) and who is mentioned as a tax collector in Matthew's list of disciples (10:2–4, esp. v 3). The question naturally arises whether this is the same man in all three gospel accounts (see Lamarche 1970: 127, for verbal parallels; Theobald [1978: 173] raises the possibility of Levi as a generic name in Mark's narrative). Several solutions have been proposed: They are two different people, a view held by several patristic fathers (e.g. Origen *Cel.* 1.62); they are the same person, since it is unlikely that the same event happened twice, and it was not unknown that a person could be known by two Semitic names, such as Levi Matthew (e.g., Joseph Barnabas [Acts 4:36]) (cf. Hervey 1853: 150–51, who speculates that Matthew was also related to Jesus); the account in one gospel has been transferred to the other gospel, probably as a Markan redactional creation (Pesch 1968: 43–45); and by the time of writing there was considerable confusion about the composition of the group of disciples (see Cranfield *Mark* CGTC, 102; Fitzmyer, 590; *TDNT* 4:234–35).

STANLEY E. PORTER

LEVIATHAN

[Heb *liwyātān* (לִוְיָתָן)]. The name of a mythological sea serpent or dragon, personifying the chaos waters, mentioned in the Ugaritic texts, in the OT, and in later Jewish literature. Etymologically the name means "twisting one," as befits a serpent.

In the Ugaritic texts the name appears as *ltn* (*KTU* 1.5.I.1 = *CTA* 5.I.1), which has traditionally been vocalized as Lōtān, but it has been persuasively argued by J. A. Emerton (1982) that the correct rendering should be Lītān. In this Ugaritic passage (lines 1–4) Mot alludes to Baal's defeat of Lītān as follows, "Because you smote Lītān the twisting serpent, (and) made an end of the crooked serpent, the tyrant with seven heads, the skies will become hot (and) will shine." In the Baal epic we also find the goddess Anat (Baal's consort) claiming to have defeated Lītān (though he is not mentioned by name), amongst other mythological creatures: "Surely I lifted up the dragon, I … [and] smote the crooked serpent, the tyrant with the seven heads" (*KTU* 1.3.III.40–42 = *CTA* 3.III.D.37–39). This event seems to be described briefly

in *KTU* 1.83.3–10 (= *UT* 1003.3–10) and *KTU* 1.82.1–3 (= *UT* 1001.1–3), the former passage ascribing the defeat of the dragon to Anat and the latter to Baal.

In view of a number of references in the OT to the defeat of the chaos monster at the time of creation (e.g., Leviathan in Psalm 74 and Rahab in Psalm 89), the question is raised whether the Canaanites likewise envisaged the dragon conflict as taking place at that time. Although the detailed description of the defeat by Baal of the sea god Yam (who is similar to, but not identical with Leviathan) does not appear to be associated with the creation of the world in *KTU* 1.2 (= *CTA* 2), it may be that the Canaanites did also envisage a primeval conflict with the powers of chaos prior to El's creation of the world. This would not only explain the creation context of such dragon passages as Psalms 74 and 89, and be consistent with the fact that the sea is a cosmic element; it might also account for the fact that at the very end of the Baal epic, perhaps corresponding to the time of new year's eve, the defeat of the dragon (*tnn* = Lītān) and Arš is looked forward to (*KTU* 1.6.VI.51–53 = *CTA* 6.VI.50–52). The Ugaritic allusions to the defeat of Lītān and other monsters, mentioned above, may therefore have had a creation context.

In the OT, Leviathan's defeat is attributed to Yahweh. In Ps 74:14 this is set in a creation context (vv 12–17), just as is the case with the defeat of Rahab, a similar or possibly identical sea monster, in Ps 89:11—Eng 89:10 (cf. vv 10–14—Eng 9–13). Attempts to claim that these two passages are really speaking of the Exodus are unconvincing. It is interesting that Ps 74:14 refers to the shattering by God of Leviathan's "heads" (pl.)—this is now illuminated by the Ugaritic texts, which reveal that he had seven of them.

In Isa 27:1 we read of an eschatological defeat of Leviathan by Yahweh. That a conflict originally associated with creation should become an element of eschatological imagery is explained by the principle *Urzeit wird Endzeit* (= the primeval time becomes the end time), which is attested elsewhere in apocalyptic literature, as in the notions of Paradise regained and a new heaven and a new earth. It is not possible to be certain which historical political power might be designated by Leviathan in Isa 27:1, though conceivably it is Egypt or alternatively the dominant world power of the time. What is striking is that the description of Leviathan as "the twisting serpent … the crooked serpent" in Isa 27:1 is remarkably close to the terminology used to describe Lītān in the Ugaritic text cited above.

In Job 40:25–41, 26 (—Eng 41:1–34) part of the second divine speech is a detailed description of Leviathan. Many commentators have believed, following the view of S. Bochart expressed in 1663, that Leviathan is here the crocodile, and similarly that Behemoth in Job 40:15–24 is the hippopotamus. However, good reasons can be put forward against Leviathan's equation here with the crocodile, or for that matter with any other actually existing beast. For example, Leviathan is said to breathe out fire and smoke (Job 41:11–13—Eng 19–21), which is suggestive of a mythological creature, and it is implicit in God's argument that no human is able to capture him. We probably have here the same mythological Leviathan who is attested elsewhere in the OT, and whom God overcame at the creation (though it is arguable that he now has only one head rather than seven). The point of God's argument seems to be that since Job cannot overcome Leviathan, how much less can he hope to overcome in argument the God who defeated him. Accordingly, Job repents in dust and ashes (Job 42:1–6). As part of the divine speech, Job is asked whether he can play with Leviathan (Job 40:29—Eng 41:5). This is clearly an allusion to Ps 104:26, where it is possible to render "There go the ships, and Leviathan whom you formed to play with." Whether this was what the author of Psalm 104 was intending to say, or whether we should prefer the translation, "There go the ships, and Leviathan whom you formed to play in it (*sc.* the sea)," the former interpretation is clearly what the author of the second divine speech presupposed. In Ps 104:26 Leviathan has sometimes been supposed to be the whale, but it is possible that here again it is rather a mythological creature which is in view.

Another reference to Leviathan occurs in Job 3:8, "Let those curse it who curse the day, who are skilled in rousing up Leviathan." These words form part of the passage in which the wretched Job laments the day of his birth, wishing it would be covered with darkness. That the rousing of Leviathan should betoken darkness is understandable if it implies the reversal of the process of creation; Gen 1:2 describes the pre-creation state of chaos as darkness. The popular emendation of "day" (Heb *yôm*) to "sea" (*yām*) in Job 3:8

is to be rejected: it would provide only a spurious parallelism, since the cursing of the sea would imply the opposite of the rousing of Leviathan.

Leviathan is also mentioned in later Jewish literature. For example, in 2 Esdr 6:49–52, *2 Bar.* 29:4, and *1 En.* 6:7–9, 24, Leviathan, along with Behemoth, is to be devoured at the Messianic banquet. Furthermore, there can be no doubt, in view of Leviathan's seven heads, that it is this mythological monster which underlies the seven-headed dragon (Satan) in Rev 12:3 and the seven-headed beast (Rome) in Rev 13:1, 17:3. Similarly, the seven-headed dragon in *Odes Sol.* 22:5, Pistis Sophia 66 and *Qidd.* 29b must also reflect Leviathan.

JOHN DAY

LEVIRATE LAW [Heb *yibûm* (יִבּוּם)]. The Bible discusses levirate marriage in Genesis 38, Deut 25:5–10, and probably Ruth 4. According to Deuteronomy, when a man dies without leaving a son, his widow is forbidden to marry outside the family. Her husband's brother "takes her as his wife and performs the levir's duty. The first son that she bears shall be accounted to the dead brother." Should the levir refuse, the ceremony of *ḥălîṣâ* (removal of the sandal) is performed and the widow is free to marry outside the family.

Leviticus 18:16 and 20:21 totally prohibit marriage between a brother- and sister-in-law. The rabbis reconciled the contradiction between Deuteronomy and Leviticus by saying that Leviticus states the general principle and the law in Deuteronomy applies only when a married man dies without offspring (*y. Něd.* 3:5).

Most modern scholars agree that Ruth 4 describes a levirate marriage, although the descriptions in Genesis and Deuteronomy differ substantially (Ahroni 1984: 68). Scholars disagree as to whether Ruth reflects an early or late stage in the development of levirate law (Niditch 1985: 452–53).

Levirate marriage is one of the principle subjects of tractate *Yĕbāmôt* of the Mishnâ, Tôseptā, and the Palestinian and Babylonian Talmuds. Neusner (1980: 30–32; 1981: 137–43 and 194–97) reads Mishnâ *Yĕbāmôt* as a philosophical essay teaching that heaven's bond (levirate) and the earthly union (betrothal, marriage-contract, and consummation) correspond to each other, as do death at God's hands and divorce. Both God and man can sanctify woman and remove the sanctification. Neusner's conception of the Mishna as a philosophical essay has been criticized by Cohen (1983), Chernick (1984), and Maccoby (1984).

Rabbinic law tends to reduce the distinction between levirate marriage and other marriages. For example, the rabbis require a betrothal ceremony, *ma*ʾ*ămār* (declaration) (*t. Yebam.* 7:2; *b. Yebam.* 52a), similar to other betrothal ceremonies. The levir gives the widow an object of value in the presence of witnesses, or writes a document containing a betrothal formula, just as a man normally betrothes a woman.

Clear differences remain between levirate marriage and other marriages, however. The view that before betrothal a state of *ziqa* (prior attachment) exists between the levir and the widow has no counterpart in other marriages (*m. Yebam.* 3:9; *b. Yebam.* 26a). The widow in a state of *ziqâ* is forbidden to have sexual relations with an outsider, although the rabbis do not consider the children of such a union as illegitimate (Belkin 1970: 307–20).

Some scholars see a tendency to limit the application of the levirate rite in rabbinic law (Epstein 1942: 96; Gordis 1974: 248; Ahroni 1984: 70–73). On the basis of Deut 25:5 ("when brothers dwell together"), for example, the rabbis exclude maternal brothers and brothers born after the husband's death from the levirate obligation (*m. Yebam.* 2:1–2; *b. Yebam.* 17b). The rabbis interpret the phrase "and has no son" to mean offspring rather than son (*Sipre* Dĕbārîm, chapter 288; *b. B. Bat.* 109a), such that the marriage cannot be consummated if the child is illegitimate, female, or a grandchild (*m. Yebam.* 2:5; *b. Yebam.* 22b; *b. Nid.* 5:3).

Several facts belie this modern scholarly claim, however. First, there is no consensus among Talmudic rabbis as to whether levirate marriage or *halisa* are preferable (*m. Bek.* 1:7; *b. Yebam.* 39a–b and 106a). Second, according to rabbinic law the offspring of the levirate union are considered the levir's and the levir inherits his brother's estate (*m. Yebam.* 4:7). The rabbis contradict the plain meaning of scripture, which views the first child as the offspring, and perhaps the heir, of the deceased. Rabbinic law here works to promote levirate marriage, making it more attractive to the levir.

Belkin (1970: 293) thinks the rabbis valued the institution because it protected the widow and helped compensate the family for the loss it sustained. Niditch (1979: 149) thinks the rabbis shared the biblical view of levirate marriage as a socially constructive institution. Society allows a young woman only two proper roles. She is either an unmarried virgin in her father's house or a faithful, child-producing wife in her husband's or her husband's family's home. Through the levirate, society avoids a sociological misfit, the young childless widow. The levirate not only continues the line of the deceased, it reaffirms the young widow's place in the home of her husband's family.

D. The Monarchical Period

———

A. Introduction

Since Wellhausen (*WPHI*) there has been wide acceptance of the view that the elaborate picture of the priests and Levites given in the "Priestly" sections of Exodus, Leviticus, and Numbers represents the last, not the earliest stage in the development of the Israelite priesthood. Wellhausen did not think that the Levites formed a special priestly class in Israel's early period, as an uncritical reading of the Pentateuch would indicate. Although he did not deny that there had been a tribe of Levi in remote antiquity, he believed that it had nothing to do with the priesthood, and further that it had already disappeared before the rise of the monarchy.

Therefore, according to Wellhausen, the priesthood did not play a significant role in Israel until the monarchical period, and those who functioned as priests were not Levites. Wellhausen saw priests come into prominence for the first time with Deuteronomy, which, following DeWette, he dated to the time of Josiah. Here priests were first called "Levites," but this new priestly class did not derive from the Levitic tribe of the premonarchical period. Rather, they simply assumed the name "Levite" as a patronymic in order to bind themselves together in a class.

Wellhausen stated that Deuteronomy's picture of the priesthood was never fully put into practice. He arrived at this conclusion by comparing Deut 18:6–7 (which invites the "Levite" to come to the central sanctuary to serve with the "fellow-Levites") with 2 Kgs 23:9 (which states that the priests of the high places did not actually come up to the altar of Yahweh in Jerusalem). From this, he believed, arose the distinction between priests and Levites made first by Ezekiel, then by P, and finally by the Chronicler.

Thus Wellhausen believed that he had "solved" the problem of the Levites by showing that they had never existed as a priestly class before the monarchical period; that is, not until the writing of Deuteronomy.

Wellhausen's reconstruction received a great deal of study, and in some cases revision, but the main aspects of his work were widely accepted. Once it was recognized, however, that OT traditions could have had a long oral history before they were written down, it became possible to reconstruct Israel's history, including that of the Levites, back into premonarchical times.

One of the most important of these post-Wellhausenian studies of the Levites that uses the history-of-traditions method is Kurt Möhlenbrink's article, "Die levitischen Überlieferungen des Alten Testaments" (The Levitical Traditions of the Old Testament), published in 1934. Möhlenbrink investigates four Levitic *Gattungen* (genres): *Listen* (lists), *Geschichten* (stories), *Satzungen* (regulations), and *poetische Stücken* (poems). In his discussion of the *Listen* he suggests how the Levitic genealogies may have come into their present form. One of his major contentions is that the Aaronite and Zadokite lines were secondarily added to earlier Levitic genealogies. The original form of the genealogy in Exod 6:16–25 (his *Schema* A) he dates sometime between David and Josiah, and Num 26:58 (his *Schema* E) he believes originated in the time "between Deborah and David."

Among the *Geschichten,* Möhlenbrink does not find any that can be dated as early as his *Schema* A, that is, preexilic times. He denies any original connection between Zadokites and Eleazarites and between Eleazarites and Aaronides. He does, however, believe that the Eleazarites were the priests of a Canaanite sanctuary at Gibeah already before the conquest of Palestine by Israel. Later they attached themselves to the Levites. In the *Geschichten* he also notes an original incongruity between Aaron and Moses.

On the basis of his investigation of the *Levitensatzungen,* of which he considers Deut 18:1–8 and Ezek 44:4–31 to be the oldest, Möhlenbrink again concludes that the Aaronite traditions are a late addition to the Levitic.

Möhlenbrink's study of the *poetische Stücke (Levitenlieder)* yields the following results: The "Levi" of Gen 49:5–7 (and of Genesis 34) had nothing to do with the Levitic priests. However, in Deuteronomy 33,

Levi is a real eponym of levitical priests. It is a poem about the origins and privileges of the Mushites (Levites derived from or associated with Moses). It dates even earlier than *Schema* E, that is, shortly before or after the conquest.

An important work of recent years which takes seriously the early history of the Levites is a study by Frank Cross (*CMHE*, 195–215). Cross believes that various stories of conflict in the wilderness period contain much that bears upon the history of the early priestly houses of Israel. He finds such stories in Exodus 32; Numbers 12, 16, and 25; and Leviticus 10. He concludes that these stories of conflict can best be understood if one posits an ancient struggle between the Mushite priesthood centered at Shiloh and Dan (with allied Mushite-Kenite priesthoods at Arad and Kadesh) and the Aaronite priesthood of Bethel and Jerusalem.

Using the insights of Möhlenbrink and Cross, as well as a fresh study of the Levitic genealogies, one can now reconstruct the history of the Levites in three periods: desert, tribal, and monarchy.

B. The Desert Period

It is in the early traditions of the desert period where one first hears of Levites who served as priests. In fact, Moses, who not only served as Israel's leader during this period but also functioned as a priest (see, e.g., Exodus 24), was considered to be a Levite (Exod 2:11).

It appears that the Levites were divided into three main groups in the desert period, namely, Gershonites, Kohathites, and Merarites. This follows from a study of the Levitic genealogies, where Gershon-Kohath-Merari constitutes the oldest element, both stylistically and content-wise, and from such narratives as Num 3:21–37 and 10:17, 21, which state that the Levites encamped around the tabernacle and took charge of transporting it, setting it up, and taking it down.

According to the Levitic genealogies in Exod 6:16–25, Num 26:58b–60, 1 Chr 5:27–41—Eng6:1–15, and 23:13, Moses and Aaron were brothers who descended from Kohath the son of Levi. In each case Aaron is listed first, which can mean that the genealogist considered Aaron to be older and/or more important than Moses.

1. Moses and Aaron in Old Narratives. According to Exod 2:16–22, Moses married Zipporah, the daughter of Reuel, a Midianite priest. That the priesthood of Moses was henceforth closely connected with Midian's is suggested by Exod 18:12, where in a cultic meeting of Israel and the Midianites the dominant partner was Jethro/Reuel (probably representing Moses, since Moses is not among Israel's representatives), while Aaron and the elders of Israel appeared as guests.

Although in Exod 4:14, Moses appears to be dependent upon Aaron when it calls Aaron Moses' brother (or "your fellow Levite"), in the old narratives Moses is usually the dominant figure. This is particularly clear in the plague stories, where Moses is constantly mentioned first. In the very first encounter with Pharaoh (Exod 5:1–4) Moses is first and Aaron second. In the fourth plague (8:16–28—Eng8:20–32) Moses dominates the scene; in fact Aaron is mentioned only once in this connection (21—Eng v 25), and then he is in second place behind Moses. In the fifth plague (9:13–35) he is mentioned only once (v 27), again in second place; in plague eight (10:1–20) he is mentioned three times (vv 3, 8, 16), but always in second position; and in plagues nine (10:21–26) and ten (11:1–8) Moses acts alone.

At the time when Yahweh first sent manna to the people, Moses alone is mentioned (16:4–5). During the war with the Amalekites (chap. 17) Aaron is a military leader of the same stature as Hur (vv 10, 12), but he is not described as a priest, nor is he on a par with Moses. In chap. 18, where Jethro, Moses' father-in-law, acts as a priest by sacrificing, Aaron (v 12), together with the elders of Israel, apparently is involved only as a participant in the communal meal which followed.

In preparation for the giving of the covenant at Sinai (Exodus 19) Aaron is mentioned only once, and then in distinction to the "priests" (19:24; cf. v 22). Who these "priests" were is not indicated. Though Aaron was given the honor of being asked to go up the mountain with Moses, in chap. 20 it is Moses alone (v 21) who drew near to speak to God. Then in the covenant proceedings recorded in chap. 24 Moses acts as a priest (vv 6, 8, while Aaron, Nadab, and Abihu function on the same level as elders in two cases (vv 1, 9), and in another instance (v 14) Aaron and Hur stay with the elders.

In Exodus 32, Aaron attempted to act as a priest, but his actions were unorthodox, and he gained the condemnation of Moses. In addition, the Levites who sided with Aaron were punished, and the Levites who sided with Moses were formalized as priests vv 25–29).

Deut 10:8 states that the Levites were set apart "to carry the ark …, to stand before Yahweh to minister to him." This may either refer to the events of Exod 32:25–29, or it may be an alternate tradition of a "setting apart" that took place at "Jotbathah" (10:7). Still another tradition mentions a constitutive act for Levi at Massah and Meribah (Deut 33:8–11).

The role of Aaron in the old narratives of Numbers is similar to that in Exodus. In 10:29–11:35 he does not appear at all, and Moses is the main figure. The same is true in chaps. 13–14; 21:4–35; and chap. 32.

In Numbers 12, Aaron, together with his sister Miriam, is actually opposed to Moses (cf. Exodus 32). They criticized Moses for his choice of a Cushite wife. This is perhaps a reference to Zipporah. For their action Aaron and Miriam were not only rebuked, but Miriam was punished with leprosy.

Cross (*CMHE,* 204) sees two themes in Numbers 12: (1) Moses' superiority over the house of Aaron as a mediator of the divine command; and (2) the legitimacy of the Mushite priesthood despite its "mixed" blood.

In summary, the old narratives present Aaron not as a priest but as an elder of the people who makes the life of Moses, the leader, difficult.

2. Moses and Aaron in the Genealogies. Exodus 6 contains a Levitic genealogy. Its basic form is *(w)bny X Y,* " (and) the sons of X are/were Y." The sons of Gershon, Kohath, and Merari are all listed according to this formula. This section is concluded with the statement (v 19b); "These are the families of the Levites according to their generations." This could mean that vv 16–19 once formed an independent genealogy.

Verse 20, however, uses a different formula from vv 17, 18, 19. On the basis of this variant wording, S. A. Cook (*EncBib* 1662) and others have concluded that the statement calling Aaron and Moses the sons of Amram is a secondary expansion of the earlier form of the genealogy (cf. also vv 23 and 25a). Accordingly, the inclusion of the family of Aaron in the final form of the genealogies would therefore be due to an "Aaronizing" *Tendenz* on the part of the genealogist.

In the genealogies where Aaron and Moses are called brothers (Exod 6:20, Num 26:59, and 1 Chr 5:29—Eng6:3 and 23:13), according to a principle enunciated by A. Olrik (1909: 5), it is significant that each time the order is "Aaron and Moses," whereas in the narrative sections it is normally "Moses and Aaron." Secondly, Moses' sons are never mentioned in the genealogies (except 1 Chr 23:15). These two facts alone indicate that Aaron and Moses may not be as closely associated as is often thought, and that they are best studied separately.

3. Is Moses a Kohathite? This raises the question whether Moses is a Kohathite, as the genealogies indicate, or whether in keeping with the old narratives he is less closely associated with Aaron. There are certain indications that Moses was actually a Gershonite. According to Exod 2:22 and 18:3 Moses had a son called Gershom. This agrees with the genealogy in Judg 18:30. Could this Gershom be connected in some way with Gershon the son of Levi? Linguistically it is difficult to tell whether the name Gershon or Gershom is more original. Both *-ōn* and *-ōm* can be used as hypocoristic/diminutive endings in biblical Hebrew names (Noth *IPN,* 56). However, given the antiquity of the *ōn* hypocoristic ending in Northwest Semitic (Gordon 1955: 51) and its greater frequency in biblical Hebrew than *ōm,* it seems probable that Gershon is primary. Further evidence for the fluidity of the spelling of the name is found in Chronicles, where the son of Levi is called both Gershon and Gershom.

If Moses' son originally had the name Gershon, then, according to the principle of papponymy (Cross 1963: 120–21) which was widespread in the ANE, he may have been named after an ancestor by the same name. The ancestor after whom Moses named his son may therefore have been Gershon the son of Levi.

This reconstruction provides a possible explanation for the different pictures of Moses' family lineage that emerge from a comparison of the old narratives and the final form of the genealogies. It would also explain why several times in 1 Chronicles the old, no doubt original, order of Gershon-Kohath-Merari is changed to Kohath-Gershon-Merari. These indications can be taken to mean that in the late period both

Moses and the Gershonites were being de-emphasized, at least insofar as their priestly role was concerned.

Another example of possible name confusion which may relate to the de-emphasis of Moses' priestly role is Eliezer the son of Moses/Eleazar the son of Aaron. If one allows for the possibility that in the Hebrew spelling of Eliezer the *mater lectionis* with the i-vowel is secondary, there was originally no difference in the consonantal spelling of these two names. Are Eliezer and Eleazar therefore one and the same? In view of the probable de-emphasis of Moses as a priest in post-Solomonic times, perhaps Eliezer the son of Moses became Eleazar the son of Aaron in the tradition.

In a similar way, Phinehas the son of Eleazar the son of Aaron (Num 25:7, 10) may originally have been associated with Moses. At any rate, one of the sons of Eli (who may have been a Mushite, 1 Sam 2:27) is named Phinehas (1 Sam 1:3). Phinehas the son of Eli could (again according to the principle of papponymy) have been named after a Phinehas of the line of Moses.

In certain of the Levitic genealogies (Exod 6:16–19; Num 3:17–21, 27, 33; and 1 Chr 6:1–4—Eng6:16–19) the next generation after Gershon-Kohath-Merari associates the Mushites with Merari, and not with Gershon. This, however, is probably not to be construed as a biological relationship, but rather as reflecting some social function or status (Wilson 1979: 19). This seems to be supported by the fact that Exod 6:20–25 carries the genealogy forward in an inconsistent way (no descendants are listed for Libnei, Shimei, Hebron, Mahli, or Mushi), while Numbers 3 and 1 Chronicles 6 do not carry the genealogy foward at all. Furthermore, there are no narratives in the OT which would indicate that these linkages represent historical reality.

C. The Tribal Period

There has been much scholarly discussion as to whether "Levite" is an ethnic or functional appellative. The evidence presented so far seems to indicate that the Levites were mainly a group or groups related by blood. This does not necessarily mean that "Levite" is per se an ethnic term. It can be a designation for a group which, though related, had a common function, and who because of the common function received the name. This seems to be the case with the Levites, for according to Albright (*ARI* 109; 204–5, n. 42) the term *lawiyu,* from which he derived "Levite," means "a person pledged for a debt or vow (to Yahweh)." In other words, a Levite, etymologically speaking, was a priest.

It is therefore plausible that each of the major groups or clans of Levites (Gershon, Kohath, Merari) constituted a blood relationship within themselves but not necessarily between them. Thus also Moses and Aaron would not have to be related, even though they were both Levites in the sense that they were both priests. Or put differently, a clan constituted a blood relationship, and several such clans who had the common function of the priesthood joined together to form the tribe "Levi." Accordingly, the Levites comprised a group of clans who, taken together, could have been designated as a tribe.

1. Levi in the Tribal Lists. In his study of the twelve tribes, Martin Noth (1930) dealt with the various lists of the tribes. He found that they generally fall into three categories: (1) those in which Levi is included (always in third place); (2) those in which Levi is not present but in which Joseph has been divided into Manasseh and Ephraim to retain the total of twelve tribes; and (3) those in which Levi, Ephraim, and Manasseh are all included.

The third category Noth takes to be a late harmonizing of the first two categories. Concerning the second category, in which the lists do not include Levi, Noth plausibly shows that all are dependent on either Num 1:5–15 or Num 26:5–51. He believes that Num 1:5–15 originally had Gad in third place. Hence, the only difference between Num 1:5–15 and Num 26:5–51 is the different order of Ephraim and Manasseh. Noth takes Num 26:5–51, which puts Manasseh first, as the older of the two forms. Noth (1930: 30–31) believes that the oldest form of category one (with Levi, Joseph still being undivided) is found in Gen 49:1–27. Since the Song of Deborah in Judges 5 mentions Ephraim and Machir (Manasseh), Noth believes that Num 26:5–51 and 1:5–15 must postdate this Song. Therefore, he dates them in the second half of the period of the Judges. Gen 49:1–27, on the other hand, must antedate the Song of Deborah, since it still speaks of Joseph as undivided. This form of the list of the tribes Noth dates to the very beginning of the period of the Judges. Another reason why Noth feels that the original form of these

lists must come from before the monarchy of David is his feeling that they would have come from a time when the tribes were still interested in maintaining their individual histories.

If, as Noth has plausibly shown, Gen 49:1–27 reflects the beginning of the period of the Judges, either Levi must have still existed as a tribe at that time, or Levi was still remembered as an integral member of an old six-tribe league (the Leah tribes) which now formed the basis for a new twelve-tribe league. According to Noth, this first or oldest list of the tribes retains the memory of a secular tribe Levi which by the time of the second list had declined to the point (cf. Genesis 34 and 49) where they were no longer mentioned.

Gunneweg (1965: 59–64) holds to the first alternative, namely, that Levi did exist as a tribe in the period of the Judges, and that one must explain the absence of Levi from the second category of tribal lists in some other way than by positing its nonexistence. Gunneweg seeks to explain the difference between category one (with Levi) and category two (without Levi) by seeing a difference in purpose between them. The first category he considers to be a *Mitgliederliste* (list of members) of the tribal league according to their eponymous ancestors; the second, since it substitutes Ephraim and Manasseh for Joseph, he takes as a geographical-political-oriented list. Accordingly, because Levi had no land, it was not included in the second list, but because it was a member of the tribal league it was listed in the first group.

Another way to understand the difference between categories one and two would be to consider the first category as a "religious" listing, that is to say, as the groups or tribes who were to appear before Yahweh at the central sanctuary three times yearly (cf. Exod 23:17; 34:23); whereas the second category could have been "political," meaning that from these groups men of war could be conscripted. Thus the Levites could be recognized as one of the member tribes of the tribal league, though they owned no land and their young men did not serve in war.

2. Possible References to Levites in the Tribal Period. a. Joshua. Joshua's terminology for priests is the same as in Deuteronomy. Therefore, when it speaks about "Levitical priests," it could be referring to Mushites (descendants/adherents of Moses).

Joshua 3:3 says that "Levitical priests" carried the ark as the Israelites crossed the Jordan. Therefore the priests who carried the ark around Jericho (Joshua 6) were probably also "Levitical priests," though it is not explicitly stated. At the time of the reading of the law of Moses on Mt. Ebal and Mt. Gerizim (Josh 8:30–35) it is again the "Levitical priests" who carry the ark of the covenant. (Cf. Deut 31:9–12, which says that "the priests the sons of Levi" who carried the ark were to read the law every seven years before "all Israel," perhaps meaning before the ark at the central sanctuary. See also Deut 27:9 and 27:14.)

Joshua 9:27 tells how the Gibeonites became "hewers of wood and drawers of water for the congregation, and for the altar of Yahweh." Though the altar they served is not mentioned, it could mean that they assisted the Levites at the central sanctuary.

Obviously these few references do not constitute a full history of the Levites/priests in the tribal league, but apparently by the time the book of Joshua was written, there was in Israel still the memory of a tradition that connected the Levites with the ark of the covenant and the public reading of the law in the very earliest period of the tribal league. And it should be noted that in the first twelve chapters of Joshua the term "sons of Aaron" does not occur.

The last half of the book of Joshua contains very little narrative material. The bulk of these chapters is usually considered to be later than chaps. 1–12. Briefly, however, the Levites are presented as priests who did not receive any land as their inheritance (13:14, 33; 14:3–4; 18:7). Instead, they are said to have received cities to dwell in (Joshua 21; cf. 1 Chronicles 6). There is general agreement among scholars that the account of the Levitical cities does not date to the tribal league; but that the Levites did not have any territory of their own and thus had to be given some special support by the rest of the Israelites is no doubt true. The book of Deuteronomy (18:1–5) suggests how the Levites at the central sanctuary were supported.

The book of Joshua mentions only one individual priest, namely, Eleazar. He is said to be involved in the distribution of the land (19:51) and of the Levitic cities (21:1). Both acts are said to have taken place at Shiloh. Eleazar's death is reported to have occurred in Ephraim (Josh 24:33).

Joshua 21 speaks of the three-fold division of the Levites, namely: Kohath, Gershon, and Merari. The order, with Kohath first, indicates that it is later than the traditional Gershon-Kohath-Merari sequence found in so many of the genealogies. The Kohathites are divided into two groups, the sons of Aaron and the rest of the Kohathites. Both in its order and in the division of the Kohathites Joshua 21 is identical with 1 Chr 6:39–45—Eng6:54–60.

Joshua 24:33 states that Eleazar was the son of Aaron and that Phinehas was the son of Eleazar. This agrees with the genealogies in Exod 6:16–25; 1 Chr 6:27–41—Eng6:1–15 and 6:35–38—Eng6:50–53; and Ezra 7:1–5. However, see B.3 above.

Though the final editing of Joshua is placed into the 6th century B.C. by Noth and many other scholars, it is recognized today that the preliterary stage of many of the documents in the book go back to a time much earlier than the final editing of the book. Therefore, in general, it can be said that there is a priori no reason why at least some of the material concerning the Levites in Joshua cannot actually reflect the period that it purports to describe, i.e., the period of the Conquest. For further discussion see Noth (*Joshua* HAT) and Boling (*Joshua* AB).

b. Judges. Judg 1:16 states that the descendants of the Kenite (i.e., Hobab), Moses' father-in-law, went up from the city of the palms (Jericho) in Judah and settled in Arad.

Judges 4:11 states how Heber the Kenite left his kinsman in Arad and went and pitched his tent at the "oak" in Zaanannim, near Kedesh.

If Moses was a priest, then the Kenites, because of their relationship to Moses, may have also been priests. What is more, oaks were frequently considered sacred (cf. Josh 24:26; Gen 12:6); so 4:11, which mentions "oak," may mean that the Kenites built a sanctuary at Kedesh.

In their excavations at Tell Arad, Y. Aharoni and R. Amiran have found a sanctuary which B. Mazar (1964: 297–303) dates to "between the 10th century B.C. (Stratum XI) and a late stage in the history of the Kingdom of Judah (Stratum VIII)." Perhaps there was such a sanctuary at Arad also in earlier times, and, if so, it could have been the haven for Mosaic traditions, since the Kenites (who lived at Arad, 1:16) were connected with Moses by marriage. These traditions could have been transplanted to the North (Kedesh) by Heber the Kenite (cf. 4:11). According to the genealogy of Judg 18:30, Dan would have been another northern sanctuary where Mosaic, and consequently Levitic, traditions were preserved. According to 18:30 there was a Mushite priesthood in Dan "until the captivity of the land," that is, presumably until ca. 722 B.C.

Judges 17:7–13 speaks of a single Levite (*lwy*) of Bethlehem in Judah. This Levite is seen moving to Ephraim. There he was quickly taken in as the priest of the Ephraimite Micah, who up till then used his own son as a priest. This shows that from the beginning of the period of the Judges, Israelites looked upon the Levites as the appointed representatives of Yahwism and as specialists of the cult. Micah considered the presence of a Levite in his house as a pledge of the blessing of Yahweh (17:13). Perhaps the Levites enjoyed this position of prestige because they were the priests of the ark of the covenant.

Judges 18 continues the story of Micah's priest. Here it is reported how the Danites on their migration northward enticed him to join with them because in their new home they wished the services of a priestly technician who could declare to them the divine intentions (18:5) and who would be qualified to set up and care for a sanctuary. Thus whether in Ephraim where he sojourned, or in the tribe where he set up his final home, the role, importance, and benefits of Levitism were appreciated.

The name of the Levite is given in 18:30, namely, Jonathan ben Gershom ben Moses. Charles Hauret (1957: 108–9) does not feel the genealogy at the end of the story is an intrusion, as do many other scholars, but that it is an ancient tradition preserved in the priestly circles of the sanctuary of Dan. He also defends Jonathan against the charges by scholars who would make him "cunning," "greedy," "ungrateful," and "ambitious." Hauret maintains that, if Jonathan was not the most virtuous priest, he at least had the merit of ability. Hauret further believes that Jonathan may have been an actual grandson of

Moses, because the migration of the Danites harmonizes well with the beginning of the period of the Judges.

If Judges 17–18 is any indication, Levites were scarce during the period of the tribal league. This is understandable if their major function was caring for the central sanctuary with the tent and ark. Only gradually, as their numbers grew, would some Levites be free to serve at local sanctuaries.

Judges 19–20 gives another story of a Levite. He was from Ephraim, and he took a concubine from Bethlehem-Judah. When the Benjaminites of Gibeah raped his concubine so that she died, the Levite "divided her, limb by limb, into twelve pieces" (19:29) and sent them throughout the land. As Polzin (1969: 239) has pointed out, this was probably a symbolic act which called on members of the tribal league to provide help which they had already pledged in a treaty. At any rate, the rest of the Israelites spontaneously rallied to the side of the Levite, and they gathered at Bethel to inquire of God (20:18, 26).

It is stated that the ark was at Bethel (20:27) and that it was served by Phinehas, the grandson of Aaron. Perhaps Phinehas was the chief priest of the central sanctuary in Ephraim, while his "cousin" Jonathan was the chief priest of the sanctuary of northern Dan. Assuming that this Phinehas was a Levite, this provides information which corroborates the picture given in Joshua, namely, that the most important Levites were in charge of the central sanctuary and its ark. Here we have the added information that the Levites at the central sanctuary are consulted before battle is joined against an enemy (Judg 20:18, 23, 26–28). To serve at the central sanctuary meant to stand before Yahweh (*l lipnê yhwh*) and his ark (20:28). The phrase *lipnê yhwh* seems to be a technical term, for in 20:18 the Israelites consulted *bēʾlōhîm* (of God); in 20:23 they wept *lipnê yhwh* and consulted *byhwh* (of Yahweh); in 20:26 they wept and sacrificed *lipnê hywh;* and in 20:27 they consulted *byhwh* (of Yahweh) at the ark of the covenant when Phinehas (20:28) served as the priest *ʿōmēd lĕpānāyw* (i.e., standing before him = Yahweh, or it = the ark).

c. 1 Samuel. The priests at the beginning of the book are Eli and his two sons, Hophni and Phinehas (1:3). Some commentators try to guess who "the house of your father who belonged to the house of Pharoah when they were (slaves) in Egypt," taken from Yahweh's words to Eli (2:27), refers to. If one takes "house of Pharaoh" to be a synonym for Egypt, then a number of answers are possible.

Wellhausen considers it to mean Moses (*WPHI,* 142; cf. *CMHE,* 196). This view can be defended, if one takes "the house of Pharoah" literally, for of Israel's ancestors, only Moses lived in Pharoah's house.

The identification of the "faithful priest" (2:35) who is to replace Eli is also a problem. The immediate context suggests Samuel; but it could already be a reference to the fact that Zadok would eventually replace Abiathar as the main priest of the people (cf. 1 Kgs 2:26–27; 35).

The Levitic classification of Samuel is even more in doubt. Though he is included in the present form of the Levitic genealogies recorded in 1 Chr 6:7–13—Eng6:22–28 and 1 Chr 6:18–23—Eng6:32-38, these are simply secondary additions to what were originally schematic genealogies of seven and fourteen names respectively. These additions were taken from 1 Sam 1:1, where Samuel's forefather Zuph is said to be an Ephraimite. That Samuel functioned as a priest, at least on occasion (cf. 7:10, etc.), seems clear. Therefore one must either reckon with a non-Levitic priesthood during this time; or the term "Levite" was used more as an appellative meaning priest than as an ethnic title. According to the former view, anyone, including Samuel, could have been considered a "Levite," regardless of his tribal affiliation.

Yet there is another possibility concerning Samuel, namely, that despite certain priestly functions he was technically a "judge" (despite 2:11). At least Samuel's sons who succeeded him were called "judges" (8:1; cf. 12:2).

The sanctuary that Eli served was at Shiloh, when, according to 1 Samuel 4, Israel was defeated by the Philistines. Eli's sons died in battle, and the ark was captured. Eli himself died after hearing the news of the battle. Though there is no clear archaeological evidence, it is quite likely that Shiloh and its sanctuary were also destroyed (cf. Jer 7:12). This, plus the loss of the ark, would have affected the Levites drastically.

The only explicit mention of Levites is in 6:15, where it is stated that they took the ark of Yahweh after it was returned to Israel by the Philistines. The Levites put the ark on a great stone at Beth-shemesh. This

description of the Levites' duties agrees with Deut 10:8; 31:9; Josh 3:3; 8:33. Beth-shemesh was, however, not the central sanctuary (6:15–7:2), and we hear no more of the ark until David became king. Accordingly, the Levites who had served at the central sanctuary now had to try to attach themselves to local sanctuaries. Ichabod (4:21; cf. 14:3a), the son of Phinehas, disappears from the scene.

Into this situation stepped Samuel who had been trained as a priest by Eli himself (1 Samuel 1–3), but who also can be reckoned as a prophet. He seems to have performed the duties of chief priest in Saul's time. However, he apparently made no effort to bring back the ark to a prominent place, nor did he work at a central sanctuary. Rather we find Samuel serving at various cities (Bethel, Gilgal, Mizpah, Ramah [7:15–17]). Therefore, Albright (1961: 18) may be right in concluding that Samuel diminished the role of priests and Levites and turned to ecstatic prophets and local sanctuaries.

In 1 Sam 8:1–5 and 12:2 it is indicated that Samuel's sons also served as priests or judges. But we hear no more of them.

Another priest at the time of Saul was Ahijah ben Ahitub ben Phinehas (1 Sam 14:3, 18). Hence, we may assume that the line of Eli had not died out, but it played an insignificant role compared to Samuel.

The Elides eventually established themselves at Nob (cf. 1 Sam 22:11) where Ahimelech is said to have been priest; but this is no doubt another name for Ahijah. Ahimelech/Ahijah's son was Abiathar. The Elides at Nob were murdered by Saul, and only Abiathar escaped. He took refuge with David (1 Sam 22:20–23) and became David's priest (1 Sam 30:7).

3. Genealogy of Levites in the Tribal Period. The narratives of Exodus indicate that Gershom is the son of Moses. This is put into genealogical form in Judg 18:30b which also adds the name of Jonathan. The descendants of Moses after Jonathan are not indicated by specific names. It is likely, however, that the name "Mushites" in the genealogy of Num 26:58a is a reference to them as a group. If Möhlenbrink (1934: 196) is correct, this dates from the period of the Judges.

4. Levitic Groups. According to a number of scholars, Num 26:58a preserves the memory of four Levitic groups in the tribal league period, namely, Mushites, Hebronites, Korahites, and Libnites.

The Mushites were the descendants of Moses. The Korahites would naturally represent the descendants of Korah and, like the Mushites, date to the tribal league.

The Hebronites were no doubt the inhabitants of the city of Hebron, mentioned in Josh 10:36 as having been taken by the Israelites during the conquest. By a process of elimination the Hebronites could be the descendants of either Kohath or Merari. However, since the Mushites probably were in control of the sanctuaries at Dan (Judges 17–18) and Kedesh (Judges 1 and 4), one would expect their rivals, the Aaronides, to be located in the South (although Arad in the South apparently remained Mushite). Hebron would therefore be the most likely place for their center. It is significant, accordingly, that in the account of the Levitical cities, Hebron is assigned to "the sons of Aaron, one of the families of the Kohathites who belonged to the Levites" (Josh 21:13 and 1 Chr 6:39–40, 42—Eng6:54–55, 57). Thus the connection of the Hebronites with Aaron and vice versa seems very probable.

The Libnites are probably to be connected with the city Libnah conquered by Joshua in Josh 10:29–30. Hence, the Levitic Libnites probably date to the tribal period. Since we suggested the Mushites to be descendants of Gershon, the Hebronites of Aaron, and the Korahites of Korah, by a process of elimination the connection of the Libnites with Merari and/or Ithamar of the desert period suggests itself.

Of the four groups mentioned in Num 26:58, the Mushites and Libnites were probably the priests in charge of the central sanctuary with its tent and ark. The Hebronites and Korahites, on the other hand, had been discredited in the desert period. Therefore they probably served only at local sanctuaries during the tribal period.

5. Deuteronomy. This, however, does not exhaust the source material for the period of the tribal league. In recent years there has been a strong reaction against de Wette's and Wellhausen's dating of Deuteronomy to the 7th century B.C. (*WPHI,* 9).

In his *Studies in Deuteronomy,* Gerhard von Rad points out that Deuteronomy preserves traditions older than the final editing of the book. He goes on to suggest that the country Levites of the N kingdom were the bearers of these traditions. He makes the same conclusion about some material in the Holiness Code.

G. E. Wright (*Deuteronomy* IB, 326) has accepted von Rad's conclusions, and he has emphasized even more strongly than von Rad that many of the Levites were teachers of the law rather than altar clergy.

J. A. Emerton (1962) has rejected Wright's view. He contends that Deuteronomy did regard all Levites as possessing priestly status and as being connected with sanctuaries. Emerton believes that there is no distinction in principle between altar priests and other Levites in Deuteronomy. While agreeing that the Levites were teachers of the law, he sees no basis for assuming that they could not also serve as altar priests.

This writer believes that Wright is correct in his belief that "Levitical priests" and "Levites" are not synonymous terms in Deuteronomy. However, he does not think that the distinction that Wright assumes, namely, that one group was altar clergy and the other teaching clergy is valid. Emerton is no doubt correct in his view that all Levites were in principle altar priests and that they could also serve as teachers. If there is nevertheless a distinction between "Levitical priests" and "Levites," what is it? We propose the theory that the two names do not represent two different groups living and working at the same time, but that they represent (essentially) the same group working at two different times. In order to test this theory we propose to take another look at the passages in Deuteronomy which speak to the matter.

First of all, the uniqueness of the terminology for priests in Deuteronomy needs to be noted. The terminology "sons of Aaron," used so frequently for priests in "P," is not mentioned at all in Deuteronomy. Aaron himself is mentioned only in the retelling of the apostasy with the molten bull (Deut 9:16–21) and with respect to his death (Deut 10:6 and 32:50). The dominant figure in the retelling of the exodus and wandering periods is Moses.

Moses does not identify himself as a Levite, nor does he mention them in his account of the molten bull incident. He does, however, say (10:8) that the tribe of Levi (*šbṭ hlwy*) was "set apart" as a special priestly tribe. This may have taken place at Jotbathah, one of the desert stations where Israel stopped, after Aaron's death. However, since vv 6–7 seem intrusive in the context, v 8 may also refer back to Exodus 32.

It is in the rest of the book where the two distinctive Deuteronomic types of terminology for priests occur.

The one is simply "the Levite" (*hlwy*). The Levite is said to live "in your gates = towns": 12:12; 12:18–19; 14:27–29; 16:11; 16:13–14; 18:6–7; 26:12. "Among you," found in 26:11, is an alternate expression. The name "the Levite" is used without the qualifying phrase "in your gates" only in 10:9. However, this perhaps is a reference to the "Levitical priests."

In all of these cases, except 10:9, the context is: The Israelite is to rejoice with the Levite (by providing food, etc., for him) when he goes to "the place which Yahweh your God will choose" (12:11, 18; 14:25; 16:11; 18:6; 26:2). The Levite is to be specially remembered, "because he has no portion or inheritance with his brothers/with you" (12:12; 14:27–29; cf. 10:9, 18:1).

The other main terminology is "Levitical priests," *hkhnym hlwym.* It is used in the following places: 17:9; 17:18; 18:1–2; 24:8; 27:9. The Levitical priests render legal decisions (17:8–9; cf. 21:5 and 24:8); and they are in charge of the Torah (17:18).

"The priests the sons of Levi" (*hkhnym bny lwy*) (21:5) is an alternate term for Levitical priests (cf. 17:8–9). It is also used in 31:9.

"Levi" in 10:8–9 seems to be equivalent to "Levitical priests" because it says he is to minister (*šrt*) to Yahweh, just as 18:7 and 21:5 describe the Levitical priests.

Similarly 33:8–11, where Levi is said to use Urim and Thummim, reminds one of the Levitical priests of 17:8–9 and 17:18.

"Priest" in 17:12 is surely also a synonym for "Levitical priests" in 17:9. In 19:17 "priests" is parallel with judges, as it was in 17:8–13. Hence, it again seems to be a reference to the Levitical priests. "Priest" in 26:3–4 is at the sanctuary that Yahweh chooses (v 2) and so must be a Levitical priest (cf. 18:6–7).

The plural "Levites" (*hlwym*) of 27:14 (cf. v 9) must be Levitical priests, since participating in a covenant ceremony agrees with the activities of Levitical priests as outlined in Josh 8:33 and Deut 31:9–11. For the same reason, "Levites" in 31:25–26 seems to refer to Levitical priests.

It is not absolutely clear who the "priest" of 20:2 is. But since preparing the people for holy war was a very important assignment, it would seem much more likely that this was the function of the Levitical priests, who throughout the book have the important assignments given to them.

Deut 18:1–8 is a disputed passage. First of all there is the question of the meaning of "the tribe of Levi" in v 1. Wright (1954: 326), in keeping with his theory of the Levites, concluded that the translation of the English Authorized Version was correct, in contradistinction to the RSV. AV reads: "The priests the Levites, *and* all the tribe of Levi, shall have no part nor inheritance with Israel." The RSV reads: "The Levitical priests, that is, all the tribe of Levi, shall have no portion or inheritance with Israel." The AV's use of *and* and the RSV's use of *that is* both represent attempts to interpret the Hebrew, which has no conjunction between the two phrases. Wright in following the AV understands "the tribe of Levi" to refer to the group entitled "Levites," which he describes in his article.

Emerton (1962: 133–34) has, perhaps, the better of the argument on this point. Following S. R. Driver (*Deuteronomy* ICC, 214), he contends that the second phrase in the Hebrew text is more naturally read as being in apposition to the first, as also the RSV has it.

There is, nevertheless, an element of truth in Wright's proposal, for while "the tribe of Levi" stands in apposition to "Levitical priests," it is an "explanatory" apposition which in effect corrects the first term as being inadequate as a statement of the one to whom the concept "no inheritance in Israel" applies, since this condition was shared by "Levites" as well as Levitical priests.

However, the expression, "the tribe of Levi," we see not just as being an explanatory "apposition" but as an explanatory "gloss." That is to say, it seems to come from the same hand as vv 6–8, which is probably an attempt (by a later hand) to give to the Levites of his own time what had (formerly?) applied only to the Levitical priests.

Basically, then, 18:1–8 is a description of the duties of the Levitical priests of the central sanctuary, but it also includes the thought that in principle "all the (rest of the) tribe of Levi" (v 1) and "the Levite" (v 6) had the right to perform these duties.

Though the country Levites (*hlwy*) therefore probably had the right to function as priests, they evidently did not do enough of this work to make a living at it. At any rate, Deuteronomy tells us clearly that they were poor and scattered. This gives a hint as to the time of the Levites. Their condition is reminiscent of the Levitic cities, since these cities were scattered throughout the land and could have served as a haven for the scattered Levites.

The account of the Levitic cities in 1 Chronicles 6 and Joshua 21, which Wellhausen called "historical fiction" (*WPHI*, 159–64), is now thought by many scholars to represent a certain reality. True, these cities were probably not reserved especially for the Levites already in the period of the Judges; but the list may represent an actual situation at the time of David (so Albright 1945: 49–73), or Solomon (Mazar 1960: 193–205), or Josiah (Alt *KlSchr* 2: 289–305), or at least some preexilic time (de Vaux *AncIsr*, 367; Haran 1961: 156). Accordingly, if the scattered Levites mentioned in Deuteronomy actually lived in the Levitic cities, the date for these Levites would be sometime in the monarchical period.

The other indication of the time referred to in the passages speaking about "the Levite" is the expression, "the place which Yahweh your God chooses." A prevailing view is that the law of centralization refers to Jerusalem in the time after 722 B.C. and before the time of Josiah.

The other main terminology, "Levitical priests" (*hkhnym hlwym*), seems to be used in Deuteronomy of the priests of the central sanctuary. In general these fell into four categories:

1. Using Urim and Thummim to obtain an oracle about various matters (17:9, 12; 19:17; 20:2; 21:5; 24:8).
2. Expounding the law of Moses (17:18; 27:9–10; 31:9–11, 24–26).
3. Serving before the ark (10:7–8; 31:9, 25).
4. Sacrificing and receiving offerings (18:1, 3; 26:4).

The key to dating the Levitical priests would seem to lie in determining the period when these activities were most likely carried on. It is generally acknowledged today that the use of Urim and Thummim was a very ancient priestly activity, which according to Deut 33:8 goes back to "Levi."

The idea of covenant renewal ceremonies in the tribal league has been widely held. At these ceremonies the law was recited and expounded (Josh 8:32–35 and 24:1–28). Therefore, there seems to be no reason not to accept Deuteronomy's statements (especially 31:9–11 and 27:14) that it was the Levitical priests who were engaged in the reading and exposition of this law at the central sanctuary.

Though the elaborate rules concerning sacrifice related in the Pentateuch no doubt correspond more to the practice of the later temple than to premonarchical times, there can be little doubt, based upon the study of ancient Canaanite cult practices, that Israel too had some sort of sacrificial system in its earliest period. That such sacrifice was the province of the priest goes almost without saying, and that the priests who engaged in this activity were Levites, as Deuteronomy claims, cannot be dismissed out of hand.

Finally, the ark, which according to Deuteronomy was carried by the Levites, is considered one of Israel's earliest cult objects, perhaps going back to Moses himself.

Deut 33:8–11, which in its content may reflect the tribal league period (Nielsen 1964: 18; Möhlenbrink 1934: 229), attributes to the tribe of Levi virtually the same activities that the rest of Deuteronomy attributes to the Levitical priests. For example, using the Urim and Thummim of 33:8 corresponds to category 1 above. Teaching the law of 33:10a corresponds to category 2. Putting burnt offerings on the altar of 33:10b is equivalent to category 4. Only category 3, serving the ark, is not mentioned specifically in Deuteronomy 33 as a duty of the Levitical priests, and that could well be implied, if the rest of the activities took place at the central sanctuary. It seems clear from such passages as Josh 8:30–35, Judg 20:26–27, and 1 Sam 4:3 that the ark was housed in the central sanctuary even before David brought it to Jerusalem (2 Samuel 6). Therefore, if Deuteronomy 33 (in its content) is as old as some scholars claim, this could be further evidence for placing the Levitical priests into the tribal league period.

Hence, the terminology "Levites" and "Levitical priests" seem to represent basically the same group of priests, but at 2 different times.

Accordingly, one can summarize the evidence of Deuteronomy as follows. The situation of the poor country Levite who is to be helped by the Israelites to come to the central sanctuary reflects the time between Jeroboam I and Josiah. It is very possible that this was part of a plan to tie the Levites to the central sanctuary in Jerusalem by giving them royal support. This support would have ended with Jeroboam I, who according to 1 Kgs 12:31 appointed "priests from among all the people who were not of the Levites," and who of course attempted to cut off all ties with Jerusalem. The result, as far as the Levites in the north were concerned, would have been the poverty-ridden situation reflected in Deuteronomy.

The description of the Levitical priests seems to refer to priests of the central sanctuary. Though the dating is difficult, the connection with the ark (10:8; 31:9; 31:25; and also Josh 3:3 and 8:33) as well as with the covenant renewal festival at Shechem (27:9–14; 31:9–11; Josh 8:33) make it possible to conclude that in the statements about the Levitical priests of Deuteronomy one has a very ancient tradition reaching back to the tribal league.

6. Summary. Putting all the foregoing together, one obtains the following picture:

In the desert the Levites had been given the right to serve the ark. By virtue of this they became the keepers of the central sanctuary in the tribal league. It became their prerogative to expound the Mosaic law as well as sacrifice at the central sanctuary. As the Levites grew in number, not all of them could stay at the central sanctuary. This made some available for serving at local sanctuaries. Anyone could be a priest at a local sanctuary, but even there Levites were preferred. On the other hand, at the central sanctuary only the Levites could serve. These are the "Levitical priests" of Deuteronomy. All these Levites seem to be descendants of Moses and/or Ithamar. They were probably the Mushites and Libnites mentioned in Num 26:58a. The Aaronides (Hebronites) and Korahites were not influential during this time, and we have no record of their activities.

D. The Monarchical Period

The fall of Shiloh (see C.2.c above) would have had a profound effect upon the Levites who were in charge of the central sanctuary, that is, perhaps the Mushites. No longer were they able to support themselves by serving at the central sanctuary. Rather they had to seek employment at other sanctuaries.

According to Judg 18:30, the priesthood of northern Dan had been Mushite since its inception. It is possible that some of the Shilonite Mushites resettled there when Shiloh fell. However, if the "molten image" of Dan was a bull icon (cf. Judg 17:3–4 and 18:17), as many scholars believe, it is doubtful if the Mushites of Shiloh, who were accustomed to the ark and cherubim as the symbol of Yahweh's presence, would have felt comfortable there.

Likewise, the Mushite Levites no doubt had difficulty attaching themselves to sanctuaries where Aaronides were in charge (e.g., Hebron). In Saul's day all of the descendants of Eli (Shilonite Mushites) who were in Nob, except Abiathar, were put to the sword for befriending David.

After David came to power he installed Abiathar as one of his two chief priests in Jerusalem. It is therefore likely that he would have invited other Mushite Levites to serve there as well. Thus in David's time Jerusalem probably not only became the haven of some refugees from Shiloh, but it also became the new home of the ark (2 Samuel 6), a sort of neo-Shiloh.

The installation of the ark in Jerusalem was the most important cultic event of David's reign. It is not entirely clear whether the Levites (= Mushites?) carried the ark alone, or whether they were assisted by priests (= Aaronides?). But we can be sure that David wanted to keep all elements of the population happy and that it was therefore his policy to invite representatives from as many sanctuaries as possible to Jerusalem.

David may have done even more for the Levites who found themselves scattered and without regular employment as a result of Shiloh's fall. Albright, as we have seen (C.5), suggested that the establishment of 48 Levitic cities (Joshua 21 and 1 Chronicles 6) is to be attributed to David. The Levites could have cared for the sanctuary in such cities and perhaps also taught the law, as they probably did in the tribal league, both at local sanctuaries and at the central sanctuary. No doubt by such an act as the establishment of the Levitic cities David not only would have wanted to help the Levites who were jobless and homeless to earn a living, but he would have also wished to create a group of influential people throughout his kingdom who would be loyal to him and the interests of Jerusalem.

Though David invited Abiathar (and other Mushite Levites?) to serve at the ark in Jerusalem, they did not have a monopoly on this service. David also brought another priest to Jerusalem who shared the office of chief priest with Abiathar. His name was Zadok. Zadok's origin has been much debated. In 2 Sam 8:17 he is introduced without explanation as one of David's two priests. He is called "the son of Ahitub," and the other priest, namely, Ahimelech, is called "the son of Abiathar" (cf. 1 Chr 18:16). Most commentators are agreed (on the basis of 1 Sam 22:20; 23:6; and 30:7) that Ahimelech was actually the father, not the son, of Abiathar. Furthermore, Ahitub is called the father of Ahijah/Ahimelech in 1 Sam 14:3 and 22:9, 11, 20, rather than the father of Zadok. Therefore, most scholars have concluded that 2 Sam 8:17 (in the MT) is out of order and that it originally read something like, "Zadok and Abiathar, son of Ahimelech, son of Ahitub, were priests." Thus Zadok would be left without genealogy, and his Aaronite ancestry as recorded in 1 Chr 5:27–34—Eng6:1–8; 6:35–35—Eng6:50–53; and Ezra 7:2–5 also becomes suspect. Instead, various theories have been proposed as to his real origin.

The hypotheses that Zadok stems from Gibeon or Kiriath-jearim do not have enough positive support to command many followers. However, the theory that Zadok was originally a priest at a Canaanite shrine of *ʾēl ʿelyôn* in Jebusite Jerusalem enjoys widespread acceptance. This theory is based on a supposed connection between the name "Zadok" and the figures of Melchizedek and Adonizedek of pre-Israelite Jerusalem. A variation on this theory considers Zadok to be a Jebusite priest who deserted to David already at Hebron.

More recently, the "Jebusite hypothesis" has come under attack, notably from F. M. Cross (*CMHE,* 209–15). Cross points out that one need not link Zadok with the tradition of Melchizedek or Adonizedek of Jerusalem simply because of the similarity in names, because *ṣdq* is a very common element in Northwest Semitic languages. Further, the texts (2 Sam 24:18–25 and 1 Chr 21:18–30) do not state that David pitched his tent at the Canaanite shrine of *ʾēl ʿelyôn* but on the threshing floor of Araunah. Next, it is difficult to believe that David, an orthodox Yahwist, would have asked a pagan priest to serve with

Abiathar in the central shrine of his realm. Finally, if Zadok in fact descended from Melchizedek, would not the later Zadokites have claimed him, rather than Aaron, as their ancestor?

After Cross' attack on the Jebusite hypothesis, he proposes a hypothesis of his own. This may be called the "Aaronite" or "Hebron" hypothesis. Cross begins by reevaluating the genealogies which claim that Zadok is the son of Ahitub (2 Sam 8:17) and a descendant of Aaron (1 Chr 5:27–41—Eng6:1–15). Wellhausen thought that these texts had no historical value. Wellhausen based his skepticism about the genealogy of Zadok on the assumption that the Ahitub of 2 Sam 8:17 had to be the same man who is listed as the grandson of Eli in 1 Sam 14:3 and the grandfather of Abiathar in 1 Sam 22:20. Wellhausen therefore thought that the MT of 2 Sam 8:17, *wṣdwq bn ʾḥyṭwb wʾḥymlk bn ʾbytr khnym* ("and Zadok the son of Ahitub and Ahimelech the son of Abiathar were priests"), had been corrupted intentionally from an original: **ʾbytr bn ʾḥymlk bn ʾḥyṭwb wṣdwq khnym* ("Abiathar the son of Ahimelech the son of Ahitub and Zadok were priests").

Cross points out, however, that there is no textual evidence for Wellhausen's emendation, and it is difficult to understand why, if an ancient Zadokite wished to change the text, Zadok would be placed last. Furthermore, it is curious that Wellhausen's reconstruction provides no patronymic for Zadok, but two generations of ancestry for Abiathar. On the basis of 2 Sam 8:16 one would expect a single patronymic in each case.

Cross contends that there is no text-critical reason for removing Ahitub as Zadok's father. In terms of content, there is also no reason why there could not be two Ahitubs, one the grandfather of Abiathar and the other the father of Zadok, as the genealogies indicate (e.g., 1 Sam 14:3; 22:20; 1 Chr 5:27–34—Eng6:1–8). That Zadok was not of the same line as Abiathar (who according to 1 Sam 14:3 and 22:20 is clearly a descendant of Eli) seems to be substantiated by 1 Sam 2:20–36, which according to most interpreters presents the line of Zadok as a replacement for the line of Eli.

Cross's reconstruction shows that the only element in the genealogy of 2 Sam 8:17 in the MT which is not authentic concerns the relation of Abiathar to Ahimelech. Cross traces the development of the MT by beginning with the Syriac version, which reads:

ṣdwq bn ʾḥyṭwb wʾbytr bn ʾḥymlk
(Zadok the son of Ahitub and Abiathar the son of Ahimelech)

On the basis of 1 Chr 18:16 it appears that originally Abimelech stood in the place of Ahimelech, thus:

ṣdwq bn ʾḥyṭwb wʾbytr bn ʾbymlk
(Zadok the son of Ahitub and Abiathar the son of Abimelech)

Cross proposes that *ʾbytr bn* (Abiathar the son of) dropped out by haplography, resulting in:

ṣdwq bn ʾḥyṭwb wʾbymlk
(Zadok the son of Ahitub and Abimelech)

Later, according to Cross, *ʾbytr* could have been inserted back into the text at the wrong place and filled out by *bn* (son of), resulting in:

ṣdwq bn ʾḥyṭwb wʾbymlk bn ʾbytr
(Zadok the son of Ahitub and Abimelech the son of Abiathar)

The final steps in the development of the MT would have been the adding of *w* (and) to *ṣdwq* (Zadok) and substituting *wʾḥymlk* (and Ahimelech) for *wʾbymlk* (and Abimelech).

Such a reconstruction of 2 Sam 8:17 agrees with the ancestry of Zadok as recorded in 1 Chr 5:34—Eng6:8, and it would also mean that the Chronicler's genealogy (1 Chr 5:27–34—Eng6:1–8, which makes Zadok an Aaronide, reflects historical reality. It would further explain how Abiathar could mistakenly have been reckoned as the father of Ahimelech.

Cross maintains on the basis of Josh 21:10, 13 and 1 Chr 6:42—Eng6:57 that the Aaronides were tied to Hebron. Since the Hebronite clan played an important role in the crowning of David in Hebron (so Mazar) and no doubt throughout the seven and one-half years that David ruled Judah from Hebron (2 Sam 5:5), it is readily understandable that he should have made contact with Zadok. In fact, 1 Chr 12:27–29—Eng12:26–28 speaks of Zadok as being over the priests (= Aaronides?) in Hebron. Though the numbers (4,600 Levites and 3,700 priests) are certainly too large, that there were Levites (under Abiathar) and

priests (= Aaronides) under Zadok is probably true. At any rate, Zadok is placed at Hebron during David's reign there, and when David made his capital in Jerusalem, he no doubt invited Zadok to join him.

First Chronicles 15 says that there were six Levitic groups at David's time. We suggest that these groups may have related to the earlier groupings as follows: Gershom represents the Gershonites; Hebron, Uzziel, and Kohath represent the Kohathites/Aaronides; and Merari and Elizaphan the ancient Merarites.

According to 1 Chr 15:17–24; 16:4–7, 25 there were singers and gatekeepers among the Levites already in David's time. Albright has shown that, although the singers probably existed in the Chronicler's own time, it is highly likely that David had already originated musical guilds in his day (cf. 1 Chronicles 25), and that the names "Heman," "Asaph," and "Ethan" probably represent such ancient musical guilds. Regarding the gatekeepers, we are not sure whether they were all Levites in David's time, as 1 Chronicles 26 says. Probably not. David may also have been responsible for the organization of his priests, but it is doubtful that he had twenty-four divisions (cf. 1 Chronicles 24).

The most significant event for the Levites during the time of Solomon was his banishment of Abiathar and adoption of Zadok as chief priest (1 Kgs 2:26–27). It is possible that Solomon also installed an Aaronite priesthood at Bethel, replacing the Mushites. This would explain the expression in 1 Kgs 12:31 that Jeroboam appointed non-Levites there. These non-Levites could have been Aaronides who were not recognized by the Mushites. Halpern (1974: 519–20, n. 3) believes that Solomon allocated the Levitic cities and that the Gershonites/Mushites were assigned as far north as possible to keep them out of Jerusalem.

From this period on there is evidence that the Zadokites came to be referred to simply as "priests" (the Chronicler's term) or as the "sons of Aaron" (P's term), although according to our analysis they were probably Aaronite Levites. The term "Levites" would have henceforth referred mainly to the Mushites. This seems to be brought out in 1 Chr 15:4, where David called together "the sons of Aaron" and "the Levites."

The genealogy of 1 Chr 5:27–41—Eng6:1–15 (cf. 1 Chr 9:11, Neh 11:11, Ezra 7:1–5), which begins with Levi, Kohath, and Aaron and ends with the exile, contains the following specific descendants of Zadok: Zadok (I), Ahimaaz, Azariah (I), Johanan, Azariah (II), Amariah (II), Ahitub (II), Zadok (II), Shallum, Hilkiah, Azariah (III), Seraiah, Jehozadak.

While it is obvious from a comparison with the priests mentioned in the books of Kings that there are historical gaps in the genealogy, some of the names are corroborated in the narratives of the OT. Ahimaaz is explicitly referred to as the son of Zadok who, together with Jonathan the son of Abiathar, served as a messenger between Jerusalem and the self-exiled King David (2 Sam 15:36; 18:19, 22, 27). Azariah (I) is referred to in 1 Kgs 4:2, albeit as a son rather than a grandson of Zadok. Amariah II is referred to in 2 Chr 19:11, Hilkiah in 2 Kgs 22:4, and Seraiah in 2 Kgs 25:18 = Jer 52:24). Other priests mentioned in 2 Kgs 11:9; 16:10; 2 Chr 24:20; 26:17; and 31:10 are evidently not to be identified with any in the list in 1 Chr 5:27–41—Eng6:1–15, though one Azariah of Hezekiah's time is explicitly called a Zadokite in 2 Chr 31:10.

Because of the apparent discrepancies between the narratives of the books of Kings and Chronicles and the genealogy in 1 Chr 5:27–41—Eng6:1–15, plus the repetition of the group "Amariah-Ahitub-Zadok" within the list, many scholars believe that 1 Chr 5:27–41—Eng6:1–15 is an artistic creation of a priestly scribe. Thus, it is not surprising that, if one allows 300 years for the apparent 12 generations between Ahimaaz and Jehozadak (25 years per generation) and figures back from the destruction of Jerusalem in 587 B.C. (when Jehozadak lived, cf. 1 Chr 5:41—Eng6:15), one falls considerably short of 959 B.C., the date when Solomon's temple was begun. This can, however, be explained by assuming that the genealogy represents a list which became stylized in Zadokite circles long before the Chronicler used it in his work. Hence, one would expect there to be historical gaps in the genealogy. Furthermore, the repetition of "Amariah-Ahitub-Zadok" within 1 Chr 5:27–41—Eng6:1–15 should not be seen as necessarily an artistic creation, for it is now known from the Samaria Papyri (Cross 1963) and elsewhere that the practice of papponymy, as well as the repetition of similar names within a family line, was common in real life.

Some of the provisions concerning priestly duties contained in P are probably really a description of the cult during the time of David and Solomon, but it is difficult to recover this in detail. Accordingly, the material in Exodus relating to Aaron and his sons, the strands of Numbers which speak about "Levites under Aaron," "Aaron" and "sons of Aaron," and most of Leviticus may ultimately go back to Zadokite circles of monarchical as well as postexilic times.

As has already been indicated, at the time of the division of the kingdom the Levites in the levitical cities in the north were cut off from Jerusalem. Because of their background as priests of the central sanctuary in the tribal league, and because they had probably been closely tied to Jerusalem for their support since the creation of the Levitical cities by David, they were of course odious to Jeroboam I. Therefore, it is easy to comprehend why he appointed "non-Levites" as priests (1 Kgs 12:31). However, his action may not have extended beyond Bethel, since according to Judg 18:30b the Mushites = Levites were the priests of the Danites until the captivity (i.e., ca. 722 B.C.).

Second Chr 11:13–14 and 13:8–11 state that as a result of Jeroboam's action against the Levites some of them left their homes in the north and went to Jerusalem. But it is doubtful whether many went south, and those who did would not have received a very warm welcome from the Zadokites.

Therefore, the Levites may have been cut off from Jerusalem and other southern sanctuaries. In this situation they would have had limited opportunity to engage in sacrifices at any large sanctuary, and they would have become poor. Hence, G. E. Wright (1954), following von Rad, may be correct in stating that the "country Levites" were engaged mostly in teaching.

Accordingly, the Levites who did remain in the north could have preserved many traditions that eventually were published in the book of Deuteronomy found in Josiah's time. This included the tradition of how they, the Mushite Levites, had been the priests of the central sanctuary in the tribal league, even though Deuteronomy's term for the Mushite Levites of the tribal league is "Levitical priests." These Levites of the N kingdom expressed their hope of going up to Jerusalem again in Deut 18:6–7.

But the Levites who lived between the time of Jeroboam I and Josiah also wished to better their present situation as *personae miserae.* Therefore, they reminded the people of the obligations to care for the "Levite" when they went to "the place which Yahweh will choose" (Deut 12:12–13, 17–19; 14:23, 27–29; 16:11, 14–15; 18:6–7; 26:2, 11–13). There may have been such legislation already in the tribal league to provide support for those Levites who served at local sanctuaries rather than the central sanctuary, but now it took on new meaning and was promulgated with greater vigor.

Hosea, a northern prophet who worked ca. 750–725 B.C., condemns the priests for their wickedness in 4:4, 9; 5:1; and 6:9. H. W. Wolff (1956: 83–94) sees in 6:9 a reference to persecution of the Levites. He extrapolates from 8:5–6; 10:5; and 13:2 (where Hosea attacks the bull cultus, cf. 1 Kgs 12:28–29) and Exod 32:25–29 (where the Levites are opposed to the golden bull) the theory that Hosea had allied himself with the Levites in opposing the cult introduced by Jeroboam I (1 Kgs 12:25–33). According to Wolff's theory, the Levites were engaged in the preservation of early Mosaic traditions ever since Jeroboam I's appointment of non-Levitic priests (1 Kgs 12:31).

At the time of Abijah the Levites shared the priesthood of Jerusalem with the "sons of Aaron" (2 Chr 13:10). During Jehoshaphat's time the Levites were engaged in teaching (2 Chr 17:8). They were also arbiters in cultic and other disputes (19:8).

At the time of Joash there was a certain criticism of the Levites for their slowness in gathering funds for the renovation of the temple (2 Chr 24:5). But in Hezekiah's time they receive special praise (2 Chr 30:22), and various groups of Levites are mentioned (2 Chr 29:12–14).

The trend of upgrading the Levites, begun in Hezekiah's time, was seemingly continued by Josiah. He ordered the centralization of *all* sacrifice in Jerusalem, but he gave the Levites (of the countryside, including those still in the north) the opportunity to join their fellow Levites who were already in Jerusalem (cf. Deut 18:6–8). Thus Josiah sought to go back to conditions at the time of David. But according to 2 Kgs 23:9 the Jerusalem priests did not accept the country Levites.

Jeremiah also gives some information about priests. He in fact mentions the priests more often than any of the other writing prophets. He himself is said to be the son of Hilkiah (not the Hilkiah of 2 Kings 22–

23) of the priests of Anathoth (1:1). This presumably means that he was of a priestly family; and, since he came from Anathoth, he may have been a descendant of Abiathar (cf. 1 Kgs 2:26–27). Yet we have no evidence that Jeremiah ever acted as a priest.

Jeremiah also calls attention to the sins of the priests, and he condemns them accordingly (1:18; 2:8, 26; 4:9; 5:31; 6:13; 8:1, 10; 13:13; 14:18; 23:11, 33–34; 32:32; 34:19).

Jeremiah tells us that it is the peculiar function of the priests to handle the Torah (2:8; 18:18). In 19:1 the "senior priests" (*zqny hkhnym*) are mentioned. It is unclear whether they are good or bad. Pashhur was an evil priest who opposed Jeremiah (20:1; cf. chap. 38). In chap. 26 the "priests and Prophets" opposed Jeremiah.

Priests are mentioned in 27:16 (Jeremiah speaks to them); in 28:1 (Hananiah the prophet spoke to Jeremiah in the presence of the priests); and in 29:1 (the priests in exile to whom Jeremiah writes).

Jer 29:24–32 informs us that Zephaniah the son of Maaseiah had replaced Jehoiada as the priest in Jerusalem (cf. 21:1; 37:3). Zephaniah refused to arrest Jeremiah.

Jeremiah foresees a time when the priests will again be good (33:17–22). The priests are called Levitical priests (*hkhnym hlwym*), which is Deuteronomic terminology. His hope is that these Levitical priests might occupy the priesthood forever.

If Abiathar was a Mushite, he would have kept Mushite traditions alive in Anathoth, the place of his exile. Accordingly, Jeremiah, coming from Anathoth, would have had northern theological training. Hence, when Jeremiah states that the priests of the future will be "Levitical priests," he may be using the term as it was understood in the north, and his words may in effect be a polemic against the Zadokite priesthood of Jerusalem.

Jer 52:24 says that the chief priest (*khn hrʾš*) at the fall of Jerusalem (587 B.C.) was Seraiah. This agrees with the genealogies in 1 Chr 5:27–41—Eng6:1–15, Ezra 7:1–5, and Neh 11:11.

According to the view of Ezekiel, himself a priest, the only priests who will be eligible to perform all the priestly duties in the "new Jerusalem" are the Levites/Levitical priests who are descendants of Zadok. They are given this privilege because they remained faithful when the other Levites went astray (44:10–15; 48:11).

A question arises how Ezekiel can commend the sons of Zadok, whereas in the preexilic southern prophets they are harshly condemned. It is also necessary to ask what situation Ezekiel had in mind when he referred to the Zadokites' faithfulness and the Levites' sin. Wellhausen (*WPHI,* 122–27) answered by stating that Ezekiel was simply trying to legalize the consequences of Josiah's reformation of ca. 622 B.C. (2 Kings 22–23; 2 Chronicles 34–35). At that time the Jerusalem priesthood (i.e., Zadokites) participated in the reform, while the Levites who had formerly served at the high places were invited to come to Jerusalem but were not permitted to serve at the altar of the temple, presumably because they were rejected by the Zadokites (2 Kgs 23:9; cf. Deut 18:6–8). As a result, they were degraded. Most other scholars have followed Wellhausen's interpretation of Ezekiel's reasons for condemning the Levites (see Zimmerli *Ezechiel* BKAT).

As regards the question of the prophets' condemnation of the (Zadokite) priesthood of Jerusalem, Ezekiel evidently does not believe their aberrations were so great as to disqualify them as priests, although he too is critical of them in 7:6 and 22:26. However, Ezekiel's own criticism comes in the midst of a stylized condemnation of all the leaders of Israel and is therefore probably not to be taken as being specifically against the Zadokite priesthood. In fact, in chap. 8, which gives a picture of paganism in the temple, there is no explicit criticism of the priests. It must also not be forgotten that Ezekiel's references to the Zadokite priesthood after chap. 40 not only refer to it in the past, but they also deal with the idealized new Jerusalem, where the priesthood would as a matter of course be perfect.

The description of the duties of the "Levites" and "sons of Zadok" here corresponds well with the description of the "Levites" as hierodules of the "sons of Aaron" in P. Why, however, are the two groups referred to in two different ways? Scholars have made many guesses. Kennett (1904–5: 174) suggests that the Aaronides, who had previously been at home in Bethel, were invited to become the priests of Jerusalem during the time when the Zadokites were in exile in Babylon. F. S. North (1954: 194) holds that

the Aaronides were in charge of Bethel, and that Bethel actually supplanted Jerusalem as the religious center of Palestine during the Exile. After the Exile the Zadokites returned to establish a new cult in Jerusalem, and now they claimed that they themselves were Aaronite in descent. T. J. Meek (1928–29: 155–56) assumes that the Aaronides took over the Jerusalemite priesthood during the Exile when the Zadokites were for the most part deported. After the Exile, Zadokites were again accepted into the higher priestly ranks, but there was a certain amount of friction until finally in NT times the Zadokites triumphed. George Berry (1923: 235) sees the "change" from the name "Zadokites" to "sons of Aaron" as the work of P who was seeking to enhance the glory of the Jerusalemite priesthood by giving it an ancient lineage. De Vaux (*AncIsr*, 394–97) rejects the contention that the sanctuary of Bethel took on new life after the reform of Josiah. Rather, he favors a view that the "sons of Aaron" constitutes a compromise between the descendants of Zadok and Abiathar, who, from the time of the Exile on, both traced their descent to Aaron, the Zadokites through Eleazar and the Abiatharites through Ithamar.

Our reconstruction shows that Zadok was a descendant of Aaron and Abiathar of Moses. The various links between Aaron and Zadok in the genealogy of 1 Chr 5:27–41—Eng6:1–15, however, we have considered to be not genuine. This genealogy had no doubt been worked out by the Zadokite priesthood of Jerusalem to bolster its legitimacy. Though in itself, then, not entirely reliable, it nevertheless presented what we consider was a historical fact, namely, that Zadok was a descendant of Aaron.

Hence, we believe that the "sons of Aaron" and the "Zadokites" stood for one and the same thing, namely, the priesthood of Jerusalem. We also hold that one should not speak of a "change" from one terminology to the other. Rather they could be used interchangeably after the time of Solomon, depending on the context. Accordingly, when P spoke about the desert period he used the term "sons of Aaron," because Zadok would have been an anachronism for the time. On the other hand, Ezekiel, since he spoke about his own day and the future, was free to use the term "sons of Zadok."

Whether there was a high priesthood in preexilic times is still a moot point. De Vaux (*AncIsr,* 378) lists only four usages of "high priest" (*hakkōhēn haggādŏl*) in preexilic texts (2 Kgs 12:11; 22:4, 8; 23:4). But in the parallels to these texts in Chronicles he finds other readings. Hence, he says that "all four references to the 'high priest' before the Exile seem to be later modifications." Nevertheless, the fact that the actual term "high priest" does not occur more often or seem more fixed in the tradition does not necessarily mean that the office did not exist.

It therefore appears most likely that the "chief priests" in Jerusalem from Solomon till the Exile were descendants of Zadok, and that the genealogy of 1 Chr 5:34–41; Eng 6:8–15 presents a reasonably accurate listing of its main members. The preexilic prophets, particularly Jeremiah, who was possibly a descendant of Abiathar, were generally critical of the Jerusalemite priesthood. Nevertheless, these priests were exalted in Ezekiel's plan for the new Jerusalem (40:46; 43:19; 44:15; 48:11) above the "Levites." The description of the duties of the "Levites" and "sons of Zadok" in Ezekiel corresponds quite clearly to the description of the "Levites" as hierodules of the "sons of Aaron" in P, and roughly to the terminology "priests and Levites" in the Chronicler. There are many theories concerning these differing terminologies. However, if the Aaronite ancestry of Zadok is sound, the terminology "sons of Aaron" for priests prior to Solomon (so in P) and "Zadokites" for those after his time would be precisely what one would expect. For further general discussion see Albright *FSAC* and Noth *ÜgS.*

MERLIN D. REHM

LEVITICAL CITIES. Unlike the other tribes (Josh 13–19), the Levites do not receive any allocation of land after the "conquest." Rather, the Levites are to inhabit 48 cities, called "Levitical cities," spread throughout the nation. These 48 cities, which include 6 "cities of refuge," are given to the Levites by the twelve tribes. The specific cities which are distributed to the Levites are found in lists of the cities in Josh 21:1–42 and 1 Chr 6:39–66—Eng6:54–81. In addition, there is the "enabling legislation" of Num 35:1–8 which describes the cities and indicates that this distribution of cities to the Levites was ordered by God.

One of the questions which arises is why the Levites did not receive any land like the other tribes. One explanation is based on Gen 49:7, part of the Blessing of Jacob, in which Levi and Simeon are reported to have been "divided in Jacob and scattered in Israel" for their actions against the Shechemites (Genesis

34). Thus, they were no longer a tribe and received no land. A more plausible explanation is that because the Levites were set aside to be priests, they received no inheritance of land (Num 18:24; Deut 10:8–9; Josh 13:33; 18:7). Levi had no portion or inheritance with his brothers; Yahweh was his inheritance. This consecration to Yahweh is reflected in the Levites' redemption of the firstborn son (Num 3:11–12, 41, 44; 8:17–18).

In spite of this claim of "no inheritance," there are passages which suggest that the Levites did receive land (Num 35:1–8; Josh 14:4; 2 Chr 11:13–15; 13:2). What the Levites received, even mentioned in the "enabling legislation" for the Levitical cities (Num 35:1–8), was pasture land (*migraš*). This land is not residential or farm land, and thus it is not considered an inheritance.

Since the Levites had no inheritance, they needed some other means of sustenance or support. One suggestion is that their support came from the tithing given to them because of their priestly status (Num 18:21–24; Deut 18:1–4; Josh 13:14). Another suggestion is that since the Levites were landless, they were put in the same sociological category as the widow, orphan, and sojourner (*gēr*) and thus received support from the people (Deut 14:28–29; 16:11, 14; 26:11–13). The third possible means of support is from the cities and pasture land which the Levites were given (Josh 21:1–42; 1 Chr 6:39–66—Eng6:54–81). Having pasture land meant they could raise herds, something priests in association with temples often did. Thus, it is through tithing, their functioning as priests, their status as landless, and their possession of cities, that the Levites are said to sustain themselves.

In understanding the lists of Levitical cities themselves, discussion has focused on three issues: the historicity of the lists, the date of the lists and the purpose of the cities. One of the early milestones in the discussion was an article by W. F. Albright (1945). In that article Albright dated the lists to 975–950 B.C.E., because he saw that as the only time in which all the cities were within the borders of the Israelite kingdom. However, the most significant element of Albright's article was his discussion of the textual history of Joshua 21 and 1 Chronicles 6. His comparison of the two texts and the LXX led him to conclude that LXX^{B} of Joshua 21 was representative of the parent of both Hebrew versions. This argument remains the predominant view.

An alternate to Albright's dating came from A. Alt (*KlSchr* 1:306–15). Alt argued that there were two significant gaps in the lists of Levitical cities. There were virtually no Levitical cities in the area of Judah and in the hills of Ephraim. For Alt, these gaps were the very areas affected by Josiah's intervention into local sanctuaries during his reform. Thus, Alt dated the lists to a time after Josiah's reign (640–609 B.C.E.).

The supposition that Albright and Alt made, but did not articulate, was that the lists are realistic. Such an assumption results in a search for a point in history where the lists could reflect reality. M. Haran questioned this assumption and argued that the lists have both realistic and utopian features. Among the utopian features are the measurements of the land around the cities as 2,000 cubits, the identical dimensions for all 48 cities, the fact that the cities were the exclusive preserve of the Levites, and the distinction between priests and Levites. One might also add the selection of 48 cities as utopian since twelve tribes contributing 4 cities each is suspicious, especially since it is not even observed in the actual distribution (e.g., Naphtali gave only 3 cities—Josh 21:32). The realistic elements Haran lists include the dispersion of the tribe of Levi, the Levites in nonshrine cities, Levitical cities not within the ideal boundaries of Israel, the different social and economic position of the Levites relative to the priests, and the numerical superiority of the Levites over the priests. Haran concluded that the lists reflect a historical situation to which later utopian elements were added. Haran identified this later utopian hand as being that of the Priestly author. The historical situation he left unspecified.

This two-stage usage of the lists was expanded on by J. P. Ross (1973). He, and most scholars, argue that the current lists reflect the postexilic workings of the Priestly writer. However, Ross argued that the lists had an earlier context, unassociated with the priestly Levites. The lists were just plain town lists of the period of the monarchy which were resurrected in the time of Josiah to help deal with a controversy about the Levites. According to Ross, the presence of Levitical clans, the references to the Aaronites, and the division among twelve tribes were all added later, by the Priestly writer in the time after Nehemiah.

This perspective of Haran and Ross that the lists are a late construction and partially utopian is buttressed by a recent archaeological study. J. Peterson (1977) sought to identify the sites of the Levitical cities and, using archaeological evidence, to discover their time of occupation. Peterson was able to identify 45 of the Levitical cities. What was startling was that only 20 of the identified sites showed evidence of occupation in the 10th century. In contrast, only one site, Kishion, was not occupied in the 8th century. Therefore, Peterson concluded that the Levitical cities were from the 8th century.

The conclusion of Peterson affects the dating for the creation of the lists of Levitical cities, but the dating of the placement of the lists in their present context still needs attention. While the postexilic placement in 1 Chronicles is not questioned, the date of Joshua 21 is more difficult to establish. Joshua 21 is set within the Deuteronomic Historian's work which would normally suggest a late preexilic or exilic date (600–550 B.C.E.). However, several factors militate against such a date. There is a clear separation of priests and Levites (Josh 21:1–3, 13, 20). Aaron is seen as a priest in Joshua 21, which would be the only instance where Aaron appears as a priest in preexilic materials. There is linguistic evidence adduced by Auld (1979) and Ross (1973) which suggests that Joshua 21 is dependent on a tradition later than 1 Chronicles 6. Finally, there is the fact that the enabling legislation for the cities (Num 35:1–8) is Priestly material. All of these factors suggest a postexilic date for the list in Joshua 21, which comports with the argument that the Priestly "writers" were responsible for the insertion of the list of Levitical cities in Joshua 21. So the lists' present locations result from postexilic redacting.

In discussing the purpose of the Levitical cities, most reconstructions have been highly dependent on the dating of the lists. B. Mazar (1959) dated the lists to the time of the united monarchy. He argued that the placement and structure of the cities were influenced by Egyptian models and that the cities functioned as provincial administrative centers to serve the deity and king. In similar fashion, Mettinger (1971) saw a close connection between royal estates and fortresses and the Levitical cities placed near the borderlands. Thus, he saw the cities as integral to the construction of David's empire.

Unfortunately, the archaeological evidence refutes any claim that the Levitical cities date from the time of the united monarchy. So scholars have been forced to look elsewhere for an appropriate historical context. Both Peterson (1977) and Boling (1985) want to place the lists in the 8th century, based on the archaeological evidence. However, it is difficult to see any time in that period when all of these cities would have been part of the Israelite or Judean kingdoms or to see any clear rationale for the construction of the lists in that period.

The assumption that persists in the works of Mazar, Mettinger, Peterson, and Boling is that the lists are realistic. Given the archaeological evidence which rules out the time of the united monarchy and the geographical evidence which makes the 8th century doubtful, one is pushed to consider the possibility that the texts do not fit any preexilic historical situation. Rather, one must consider the possibility that they are creations from the postexilic period which sought to explain how the Levites fit into the early political, social, and theological structure of ancient Israel.

LEVITICUS, BOOK OF.

Leviticus is the third of the five books of the Torah (Pentateuch).

A. Introduction
B. Contexts and Structure of Leviticus
1. Cult and Purity (Chaps. 1–16)
a. Officiation of Priests in the Sacrificial Cult (Chaps. 1–10)
b. Purifications Conducted by the Priesthood (Chaps. 11–16)
2. Holiness of the Israelite People (Chaps. 17–27)
a. Prologue and Epilogue to the Holiness Code (Chaps. 17; 26:3–46)
b. Holiness Code and Addendum (Chaps. 18:1–26:2 and Chap. 27)
3. Text-Critical Considerations: The State of the Text of Leviticus
C. Historical Context of Leviticus: "Realistic Interpretation"
1. Issues of Interpretation
2. Comparative Method

A. Introduction

The name "Leviticus" represents the Latin form of the Greek name *Levitikon.* In Hebrew, the usual way of referring to this book is *wayyiqrāʾ,* "He called," a mnemonic title which identifies the book by its first significant word. (Compare *Šĕmôt* "The names of—" for Exodus, etc.) As such, the name *wayyiqrāʾ* tells us virtually noting about the contents or significance of this biblical book. In contrast Greek *Levitikon* is a characterization, and the same is true of the rabbinic Hebrew name *tôrat kôhănîm,* an ambiguous name which is, however, highly instructive.

At first glance, Greek *Levitikon* is a puzzling name, because the Levites are mentioned only in passing; it is the book of Numbers which features the Levites. But to Greek-speaking Jews of antiquity, *Levitikon* probably connoted "priestly" in general. It may reflect Deuteronomic usage, since in Deut 17:9, 18; 18:1 the Israelite priests are referred to as *hakkôhănîm hallewîyîm,* "the Levitical priests." The postexilic prophet Malachi (2:6–7) speaks of Levi as the epigone of the Israelite priesthood and refers to "the covenant of Levi," the commission of the priesthood, which he sees as having been violated in his day. We can say, therefore, that the name *Levitikon* means "that which concerns the priests." This is close to the meaning of Hebrew *tôrat kôhănîm*. The component term *tôrâ* originated in priestly literature. It means "instruction, prescribed ritual, ruling." In chapters 6–7 of Leviticus we find manuals of practice addressed to the priests, and entitled *tôrâ.* For example: "This is the *tôrâ* for the burnt-offering" (Lev 6:2). This suggests that *tôrat kôhănîm* means "instructions *for* the priests." But, we could just as well render *tôrat kôhănîm* in other instances as "instructions *of* the priests," (or, "by the priests"). These are the rulings issued by the priests; their teachings transmitted to the people of Israel or to individual Israelites. This is the sense of *tôrâ* as priestly teaching in Jer 18:18; Hag 2:10–13; Mal 2:6–7; etc. The rabbinic term should be understood in both of its aspects.

B. Contexts and Structure of Leviticus

Leviticus consists almost entirely of law and ritual. In most instances, rituals are also formulated as laws and commandments. The book of Leviticus is organized according to a perceptible plan into two principal parts. Chapters 1–16 deal with the role of the priests as officiants in the sacrificial cult of worship, and as performers of rites of purification. Chapters 17–27 deal with the requirements of holiness; they preserve major priestly statements, addressed for the most part to the Israelite people. This, then, is how the book is organized. Part One (chaps. 1–16) is addressed to the priesthood and concerns cultic officiation and

purity. This section represents *tôrâ for* priests. Part Two (chaps. 17–27) represents *tôrâ of,* or *by* the priests, addressed to the people of Israel, and commanding the pursuit of holiness as the collective goal of religious life.

1. Cult and Purity (Chaps. 1–16). a. Officiation of Priests in the Sacrificial Cult (Chaps. 1–10). (1) Types of Sacrifices (Chaps. 1–7). Chapters 1–7 of Leviticus prescribe the proper manner of preparing and offering the principal types of sacrifices which, separately and in various combinations, comprised the cultic regimen of biblical religion, as prescribed by the priestly school of biblical writers. These sacrifices answered the needs of both private and public worship. Each of the first three chapters of this section is devoted to one of the mainstays of the cult: the burnt offering (*ʿôlâ*), the grain offering (*minḥâ*), and the sacred gift of greeting (*šĕlāmîm*). Chapters 4–5 prescribe the sacrifices of expiation, the *ḥaṭṭāʾt* "sin-offering," and the *ʾāšām* "guilt offering." Chapters 6–7 deal with the allocation of portions of most sacrifices to the officiating priests, and in some cases, to donors of sacrifices as well. Most sacrificial offerings, with the exception of those offered in the manner of holocausts, contributed to the sustenance of the officiating priesthood. It was, in fact, essential to the efficacy of the sacrifices, especially with respect to sacrifices of expiation, that priests partake of them in the form of a sacred meal (Lev 10:12–19).

The prescriptions of chaps. 1–7 are followed (chaps. 8–10) by a description of the investiture of Aaron and his sons as the first legitimate Israelite priests, and the simultaneous consecration of the tabernacle and its altar. The sequence in chaps. 1–10 of Leviticus is: (1) rites at which priests were to officiate; (2) the authority or sanction of the Aaronide priesthood. This authority was granted by God and conferred by Moses in the formative period of Israel's history. There is little corroborative evidence for the ascendancy of the Aaronide priesthood in preexilic biblical literature, but there is ample evidence of a functioning priesthood from relatively early times.

Each of the principal types of sacrifices prescribed in Leviticus 1–7 had a distinctive character conveyed in part by the term used to designate it. The Hebrew term *ʿôlâ,* "holocaust," expresses the manner of offering that sacrifice. Its aromatic smoke "ascends" heavenward (the Hebrew verb *ʿālâ*) and is inhaled by the deity, in acceptance of the offering (Gen 8:21). In chap. 2, the term *minḥâ* likewise indicates the manner of disposing of the sacrifice. The Hebrew verb *nāḥâ* means "to bring forward, present," and *minḥâ* connotes, therefore, "that which is presented." As for the term *šĕlāmîm* of chap. 3, it is far more elusive, because it derives from the root *š-l-m,* which attests a wide range of meanings, from peace and well-being to sharing and covenant. The translation "sacred gift of greeting" is based on the evidence of Ugaritic and Akkadian, where nominal forms of the Semitic root *š-l-m* šlmm in Ugaritic, and *šulmāmu* in Akkadian) designates gifts presented when one greets another or is welcomed into the presence of another. In cultic contexts, both Ugaritic *šlmm* and Akkadian *šulmāmu* designate sacrificial offerings. The *šĕlāmîm* are, therefore, the sacred gifts which accompany the word of greeting *ŝālôm.*

In practice, the *ʿôlâ* of chap. 1 could consist of large or small cattle, as well as certain birds. The *ʿôlâ* was sectioned, decapitated (almost always), skinned, and cleaned. The parts were burned to ashes on the altar of burnt offerings: it was a holocaust. The *minḥâ* of chap. 2 could be prepared in a number of ways. It was usually made of semolina (wheat flour) with olive oil and aromatic spices added. Usually, a fistful of the dough was burned on the altar, and the rest of the dough baked or fired. Some *minḥâ* offerings were offered as a holocaust. The meaning of the term *minḥâ* suggests that this type of sacrifice was originally set before the deity, rather than being burned on an altar. In fact, certain grain offerings continued to be presented in this way, with no part of them being placed on the altar (compare the provisions of Lev 7:10–14; 23:15, 17; 24:5–9, and Deut 26:1–11). These presented offerings were made of leavened dough (*ḥāmēṣ*) instead of unleavened dough (*maṣṣā*), as is the rule in chap. 2. No leavened dough was allowed on the altar according to the priestly laws of the Torah. (Also note the *minḥâ-holocaust* of Lev 6:12–16.) As the importance of burnt offerings grew, the mode of presenting most types of *minḥâ* was adapted to the altar of burnt offerings, and a "token" (Hebrew *ʾazkārâ*) was burned on the altar.

The *ʿôlâ* and *minḥâ* of chaps. 1–2 are classified as "most-sacred offerings" (*qōdeš qodāšîm*), which meant, practically speaking, that only consecrated priests could partake of them. Chapter 3 introduces a series of offerings of lesser sanctity, prepared in the manner of a *zebaḥ,* "sacred meal." Certain portions of

such sacrifices, called *šĕlāmîm*, were burned on the altar, whereas most of the edible meat, of large or small cattle, was boiled in pots and allotted to both priests and donors. We learn something about the preparation and disposition of the *zebaḥ* from descriptions found in 1 Sam 2:13, 16; 9:22–24.

The *ʿôlâ* and *minḥâ* were often utilized in the public cult as well as for private worship, but the *šĕlāmîm* had only a very limited role in public worship, in the celebration of the Pentecost, according to Lev 23:19. In the public sphere, it seems to have been reserved largely for special dedications and historic convocations (Exodus 24, 1 Samuel 11, and 1 Kings 8).

Chapters 4–5 of Leviticus prescribe a regimen of expiatory sacrifices. The *ʾāšām* was a penalty, computed according to "valuations" (Heb *ʿērek*), and paid in the form of a sacrificial ram. It was ordained for inadvertent misappropriation of sacred property or the property of fellow Israelites, and for cases involving a false oath, a crime known as *maʿal.* The sacrificial ram was accompanied with a payment equivalent to 20 percent of the misappropriation, and was not efficacious unless full restitution had been made (Lev 5:14–16, 20–26—Eng 6:1–7). The phenomenology of the *ʾāšām* is best illustrated in the narrative of the expiatory gifts, called *ʾāšām,* which the Philistines dispatched to the Israelites so as to avert the wrath of the God of Israel (1 Samuel 6). A brief code governing the *ʾāšām* is also found in Num 5:5–10. The verb *ʾāšam* means "to be guilty, to incur blame."

As for the *ḥaṭṭāʾt,* there were two distinct types. Lev 4:1–21 ordains a *ḥaṭṭāʾt* consisting of a bull. Its purpose was to expiate for serious inadvertent offenses on the part of the chief priest, or the entire community. Sections of the bull were burned on the altar; what was not so disposed of was removed to a spot outside the encampment and, in a rite of riddance, was completely destroyed. The more usual type of *ḥaṭṭāʾt* most often consisted of small cattle, sections of which were offered on the altar; other parts were allocated to the priests. Such sin-offerings were required of individual Israelites, even tribal chieftains, who inadvertently transgressed the law. They served to square offenses with God and community and, at the same time, rewarded priests for their role in securing expiation on behalf of their fellow Israelites (Lev 4:22; 5:13, 17–19). There was provision for redressing the cost of this type of sin-offering by allowing it to consist of birds—even a grain offering—so as not to deprive any Israelite of expiation due to lack of means. The noun *ḥaṭṭāʾt* itself is based on the *Piʿel* stem of the verb *ḥ-ṭ-ʾ*, which means "to err, betray, offend." Quite often, the *Piʿel* stem connotes the undoing of what the simple stem conveys. On this basis, *ḥaṭṭāʾt* means "removal of sinfulness, purification."

It is important to emphasize that the expiatory system outlined in chaps. 4–5 of Leviticus did not apply to willful, flagrant violations of law. There was no way to expiate such acts ritually; authorized agencies imposed direct penalties on the guilty (Num 15:30).

Integral to the sacrificial procedures of Leviticus were various blood rites. In all cases of sacrifices of animal and fowl, it was required that the sacrificial blood be used in specified ways. Two functions are evident in these blood rites. One function was expiatory: Dashing or sprinkling of sacrificial blood on the side of the altar of burnt offerings, or pouring it onto the base of the altar as a blood libation (Lev 1:5; 3:2; 4:7; etc.). The original intent of such blood libations was to appease chthonic deities by offering them lifeblood, which increased their power. In the monotheistic cult of Israel, where blood also symbolized life, manipulation of sacrificial blood was conceptualized as a substitute for the lives of the worshippers, securing expiation for them, and protecting them when they were in God's immediate presence (Lev 17:11f.).

The second function was apotropaic. The application of sacrificial blood to the horns of the altar, and in rarer instances, to the horns of the altar of incense and other interior furnishings of the shrine represented the effort to ward off evil impurity—to protect the sacred appurtenances and sacred space from demonic penetration. This is why such utilization of sacrificial blood was restricted to expiatory offerings whose purpose it was to purify (see Lev 4:6–7, 17–18, 25, 30, etc. Also see the purificatory rites of Leviticus 16 for the Day of Atonement).

Chapters 6–7 of Leviticus specify in greater detail how priests were to officiate in the sacrificial cult. This involved keeping the altar fire burning continually and removing ashes regularly. Those portions of the sacrifices allotted to priests became their property. In the case of the *zebaḥ* "sacred meal," of which

several types are stipulated in chap. 7, donors also received portions of the sacrifice. Chapter 7 enumerates three varieties of the *zebaḥ* called *šĕlāmîm,* first encountered in chap. 3: the votive (*neder*); the voluntary contribution (*nĕdābâ*); and the thanksgiving offering (*tôdâ*), the last accompanied with two loaves of leavened bread.

(2) Ordination of the Priesthood in the Sanctuary (Chaps. 8–10). The last 3 chapters of the first major unit of Leviticus differ in their formulation from chaps. 1–7, which are *prescriptive,* commanding certain ritual performances. Chapters 8–10, on the other hand, are primarily *descriptive,* reporting on certain celebrations, set in the presettlement period of Israelite history. Chapter 8 describes how Aaron and his sons were installed in their priestly office by Moses, at God's command. Simultaneous with their investiture and consecration was the consecration of the tabernacle and its altar. Aaron, the chief priest, is the typological counterpart of the tabernacle; both were anointed with the same special oil. The commissioning of the priests is conveyed by the term *millû᾽îm* "appointment." Chapter 8 concludes with specific instructions to Aaron and his sons regarding their participation in the sacred meal of their consecration, which lasted for seven days.

Chapter 9 describes the celebration of the eighth day, when the sacrificial cult was actually initiated, with the newly appointed priests officiating for the first time. This occasion held critical importance, because it was intended to verify that God had accepted the Aaronide priests and would receive their offerings favorably. A sequence of sacrifices celebrated this occasion. First, the tabernacle was purified by means of a *ḥaṭṭā᾽t,* "sin-offering." Then, an *ʿôlâ,* "burnt-offering," was performed, to test God's readiness to accept the officiation of the Aaronide priesthood. This *ʿôlâ* was accompanied by a grain offering (*minḥâ*). Finally, the *šĕlāmîm,* "sacred gift of greeting," was offered and the priests joined with the deity in a "sacred meal."

A fire from within the tabernacle, God's fire, ignited the altar. Aaron blessed the people assembled. According to tradition, he did so in the words of the tripartite benediction preserved in Num 6:22–26. The "glorious presence" (Heb *kābôd*) of the God of Israel appeared to all the people, who prostrated themselves in adoration. God was present in the tabernacle and had indicated his favorable disposition.

Immediately, things began to go wrong. Nadab and Abihu, two of Aaron's sons, offered "hateful" incense in the tabernacle and the divine fire blasted them to death (Lev 10:1–2). Although the precise nature of their offense remains elusive, their dramatic death served to emphasize that extreme care was to be exercized by the priests in all aspects of officiation. A series of instructions on proper priestly conduct reinforces this message; Aaron and his two remaining sons are cautioned not to defile their consecration by mourning the dead of their family.

b. Purifications Conducted by the Priesthood (Chapters 11–16). (1) Dietary Code (Chap. 11). Now that procedures relevant to priestly officiation have been set forth, Leviticus addresses the purificatory functions of the priesthood. Chapter 11 presents a *tôrâ* of dietary purity, extending to the condition of vessels and to persons normally having contact with foodstuffs. These regulations are similar to those in Deuteronomy 14, and it is reasonable to conclude that Leviticus 11 is patterned after the Deuteronomic code. This is a logical assumption in view of the fact that Leviticus 11 goes further in dealing with the purity of foodstuffs.

One would have expected the dietary code to appear in the second part of Leviticus, since it is addressed to the Israelite people, in substance, and is dominated by the theme of holiness, as is Deuteronomy 14. It is possible, therefore, that chap. 11 was shifted from the so-called Holiness Code to the first part of the book, and reinterpreted as purity legislation. Prevention of impurity was a priestly function, as we read in a postscript to chap. 11 (vv 44–46). What had been priestly instruction addressed to the people was reoriented, and regarded as instruction for the priests, as well.

Leviticus 11 legislates the permissibility of animals for food on the basis of a classificatory scheme which distinguishes large land animals, aquatic creatures, flying animals, and social insects. Large land animals may be used as food only if they have fully cleft hooves and are ruminants. (The pig is prohibited because it does not chew the cud, although it has cleft hooves.) Only water creatures with fins and scales may be used as food. The long list of prohibited birds implies that all others were permitted. Winged

swarming creatures are generally forbidden; four types of locusts are permitted because they have jointed legs. Also prohibited are land creatures that move without legs, four-legged beasts that walk on paws, and all many-legged creatures.

No physical purification (e.g., by means of water) is required of a person who has eaten forbidden foods. Nevertheless, according to Lev 5:2, one who mistakenly eats forbidden food is obliged to bring a sin-offering.

All attempts to formulate a consistent theory to explain why certain animals, fowl, and fish were permitted as food and others forbidden, or why certain physical criteria determined purity, have failed to account for certain anomalies. There are, nevertheless, some fairly prevalent correlations. Domestication is a pervasive factor. Animals raised and kept in proximity to human settlements were preferred as food; even deer, for instance, were permitted as food, probably because they shared certain features with domesticated animals. Herbivorous animals predominate in the approved diet. Digestion and locomotion are the two factors most important for determining acceptability. Ruminants meet the requirements of digestion. How living creatures obtain their own food is significant. Those creatures most "careful" in their own diet are fit sources of food for a holy, pure people. Animals with fully cleft hooves have "toes" of a sort, and meet the requirements of locomotion; those with paws do not. Fins and scales indicate proper locomotion for water creatures. It emerges that living creatures most resembling humans, and most familiar to them are acceptable as food sources.

A dominant theme in Leviticus 11, as in Deuteronomy 14, is Israel's distinctness as a pure and holy people. This distinctness was to be expressed in diet, as well as in sexual activity and religious worship. Israelites were to avoid *tôʿēbâ,* "abomination," in all three areas, and to avoid defilement (see Lev 18:24–30; 20:22–26; Deut 7; 14:3).

As chap. 11 proceeds, emphasis shifts from foodstuffs themselves to the problems of retaining the purity of foodstuffs and of vessels in which they are stored, prepared, and served. Seed and grains had to be kept dry, and impure persons and substances had to be kept away from food and vessels. Chapter 11 ordains a complex system of dietary restrictions and food care. The priests were trained to instruct the people on questions of purity, as regards proper diet.

(1) Other Purifications (Chaps. 12–15). Chapter 12 of Leviticus deals with the ritual status of the new mother during the period following childbirth. She was declared impure for varying periods of time, depending on the sex of the newborn child, and was forbidden access to the sanctuary for that period of time. The fact that this period of restriction was doubled for a female child may be explained by the greater potential role of the female in human reproduction. By distancing childbirth from the cult it was intended that its celebration be kept within the family. In the polytheistic, mythological religions of the ANE, the life cycle was celebrated ritually and associated with the gods. This was incompatible with the Israelite monotheistic belief.

Various conditions were subsumed under the category of "impurity" (Heb *ṭûmʾâ*), both medical and otherwise. This classification did not imply that any offense had been committed, necessarily, only that danger threatened. Such was the case of the new mother. At the conclusion of the period of restriction, the new mother was required to offer an expiatory sacrifice, not because of any offense on her part, but because she was being readmitted to the sanctuary after a period of confinement, when she and her infant were vulnerable.

The second matter dealt with in this series of purifications is a complex of skin ailments, undoubtedly regarded as contagious. These, too, were classified as impure. The ailment called *ṣāraʿat* is sometimes translated "leprosy," although, from its given symptomology, it was more likely a type of psoriasis or other skin ailment. This condition could occur in acute or transient forms and resembled the blight and discoloration often evident in cloth and leather, and even in plastered building stones. These conditions are the subject of chaps. 13–14 of Leviticus. Intricate purificatory rituals are prescribed, including sin-offerings, so as to ward off the dangerous effects and the impurity of such affections. Some of these rites, such as the dispatching of a bird as a part of a riddance ritual, resemble the rites of purification of the sanctuary, as ordained in Leviticus 16. Quarantine and observation interacted with purification and

sacrifice. Priests were instructed on how to diagnose acute *ṣāraʿat,* for which no cure was known. One suffering from acute *ṣāraʿat* was permanently banished as *ṭāmēʾ,* "impure" (Lev 13:45–46).

Chapter 15 concerns physiological phenomena, particularly abnormalities related to the human genitals. The normal menstrual cycle of the female was a matter for priestly regulation, and a woman was declared impure, a state termed *niddâ* "flow, menstruation" for seven days, during which time she could not have sexual intercourse with her husband. The menstruating woman was required to bathe at the conclusion of her period. There are also provisions for abnormal discharges from the genitals occurring outside the normal menstrual period.

The normal seminal emissions of the male were likewise classified as impure and required bathing for proper purification. Abnormal flux in the male produced even a greater degree of impurity. Taken as a whole, Leviticus 15 attests to the high degree of anxiety over human sexuality and reproduction. The category of *ṭûmʾâ,* "impurity," once again embraces both actual problems of a medical character and matters of ritual concern.

(2) Purification of the Sanctuary. The first part of Leviticus concludes with chap. 16, the elaborate ritual for purifying the Israelite sanctuary. Priestly tradition, as represented in vv 29–34 of this chapter, scheduled this purification as an annual event, to take place on the tenth day of the seventh month, only a few days before the major pilgrimage, the festival of booths (*ḥag hassukkôt*; see Lev 23:26–44). Virtually all purification rites required sacrifice, and this in turn necessitated a pure sanctuary. After chaps. 11–15 had set forth the rites of purification to be conducted by the priests, chap. 16 instructed the priesthood on periodic measures necessary for maintaining the purity of the sanctuary itself.

The purification of the sanctuary was conducted by the chief priest; tradition identified Aaron as the one who had initiated these rites. The priest wore special vestments on this occasion and undertook to expiate, in turn, for his own offenses and those of his priestly family, and finally for those of all Israel. By "sins" (Heb *ʿăwônôt*) was meant those acts which defiled the sanctuary and its attending priesthood. At a certain point in the proceedings, the high priest, Aaron, entered the innermost shrine, the holy of holies, bringing with him sacrificial blood from the sin-offering. He stood directly in front of the *kappôret,* the sculptured lid covering the ark, the space from which divine forgiveness came. The God of Israel was envisioned as sitting astride the cherubs, which adorned the sculptured lid of the ark (1 Sam 4:4; 6:2; 2 Kgs 19:18; Isa 37:16). The priest applied sacrificial blood to objects and spaces inside the shrine, perhaps in order to seal up his route of egress and thus protect the shrine from defilement.

Alongside the offering of sacrifices, which effected riddance and removal, there was also the dispatching of the scapegoat, a riddance rite *par excellence,* with heavily magical overtones. Anthropologists and students of comparative religion have analyzed the scapegoat ritual extensively and have encountered similar practices in many parts of the world. The collected sins of the community were transferred to a kid goat, selected by lot, and carried off into the wilderness, to the domain of Azazel, the demonic ruler of the wasteland (see Lev 17:7). The scapegoat represents a vestige of pre-monotheistic religion, continued by the priests of Israel to dramatize expiation.

Appended to the principal rites of purification is the annual scheduling of the occasion called *yôm hakkippûrîm* "the Day of Atonement," (Lev 23:27). The basic objective of purifying the sanctuary and its attendant priesthood is extended to the people themselves. No actual rite of purification of the people of Israel was performed, but the ceremonial *identification* of the people with the actual purification of the sanctuary effected a purification of the populace. By fasting and other forms of abstinence, and by declaring this day a twenty-four-hour period of complete rest, the people were involved in the purification of the sanctuary in a meaningful way. The confession of sins by the officiating priest touched them as well.

2. Holiness of the Israelite People (Chaps. 17–27). In modern biblical scholarship, Leviticus 17–26 has come to be known as the Holiness Code. Admitting later interpolations, scholars have nevertheless been impressed by the unusual coherence of themes in this section of Leviticus, and by the consistent emphasis on holiness as the objective of collective existence. Chapter 27, which comes after the epilogue to the Holiness Code (Lev 26:3–46), belongs with chaps. 17–25, though it may be a later composition. In

any event, it was clearly appended to the book of Leviticus, with no effort made to insert it before the epilogue.

Most of the contents of the Holiness Code are addressed to the entire people of Israel. Chapters 21–22 are exceptional in this respect since they deal with regulations governing the priesthood. The theme of holiness dominates chaps. 21–22. The sanctity of the priesthood was of concern to the whole people, and there is a symmetry between people and priesthood: both must be holy.

a. Prologue and Epilogue to the Holiness Code (Chaps. 17; 26:3–46). The Holiness Code opens with a prologue (chap. 17) and ends with an epilogue (26:3–46). This arrangement is characteristic of the other collections of laws preserved in the Torah. The subject of the prologue is proper worship. (Cf. Deuteronomy 12, which introduces the Deuteronomic laws, and Exod 20:19–23, which introduces the book of the Covenant. Both sources speak of proper worship.)

According to the prologue, which most likely expresses the Deuteronomic doctrine of cult centralization (Noth *Leviticus* OTL, 129–30) all sacrifices must be offered at the entrance of the Tent of Meeting (a way of referring to the sanctuary), on the one legitimate altar by a legitimate priest. No blood may be consumed, and sacrificial blood is reserved for ritual utilization on the altar to expiate sins. The earlier practice of offering sacrifice at various altars is outlawed.

The epilogue admonishes the Israelite people to obey God's laws and commandments, predicting the dire consequences of disobedience. A disobedient Israel will be exiled from its land and endure horrible punishments in foreign lands. Going beyond exile, and the threat of collective extinction, the epilogue holds forth the promise of restoration to the land, if only the people of Israel will show remorse for its past behavior and renounce its coldness toward God. In its thrust, the epilogue to the Holiness Code resembles the epilogue to the Deuteronomic laws (Deuteronomy 28–30), notwithstanding certain differences in the language and concepts characteristic of each composition.

b. Holiness Code and Addendum (Chaps. 18:1–26:2 and Chap. 27). (1) Family Law (Chaps. 18 and 20). Between prologue and epilogue, the Holiness Code presents important legal documents and commandments relevant to the life of the Israelite community. Chapters 18 and 20 present differing formulations of family law. It is not clear why such repetition was required. Chapter 18 is clearly the primary statement, and is formulated apodictically, whereas chap. 20 is casuistic in its formulation, specifying legal penalties. The introduction to chap. 18 speaks of avoiding the sins of the Egyptians of the land which the Israelites had just left, and the sins of the Canaanites of the land to which they would arrive. On the other hand, the introduction to chap. 20 (vv 2–5) focuses on the abominable cult of Molech, which appears to have involved child sacrifice, a practice for which death by stoning is legislated.

The chapter continues (20:10–21) with restrictions on sexual congress between kin. A man was forbidden to marry his close relatives. Two factors combined to enhance the concern in ancient Israel with incestuous marriages. There was, first of all, a pattern of endogamy, epitomized in the narratives of the patriarchs. Marriages with Canaanites or Philistines were not acceptable. Then, too, there was concern for retaining ancestral lands within the larger family, or clan. Acting together, these two pressures created a situation in which marriages within the clan were subject to restriction so as to avoid incest. Chapters 18 and 20 place limits on sexual relations. These codes outlaw adultery, homosexuality, and bestiality. A holy community was one in which sexual energies were channeled according to divine will.

(2) "You must be holy, for I, the LORD your God, am holy!" (Chap. 19). Chapter 19 of Leviticus is a remarkable document of priestly *tôrâ,* showing the degree to which the priestly school of biblical times was sensitive to prophetic teachings, and laws governing human behavior. This composition emphasizes perhaps more than any other section of the Holiness Code what it truly meant to be a holy nation.

Chapter 19 stresses the interaction of social behavior and religious piety, two dimensions of life which were never meant to be regarded as separate. In tandem, chap. 19 commands observance of the Sabbath and respect for parents; it prohibits pagan funerary practices and commands respect for elders. It requires that sacrificial flesh be disposed of in certain ways, while condemning fraudulent economic dealings. The grafting and blending of vegetation separate in nature are prohibited, and Israelites are commanded to leave gleanings and corners of their fields for the indigent. Though idolatry is thoroughly condemned,

Israelites are commanded to be kind to aliens, who may be idolators. By following the dictates of this mini-*tôrâ,* which echoes the commandments of the Decalogue, Israelites could hope to become a holy nation.

(3) Priestly Regulations (Chaps. 21–22 and 24). In symmetrical fashion, chaps. 21–22 deal with two factors relevant to purity: contact with the dead through funerary activity and restrictions on priestly marriage. An ordinary priest was generally forbidden to attend to the dead, except with respect to his close, consanguinal relatives. By declaring the human corpse the most impure object, a matter detailed in Numbers 19, priestly law effectively ruled out any funerary role for the priesthood. It is reasonable to conclude that the priesthood sought to prevent the spread of cults of the dead by distancing funerary activity from the public cult, or from private ministrations by the priesthood. This is further indicated by the fact that a Nazirite was also prohibited from contact with the dead (Num 6:1–21).

The second area of concern was marriage. Ordinary priests were prohibited from marrying a divorcée or a defiled harlot. An ordinary priest could marry a widow, however. In both areas, the high priest was subject to even severer restrictions. He was barred completely from contact with the dead, and could not even attend to the burial of his parents. He was restricted to marrying a virgin of a priestly family. He could not marry a widow.

The avoidance of divorcées reflects the laws of Deut 24:1f., which stipulate that the sole basis for divorce was serious sexual misconduct, such as adultery. A divorced woman was, therefore, stigmatized on the assumption that she had been guilty of such misconduct.

Chapters 21–22 of Leviticus deal also with the physical suitability of priests, and with defects and blemishes in sacrificial animals. The remarkable correspondence between the two categories suggests that the same concept underlies both classifications: what is offered to God must be of the best, sound and without defect.

Also included in chap. 22 are laws aimed at guaranteeing that sacred offerings (*qodāšîm*) be maintained in a pure state. Impure priests were to avoid contact with such materials. Sacred offerings were intended to sustain priests and those members of their families who shared the same domicile. Chapter 22 concludes with a brief code governing procedures of sacrifice. Mother animals and their offspring may not be sacrificed on the same day, and offspring could not be sacrificed until they were eight days old.

Chapter 24 of Leviticus is a brief and loosely organized collection of priestly laws, including the charge to Aaron to kindle the candelabra continually and to prepare the bread of display (*leḥem happānîm*). The rest of the chapter deals with the crime of blasphemy, and an account of an actual instance of blasphemy in the days of Moses.

(4) Calendar of Festivals (Chap. 23). The sacred days of the year are significant aspects of any religious system. They constitute the *sancta* of the group, which lend to it a distinct identity. Leviticus 23 is the primary, priestly calendar of annual festivals, and is therefore a major source of information on biblical religion. Its precise position in the development of the Israelite festivals is not entirely certain. Here it will be the accepted view that this calendar reflects the rescheduling of the festivals which was legislated in Deuteronomy 16 and exhibits further indications of dependence on Deuteronomy. Its provisions represent therefore a stage in the development of the festivals subsequent to the Deuteronomic reforms, and of course, much later than the pre-Deuteronomic code of Exod 23:14–19, part of the Book of the Covenant.

According to Deuteronomy 12, all sacrifices, including those in celebration of the festivals, must be offered on a single altar, at a central "cult-place" (Heb *māqôm*). It has already been suggested in our discussion of the prologue to the Holiness Code (chap. 17) that this restriction underlies the law of Lev 17:1f.

Restriction of sacrifice to a single, central temple generated the most basic changes in the scheduling of the annual festivals and in other aspects of their celebration. The primary change was to defer the wheat harvest festival seven weeks, since it would be very difficult for Israelites to undertake two lengthy pilgrimages, the *maṣṣôt* pilgrimage and the pilgrimage of the wheat harvest, in close sequence to each other.

The content of Leviticus 23 gives evidence of considerable editing. Its requirements of sacrifice were subsequently elaborated in the provisions of Numbers 28–29. Chapter 23 is presented as a calendar of *môʿădîm,* "set-times," a term used to designate annual occasions occurring at the same time each year. The calendar begins with the law of the Sabbath day, even though the Sabbath is not strictly speaking a *môʿēd.*

The basic commandment of the Torah regarding the Sabbath is to cease all *mĕlāʾkah* "assigned tasks." In priestly terminology, the Sabbath is *miqrāʾ qôdeš,* "a sacred convocation," and is to be celebrated as such in all Israelite habitations (23:1–3).

The order of the annual *môʿădîm* is as follows:

(1) *Ḥag hammaṣṣôt,* "the pilgrimage festival of unleavened bread." This festival is to be celebrated for seven days, beginning on the fifteenth day of the first month, in the spring of the year. It is immediately preceded by the paschal sacrifice (*pesaḥ*), offered before evening on the fourteenth of the month. *Maṣṣôt* must be eaten for seven days, beginning as an accompaniment to the paschal sacrifice. The first and seventh days are proclaimed *miqrāʾ qôdeš,* days on which assigned tasks are forbidden. An offering by fire (Heb *ʾiššê*) of an unspecified character is to be offered on each of the seven days of the festival (23:8).

(2) Chapter 23 of Leviticus continues by ordaining certain religious activities for the period between the *maṣṣôt* festival and Pentecost, the wheat harvest festival, seven weeks later. The mere fact that the priestly calendar schedules this festival seven weeks after the *maṣṣôt* festival testifies to its acceptance of the Deuteronomic program, which called this occasion *ḥag šābûʿôt* "a pilgrimage festival of weeks" (Deut 16:9–12). In our chapter, the laws governing the period between the *maṣṣôt* festival and the Pentecost highlight the importance of the Sabbath day as a point in time for calculating the passage of weeks. If consistent terminology were employed throughout, the *ḥag šābûʿôt* of Deut 16:10 would have been called *šabbātôt* in Leviticus 23. The seven weeks are to be counted from Sabbath to Sabbath and not from any other day. This concept of marking time eventually led to the week which begins on Sunday and ends on the Sabbath. Lev 23:9–22 involves two desacralizations. At the beginning of the period of counting, on the day after the first Sabbath following the fifteenth day, the barley sheaf (*ʿômer*) is presented, and on the morrow of the seventh Sabbath, at the end of the period of counting, the new wheat crop is desacralized with an offering of grain. The concept underlying desacralization is that God must be honored with the first fruits, because God grants humankind the blessings of the earth. Only then may humans have the benefit of the produce of the earth, and of the herds and flocks.

The Pentecost is not designated a *ḥag,* "pilgrimage festival," in the liturgical calendar of Leviticus. This is a significant departure from the law of Deuteronomy, which does use the term *ḥag* (Deut 16:10). The implicit change is endorsed subsequently by Num 28:26 (which does not use *ḥag*). The legislation in Leviticus 23 seems to implement a change in the method of celebrating the Pentecost. Whereas Deuteronomy envisions a pilgrimage festival at a central sanctuary, Leviticus describes a domestic festival during which offerings of first fruits are delivered to the sanctuary but no pilgrimage is undertaken (Lev 23:12–13, 18–20).

(3) *Ḥôdeš,* "the new moon" of the seventh month, is proclaimed as a day of rest, on which the ram's horn is sounded at the middle of the month to announce the forthcoming autumn pilgrimage. An offering by fire is presented (vv 23–25; cf. Ps 81:4).

(4) *Yôm hakkippûrîm,* "the Day of Atonement," falls on the tenth of the seventh month. The provisions relating to this occasion have already been discussed above, in the summary of chap. 16. Here, we find the statement that any Israelite who fails to obey the regulations pertaining to this day shall be "cut off" from his clan. The Day of Atonement lasted a full twenty-four hours. There is no mention here of the main purification of the sanctuary (vv 26–32).

(5) *Ḥag hassukkôt,* "the pilgrimage festival of booths," is the name given to the festival in Deut 16:13f. It begins on the fifteenth day of the seventh month and lasts for seven days. The eighth day is declared a special day of assembly (*ʿăṣeret*). Assigned tasks are forbidden on the first and eighth days, and sacrifices ordained for each of the eight days (vv 33–36).

After a postscript summarizing the liturgical calendar (v 38) comes a second statement relative to the celebration of the festival of booths in the Israelite habitations. Greenery was utilized, symbols of fertility, and the Israelites dwelled in booths for seven days. The duty to dwell in booths is given an historical explanation: God provided temporary shelter for the Israelites on their way to the promised land, when they wandered in the wilderness. Realistically, it has been suggested that the throngs of Israelite pilgrims arriving in Jerusalem for the autumn celebration found it necessary to live in booths for the duration of the festival (cf. Nehemiah 8).

(5) Priestly Administration (Chaps. 25 and 27). Chapter 25 of Leviticus is the only explicit statement in Torah literature on the right of the Israelite people to the land of Canaan, usually referred to as "*the* land." This right imposed obligations. As stewards of God's land, the Israelites were obliged to obey God's commandments with respect to the land—its economic exploitation, its ownership, etc. Although chap. 25 never mentions a priestly or other agency which was to be in charge of land transfers, a major concern of this chapter, it may be assumed that the very inclusion of this legislation in Leviticus indicates that the priesthood was in charge of such business.

Essentially, this code of law prohibits the permanent alienation of any arable land in the land of Israel, and relegates sales of land to the status of long-term leases. On the Jubilee, or fiftieth year, all land sold or forfeited in payment of debts would revert to its original owner. The key term in chap. 25 is *ʾăḥuzzâ*, "land holding," a term which conveys the theory of stewardship. The land is truly possessed by God; its inhabitants are tenants, to whom has been transferred the right to live on the land.

After restating earlier laws on the Sabbatical, or seventh year, when the fields are allowed to lie fallow, chap. 25 introduces the Jubilee year. The Jubilee is an occasion of "release" (Heb *dĕrôr*), when all who are indentured will regain economic liberty. The land may never be sold beyond retrieval (*liṣmîtût*), and must be redeemed. But, as the laws of chap. 25 unfold, it becomes clear that the provisions for economic relief associated with the seventh year in Exodus 21 and 23 and in Deuteronomy 15 have been discontinued. The primary concern has shifted to guaranteeing the rights of Israelite landowners at the expense of those indebted or indentured. There is a concern to prevent acquisition of land by non-Israelites (Lev 25:47f.). Special legislation protected the property of the Levites, and urban dwellings could be acquired permanently if they had not been redeemed within one year. It was forbidden to hold Israelites as slaves, or to charge them interest, or mistreat them while indentured. See also JUBILEE.

In chap. 25, the concept of *gĕʾullâ,* "redemption," is fundamental. On the private level, redemption expressed itself in the efforts of clan relatives to come to the aid of those of their relations whose tenure over their land had been forfeited or threatened. Collectively, continued tenure of the land meant redemption for the people of Israel.

Finally, chap. 27 of Leviticus, which was appended to the book, deals with the financing of the sanctuary and its cult. Several sources of income are legislated. Traditionally, Israelites vowed donations to the sanctuary, by devoting weights of silver calculated as "equivalents" (Heb *ʿērek*) of their life-worth. This idiom of votive donations harks back to a time when persons were actually devoted to temple service. One would devote his life-worth to the sanctuary ("to the LORD"), and buy back his "life" by a donation—in other words, he would redeem himself. In a similar way, livestock and even real estate could be devoted and bought back in this way, with animals actually suitable for offerings remaining in the possession of the sanctuary. Chapter 27 also speaks of condemned land that became the property of the sanctuary. It concludes with reference to tithes of produce and livestock, which helped to support the clergy.

We have come, in this survey of the contents of Leviticus, all the way from sacrifice and purification, through family law and festival celebrations, to statements on land tenure and economic policy, as well as temple finances. These varied subjects addressed in the text of Leviticus actually reflect the multiple functions of the Israelite priesthood.

3. Text-Critical Considerations: The State of the Text of Leviticus. Before one can interpret an ancient book, it is necessary to be certain exactly what is written in it. Recently, parts of one or more scrolls of Leviticus, discovered at Qumran and written in a script imitative of earlier calligraphy (paleo-

Hebrew) have been published by D. N. Freedman and K. A. Matthews (1985). These materials date to the last pre-Christian century. All instances where these ancient fragments differ from MT, LXX and the Samaritan version have been tabulated. The results of these comparisons indicate that the received text, the Masoretic version of Leviticus, was carefully copied, although a degree of fluidity is evident. The actual variations evident in the Qumran fragments are not what we would regard as "meaningful"; they do not reflect a different text having a different intent. Most are simply alternative ways of saying the same things, or conscious attempts at symmetry, the juxtaposition of syntax, etc. The LXX and the Samaritan versions are often interpretive, but seldom point to a different text as the basis of translation. Generally, the Torah books, with the exception of certain poetic sections, are in much better shape than other books of Scripture. This is probably because of the later importance of the Torah in the Jewish synagogue, and the basic role of Torah law in Jewish relation.

C. Historical Context of Leviticus: "Realistic Interpretation."

1. Issues of Interpretation. Thus far, the contents and structure of Leviticus have been discussed without specifying a historical context. No attempt has been made to place the laws and celebrations of this priestly composition in an historical setting, or to assess their degree of realism. Since late antiquity, traditional interpretation, both Jewish and Christian, has accepted the stated historiographic context of all Torah literature. The assumption was that the religious and social legislation of Leviticus, and of Torah literature generally, went into practice either in the time of Moses, or, as often stated, when the Israelites settled in Canaan.

Modern critical scholarship has demanded independent corroboration of traditional dates and attributions, and regards Leviticus as priestly literature. It is part of the *Priesterschrift* (abbreviated P), a documentary source which has a literary history of its own. In the absence of the types of indicators found in historical books of the Bible, determining the historical context of P requires special methods of analysis. The method which recommends itself is "realistic interpretation." By this we mean an approach to the study of the text which focuses on realistic indications, such as terminology and formulation, institutional makeup, precise legal provisions, and the relative chronology of the sources of Torah literature.

As regards the literary history of Leviticus, the major debate in modern scholarship has centered on the chronological relationship of P to Deuteronomy. Are the provisions of Leviticus predicated on the specific legislation of Deuteronomy, or do they generally precede the changes in religious worship legislated in Deuteronomy? Even before Wellhausen, modern biblical scholars had endorsed a late date for P, in the postexilic period. This view has been challenged most forcibly by Y. Kaufmann (*KRI,*) who places P before Deuteronomy in the chronology of Torah sources. His realignment has, in turn, been challenged and has raised serious questions. Recently, H. L. Ginsberg (1982) has shown to what an extent the biblical festivals, as scheduled and prescribed in Leviticus and in the priestly sections of Exodus and Numbers, reflect and endorse the Deuteronomic doctrine of worship.

Ginsberg has advanced the hypothesis, on the basis of his original analysis, that the Deuteronomic doctrine of cult centralization originated in the N Israelite kingdom before its annexation by the Assyrians, toward the end of the 8th century, B.C.E. The Judean king Hezekiah had attempted to implement the Deuteronomic policy (2 Kgs 18:3–4, 22), but did not succeed at it. Since he was followed by the heterodox king Manasseh, who ruled Judah throughout most of the 7th century B.C.E., no progress was made in eliminating the *bāmôt,* the local and regional cult sites, until the reign of Josiah. In 622 B.C.E., Josiah, king of Judah, issued an edict endorsing the Deuteronomic policy, then interpreted to mean that sacrifice could be legitimately offered only in the Temple of Jerusalem (2 Kings 22–23). It is reasonable to suppose that most of the major changes in festival celebration and sacrificial worship emerged after the promulgation of Josiah's edicts. In turn, this suggests dating those priestly laws which show dependence on Deuteronomic doctrine to the period after 622 B.C.E., at the earliest, which brings us close to the Babylonian exile.

It was Wellhausen's keen insight (*WPHI*, 34–35) that the law of Leviticus 17, which requires that all sacrifices be offered at the entrance of the Tent of Meeting, is best understood as a priestly formulation of

Deuteronomic doctrine on cult centralization, projected in a wilderness setting. It has already been noted that the seven-week deferral of the wheat harvest festival, adopted in Leviticus 23 and in Numbers 28, reflects the provisions of Deuteronomy 16. Ginsberg (1982) and Levine (1987) have shown that the epilogue to the Holiness Code (Lev 26:3–46) contains themes introduced by Ezekiel, and takes us well into the 6th century, B.C.E., the period of the Babylonian exile. Levine goes further, and sees in the epilogue, which evidences several internal strata, echoes of the end of the exile, and the early years of the return, at the end of the 6th century B.C.E. In Levine's view, Leviticus 25 is a document best understood as deriving from the early period of the Return.

Not only literary-historical analysis suggests that Leviticus in particular and P in general contain exilic and postexilic creativity, but also technical terminology and institutional structures. Such institutional structures are conveyed by terms of reference. It is important to differentiate between traditional terms and realistic, functional terms. We learn little about the precise historical setting of Leviticus from such terms as *hā-ām,* "the people," or even *bĕnê yiśrā-el,* "the Israelite people," or even *bêt Yiśrā-ēl,* "the House of Israel," which is admittedly somewhat instructive. The truly functional terms for the Israelite collective are *-ēdâ,* "community," and *qāhāl,* "congregation." The Aramaic cognate of Heb *-ēdâ* is attested in documents from 5th-century-B.C.E. Elephantine, in upper Egypt. There the word refers to the garrison of Jewish mercenary troops residing there. Neither *-ēdâ* nor *qāhāl* are kinship terms. It is interesting that the usual terms for "tribe" *šēḇeṭ* and *maṭṭeh* are not used in Leviticus.

To refer to fellow Israelites, traditional terminology, such as *-āḥ,* "brother, kinsman," as well as somewhat distinctive, internal family terms, such as *šĕ-ēr,* "flesh, relation," are used. Of greater historical and social significance is a term like *-ămît,* "neighbor" (even *rē-a,* "comrade") identifying a fellow member of the socioreligious community. A community whose members refer to each other as *-ămît* (cf. Zech 13:7 where *-ămît* is parallel to *rē-a*) is not one defined by kinship and ancestry. It is rather a community composed of citizens, in our modern terminology. There are other subtle indications of this sort in Leviticus of a breakdown of the earlier clan system as the basis of overall social organization.

When we inquire as to where the community referred to in Leviticus (or the network of communities) lived, we again find it necessary to differentiate between traditional terms such as *maḥăneh,* "encampment," and functional terms such as *môšāḇôt,* "settlements"; *-îr, -ārîm* "town(s)"; *ḥăṣērîm* "open settlements, villages"; and *migrāšîm,* "corrals" (but also "gardens") adjacent to the towns. Outside the area of the towns is the *śādeh,* "arable land."

We observe, therefore, realistic terms of reference which point to a network of communities, engaging in agriculture and pastoral pursuits, and settled in towns and villages. This is the realistic setting, whereas the traditional setting of Leviticus is cast in the wilderness, with the people living in encampments, having recourse to the Tent of Meeting (*-ôhel mô-ēd*) as their sanctuary.

The leadership of the Israelite community is also a matter for "realistic interpretation." There is only one reference in Leviticus to the *nāśî-,* "tribal chieftain," and it is hardly significant in our quest for ancient reality. In Lev 4:22–26 we are told that a *nāśî-* who transgresses is treated like any other individual Israelite. The *zĕqēnîm,* "elders," have only a ceremonial role, laying their hands on certain offerings, etc. The functional leaders are the priests. The high priest is mentioned in Lev 21:10, and designated "the anointed priest" in Lev 4:3. His offenses were to be expiated in the same manner as the collective transgressions of the entire people, because they affected the people as a whole (Lev 4:1–21). Administrative as well as religious functions are performed by priests, as appears from chap. 27, and most probably from chap. 25. In the traditional setting of Leviticus, Moses was, of course, the leader of the Israelites in every respect. But unless one accepts the historicity of this traditional setting, the only functional leadership resided with the priesthood.

In summary, a terminological analysis of the community structures expressed in Leviticus yields the following outline: we observe a socioreligious communal network, whose members are similar to citizens. The economy is agricultural and pastoral, and the people live in towns and open villages. The head of the communities is the chief priest, and the administration is composed of priests, who handle the affairs of the Temple (= sanctuary) and the society at large.

This profile would suit the life situation of the reconstructed Judean community in the period after the Return, in the late 6th century B.C.E. and thereafter. A hierocracy administered the Temple establishment and of Judea, as well, all under Persian imperial rule. The legislation of Leviticus 25, indicates an economically strained and somewhat stratified society, in which indenture was a frequent condition, and forfeiture of land a present threat. These conditions are very similar to what is described as the plight of the people in Nehemiah 5, which clearly reflects the conditions of life under Persian rule.

On the other hand, it is probable that some of the cultic praxis prescribed in Leviticus is of great antiquity and reflects preexilic patterns of worship. All of the contents of Leviticus need not be assigned to a single period of biblical history, and there are clear indications of internal documentary stratification in Leviticus. Nevertheless, the presence of early material, and even of some early language in Leviticus (and in P generally) does not lead to the conclusion that the overall regimen presented therein is as ancient as its oldest sources.

Much of the current debate centers around this very issue, namely, the relative valence given to older versus more recent materials, respectively. Those most heavily influenced by Y. Kaufmann (including Israeli scholars such as M. Haran, and American Jewish scholars like J. Milgrom) attach greater weight to evidence of antiquity in P. H. L. Ginsberg, B. A. Levine, and even the late E. A. Speiser as well as many Christian and humanist scholars conclude that P, in its final form, was compiled at a relatively late date, and contains some exilic and postexilic material.

2. Comparative Method. "Realistic interpretation" utilizes comparative evidence from the larger and smaller cultures of the ANE, contemporary with the biblical period, or having attested contact with Canaan, in earlier periods. Such comparative evidence sheds light on the derivation of social and legal institutions as well as on the phenomenology of sacrifice and purification. It is used by most contemporary specialists in the area of priestly literature, regardless of their views on dating with regard to the Deuteronomic question, etc.

To be brief, the legal institutions of Leviticus 25 include the moratorium known as *dĕrôr,* "release," and recall the *andurārum* of the Old Babylonian kings, Hebrew *liṣmītût,* "beyond retrieval," recalls the Akkadian documents from Ugarit, where the stative form *ṣamid/t* has essentially the same meaning. Penalties for cultic offenses recall similar punishments recorded in Mesopotamian and Hittite laws. Perhaps even more informative are the Mesopotamian magical texts, many of Neo-Assyrian and Babylonian provenance, which offer parallels to the rites of riddance and purification found in Leviticus 12–16.

On the level of terminology, we find both cognates and the semantic equivalents of specific biblical terms for sacrifice. These are mostly to be found in the Mesopotamian, Ugaritic and Phoenician-Punic vocabularies. As an example, the sacrificial offering *šĕlāmîm,* "sacred gift of greeting," is known both in Ugaritic documents of the LB Age, and in the Punic "tariffs" from Carthage, from the 4th–3d centuries B.C.E. (see Levine 1974). Even the formulation and composition of the biblical and extrabiblical ritual texts show remarkable affinity.

The phenomenology of sacrificial worship and ritual purification has also been clarified in comparative perspective, as has been the character of festival celebrations. All in all, the prescribed regimen of Leviticus now appears much less artificial, or simply programmatic, than it did in the early years of this century. Recent discoveries such as the Temple Scroll from Qumran have reinforced the conclusion that the sacred cult of biblical Israel remained of basic importance even after the period covered by the Hebrew Bible. However one determines the original life situations which produced the institutions and practices ordained in Leviticus, it is acknowledged that they were fully functional throughout most of the period of the Second Temple of Jerusalem.

BARUCH A. LEVINE

LEX TALIONIS. A law of retaliation by which the guilty party suffers the same harm as that experienced by the injured party. In biblical as in modern law the primary example of taliation is capital punishment for a judgment of murder (Gen 9:6, "Whoever sheds man's blood, by man shall his blood be shed"; Exod 21:12, "Whoever strikes a man so that he dies, he shall surely be put to death"; Lev 24:21, "Whoever kills a man shall be put to death"), although some commentators would restrict the term "talion" to nonfatal bodily injuries. The classic formulation of taliation in biblical law is "life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe" (Exod 21:23–25). This text is popularly quoted as "an eye for an eye (and a tooth for a tooth)," following Matt 5:38, and is popularly regarded as a summation of biblical law.

What occasions the detailed statement in Exodus 21 is the difficulty of appropriate punishment in the complex case of injury to a pregnant woman who gets caught up in a fight among men and suffers a miscarriage and possible further consequences, even death. (Exod 21:22–25, however, has several indications of complex redaction and scholars differ widely in reconstruction and interpretation.) A similar talionic statement occurs with reference to causing permanent bodily injury to a neighbor—"as he has done so it will be done to him: injury for injury, eye for eye, tooth for tooth; as he has injured a man, so shall it be done to him" (Lev 24:19–20). The principle of taliation is also invoked with reference to compensation for the death of a stock animal—the negligent owner of a dangerous ox gives "ox for ox" (Exod 21:36), and someone who kills another's animal gives restitution, "life for life" (Lev 24:18). In the case of false testimony, the penalty for the allegation is carried out on the perjuring party—"You shall do to him as he intended to do to his brother" (Deut 19:19). The added warning states, "You shall not show pity, but life for life, eye for eye, tooth for tooth, hand for hand, foot for foot" (Deut 19:21).

Biblical law does not know of the vicarious talion illustrated in the Laws of Hammurapi (## 116, 210, 230; cf. Middle Assyrian Laws ## A 50–52) in which someone responsible for the death of a citizen's son or daughter has his son or daughter put to death. The biblical emphasis is on punishment of the guilty person—"everyone will be put to death for his own sin," Deut 24:16; "so it will be done *to him,*" Lev

24:19—although vicarious punishment is known in extralegal situations. Also, unlike the Laws of Hammurapi (## 196–205), biblical law does not restrict the operation of talion to a specific class—talion among equals, but a fine if the injured person is of lower status.

Debate has also focused on whether the statement of talion was intended to govern actual practice—an actual tooth for a tooth—especially in earlier biblical times, or whether it articulated the principle that the punishment should fit the crime. As such, it would guard against excessive punishment for a wrong (contrast Lamech's boast, Gen 4:23–24) as well as the disparity of compensation assessed upon the wealthy malefactor whereas death is the penalty for the poor (contrast # 8 in the Laws of Hammurapi). In Exod 21:22–25, the expansive talion formula follows the reference to the woman and/or a fetus being injured and serves to adjust the punishment to the injury. (Immediately thereafter, Exod 21:26–27 illustrates the formula as a principle. A slave whose master destroys his/her eye or tooth gains freedom; the master loses a slave, not an eye or a tooth.) Likewise in Lev 24:19–20—bodily injury to another man—there is a catalog of possible injuries with corresponding punishments. Even in these texts, the talion formula might be taken to mean inflicting physical injury, yet in Deut 19:16–21 (false witness), the talion formula must be a statement of equivalent compensatory punishment. The penalty in the case involving perjury would be compensation or fine. (Mutilation is restricted in biblical law to the special circumstances of Deut 25:11–12.) Note also that in Leviticus 24 the talion formula is followed by another statement of principle: "There should be one law for you; as for the alien, so for the native, for I am the Lord your God" (Lev 24:22). In the historical traditions the principle of punishment paralleling the crime is recognized by king Adoni-bezek, who had his thumbs and big toes cut off as he had done to others; "as I have done, so has God requited me" (Judg 1:6–7).

A related debate concerns whether talion is more primitive than compensation—and therefore presumably morally inferior. Driver and Miles comment that "the whole system of punishments among the Semites was based on talion, which is itself nothing but a legalized limitation of the vengeance of the blood-feud" (Driver and Miles 1952: 60). But "blood-feud" is hardly the background of biblical or ANE law. Noteworthy also is that the oldest Near Eastern law provides for compensation, whereas the Laws of Hammurapi—possibly reflecting Amorite cultural influence—provide for vicarious talion as well as talion within classes. The principle of the punishment fitting the crime seems basic, complicated by the recognition of different legal classes.

At times, unimaginative societies have favored a policy of literal taliation—e.g., putting out the left eye of someone who injured another's left eye. But given the inherent difficulties in carrying out specifically equivalent punishment—someone with but one eye; parties of rather different ages, etc.—the famous "eye for an eye, tooth for a tooth" does not provide genuinely specific guidance any more than a literal interpretation of "If your right eye causes you to sin, pluck it out and throw it away" (Matt 5:29). In view of the Bible's interest in compensation to the injured party, as opposed to physical punishment of the guilty party, it seems likely that the reference to equivalency was intended even originally as a statement of principle. The injured party was probably seen as better served by compensation than by mere punishment.

The historical narratives mention instances of guards being responsible with their own life for a prisoner entrusted to them (1 Kgs 20:35–42; 2 Kgs 10:24), a variant of talion, but there are no sentences immediately carried out nor are the texts intended to reflect ordinary legal practice. In a parallel way, the prophet Ezekiel is responsible with his own life for the appropriate warning to sinners of the consequences of their wrongdoing. Also, the prophetic literature frequently points to a punishment of Israel or the nations corresponding to the wrong committed (Miller 1982). See also LAW.

LIBER DE INFANTIA. See MATTHEW, GOSPEL OF PSEUDO-.

LIBNAH (PLACE) [Heb *libnâ* (לִבְנָה)]. The second levitical city in the Judah/Simeon list. There are no Hebrew textual variations in either Josh 21:13 or in 1 Chr 6:42 [—Eng 6:57]. The first reference to Libnah in the biblical record is in the conquest narratives. Libnah was one of the towns in the S subjugated by Joshua. Following the conquest, Libnah was included in the allotment of Judah (Josh 15:42). During the reign of Jehoram, Edom revolted from the control of Judah and at the same time Libnah revolted (2 Kgs 8:22). The Chronicler justified Libnah's revolt against Jehoram "because he had forsaken the Lord, the God of his Fathers" (2 Chr 21:10). By the time of Hezekiah's reign and Sennacherib's campaign, Libnah had returned to Judah's control (2 Kgs 19:8; Isa 37:8). The final reference to the city describes it as the home of Hamutal, the mother of Jehoahaz and Zedekiah (2 Kgs 23:31; 24:18; Jer 52:1). There are no ancient nonbiblical references to Libnah. Three tells have been associated with biblical Libnah: Tell es-Safi, Tell Bornat and Tell Judeidah.

Albright (1921: 6) first suggested that Tell es-Safi (M.R. 135123) be identified with biblical Libnah. Up until 1921 it had been almost universally assumed that Tell es-Safi was the Philistine city of Gath. Albright, basing his argument on an assumption from 2 Kgs 8:22 that Libnah must have been situated on the border, concluded that Tell es-Safi is the only reasonable identification, because it is the only important tell on the border between Philistia and Judah which is in the district of Eleutheropolis (following Eusebius, *Onomast.* 120.23–25). Albright further substantiated his theory by discussing the name Libnah, "the white (city)" and Tell es-Safi, "the bright, shining tell." Tell es-Safi had received its name because of the white limestone scarps, a definite corroboration with Libnah. The final argument advanced by Albright was in relationship to Sennacherib's march to Jerusalem. He concluded that the route from Lachish to Jerusalem via Tell es-Safi was the most natural route for the Assyrian king to take. However, within two years Albright (1934: 9) had changed his mind about the identification of Tell es-Safi. Instead, he identified Tell es-Safi as Makkedah. Although Albright changed his mind, G. E. Wright (1971: 81) continued to identify Libnah with Tell es-Safi. Wright was convinced that Tell es-Safi's geographical location at the W opening of the Valley of Elah fit well the biblical descriptions of Libnah. Tell es-Safi is located at the W edge of the Shephelah as it enters the valley leading into the coastal plain. The Valley of Elah provided a good access into the hill country since the ascent was gradual and did not involve crossing many hills and valleys. As a result, Tell es-Safi stands as a fortress between the coastal plain and the Shephelah, protecting the entrance to the mountains and the valley.

The first and only major excavation conducted at Tell es-Safi was directed by F. J. Bliss and R. A. S. Macalister (1902). There have also been many surveys conducted at Tell es-Safi. The different periods of occupation which have been identified include EB, MB, LB, Iron I, Iron II, Hellenistic, Roman, Crusader, and Arab.

After Albright changed his mind about the identity of Libnah, he opted for Tell Bornat (M.R. 138115). Although Albright never detailed his reasons for choosing Tell Bornat, this identification has received wide acceptance among German and Israeli geographers and archaeologists. Aharoni (*LBHG*, 86) argued against the identification of Libnah with Tell es-Safi because Libnah is mentioned in Josh 15:42 alongside Mareshah, Keilah, and Nezib, towns in the SE Shephelah, and not with towns near Tell es-Safi. Tell Bornat is 9 km SE of Tell es-Safi, 3 km W of Tell Judeideh, and 8 km NE of Lachish. Near Tell Bornat is the Wadi Zeita, which is the shortest trade route to Hebron in the Shephelah. This means that Tell Bornat would have been a "junction city." Not only was there an E–W route near the city, but the *Via Maris* ran along the W edge of the Shephelah.

References to Tell Bornat by early geographers come rather late. The first geographer to mention the tell is Guerin (1869: 314). There have been no archaeological excavations at Tell Bornat, but many surveys. Historical periods which have been identified include EB, LB, Iron I, Iron II, Persian, and Arab.

The last site that has been associated with biblical Libnah is Tell Judeideh. Z. Kallai (1958: 153) first suggested this identification following the survey of Aharoni and Amiran for the Historical Geography Study Circle. Tell Judeideh (M.R. 141115) is located only 3 km due E of Tell Bornat and 10 km NE of Lachish. From the tell there are magnificent views of the coastal plain and the Judean hills. The site is also on a major E–W trade route to Hebron and to the Valley of Aijalon. Bliss (1900a: 94; 1900b: 200) directed the only archaeological excavation that has been conducted at Tell Judeideh. Since that excavation there have been many surveys. The pottery dates to the EB, Iron I, Iron II, Persian, Roman, and Byzantine periods.

The identification of biblical Libnah has remained somewhat of a question. Although the pottery found at Tell Judeideh could associate the site with Libnah, its traditional identification with Moresheth-Gath is probably correct. As all surveys and excavations at Tell es-Safi have shown, there was a large Philistine settlement at the site. It is only logical then to associate Tell es-Safi with the Philistine city, Gath. Although Tell Bornat is physically smaller than Tell es-Safi, the identification of Libnah with Tell Bornat does not minimize the importance of the city in ancient Israel. The size of the tell does not seriously affect the importance of city because "the pasture lands" were a significant part of each city's territory. Tell Bornat was on an important crossroads and its geographical location is strategically important. Although Tell Bornat cannot be absolutely identified with biblical Libnah, the evidence strongly supports this association.

JOHN L. PETERSON

LIBNI (PERSON) [Heb *libnî* (לִבְנִי)]. LIBNITE. **1.** All evidence indicates that the Libnites were a levitic family from the territory of Judah. Their name is probably derived from the name of the Judahite town Libnah (the expected form would be ***libnātî*, but cf. *yĕhûdâ-yĕhûdî*, *ṣārĕʿâ-ṣārĕʿî*). A genealogical fragment of unknown origin quoted in the Priestly source lists the families of Levi as the Libnites, the Hebronites, the Mahlites, the Mushites, and the Korahites (Num 26:58). All these names have possible connections to Judah or its kindred Edom. Hebron, often used as the name of a levitic family (Exod 6:18; Num 3:19, 27; 1 Chr 5:28—Eng 6:2; 6:3; 15:9; 23:12, 19; 26:23, 30, 31) was the chief city of Judah and a Judean family name (1 Chr 2:43). Korah, ordinarily a levitic name, appears as a Judahite name in 1 Chr 2:43 and as an Edomite name in Gen 36:5, 14, 16, 18; 1 Chr 1:35, and the Korahites are said to be among David's early allies (1 Chr 12:7). Moreover, a fragment of a bowl discovered at Arad in Judah refers to "the sons of Korah" (Aharoni 1968, Miller 1970). It is probable that Mushi comes from *mōšeh* (Moses), and it is noteworthy that Jonathan, the son of Gershom, the son of Moses (Judg 18:30 [Greek version]; the MT reads "Manasseh" instead of "Moses") is called a Levite "from the family of Judah" (Judg 17:7). Mahli may not be specifically Judean, however, for the name is easiest to derive from Mahlah in Manasseh (Num 26:33; 27:1; 36:11; Josh 17:3; 1 Chr 7:18), but note the Judahite name Mahlon (Ruth 1:2, 5; 4:10), the Edomite name Mahalath (Gen 28:9), and the probable attestation of Mahli on a Persian period cosmetic burner from Lachish in Judah (Albright 1974). In short, Num 26:58 probably was not intended to be a comprehensive list of levitic clans, but was rather a catalog of the chief families native to or resident in Judah.

2. The Priestly genealogist considers Libni, along with Shimei, a subgroup of the Gershonites (Exod 6:17; Num 3:18, 21), and the Chronicler at times follows this scheme (1 Chr 6:2, 5—Eng vv 17, 20). Elsewhere, however, the Chronicler replaces Libni with Ladan (1 Chr 23:7, 8, 9; 26:21), a name unknown toP, which suggests that the name Libni was obsolete after the exile. Ladan, too, is a name with Judahite connections, for the similarly named Laadah is a grandson of Judah (1 Chr 4:21). That Libni is always the firstborn, whether of Levi (Num 26:58) or of Gershon, indicates the prominence of this family.

3. In the Chronicler's genealogy of Levi, Libni is also a subgroup, literally "son," of Mahli, the descendant of Merari (1 Chr 6:14—Eng v 29; cf. #2 above, 1 Chr 6:2, 5—Eng vv 17, 20).

WILLIAM H. PROPP

LIBYA (PLACE) [Heb *kûb* (כּוּב)]. LIBYAN. A land and people in N Africa, immediately W of Egypt (Ezek 30:5). It seems that the oldest Egyptian terms for these W neighbors are *Tjehenu* and *Tjemehu* (from the 3d millennium B.C.), but from about the period of Rameses II (the 13th century B.C.) onward this group was called the *rbw* or *Libu* (Egyptians had no character for the *l* sound so *r* or *n* was substituted, therefore *rbw* was pronounced *Libu*). The Egyptian *Libu* probably was the source for the Gk *Libyēs* and the Heb *lûbîm* (1 Chr 12:3; 16:8). The Libyans and the Egyptians often were involved in skirmishes especially during the 12th–10th centuries B.C. Libyans figured prominently in the forces of Pharaoh Shishak (2 Chr 12:3) and it is probable that Shishak himself was of Libyan extraction. Pharaoh Shishak attacked Israel with 1200 chariots, 60,000 horsemen, and an army comprised of Egyptians, Libyans, Sukkiim, and Ethiopians (1 Kgs 14:25–28; 2 Chr 12:1–12). This invasion was interpreted as divine disciplinary action because Israel was ignoring the law. The Libyans also appear in the forces of Zerah (2 Chr 16:8) who may have been an Ethiopian officer who commanded an army comprised of Ethiopians and Libyans. Although the military strength of Zerah's forces was enormous, King Asa was able to rout them.

The relationship between the Libyans and the *lĕhābîm* is problematic (Gen 10:13; 1 Chr 1:11); *lĕhābîm* may be a variant form of *lûbîm.* Ham's third son was Put; Put was Egypt's brother (Gen 10:6). Moreover, Lehabim was Egypt's third son (Gen 10:13). Almost certainly the names Egypt and Lehabim are not individuals but peoples, therefore Put, Lehabim, and Egypt shared the same tradition which itself was linked to Ham. It is not surprising that parts of this tradition continuously reappear later in the prophets (Nah 3:9; Dan 11:43; cf. also Jer 46:9; Ezek 27:10; 30:5; 38:5) where some read *lûbîm* for *lûd.* The peoples of this tradition have often been called Hamitic peoples wherein "Hamitic" has designated the people, or perhaps only the languages, of Libya.

In the NT, while witnessing Jesus' trip to Golgotha, a Simon of Cyrene from Libya was pressed into service (Matt 27:32; Mark 15:21; Luke 23:26). Furthermore, people from "the parts of Libya about Cyrene" were in the crowd which witnessed Pentecost (Acts 2:10).

LIKHI (PERSON) [Heb *liqḥî* (לִקְחִי)]. The third son of Shemida (1 Chr 7:19) in the genealogy of Manasseh (7:14–19). His name appears only once in the Bible, and it is probably cognate with the Heb verb "take, grasp" (*lāqaḥ*). Some have suggested, however, that "Likhi" is nothing more than a textual corruption of "Helek" (Heb *ḥēleq*), the name of one of Gilead's sons (Num 26:30; cf. Josh 17:2; see Noth *IPN*, 249).

1 Chr 7:19 is a genealogical fragment, and its relationship to the preceding collection of Manassite genealogical materials (7:14–18) is uncertain. The verse lists the names of Shemida and his four sons, but it does not specify the position of Shemida in the genealogy of Manasseh as a whole. Therefore, attempts have been made to find a logical relationship for the verse with the rest of the Manassite genealogy in 1 Chronicles 7. One proposal has been that Shemida was the fourth son of Hammolecheth (7:18), and so Likhi was her grandson (so Curtis and Madsen *Chronicles* ICC, 152). Another suggestion is that Gilead was the father of Shemida, just as Num 26:30–32 indicates (cf. Josh 17:1–3). Consequently, Likhi was the grandson of Gilead. Rudolph's formulation of this solution (*Chronikbücher* HAT, 69–71) has found wide acceptance, but it involves the wholesale emendation of the Manassite genealogy in 1 Chronicles 7 on the basis of Numbers 26:28–34.

LILITH (DEITY) [Heb *lîlît* (לִילִית)]. Lilith is the Hebrew form of Akk *lilītu* (the feminine form of *lilû*), which was a species of lesser deities in Mesopotamia known for their diabolical activities (Farber *RLA* 7: 23; Porada *RLA* 7: 24–25; *CAD* s.v. *lilû*). Very little information has been found relating to the Akkadian and Babylonian view of these demons. Two sources of information previously used to define Lilith are both suspect. Kramer (1938: 5) translated *ki-sikil-líl-lá-ke*$_4$ as "Lilith" in a Sumerian Gilgamesh fragment. The text relates an incident where this female being takes up lodging in a tree trunk which has a Zu-bird perched in the branches and a snake living among the roots. This text was used to interpret a sculpture of a woman with bird talons for feet as being a depiction of Lilith (Frankfort 1937: 130 fig 1, 134–35; Kraeling 1937: 18). From the beginning this interpretation was questioned (Opitz 1932: 330) so that after some debate neither the female in the story nor the figure are assumed to be Lilith (Ribichini 1978: 31–33; *RLA* 7:25). The 1st millennium Syrian incantation from Arshlan-Tash, often cited as a Lilith reference also has been shown not to refer to this demon (Gaster 1942: 44, 50; Torczyner 1947: 29).

Amulets exist to ward off *lilītu* and the *lilû* family. Lilith was known to attack women in childbirth, a characteristic she may have adopted from Lamashtu (*EncJud* 11: 246–47; Farber 1989: 4, 103, 117, 142–43). The new infant was in more danger than the mother since Lilith could suck its blood, eat its marrow, and then consume its flesh (*RLA* 7:23). To protect oneself from this demon one could write out incantations, wear amulets, or invoke gods or other demons, especially the king of the *lilû*, Pazuzu (Lambert 1968: 42, 46).

Two Jewish sources may be used to determine the activities of Lilith. The first of these are the four references to Lilith in the Talmud (*Nid.* 24b; *B. Bat.* 73a; *Šabb.* 151b; *ʿErub.* 100b). From these texts it is clear that Lilith has the form of a woman with long hair and wings, who bears demonic offspring. There is a sexual aspect implied in the warning that men who sleep alone could be seized by her.

The other source of information on Lilith and her relatives is the series of Aramaic and Mandaic bowl inscriptions used to ward off demons. Most of these texts came from a Jewish community in Nippur, though they date from the 1st millennium C.E. (Montgomery 1913: 76–78, 117, 155–56, 209, 244, 259–60; Isbel 1975: 17, 44–45, 108, 120–21; Geller 1986: 108–9). These texts confirm Lilith's malevolent activities and they show her lurking around human habitations waiting for a chance to seize people. One incantation bowl bears a drawing of the shackled Lilith bound in chains around her neck, arms, and legs; she has been stripped bare and her hair loosed (Montgomery 1913: 154–55 no. 8 lines 2–3, pl. 8).

When only Jewish sources for the deity were known, it was assumed her name was a variant on *lylh* and thus she was understood to be the "night hag" (RSV Isa 34:14; *ERE* 4: 598). Once her Mesopotamian

origins became clear the name was associated with Sum *líl,* "wind" (Meissner 1925: 201; Patai 1967: 207; *RLA* 7: 23).

Lilith was taken up by Jewish midrashic and cabalistic traditions and there is a rich literature which includes visions of her as a benign being as well as a demon (Patai 1967: 217–45). Currently Lilith is an inspiration for much creative writing and reinterpretation (Koltuv 1986: 126–27).

LIMES, ROMAN (IN PALESTINE). Since Flavian days (69–96 C.E.), *limes* (pronounced: "lī' mēz" according to Webster, but often pronounced "lē' mis") has been the Roman term for the controlled and defended borders of the Roman Empire. Succeeding emperors gave major attention to the imperial borders, since maintenance of peace within the empire was considered not only vital for its prosperity, but a major inducement for the subjected nations to submit to Rome's domination. Furthermore, besides being the first line of defense, the *limes* was the zone of physical contact with the outside world, cultural as well as ethical, and a staging area for international trade, which was vital to Roman economy.

At first, Rome tried to base its border on natural obstacles, yet, when necessary, a network of fortifications, manned by more lightly armed troops (the *auxilia*) was established in front of the legionary bases. At times, these were connected by continuous obstacles (S.H.A., *Hadr.,* 12.6).

In an effort to ease the staggering financial burden, to free part of the armed forces from constant obligations to the frontier guard, and to repopulate the frontier zones, Diocletianus (284–305 C.E.) adopted earlier precedents and entrusted the frontier defense to a newly created corps of rural frontier militia (*limitanei*), which did part-time, and in emergencies, full-scale, hereditary service against the grant of border lands. The civil administration in the border areas was vested in the military commanders (*comites, duces*) and the privileged zones soon developed distinctive socio-ethical and agrarian settlement patterns, which in many ways influenced subsequent developments. These arrangements, with some modifications, remained in effect until the disruption of the empire in the W and the capture of its E parts during the Islamic conquest about 635 C.E. One cause of the territorial loss was the *limitanei*'s loss of military prowess which had become *de facto* farmers for all practical purposes.

The peculiar situation of the *limes* in Palestine was that the area was a border state, and it has always been essential to secure borders from incursions of outsiders. In years of drought, the threats posed by the incursions of desert fringe nomads (cf. Judg 4:3–5), could surpass the inherent antagonism between the sedentary farmer and the migrant husbandman. With apparently such a scenario in mind in the pre-Diocletian and probably pre-Severian period, there is a rabbinical ruling that permits the taking up of arms

in border settlements, and issuing forth even on Sabbath, not only to defend their lives, but also to prevent "loot of hay and straw" (*j. Talm.* ʿErub. 4, 21d).

The Romans were thus compelled to step into the Herodian border defenses (which seems also to have operated under the procurators) not only to ensure the Pax Romana, but to prevent anarchy in a country, where the borders with hostile raiders were not more than 80 km removed from Jerusalem. The Nabatean presence in the Negeb was no substitute, since it was confined largely to the major arteries of commerce, and with the means at their disposal, they could not prevent the swift desert raiders to cross over into Judea had they wished to do so. Even under less extreme conditions, such as in the Balkans, the Romans took care to fortify the borders, regardless of the existence of an allied *cordon sanitaire* all around them.

The various surface surveys (Gichon 1980), rabbinical literature, the excavations of stratum III at Arad and stratum I at Beer-sheba (Gichon 1980: 845), and the Flavian presence at Masada and En Gedi provide sufficient evidence for a Flavian establishment of the *limes.* After the Trajanic occupation of Nabatea, three forward lines were created by occupying the Nabatean installations along the three E–W routes: (1) En Tamar-Malatha; (2) Hatzeva (Eiseiba?)-Mampsis-Bersabee; and (3) Mojet Avad (Moa?)-Oboda-Elusa.

At the same time the Tranjordanian *limes* was established from Aila to the borders of Syria, together with the great military and commercial highway, to avert incursions from the Arabian desert. Following the Bar Kokhba Revolt (131/132–135), Hadrian seems to have evacuated the Flavian *limes* and entrusted the defense of Palestine mainly to the more forward *limes* and the *limes Arabicus,* E of the Jordan.

The insufficiency of this arrangement induced Diocletianus to create a united frontier command in S Transjordan and the Negeb, by attaching the former, S of Zoara, to the *provincia Palaestina.* While the increased threats from the tribes in the W and in the E were met as before, if these succeeded in breaking through, the other sector could be activated. To strengthen the W borders, the Flavian *limes* was reactivated, and in order to place the strategic reserve in the best possible position, the 10th Legion was moved from Jerusalem to Aila-Aqaba on the apex of the now fan-shaped network of defenses. In addition, a more permanent framework of confederate tribes beyond the borders was created.

In principle, these arrangements remained unchanged until the Islamic conquest (ca. 635 C.E.). However, the complications on the borders were such, that in addition to the shifts in tactics and individual strongholds, about 358 C.E., all of the *limes* area was made an independent province named *Palaestina Salutaris,* and after 429, renamed again *Palaestina Tertia.*

From the beginning, the *limes* fortifications comprised a network of forts, fortlets, and towers, strategically placed to deny the enemy of water resources, and to channel marauders into areas facilitating their interception by the mobile components of the *limes* garrisons. The disposition of the troops according to their headquarters has been preserved in the *Notitia-Dignitatum* (late 4th century?), which enumerates for the W front six elite cavalry units (*equites*), three infantry units (*cohortes*), and one unit of mixed composition (*cohortes equitatae*) against eighteen units in the Arava and in the E. The Beer-sheba edicts (Alt 1921) and the Nessana papyri (Kraemer 1958) record changes in the deployment of the troops in the course of the 5th and 6th centuries respectively.

The standard type of fortification was the courtyard fort, in which the flat-roofed internal buildings were built against the outer walls to provide maximum yard space, strengthen the walls, and enlarge the width of the battlements. Frequently, these rectangular structures had protruding corner towers (consequently named *tetrapyrgoi*). This form had been introduced into the Negeb not later than the Judean monarchy and was preserved during successive periods because of its suitability to local conditions.

Two further traits gave the *limes Palaestinae* primary importance in addition to its military significance: when overpopulation threatened the interior of W Palestine, the expansion into the arid Negeb and the development of sophisticated desert-fringe agriculture was the only recourse. Following the First Temple period and Nabatean precedents, the 4th to 7th C.E. Negeb attained an unsurpassed flourish of rural and urban colonization. While the military was thus able to base its upkeep and logistic support on the civilian infrastructure, it provided civilians with the protection necessary to survive in face of the "Saracens" (desert tribes).

In the Byzantine period, the frontier forces became more involved in agricultural activity after their structure converted to *limitanean* status. The Negeb may have been one of the frontiers on which the system was first tested as early as Alexander Severus (cf. S.H.A., *Alex. Sev.*, 18.4).

No less important than the land reserve was the Negeb's role as an overland bridge between the Mediterranean and the Red Sea, and as a link in the caravan trade with Arabia and beyond (e.g., *HN* 5.12.67; 6.32.144). In the 4th century, when political deterioration threatened commercial movement along the transasian "silkroad," the reviving Negeb roads were among the alternative routes. While in the agricultural belt, the ten *limes* towns profited from serving the transit trade, and in the more remote areas, the military outposts doubled as road stations (*mansiones*) for official travel (*cursus publicus*) and commercial traffic (Gichon 1974: 534–35).

Whereas the immediate rear of the Flavian *limes* remained Jewish until the Islamic conquest, Christianity began to spread in the 3d–4th centuries from the Philistine coast (St. Hilarion) and from the monastic establishments in the Judean desert and Sinai (St. Chariton, St. Catherina, etc.). By the 6th century, rich and impressive churches dominate the panorama of all *limes* towns.

The almost complete transformation of the *limitanei* into mere farmers (as shown in the Nessana papyri), and the friendly disposition of the Arab confederate tribesmen (on whom much of the *limes* defense was based after its hasty reconstruction following the Persian [Sassanian] occupation of Palestine in 614–28) toward the Moslem invaders, facilitated the piercing of the *limes* and the collapse of the Roman defense in 634–38 (Alt 1938). Deprived of the military shield, the civilian population withered away, and the *limes* zone was gradually reconquered by the desert.

LINGUISTICS AND BIBLICAL STUDIES. Linguistics is the study of language as language, in contrast to the study of any specific language. The term "general linguistics" comprehends all of the varied theoretical positions of linguists. There is no question that linguistics has much to offer students and teachers of the biblical languages (Hebrew, Aramaic, and Greek). A sizable number of scholars of biblical and other ancient languages have written of the potential contribution of linguistics to their research. A smaller number have written of the improvement that would come to the teaching of biblical languages through serious interaction with linguistics. Yet these contributions to research are still in their initial stages at the time of this writing, and the teaching of ancient languages is yet to be significantly affected by the insights of modern linguistics.

The beginning of linguistics as a field of study in its own right is variously dated from the historical/comparative study of the 19th century to the turn of the present century with the work of Saussure, or (for some) the approach pioneered by Chomsky in 1957. For the purposes of this article, however, it is necessary to survey earlier language study, in particular in the Greco–Roman period and in medieval times (especially medieval Jewish grammar), because of the influence of these periods on the study of the biblical languages up to the present.

A. The Study of Language Prior to the 19th Century

1. The Ancient East. The study of language in a general sense is as old as the oldest languages in which written texts are known, those of the ancient East. Akkadian grammatical texts from the mid-2d to the mid-1st millennium B.C. represent Sumerian according to certain paradigms, using grammatical terminology and morpheme analysis. Indian grammatical studies appear to have been indigenous from roughly the mid-1st millennium B.C. and forward. Because of their aim to preserve the correct pronunciation of the Vedic literature, they achieved such precision in phonetic analysis that ancient Sanskrit can still be pronounced with almost full accuracy, in marked contrast to Greek and Latin, not to speak of the biblical and other languages of the ANE. Sometime, probably during the second third of the 1st millennium B.C., Pāṇini produced an analytic and descriptive grammar which remains a definitive model for modern students of Sanskrit.

2. Greece. Most present-day linguists in the West trace the origins of their discipline to ancient Greece. The study of language among the Greeks arose in the 5th century B.C. within the larger context of philosophy and was primarily speculative. The Greeks debated whether the relationship between sound and meaning was necessary or arbitrary. While Plato (427–347 B.C.E.) was ambivalent on this issue, Aristotle (384–322 B.C.E.) believed that meaning was arbitrary and conventional. The Greeks also debated whether language was essentially regular (the analogist position), or irregular (the anomalist position). Sentence types were distinguished, as were parts of speech, although the basis for the latter was more logical than formal. The Stoics established the recognition of case and also discussed such features as number, gender, voice, mood, and tense. From the Alexandrian school, Dionysius Thrax (ca. 100 B.C.E.) wrote the first explicit description of the Greek language which became the prototype for subsequent descriptions of Greek and Latin.

3. Rome. In grammatical study as in other learning, the Romans venerated the Greeks and largely followed their lead. Because Latin was quite similar to Greek in overall structure, the work of the Greek grammarians could be applied to Latin without difficulty. The linguistic model was a word and paradigm type. Varro (116–27 B.C.E.) was perhaps the most original of Roman grammarians to write on the Latin language, though only slightly more than one-fifth of his twenty-five volumes on the subject survive. The two most influential Latin grammarians were Donatus (4th century C.E.) and Priscian (ca. 500 C.E.). Donatus' intentionally didactic grammar was used well into medieval times (and is said to have been the first book printed with wooden type). Priscian's grammar was quite long; it represents the culmination of late Latin grammatical study, and became the most widely used grammar of the medieval period.

4. Medieval Grammar. Under the influence of Donatus and Priscian, medieval grammatical study continued the Greco–Roman tradition. Aelfric wrote a Latin grammar (ca. 1000) and recommended it as an introduction to Anglo-Saxon, illustrating already the tendency to employ the Greco–Roman grammatical model in the study of other languages. The grammatical description of Latin was incorporated into the system of scholastic philosophy. While the speculative grammars of medieval modistae anticipated somewhat the recent interest in linguistic universals, their contribution would now be seen as quite limited because of their preoccupation with the Latin language and their commitment to a deductive approach based on Aristotelian logic. In Italy, Dante (1265–1321) remarkably anticipated diachronic linguistics and dialect research, but found no response to his ideas.

5. Arab Grammarians. From about the 8th to the 15th centuries of this era, Arab grammarians worked out an analysis of their language. Centers of grammatical study developed at Basra, Kufa, and Baghdad. The canons of classical Arabic grammar were established by Sībawayhi in the 8th century. His phonetic description is thorough, and his grammatical approach can be compared to the modern method of immediate constituent analysis. In the next three centuries Arabic grammar was systematized and placed on a par with other branches of learning. In the 12th through the 15th centuries the established system was condensed and refined.

6. Medieval Hebrew Grammarians. Jewish scholars of the medieval period also developed their own analysis of the Hebrew language. While the way was prepared by the Masoretes, this work actually began with Saadia Gaon (882–942 C.E.) in the late 9th and early 10th centuries. He produced the first vocabulary and the first grammar of biblical Hebrew. In the 10th century, the scholar ibn Quraysh produced the first

systematic attempt to compare biblical Hebrew with Mishnaic Hebrew, Aramaic, and Arabic, an effort which was pursued by Jewish scholars throughout medieval times. The creative period of medieval Jewish grammar was from about 1000 to 1150, with Ḥayyūj, Janāḥ, and Samuel ha-Nagid representing the high point. Ḥayyūj expounded the principle of the triliteral root and distinguished the seven primary verbal conjugations which are still followed. After the Muslim persecution of Jews in Spain and their subsequent Jewish dispersal in 1148 came a period of adaptation. Joseph Qimḥi (ca. 1105–1170) introduced an analysis of the Masoretic vocalization system as consisting of five short and five long vowels, in contrast to the view of seven differences in quality (but not quantity) previously accepted among the Jews. His son David (ca. 1160–ca. 1235) brought this period of adaptation to its culmination with his grammar and lexicon, known as the *Miklol* (*Compendium;* the title was later applied only to the grammar). The main lines of approach to Hebrew set forth by the Qimḥis have continued to be followed in most Hebrew grammars. See also LANGUAGES (HEBREW).
